Public Relations Documents

National Water Council 2016

The Federal Capital Territory Reduction of Non-Revenue Water Project

31st May 2016

Engr. A. A. Nahuche
Technical Manager, HOD Distribution, FCTWB
Supported by JICA Expert Team

Annex6-1

Contents

Part-I: Water Supply of FCTWB

- 1-1. Introduction
- 1-2. Features
- 1-3. FCTWB Organization and Members involved
- 1-4. Master Plan for Water Supply in the FCC
- 1-5. Water Sources & Water Infrastructure

Part-II: FCTA/FCTWB-JICA Project

- 2-1. Outline of the Project
- 2-2. What is Non-Revenue Water?
- 2-3. Overall Goal, Project Purpose & Outputs
- 2-4. Distribution Monitoring Zones (proposed)
- 2-5. Procedures of Pilot Project
- 2-6. Ongoing Pilot Project Activities (Baseline Analysis)
- 2-7. Training in Japan

1-1. Introduction

- The Federal Capital Territory (FCT), Abuja was created in 1976 to serve as the new capital city of the Federal Republic of Nigeria.
- The FCT Water Board (FCTWB) was established in October 1989 to provide potable water of adequate quantity and quality at affordable rate to the residents of the FCT.

Functions:

- ❖ Management and maintenance of all water works in the FCT
- ❖ Harnessing all water resources of the Territory for economic development.
- ❖ Conducting research for the purpose of carrying out its functions
- ❖ Submission of the findings of the research to the Hon. Minister of the FCT for the purpose of policy formulation

Part-I: Water Supply of FCTWB

3

2

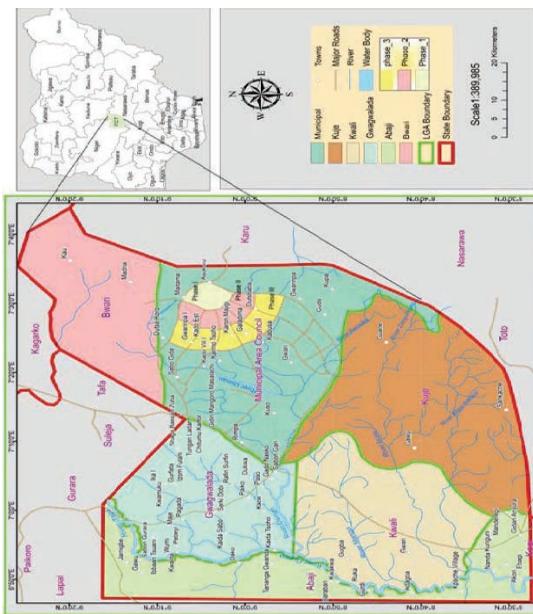

4

1-3. FCTWB Organization and Members involved

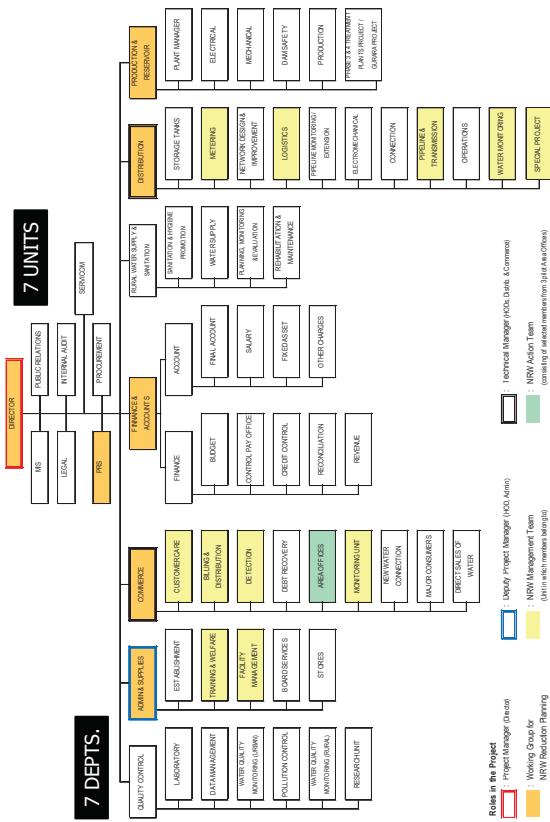

- The water sub-sector of the FCT is well documented under the support infrastructure system of the Master Plan of Abuja.
 - The manner in which the water is supplied, distributed, used and disposed off in the FCT properly documented in the Abuja Water supply Master Plan
 - The Federal Capital Development Authority (FCDA) Engineering Services Department is responsible for the provision of Water Infrastructure in FCT

1-2. Features

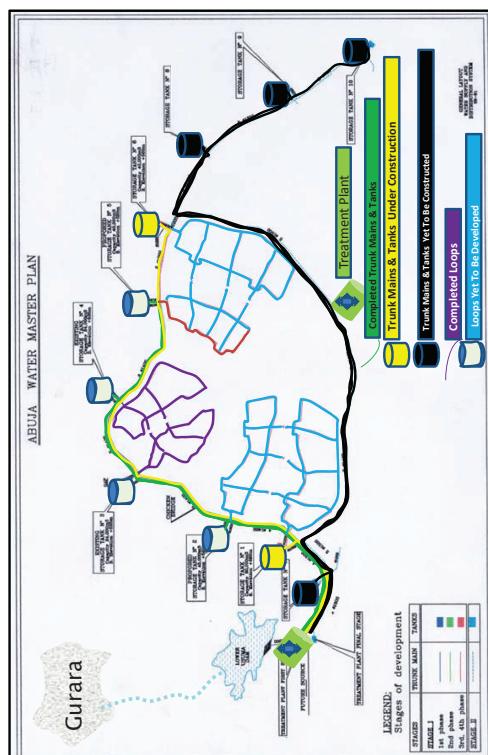

- National Population 170 million
 - FCC population 3 million
 - Connections 48,300
 - Average actual water product. 274,000m³/day
 - Non-Revenue Water (NRW): estimated at 52% of 2014

Annex6-2

1-4. Master Plan for Water Supply in the FCC

1-5. Water Sources & Water Infrastructure

- **Lower Usuma Dam**
Capacity: 100 mil. m³
- **Gurara Dam**
Capacity: 880 mil. M³

■ Treatment Plants 1 & 2

Capacity 10,000m³/hr designed to operate 24hrs a day thus the total output of 240,000m³/day is expected

■ Treatment Plants 3 & 4

Designed capacity: To provide 20,000m³/hr treated water each boosting treated water supply to 480,000m³/day.

Total Treatment Capacity: 720,000m³/day.

Annex6-3

11

Part-II: FCTA/FCTWVB-JICA Project

2-1. Outline of the Project

Project Name

The Federal Capital Territory Reduction of Non-Revenue Water Project

Project Period

Phase-1: October 2014 to December 2016 *Ongoing
Phase-2: January 2017 to March 2018

Project Areas

Federal Capital Territory (FCT)
Pilot Areas: Garki I, Gudu and Jabi

Nigerian Counterparts

Federal Capital Territory Administration (FCTA)
Federal Capital Territory Water Board (FCTWB)

Japanese Counterparts

JICA Expert Team (based in Abuja)

TANK	LOOP	CAPACITY (m ³)	PHASE	STATUS	DISTRICTS SUPPLIED
Tank 1	1	30,000	III	Under construction	Wupa, Karmo, Bunkoro, Nabora, kafe, Gwairima I, Gwairima II, Dape, Industrial Area 1
Tank 2	2	45,000	II	Completed	Jabi, Utako, katampe, Dakibiyu, Kado, Wuye, Mabushi, Kukwaba, Jabi, Recreational park
Tank 3	3	24,000	I	Completed	Mafatama, Wuse I and Wuse II
Tank 4	4	24,000	I	Completed	Garki I, Garki II, Asokoro
Tank 5	5	40,000	II	Completed	Duriuni, kaura, Gudu, Duboyi, Guzape, Guduwa, Duse
Tank 6	6	40,000	III	Under construction	Gaidimawa, Dakwo, Lokogoma, Wumba, Saraji, Kabusa, Okanje, Pyakasa, Institutional Are, Industrial Area II

Tank 2

10

12

2-2. What is Non-Revenue Water?

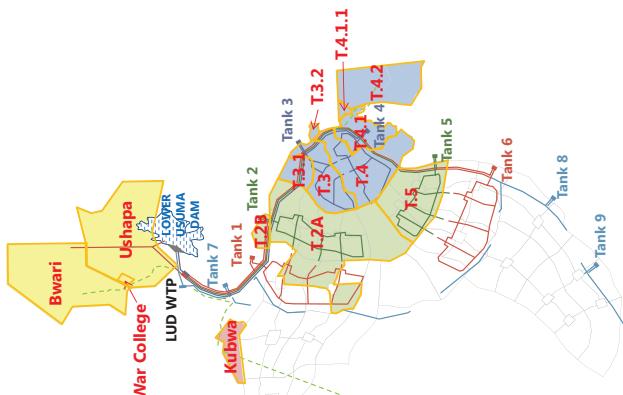

NRW is an **indicator of water supply management and O&M for actions** to be taken, and also is supposed to be **monitored** and kept **lower** to improve **efficiency** of water supply services.

System Input Volume	Authorized Consumption		Billed Metered Consumption		Revenue Water
	Billed Authorized Consumption	Unbilled Authorized Consumption	Billed Unmetered Consumption	Unbilled Unmetered Consumption	
Commercial (Apparent) Losses				Unauthorized Consumption	
Customer Metering Inaccuracies and Data Handling Errors				Customer Metering Inaccuracies and Data Handling Errors	
Water Losses				Leakage on Transmission and/or Distribution Mains	Non-Revenue Water (NRW)
				Leakage and Overflows at Utility's Storage Tanks	
				Leakage on Service Connections up to Point of Customer Use	
				Physical (Real) Losses	

* "Un-accounted for Water (UAW)" is no longer common term.

13

2-4. Distribution Monitoring Zones (proposed)

- **Zones** are created for **effective monitoring** by installing zonal meters and isolation.
- Each zone is monitored by zonal meter **reading (inflow)** and **billed consumption (outflow)**.
- Location of zonal meters is **prioritized by criteria** such as its roles and importance.
- **Remote monitoring (telemetry system)** in one or two zones is introduced on a trial basis.

15

2-3. Overall Goal, Project Purpose & Outputs

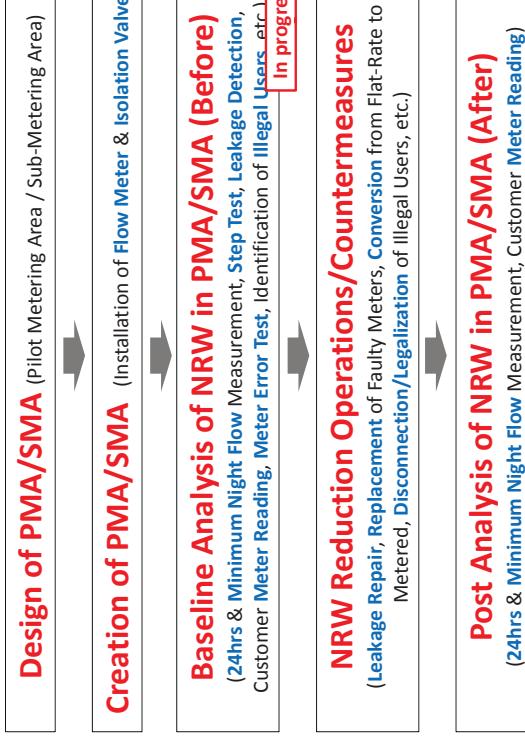

Overall Goal	Level of Non-Revenue Water (NRW) is reduced at the service area of FCTWB.
--------------	---

Project Purpose	Capacity of FCTWB for NRW reduction is strengthened.
-----------------	---

Output-1	Level of NRW of both the service area of FCWTB and water distribution areas is monitored regularly .
Output-2	Methods/operational procedures for effective NRW reduction are established through pilot projects at Pilot Metering Areas (PMAs) under pilot Area Offices.
Output-3	A medium-term strategic plan of FCTWB for NRW reduction is developed, utilizing the results of Output 1-2.

Annex6-4

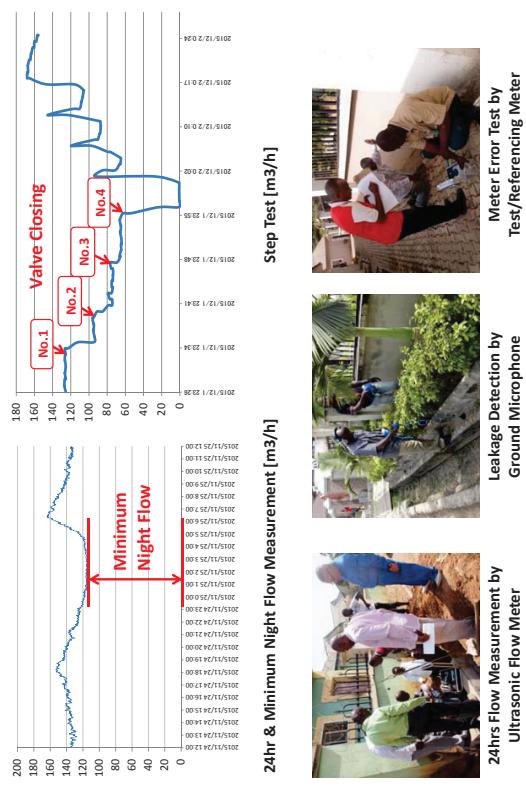

2-5. Procedures of Pilot Project of NRW Reduction

14

16

2-6. Ongoing Pilot Project Activities (Baseline Analysis)

Annex6-5

2-7. Training in Japan

Hon. Minister of FCT flags off Reduction of NRW Project in FCT, supported by JICA.

INTRODUCTION

In Abuja, Federal Capital City (FCC), located in the north-east of the Federal Capital Territory (FCT), Federal Republic of Nigeria, water supply facilities have been developed based on water supply master plan prepared in 1980. Although new water treatment plants were recently constructed to meet increasing water demand occasioned by mass-inflation and urbanization, distribution facilities such as service reservoir and network have lagged behind in development. On the subject of non-revenue water (NRW) in F-C, the Detail Planning Survey by Japan International Cooperation Agency (JICA) estimated it at 38% in 2014, and the strategic plan for 2011-2015 of the Federal Capital Territory Administration (FCTA) sets its target level at 25%. However, the Federal Capital Territory Water Board (FCTWB) in charge of operation and maintenance has not taken effective actions against NRW because of its shortage of experience, knowledge and qualified personnel on planning and execution of NRW reduction. Improvement in NRW is a key issue in water supply services.

Under the circumstance, the Government of the Federal Republic of Nigeria (FRN) requested technical cooperation from the Government of Japan in order to strengthen NRW reduction capacity of

the Project. Phase-1: Oct. 2014 to Dec. 2016 Phase-2: Jan. 2017 to Mar. 2018 Project Area: Garki, Gudu and Jabi Pilot Areas: Garki I, Gudu and Jabi

Implementation by

FCT Administration (FCTA)
FCT Water Board (FCTWB)

Support by

Japan International Cooperation Agency (JICA)

What is NRW?

According to International Water Association (IWA), "Non-revenue water (NRW)" is water that has been produced and is "lost" before it reaches the customer. Such losses may be caused through leaking and burst pipes, illegal connections and metering inaccuracies; for example, Reduction of NRW is a key issue to increase revenue and availability of water sources.

It is now recommended that "Unaccounted-for Water (UFW)" be no longer used which is equivalent to "Water Losses" as part of NRW in the Water Balance (or Audit) shown below in Q&A, P.3.

CONGRATULATORY MESSAGES

Mr. Ari, Isa Muhammad
Project Director
Director Economic Planning,
Research and

ABUJA
The Heart of Nigeria

Statistics (EPRS),
FCTA

The Hon. Minister FCT Senator Bala Abdulkadir Muhammed has officially pronounced the kick-off of the Project.

Making the pronouncement in a tripartite meeting between officials of FCTA-EPRS, FCTWB and JICA, Mr. Ari Isa Mohammed, Director, EPRS, who represented the Hon. Minister explained that the Project is aimed at reducing all forms of water losses in the process of water distribution in order to improve services and increase revenue. Mr. Ari expatiated that the Project will also improve productivity, efficiency, and capacity amongst staff, while the FCTWB in return would be adhering to the principle of global best practices

In his own remarks, Director FCTWB, Malam Hudu Bello reassured that the Hon. Minister is fully committed to the success of the Project and has demonstrated this by promptly approving and releasing the counterpart funding of the Project in order to ensure a hitch free kick-off.

He further reiterated the unalloyed cooperation of management and staff of FCTWB with JICA officials towards the success of the Project.

Mr. Akinori Miyoshi
Chief Advisor
JICA Expert Team

On behalf of the team, I am pleased to offer our congratulations to all of counterparts. The team consists of members from two Japanese consulting firms: namely, "Archyo Engineering Co., Ltd." having a great deal of experience in Nigeria and "Yokohama Water Co., Ltd." affiliated with Yokohama Waterworks Bureau for a megacity in Japan.

I promise the team will fully assist the Nigerian counterparts for a successful project implementation.

Mr. Tetsuo Seki
Chief Representative
JICA Nigeria Office

Senator Bala Abdulkadir Muhammed
FCT Minister

1

2

OUTLINE OF THE PROJECT

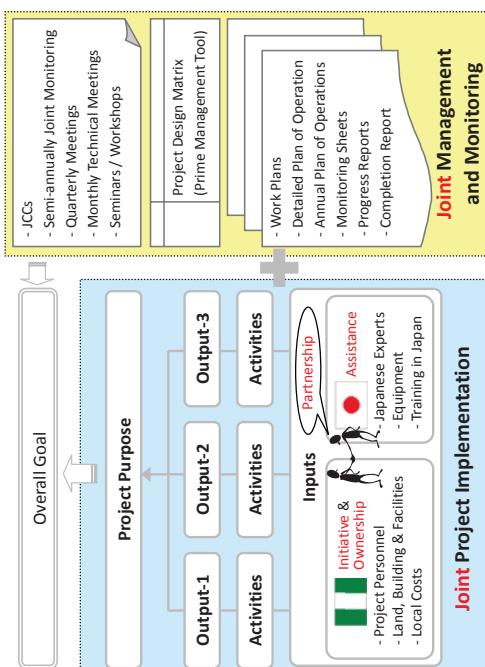

Solutions to NRW with Patient Efforts

In the FCT, leakage control including detection of invisible leakage and measures against commercial losses including illegal connections and meter inaccuracy are currently not implemented in systematic way, just visible leakages are usually repaired on report of consumers, but they are only a small part of the entire leakage.

Through the Project, leakage control and measures against commercial losses will be converted from passive to active manner.

Outputs

1. Level of NRW of the service area of FCTWB is monitored regularly.
2. Methods/operational procedures for effective NRW reduction are established through pilot projects at Pilot Metering Areas (PMAs) under pilot Area Offices
3. A medium-term strategic plan of FCTWB for NRW reduction is developed, utilizing Output-1 and -2

Hydraulic Analysis / GIS

FCTWB has supplied water without adequate hydraulic analysis of distribution networks. But, in response to expansion of the networks and increase in water consumption, hydraulic analysis is necessary in identification of defective pipeline, and then through the pipe replacement.

FCTWB can ensure appropriate water supply and pressure. Water pressure is a factor related to leakage.

Information of water supply facilities located in the Phase-1 development area of the FCC has been managed by GIS, but not been utilized adequately. Through update of information of all existing facilities and improvement in skills and knowledge, information-intensive management by GIS and appropriate utilization can contribute to a variety of services.

Q & A What is Water Balance (or Audit)?

Water balance (or audit) has been developed to understand the big picture of the water system as the first step in reducing NRW.

IMA's Standard Water Balance (or Audit) and Components

	Authorized Consumption	Billed Authorized Consumption	Billed Unmetered Consumption	Unbilled Metered Consumption	Revenue Water	Non-Revenue Water (NRW)
System Input Volume	Commercial (Apparent) Losses	Customer Metering Inaccuracies and Data Handling Errors	Leakage on Transmission and/or Distribution Mains	Leakage and Overflows at Utility's Storage Tanks		
Water Losses	Physical (Real) Losses					

PROJECT MEMBERS

Committee/Group/ Teams in the Project

Joint Coordinating Committee is chaired by Project Director, which consists of Project Managers, representatives from National Planning Commission, Executive Secretary of Federal Capital Development Authority and Federal Ministry of Water Resources, and also JICA Expert Team, representatives from JICA Nigeria Office and Embassy of Japan.

Working Group for NRW

Reduction Planning is a group for the Output-3, development of medium-term strategic plan of NRW reduction, which is composed of Project Managers, NRW Management Team members, and representatives from Federal Capital Development Authority.

NRW Management Team (FCTWB) is a team responsible for all activities of the Project with theoretical and practical understandings.

JICA Expert Team is a working-level team in three pilot areas, responsible for NRW reduction operations with use of equipment.

SCENES OF THE PROJECT

Project Member participated in JICA Training in Japan

The Project activities have been implemented with considering capacity development of FCTWB and members on various levels through lectures, interactive discussions, field surveys, on-the-job training (OJT) and so on by JICA Experts.

LECTURES & INTERACTIVE DISCUSSIONS

In May and June 2015, Eng. Douglas Ojolot, Head of Metering Unit, Distribution Dept participated in JICA group training course for "Operation and Maintenance of Urban Water Supply System (Water Distribution and Services)" in Osaka City.

His contribution:

"The Training was a wonderful experience as it provided me with advance experiences on Q&M using a lot of modern tools and equipment. I am unwrapped technically the reasons why we are experiencing high NRW and measures to be taken in order to reduce the NRW such as; Leakage Detection Methods using modern equipment, Technology for Monitoring of Pressure on distribution mains, Pipe line Design Technology, Build-up of Integrated Information Management System, Synergy between the Water Service Provider and other agencies for effective service delivery.

Though it is capital intensive and requires adequate planning, record keeping, dedication of staffs of the Board and cooperation of the Government in the area of funding but it is within reach.

The training has also exposed me to the Japanese spirit and attitude to work which in fact can be recommended for any organization to emulate for success story.

I unswervingly recommend that staff be sent on such trainings to change their psyche and improve their productivity."

PROJECT MEMBERS as of July 2015

Committee/Group/ Teams in the Project

Joint Coordinating Committee is chaired by Project Director, which consists of Project Managers, representatives from National Planning Commission, Executive Secretary of Federal Capital Development Authority and Federal Ministry of Water Resources, and also JICA Expert Team, representatives from JICA Nigeria Office and Embassy of Japan.

Working Group for NRW Reduction Planning is a group for the Output-3: development of medium-term strategic plan of NRW reduction, which is composed of Project Managers, NRW Management Team members, and representatives from Federal Capital Development Authority.

NRW Management Team (FCTWB)

Mrs. Hafsat Ahmed Lawal, Head of Finance and Accounts Department

COLUMN

LEARNT FROM JAPAN AND ACTIONS

In late August 2015, four project members namely Engr. A. A. Nahuche, Mr. Adis S. Muhammad, Engr. Aliyu Usman and Mr. Musa Dikko participated in training course "Water Supply Services Management and NRW Reduction" for two weeks in Yokohama City, Japan (Service Population: 3.7 million, Connection: 1.6 million, Daily Supply: 1.1 million m³, NRW Ratio: 8%).

"Water Supply Services Management and NRW Reduction"

Procurement and installation of photovoltaic system (975kWp) into Lower Usuna Water Treatment Plant has been implemented since November 2015 under JICA's project "The Project for Introduction of Clean Energy by Solar Electricity Generation System (Responsible Ministry and implementing agency the Federal Ministry of Power)" funded by Japan.

This Project will contribute to not only the realization of Nigeria's development plans and energy policy but also alternative power supply to FC TWB as an OEM agency, eventually water supply to more than 40,000 customers.

Annex6-12

Organization

- Enabling Law for FC TWB
- Restructuring the organization for more effective & efficient service delivery
- Preparation of short, medium and long-term planning for training

Planning

- Forming a committee to review ongoing business plan and discuss future plan covering the NRW reduction
- Introduction of quality management of works
- Introduction of information management

Operation and Maintenance

- Creation of the mapping/GIS unit and procedures
- Establishment of leak detection unit
- Strengthening of metering units and establish meter workshop
- Installation of bulk/zonal meters to manage and monitor distribution system
- Introduction of strategic plan for maintenance

Billing

- Review of mode of payment to be more flexible for customers
- Review of water tariff based on volume of water consumption (progressive water tariff)
- Review of billing papers, elimination of return bills

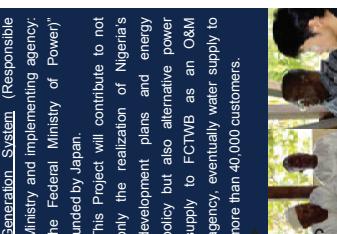

Customer Service

- Enhancement of Customer Service Center and creation of desk officer of each area office
- Creation of more awareness through PR

Mr. Ezech Hillary, a project member, Sunoyer of GIS Unit got married on 28th Nov. 2015
The Project offers hearty congratulations to him and his wife.

FC TWB invited JICA Expert Team to weekend lunch one fine day in Nov. 2015 in the waterfront of Lower Usuna Dam, which helps both to promote strong ties of friendship.

Congratulations

Well-organized works

FCT Water Board, Japanese agency to rake in millions for govt

Cont'd from pg 1

hefty sums for payment into government treasury.

Observers say the development is coming handy as the mantra of the President Muhammadu Buhari administration is more on organizations being creative by adopting means to save cost, maximize output and optimize performance, given the plummeting international prices of crude oil and less inflow into the national till.

Speaking while presenting the equipment to FCT Water Board recently, JICA Chief Representative to Nigeria, Mr. Hirotaka Nakamura recalled that the project kicked off with pilot metering in some places where there exist no functional or reliable system on ground for measuring water losses.

According to him, installing the water flow meters will ensure inflow and outflow are measured. Nakamura insisted that the biggest efficiency headache of a water firm is water loss or non-revenue water caused by leakages from pipes, illegal connections and under-registration of water meters, resulting in heavy sums being lost.

He added, "In FCT, non-revenue water is a conservative 42 per cent and bill collection efficiency of only 35 per cent," pointing to lack of modern capacity as a cause of the

board's inability. The JICA chief urged officials of Water Board to ensure good care of the equipment, adding that JICA is on hand to give practical training on technology transfer to relevant employees who will handle the tools.

Speaking later, Director FCT Water Board, Alhaji Hudu Bello, who spoke for a senior official of the Administration, noted that the presentation was coming at a most convenient time when emphasis is on the prudent conduct of government business."

Expressing appreciation to JICA, Bello said not only would the partnership jerk up the board's revenue generation capacity, it would also have impact on the development skills of the Water Board officials as the capacity development component is also implemented." The director called on FCT residents to support the project's success by "desisting from every form of illegal water connection and through regular payment of water bills."

Goodwill messages came, on

the occasion, from directors of key

agencies in FCT, with all of them optimistic that, with the fresh injection of capacity, the Water Board will now fulfill its mandate.

In line with change agenda

FCT Water Board, Japanese agency to rake in millions for govt

By Faruk Durrahah

A strategic technical partnership involving Federal Capital Territory (FCT) Water Board and the Japanese International Cooperation Agency (JICA) is set to see millions of Naira ploughed into government coffers.

The undertaking followed donation of premium technology Japanese equipment which will be employed to reduce the amount of non-revenue water loss through leakages and other inherent non-listed causes.

Some of the equipment include ultrasound water flow meters, leak detectors, pipe detectors, test meters, data loggers, as well as two Toyota FRNT vehicles, all worth a conservative N1,000,000.

The rest of the equipment are to be deployed to fight huge water revenue losses through various means, and to save these

FCT board, agency plan N2.5b profit

From Gbenga Omekhuanu, Abuja

THE Federal Capital Territory Water Board (FCTWB) is expected to make about N2.5 billion profit if it implements the medium-term plan for the Non-Revenue Water (NRW) reduction project from now till 2021.

Chief Representative, Japan International Cooperation Agency (JICA), Nigeria office, Mr. Kaiusitoshi Konomai made this known yesterday at a seminar organised by FCTWB in conjunction with JICA.

Konomai said the NRW reduction is one of the best ways to archive autonomy.

He said the collaboration of enhancing FCTWB staff capacity for the reduction of NRW started since October 2014 adding that last September, the project activities were concluded and handed over to FCTWB.

"Our project is the first large scale project of NRW reduction in the country and achieve the reduction of NRW ratio, but when we look over the whole country, Nigeria, State Water Agencies (SWAs) is struggling to reduction of high NRW Ratio. We would be happy if other state water agencies engage in knowledge sharing with FCTWB in order to enhance their capacity for reducing NRW in their own territories."

The JICA boss expressed satisfaction with the results achieved at the end of the project.

Amongst the outputs, Konomai said includes the reduction of NRW in pilot metering areas like Jabi, Gudu and Garki 1, setting up of operational procedure for effective NRW reduction and the Medium-Term Strategic Plan for the reduction of non-revenue water from 2019 to 2023.

Konomi, who was represented by Ms. Makiko Okumura said, "The plan, developed from the pilot activities conducted over the past 4 years, together with FCTWB staff and Japanese experts, as you will learn in detail lays the necessary actions needed to be taken by FCTWB to ensure NRW is reduced strategically over the next 5 years, through budgetary allocations, appointment of well trained professionals for leakage survey and development of pipeline data, amongst other action steps."

Introduction

Federal Capital Territory Reduction of Non-Revenue Water Project (the Project) has set overall goal, project purpose and outputs to achieve the purpose as below:

Overall goal is: ‘Non-Revenue Water Reduction activities are routinely implemented in the service area of FCTWB’.

Project purpose is: ‘Capacity of FCTWB for NRW reduction is strengthened.’

Outputs to achieve project purpose are:

1. Level of NRW of both the service area of FCTWB and water distribution areas is monitored regularly.
2. Methods/operational procedures for effective NRW reduction are established through pilot projects at Pilot Metering Areas (PMAs) under pilot Area Offices.
3. A medium-term strategic plan of FCTWB for NRW reduction is developed, utilizing the results of Output 1 and 2.

In order to implement the Project steadily by FCTWB and project members to be empowered through capacity development by the JICA Expert Team, at the beginning of the Project, the Project made

Capacity Assessments (CA) for setting up baseline and **Capacity Development (CD) Plan** at 1: **Organizational Level**, 2: **Individual Level** and 3: **Institution, Policy and Society Level**.

Firstly, concerning the CA as a baseline at organizational level, the Project analyzed data as of 2013 and 2014 and had interviews with Director and Head of Distribution Department of FCTWB. Secondly, in the light of the CA as a baseline at individual level, the Project had interviews with Project Technical Managers, NRW Management Team members (excluding administrative members) and NRW Action Team members (three Area Office managers and groups). Thirdly, the Project analyzed the CA of institution, policy and society level based on the existing information and interviews with some of NRW Management Team members.

The CD Plans for both organization and individuals are required primarily so as to achieve the project purpose. Secondarily, an approach to aspect of institution, policy and society and encouragement to Federal Capital Territory Administration (FCTA) and FCTWB are significant actions to enhance their capacity and facilitate their performance. Furthermore, the Project focuses on sustainability of NRW reduction so that FCTWB can improve water supply services and ultimately approach to overall goal in the future.

For the CD plan at organizational level, the Project considered;

- Establishment of routine work on NRW reduction
- Introduction of vehicle and equipment required for creation of Pilot Metering Area (PMA) and Sub-Metering Area (SMA), database and flow measurement
- Sustainability of the work for permanent or semi-permanent team
- Periodical trainings

On the other hand, at individual level, the Project considered;

- Preparation of action plans (if applicable)
 - Motivation for proactive measures against NRW
 - Full understanding of NRW reduction operations and development of database for the existing distribution networks
 - Accumulation of practical experience in NRW reduction operations through the pilot project

JICA Expert Team intensively directed the appointed Project members of the NRW Management Team and the NRW Action Team through individual CD plans.

In addition, the Project suggested an approach to aspects of institution, policy and society.

Capacity at both organizational and individual levels was scheduled to be monitored periodically by interim assessments and evaluated at the end of the Project, as shown below.

Table: Schedule of Capacity Assessment and Capacity Development Plan

Remarks: Revised in September 2018

1 Capacity Assessment and Capacity Development Plan at Organizational Level

1.1 Capacity Assessment at Organizational Level

(1) CA Method

In principle, the capacity at organizational level was assessed by means of both List of Performance Indicator (PI) list and Utility Basic Checklist, which are a part of “*Handbook for Capacity Assessment on Urban Water Supply Sector and Water Supply Entity in Developing Country (published by JICA)*”.

The Project figured out PI by sorting out the data provided by FCTWB and interviewed and questioned Project Manager and Technical Manager of FCTWB according to the Utility Basic Checklist for water supply entity to collect information on water supply services related to NRW.

(2) Selection of CA Items

1) Performance Indicators (PI)

Procedures to select items in List of PI are shown **Figure 1-1**. Out of the whole 38 items, the Project sorted out 24 items to be improved through CD and then finally selected 13 items for setting up baseline related to NRW reduction among them (see **Table 1-1**).

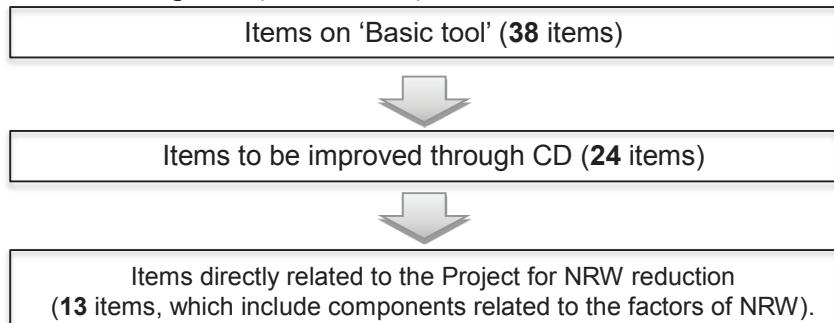

Figure 1-1: Procedures to Select the Items in List of Performance Index

Table 1-1: 13 Selected Items in List of Performance Index

Category	Sub-Cate.	13 Items (Index)
Technical aspects	Measures of NRW	NRW ratio (%)
		Water production (m ³ /day)
		Billed water (m ³ /day)
		Ratio of water meter installation
		Number of the water pipe breaks responded to within 24 hours (%)
		Quantity of NRW (m ³ /km/day)
		Quantity of NRW (m ³ /connection/day)
Non-Technical aspects	Financial Performance	Water tariff collection ratio (%)
		Billing amount (Naira x1000)
		Unit operational cost for water (Naira/m ³)
		Average revenue for water (Naira/m ³)
	Training	Average revenue for water (Naira/m ³) based on collected tariff Total number of training days in the year on water supply sector (days/annual/staff)

2) Questions in Utility Basic Checklist for FCTWB

Procedures to select questions in Utility Basic Checklist for FCTWB are shown in **Figure 1-2**. Out of 26 questions of main parts, the Project sorted out 16 questions related to NRW consisting of two categories; one consists of one question to be improved by facility investment and the other consists of 15 questions to be improved by CD. The Project finally selected 10 questions for setting up baseline for the CA and the CD plan at organizational level in the Project, which are composed of one question of rehabilitation/ replacement, seven questions of technical aspects and two questions of non-technical aspects and (see **Table1-2**).

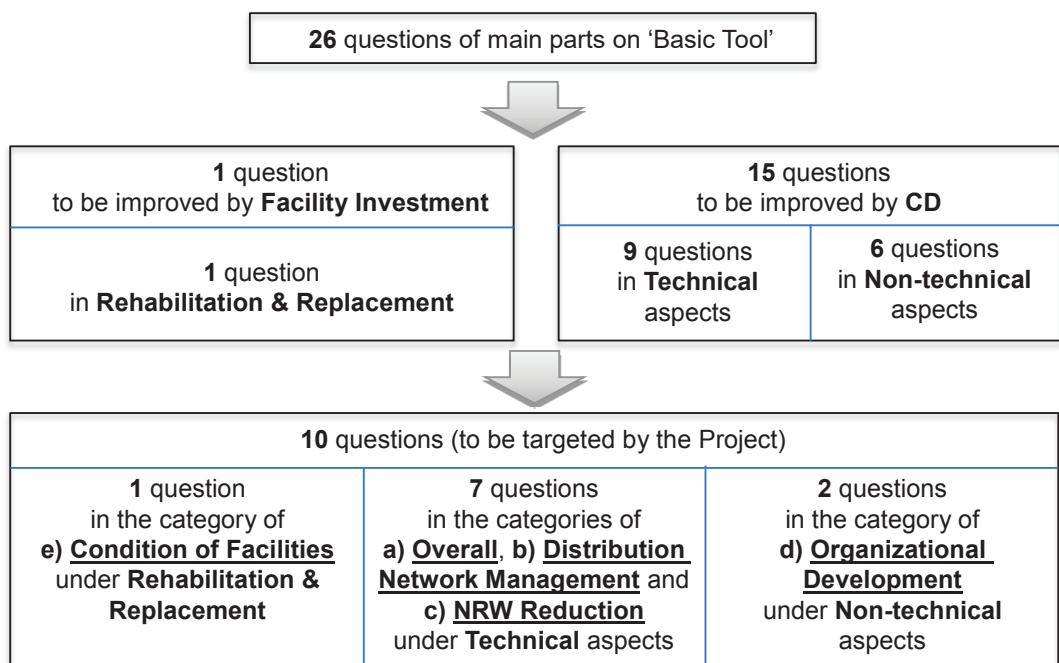

Figure 1-2: Procedures to Select Questions in Utility Basic Checklist for FCTWB

Table 1-2: 10 Selected Questions in Utility Basic Checklist

Category			10 Questions	Question No. in Checklist
Large	Medium	Small		
Aspects to be improved mainly by Facility Investment	Rehabilitation / Replacement	Condition of facilities	Condition of service connections	Q1
Aspects to be improved mainly by Capacity Development	Technical aspects	Overall	O&M of the facilities	Q2
		Distribution network management	Drawings of pipe facilities	Q3
		NRW reduction	Zoning of distribution networks	Q4
			Water pressure at supply points	Q5
			NRW ratio	Q6
			Installation of customer meters	Q7
			Installation of bulk meters	Q8
	Non-Technical aspects	Organizational development	Personnel management	Q9
			Implementation of training	Q10

(3) Baseline and Result of Capacity Assessment at Organizational Level

1) Performance Indicators

Data on water supply services of FCTWB such as water production, billed water was supposed to be updated through measurement of bulk flow rate at Usuma Water Treatment Plant and billing improved by introduction of the new billing system. However, chamber construction of the bulk flow meters and introduction of the billing system were delayed due to budget disbursement and preparation in sorting-outs of subscribers of water use respectively. In addition, the financial statement as of 2015 and 2016 has not been reported in FCTWB officially. Therefore, the Project sorted out data of 2017 through the Project and applied it for final assessment as shown in **Table 1-3**. Since it is likely that baseline data based on FCTWB's original report was not so accurate, it is not necessarily appropriate to compare the baseline data with the final assessment data.

Some data such as water production and billed water as a baseline are not measured but estimated ones. FCTWB has roughly estimated water production by water flow into water treatment plants because of no bulk flow meters at outlets of clear water tanks located in water treatment plants. As well, FCTWB estimated billed water by given water consumption for unmetered customers. Therefore, the Project applies provisionally the estimated water production and billed water quantity as baseline.

Accordingly, NRW ratio in entire water service areas of FCTWB for the year 2014 was provisionally estimated at 60.7% based on the data provided by FCTWB and its area offices. In addition, each proportion of NRW components such as leakage, meter inaccuracy, illegal connection, etc. has not been determined, because of no or limited information of Minimum Night Flow (MNF), meter inaccuracy and actual number of illegal connections.

Table 1-3: Performance Indicators of Water Supply Services of FCTWB

Category	Sub-Category	Index	Historical Data		Remarks	Relevant Output
			As of 2014 (Baseline)	As of 2018 (Final CA)		
Technical aspects	Measures of NRW	NRW ratio (%)*	60.7	48.3	Baseline: Water Balance of FCTWB Year 2013 Final: Medium-Term Strategic Plan	1, 2, 3
		Water production (m ³ /day)	232,798	310,630	Baseline: JICA Preliminary Survey in August 2014 (Source: FCTWB) Final: Medium-Term Strategic Plan	
		Billed water (m ³ /day)	91,506	160,630	Baseline: Water Balance of FCTWB Year 2013 Final: Medium-Term Strategic Plan	1, 2, 3
		Ratio of water meter installation	85.3	93.4	Baseline: Billing Method Summary Report (as of Sep. 2014) by Area Offices Final: Through Output-1 of this Project Total Connections: 51,215 Water Meters installed: 47,843 * A number of automated estimate bills has remained.	
		Number of the water pipe breaks responded to within 24 hours (%)	N.A.	N.A.	Baseline: - Final: No answers about response within 24 hours because of the limited budget, logistics and discretion of expenditures for O&M particularly in Area Offices.	2
		Quantity of NRW (m ³ /km/day)	208.1	220.9	Baseline: JICA Expert Team, (232,798 - 91,506m ³ /day) / (44+296+339km) Final: the Project, (310,630-160,630m ³ /day) / (44+296+339km)	1, 2, 3

Category	Sub-Category	Index	Historical Data		Remarks	Relevant Output
			As of 2014 (Baseline)	As of 2018 (Final CA)		
Non-technical aspects	Financial performance	Quantity of NRW (m ³ /connection/day)	3.0	3.1	* NRW volume increased according to increase in water production while NRW ratio improved. Baseline: JICA Expert Team, (232,798-91,506m ³ /day)/(47,610connections) Final: The Project, (310,630-160,630m ³ /day) / (47,843connections)	1, 2, 3
		Water tariff collection ratio (%)	47.0	31.3	Baseline: JICA Preliminary Survey in August 2013 (Source: Financial Statement 2012 of FCTWB) ● Revenue: N4,522.7million ● Collected: N2,125.7million Final: Financial Statement 2017 of FCTWB ● Revenue: N5,276.6million ● Collected: N1,651.3million * Not increased because of existence of return (duplicated) bills in the billing system which depresses collection ratio, and also frequent estimate bills and irregular billing cycle	1
		Billing amount(N. x1000)	4,522,708	5,276,600	Baseline: Financial Statement 2013 of FCTWB Final: Financial Statement 2017 of FCTWB	1
		Unit operational cost for water (N./m ³)	84.6	44.0	Baseline: Operational Cost: Production Cost (chemical, fuel, etc.) + Personnel Cost + Administrative Cost + Pension = N. 1,074,456,115 + N. 875,243, 967 + N. 827, 200,475 + N. 48,698,767 = N. 2,825,599,324 N. 2,825,599,324 / (91,506m ³ /day x 365 days) Final: Operational Cost: Production Cost (chemical, fuel, etc.) + Personnel Cost + Administrative Cost + Pension = N.1,083.5million + N.401.4million + N. 1,017.2million + N. 75.2million = N. 2,577.3million N. 2,577.3million / (160,630m ³ /day x 365 days)	1, 2
		Average revenue for water (N./m ³)	135.4	90.0	Baseline: N.4,522,708,000 / (91,506m ³ /day x 365 days) Final: N. 5,276.6million / (160,630m ³ /day x 365 days)	1, 2
	Training	Average revenue for water (N./m ³) based on collected tariff	63.6	28.2	Baseline: N. 4,522,708,000 x 47% / (91,506m ³ /day x 365 days) Final: N. 5,276.6million x 31.3% / (160,630m ³ /day x 365 days)	1, 2
		Total number of training days in the year on water supply sector (days/annual/staff)	0.009	0.011	Baseline: 4 times x 2 days = 8 days, 8 days / 880 staff members (proper) Final: 4 times x 2 days = 8 days, 8 days / 750 staff members (proper). * Considering OJT by the Project members on NRW, the indicator increases.	1, 2, 3

2) Result of Capacity Assessment at Organizational Level

The result of CA about 10 questions at organizational level is shown in **Table 1-4** and graphed in **Figure 1-3** (both include the final assessment results of CD). Capacity of water utility is qualitatively scored in

five levels; 1: Very Serious, 2: Serious, 3: Not Good Enough, 4: Good and 5: Very Good. Capacity of FCTWB is still not enough to conduct NRW reduction activities.

Capacity of FCTWB on Q2 O&M of the facilities, Q4 Zoning of Distribution Networks, Q8 Bulk Meters and Q10 Implementation of Training has been developed to some extent through the Project compared with that of baseline.

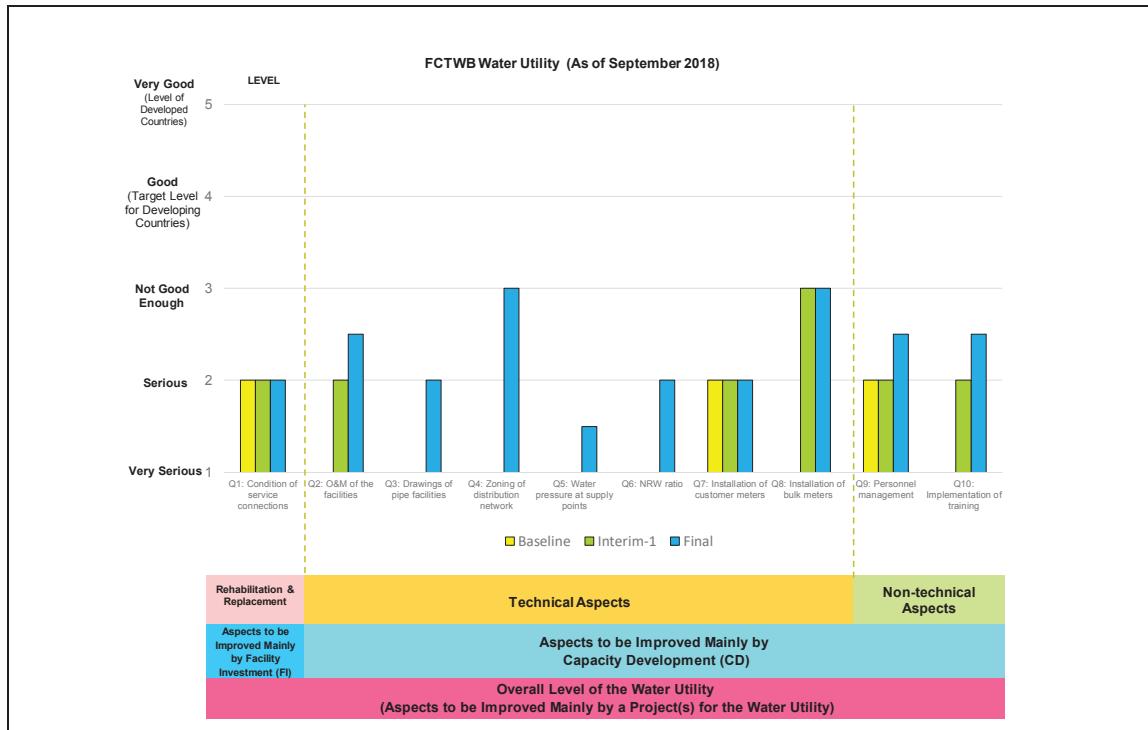

Figure 1-3: Result of Capacity Assessment by Utility Basic Checklist (Basic Tool)

The results of CA were analyzed by small category as follows:

- Condition of facilities
- Overall
- Distribution network management
- NRW reduction, and
- Organizational development

a) Condition of Facilities

The Project targets an item ‘service connections’ under “Conditions of facilities”, which consists of customer meters and service pipelines. In fact, a number of existing customer meters are in defective condition and service pipelines have deteriorated. Billed water of unmetered customers is usually estimated based on the given water consumption rate.

b) Overall

The small category ‘Overall’, one of technical aspect, corresponds to ‘operation & maintenance (O&M) of the water supply facilities’. An indicator of O&M of the facilities is whether FCTWB has an

appropriate O&M manual or not.

Any O&M manuals of pipeline facilities and NRW didn't exist in FCTWB including area offices, so O&M of those facilities has been taken based on experience of FCTWB's staff. However, the Project prepared the dedicated operation manuals for NRW reduction activities for area office managers & assistant areas managers, and working-level staff respectively.

c) Distribution Network Management

'Distribution network management' is composed of three items selected in Utility Basic Checklist; 'drawing of pipe facilities', 'zoning of distribution networks' and 'water pressure at customer meter points'. Each current status is as follows:

Drawing of Pipe Facilities

In the Pilot Project Area, the existing pipe networks were developed in database. However, most of maintenance staff members are currently engaged in regular maintenance without any drawings in the most of areas in Abuja, because drawings of pipe facilities exist partially in FCTWB and have not been organized, sorted out and shared properly. So, FCTWB has often encountered a difficulty in finding reliable data on diameter, material and exact location of existing pipelines, and consequently maintenance works of FCTWB is inefficient.

Zoning of Distribution Network

Water supply service area should be composed of some zones where distribution networks exist. In order to reduce NRW efficiently in the wide service areas, the areas seriously affected by NRW must be prioritized for taking measures NRW ratio, but most of the water supply service areas was not zoned (isolated) in terms of some aspects such as water flow, number of customers and topographical conditions, etc. The Project installed zonal flow meters at outlet of major tanks and upgraded billing system so that FCTWB measures/estimates system input volume and billed consumption for monitoring NRW in each zone. However, it is still not enough for FCTWB to calculate NRW ratio in each District Metered Area (DMA) so as to reduce NRW effectively.

Water Pressure at Customer Meter Points

It seems hardly water pressure at customer meter points is enough because of absence of monitoring by hydraulic analysis and leakage on pipelines. Ensuring optimum water pressure by hydraulic analysis and repair of leakages are some of the urgent actions. The Project developed the capacity of hydraulic analysis and procured water pressure loggers.

d) NRW Reduction

FCTWB has not learned actual NRW ratio of the entire water service areas of FCTWB, because of absence of bulk flow meters for measuring water production at water treatment plants and also absence of system for tallying all billed water consumption.

Prior to commencement of this Project, FCTWB did not implement NRW reduction systematically because they had neither any equipment such as bulk flow meters for District-Metered Area (DMA) nor measures on detection of invisible leakages and systematic detection of illegal connections. In addition, FCTWB lacks in experience of NRW reduction planning. Besides, it is not easy to measure water consumption accurately because more than 30% of all customers are defective water meters or missing.

The Project installed bulk flow meter at outlet of Lower Usuma Water Treatment Plant and upgraded billing system so that FCTWB measures/estimates system input volume and billed consumption for monitoring NRW throughout Abuja. However, it is still not enough for FCTWB to calculate NRW ratio in each District Metered Area (DMA) so as to reduce NRW effectively.

e) Organizational Development

Working regulations and base salary system exist, but incentive schemes such as bonus, award and promotion based on certain criteria other than overtime allowance don't exist in FCTWB. Since autonomous of FCTWB was approved in December 2017, it is expected that incentive schemes will be developed in near future.

Regarding training system as a part of human resources development of FCTWB, prior to commencement of the Project, there are no staff eligible as trainers and no in-house training courses. However, some staff of the area offices learned the method and enabled to train other staff through the practical training in this Project in terms of leakage detection.

FCTWB has still relied on non-periodical outside trainings and also international trainings. Therefore, it is a key challenge for FCTWB to train staff continuously and systematically.

								1.7		1.9
								2.2		

Note:

*1: Expected lifetime of house connections can be 25 years or more if using corrosion-resistant materials.

*2: Proper zoning and sub-zoning of distribution networks is a basic requirement for good pressure control, effective reduction of NRW, etc. The concept of zoning and sub-zoning is explained in (2) Supporting Figures and Table.

*3: Conversion table for different units of pressure is shown in (2) Supporting Figures and Table.

*4: Non-Revenue Water (NRW) ratio = $(1 - \text{annual water charged}) / (\text{annual water produced}) \times 100$

If all the bulk meters necessary for this calculation are not installed, estimation of this average NRW ratio can be carried out based on some data of NRW in some areas. The difference between NRW and UFW (Unaccounted for Water) is explained in (2) Supporting Figures and Table.

*5: Expected lifetime of customer meters is usually between 8 and 10 years, depending on their type and quality.

*6: Recommended calibration intervals for bulk flow meters are 5 years for wheel/mechanical type and 1 year for electromagnetic and ultrasonic types.

*7: The size of District-Metered Area (DMA) is recommended to be about 1,000 - 3,000 households.

*8: Training programs are required for engineers, technicians, administration staff, managers, etc.

1.2 Capacity Development Plan at Organizational Level

(1) Capacity Needs of FCTWB

10 capacity needs of FCTWB become targets of CD at organizational level in the Project. **Table 1-5** shows the needs and organizational responsibilities in the Project in terms of finance and logistics, to be taken by FCTWB with support from JICA.

Table 1-5: Capacity Needs and Organizational Responsibilities in the Project

No.	Small Category	Capacity Needs	Organizational Responsibilities in the Project
1	Condition of facilities	To improve of service connections	<ul style="list-style-type: none"> ● Procurement of test-meter and customer meters, and installation or replacement (as a part of NRW reduction) ● Repair of leakages (as a part of NRW reduction)
2	Overall	To enhance O&M of the facilities	<ul style="list-style-type: none"> ● Preparation of O&M manual on NRW reduction
3	Distribution network management	To make drawings of pipe facilities	<ul style="list-style-type: none"> ● Procurement of GIS software, GPS handset, PCs and plotter ● Training of GIS operation ● Improvement and update of database
4		To zone distribution networks	<ul style="list-style-type: none"> ● Creation of PMAs and SMAs ● Procurement and installation of valves for isolation and bulk flow meters for PMAs and SMAs
5		To ensure optimum pressure at customer meter points	<ul style="list-style-type: none"> ● Procurement of hydraulic analysis software ● Training of hydraulic analysis software operation ● Identification of pipelines to be replaced by larger or smaller ones and also service areas to be targeted by pressure control ● Repair of leakages (as a part of NRW reduction)
6	NRW reduction	To measure NRW ratio accurately and reduce it	<ul style="list-style-type: none"> ● Procurement and installation of ultrasonic flow meters at outlets of clear water tanks located in water treatment plants ● Modification of system for tallying water consumption (billed water) ● Procurement of vehicles, ultrasonic flow meter, data logger, leak detector, correlator, test-meter and customer meters, etc. ● Identification of NRW components such as detection of invisible leakages and illegal connections, meter functioning check, measurement of meter inaccuracy ● NRW reduction operations such as repair of leakages, disconnection or legalization of illegal connections, installation or replacement of customer meters. ● Preparation of NRW reduction strategic plan
7		To install customer meters	<ul style="list-style-type: none"> ● Procurement and installation or replacement of customer meters (as a part of NRW reduction)
8		To install bulk meters	<ul style="list-style-type: none"> ● Procurement and installation of bulk flow meters for PMAs and SMAs (as a part of distribution network management) ● Procurement and installation of ultrasonic flow meters at outlets of clear water tanks located in water treatment plants (as a part of NRW reduction) ● JICA Expert Team encourages FCTWB to facilitate installation of bulk flow meters proposed in existing study.
9	Organizational development	To ensure effective personnel management rules & regulations including incentives	<ul style="list-style-type: none"> ● JICA Expert Team encourages and supports FCTWB to adopt incentive schemes
10		To implement trainings periodically and systematically	<ul style="list-style-type: none"> ● Systematized lectures, trainings and OJTs on NRW reduction with consideration for sustainability ● Trainings abroad (in Japan) ● Periodical workshops/seminars for information sharing

(2) Principles and Capacity Development Plan at Organizational Level

1) Principles

The Project sets principles by small category as follows:

a) Condition of Facilities

Well-functioning customer meters should be installed so that FCTWB can measure water consumption accurately and reduce NRW at customer meters and along service pipelines.

b) Overall

The Project assists in NRW reduction operations and preparation of their manuals in order for concerned staff members to carry on NRW reduction sustainably even after the Project terminates.

c) Distribution Network Management

The Project contributes to development of database by using GIS to improve drawings of pipe facilities as a fundamental tool for distribution network management and eventually NRW reduction.

In order to reduce NRW promptly and effectively and monitor it, zoning of distribution networks is a solution in consideration of water flow, service population and topographic conditions. The Project assists in creating Pilot Metering Area (PMA) and Sub-Metering Area (SMA), which are zoned service areas for NRW reduction operations.

Repair of leakages as a part of NRW reduction can contribute to an improvement of water pressure at customer meter points.

d) NRW Reduction

Through various trainings and utilization of equipment to be procured under the Project, JICA supports FCTWB in NRW reduction, particularly measuring water production from water treatment plants, tallying water consumption, detecting invisible leakages and illegal connections, analyzing collected data and preparing NRW reduction strategic plan in consideration of properly-phasing and sustainability.

It is essential that the Project verifies methods for calculating NRW ratio and establishes optimum calculation model and workflow for IWA water balance in order to set up goal of NRW reduction through steady improvement in accuracy of NRW ratio and components. It is also a matter of importance to appoint staff members properly to deal with unforeseen circumstances such as transfer and turning over of staffs during the project implementation period.

e) Organizational Development

It is advisable to make FCTWB autonomous as soon as possible. During the Project, JICA encourages FCTWB to take ownership of the Project and to adopt incentive schemes, such as performance-based personnel evaluation system, so as to enhance motivation of the staff members.

The Project considers systematic manners of information sharing among staff members so that

knowledge and experiences obtained through on-the-job trainings (OJT) and trainings abroad can be shared properly. Also, the Project aims at training of trainers-to-be as well as common staff members for sustainability and future expansion of NRW reduction into other Area Offices.

2) Capacity Development Plan at Organizational Level

Based on the above capacity needs and principles, the Project prepared Capacity Development (CD) Plan of FCTWB during project implementation (see **Table 1-7**). The goal of achievement shown in the table conforms to the Utility Basic Checklist in principle, but their contexts were slightly modified according to situation of FCTWB, current water supply services and scope of the Project.

(3) Results of Capacity Development at Organizational Level

As shown in **Table 1-3** and **Table 1-7**, the following **Table 1-6** shows the results of capacity development at organizational level, by comparison among baseline level, the target level by CD and actual achieved level. The second interim assessment was scheduled originally, but not conducted and combined to the final assessment in consideration of delay of pilot project.

Table 1-6: Rate Comparison among Baseline, Target and Actual Achieved Level

Question Item	Baseline Level	Target Level by CD	Actual Achieved Level (Final)
Service connections	2	3	2
O&M of the facilities	1	4	2.5
Drawings of pipe facilities	1	3	2
Zoning of distribution networks	1	2	3
Water pressure at customer meter points	1	1	1.5
NRW ratio	1	2	2
Customer meters	2	3	2
Bulk meters	1	3	3
Effective personnel management rules and regulations including incentives	2	4	2.5
Implementation of training	1	4	2.5

Table 1-7 Capacity Development Plan at Organization Level

No.	Category	Baseline as of Dec-2014		Targets			Approaches to achieve the Targets			
		Capacity Needs	Current Status	Interim-1 as of Feb-2016 (*original schedule)	Interim-2 as of Feb-2017 (*not conducted)	Final as of Feb-2018 (*original schedule)	Rating Max. 5	Interim-1 Jan-2015 to Feb-2016 (*original schedule)	Interim-2 Mar-2016 to Feb-2017 (*not conducted)	Final Mar-2017 to Feb-2018 (*original schedule)
1	To improve condition of service connections ¹	80-94% of house connections are more than 25 years old.	80-94% of house connections are more than 25 years old.	80-94% of house connections are more than 25 years old.	80-94% of house connections are more than 25 years old.	60-70% of house connections are more than 25 years old. 2 Capacity Assessment and Capacity Development Plan at Individual Level

2.1 Capacity Assessment at Individual Level

(1) CA Methods

The Project applies the CA methods such as interactive interview, questionnaire, mini-test and practical test.

(2) Members assessed (Assessee)

The Project assessed both NRW Management Team members and NRW Action Team members (see **Table 2-1**).

Table 2-1: Members assessed (Original Assesses)

S/N	Name or Group	Position in FCTWB (Position in the Project)	CA Areas ^{*1}
NRW Management Team			
01MD	Engr. A. A. Nahuche (Mr.)	General Manager (Project Manager)	MD
02MC	Adis S. Muhammad (Mr.) *Transferred	HoD: Commerce (Technical Manager)	MC

Note: MD: NRW Management on Distribution
MC: NRW Management on Commerce
GIS&HA: GIS and Hydraulic Analysis

AD: NRW Action on Distribution
AC: NRW Action on Commerce

(3) CA Areas

The CA at individual level mainly on NRW reduction varies depending on the area of expertise in which he/she engages or the Department/Unit/Area Office to which he/she belongs. The above **Table 2-1** also shows the CA area for each member, which is grouped into the following five (5) areas:

- 1) NRW Management on Distribution (MD)
- 2) NRW Management on Commerce (MC)
- 3) GIS & Hydraulic Analysis (GIS&HA)
- 4) NRW Action on Distribution (AD)
- 5) NRW Action on Commerce (AC)

Each CA area consists of some assessment axes, which are rated between less than 0.5 as minimum/inexperience and 3.0 as maximum/target. Description of the rating is shown in **Table 2-2** and CA areas are described below:

Table 2-2: Description of Rating

Description	Rating
Excellent (outstanding understanding and initiative for in-house training)	3.0
Very good (considerable/significant understanding)	2.5 or more
Good (sufficient understanding)	2.0 or more
Average (satisfactory level)	1.5 or more
Fair (unsatisfactory level, but promise in the future improvement)	1.0 or more
Poor (unsatisfactory level)	0.5 or more
None (inexperience)	Less than 0.5

1) NRW Management on Distribution (MD)

The CA consisting of nine assessment axes as below was intended for a Technical Manager and NRW Management Team members from Distribution Department and NRW Action Team Leaders (Area Managers).

- Data Management Ability: to assemble reports and tally data from staff members and sections.
- Data Collection Ability: to grasp where data is and collect data.
- Data Utilization Ability: to analyse and utilize data.
- Water Balance: to understand components of NRW and calculate their ratio.
- Planning Ability: to understand requirement and priority for planning, and make plans.
- Sustainability: to understand budget allocation, manuals and review of plans.
- Basics of Leakage Detection Equipment: to understand equipment, their functions for planning.
- Basics of Leakage Detection Method: to understand methods, advantages and combinational use for planning, and estimate leakage volume.
- Mechanism and Characteristics of Leakage: to understand leakage properly and technically.

2) NRW Management on Commerce (MC)

The CA consisting of five assessment axes as below was intended for a Technical Manager and NRW Management Team members from Commerce Department.

- Data Management Ability: to assemble reports and tally data from staff members and sections.
- Data Collection Ability: to grasp where data is and collect data.
- Data Utilization Ability: to analyse and utilize data.
- Water Balance: to understand components of NRW and calculate their ratio.
- Sustainability: to understand budget allocation, manuals and review of plans.

3) GIS & Hydraulic Analysis (GIS&HA)

The CA consisting of eight assessment axes as below was intended for NRW Management Team members from Distribution Department.

- Basics of GIS: to understand advantages, data to be input and their utilization.
- Software Operation of GIS: to master how to operate GIS software practically.
- Data Adjustment of GIS: to find out data deficiency and update them.
- Evaluation of GIS: to evaluate outputs and improve them.
- Basics of HA: understand concept, purpose and data.
- Software Operation of HA: to master how to operate HA software practically.
- Data Adjustment of HA: to find out data deficiency and update them.
- Evaluation of HA: to evaluate outputs and improve them.

4) NRW Action on Distribution (AD)

The CA consisting of six assessment axes as below was intended for Leakage Detection Groups under NRW Action Team from Pilot Area Offices, in charge of physical/real losses.

- Knowledge of NRW and Leak: to understand basics of NRW and leak noise.
- NRW Reduction Equipment: to understand function and advantage of equipment.
- O&M of NRW Reduction Equipment: to master O&M of equipment.
- NRW Reduction Methodology: to understand methods, advantages and combinational use, and master them practically.
- Record: to record NRW reduction operations properly.
- Report: to report NRW reduction operations properly to management or semi-management.

5) NRW Action on Commerce (AC)

The CA consisting of six assessment axes as below was intended for Commerce Groups under NRW Action Team from Pilot Area Offices, in charge of unbilled authorized consumption and commercial/apparent losses including illegal connections and customer meter inaccuracy.

- Knowledge of NRW and Commercial Loss: to understand basics of NRW and commercial loss
- Unauthorized Consumption (Illegal Connection): to understand bad effect by illegal connection, and seek systematic detection of them, and disconnect/legalize them.
- Customer Meter Reading and Inaccuracy: to understand meter-related problems properly and master checking inaccuracy by equipment, and find meters to be installed/replaced.
- Customer List and Complaints: to understand which items to be listed and importance of uniform management, and how to deal with complaints.
- Record: to record NRW reduction operations properly.
- Report: to report NRW reduction operations properly to management or semi-management.

(4) Results of Capacity Assessment at Individual Level

In late November and early December 2014, the Project conducted CAs to set up baseline by interactive interview and questionnaire. Scoring criteria are not exactly same, particularly, scoring of management-positioned members is relatively rigorous because of his/her role and responsibility. The Project also conducted an interim assessment and the final assessment. The second interim assessment was scheduled originally, but not conducted and combined to the final assessment in consideration of delay of pilot project.

The CA result at individual level was summarized below by CA area and assessment axis, and also results of all CAs including the final assessment after CD (described below) are shown in **Figure 2-1**.

1) NRW Management on Distribution (MD)

The results differ in individuals. Data management and collection, water balance, planning and sustainability were rated at between Average and Good, while data utilization, leakage detection and its mechanism and characteristics were rated at less than Average because of inexperience. Their understanding should have been ensured.

2) NRW Management on Commerce (MC)

On the whole, most of assessment axes were rated at Good. Their understanding particularly of water balance should have been ensured.

3) GIS & Hydraulic Analysis (GIS&HA)

Except software operation of GIS targeting members belonging to GIS unit, which was rated at Average, most of assessment axes were rated at less than Fair or Poor. This result indicated necessity of supports to members for effective utilization GIS and practice of hydraulic analysis.

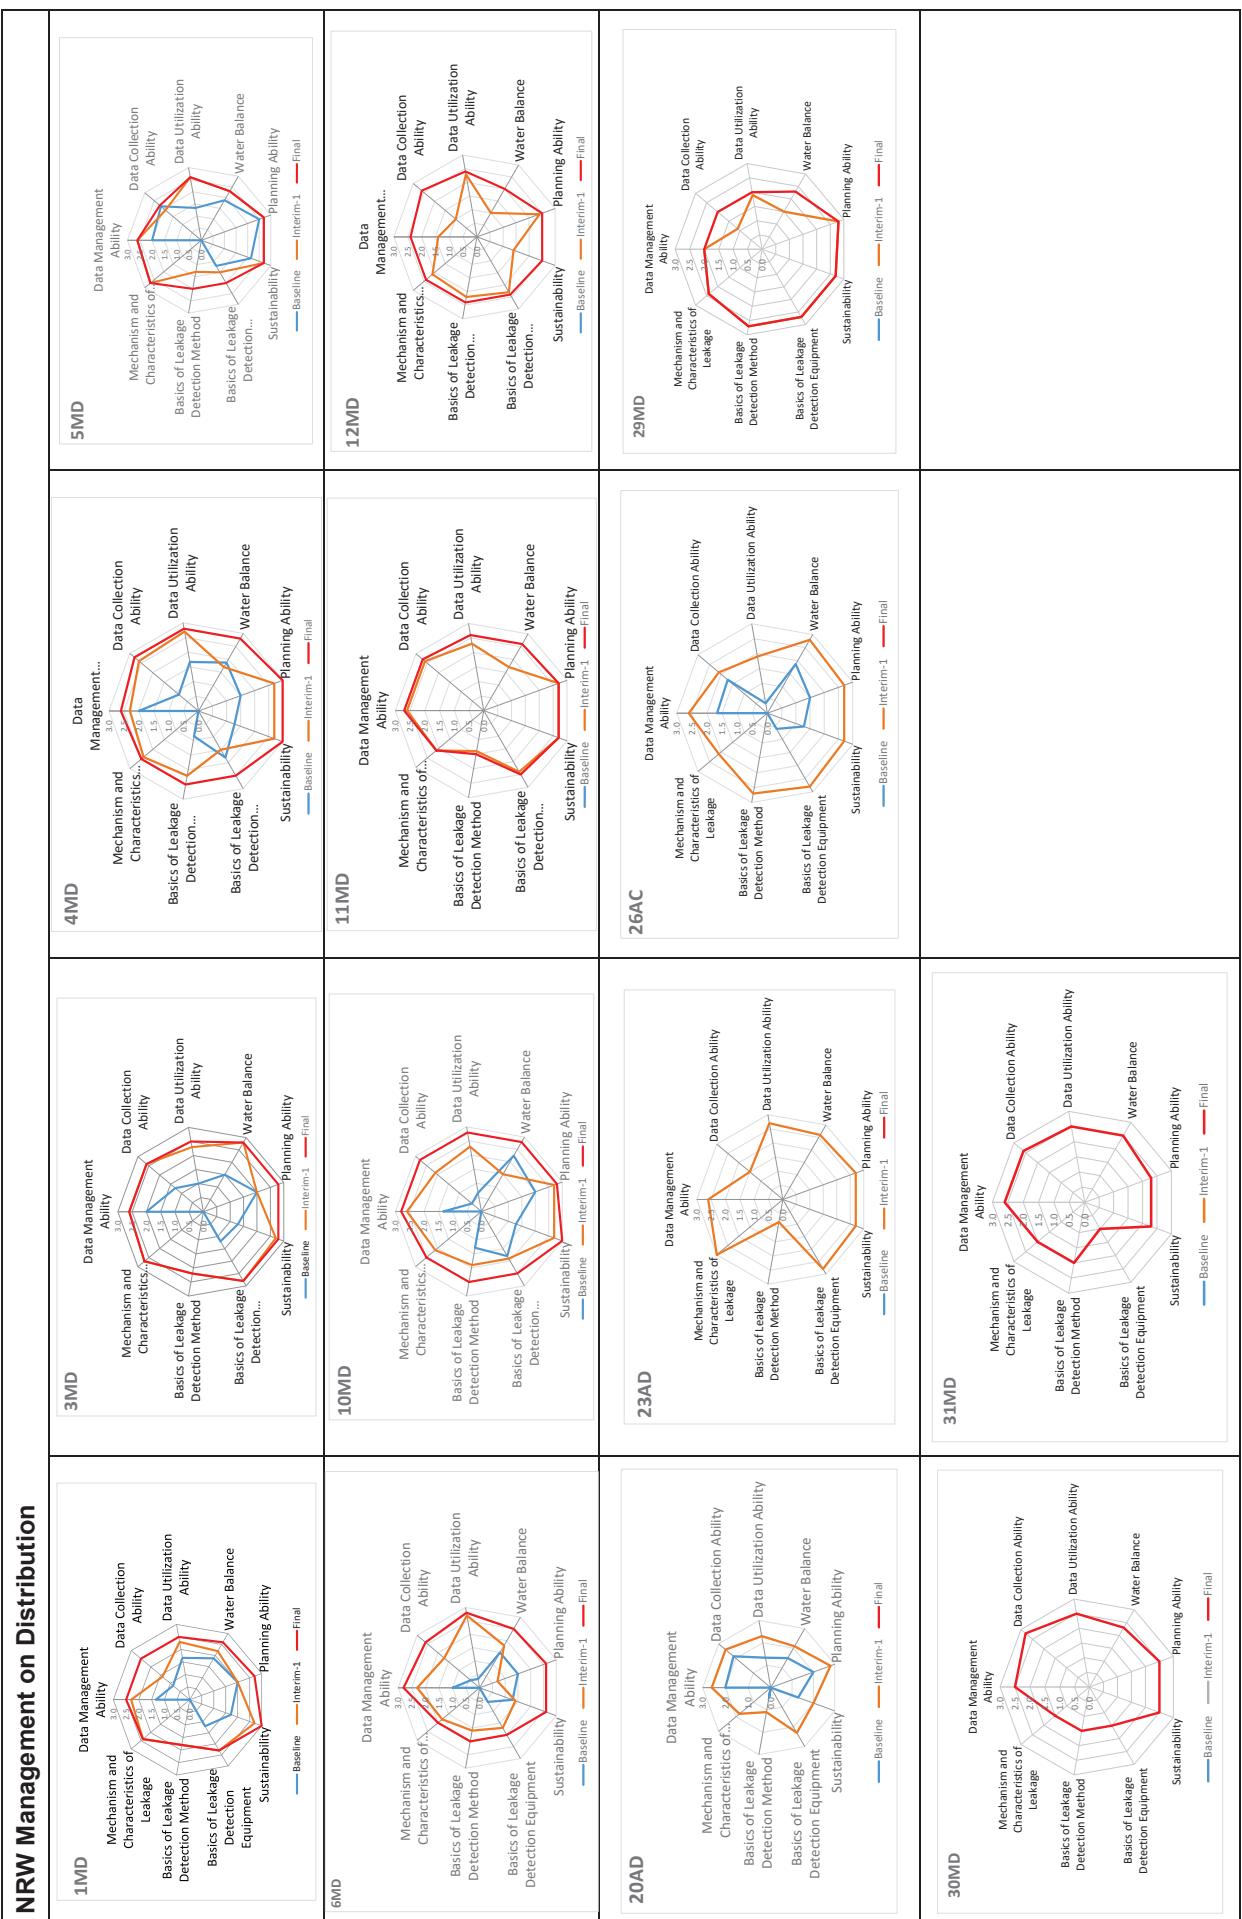

4) NRW Action on Distribution (AD)

All three groups have little ability of NRW reduction operations technically, particularly leakage detection, because of inexperience. This result indicated necessity of full supports to groups.

5) NRW Action on Commerce (AC)

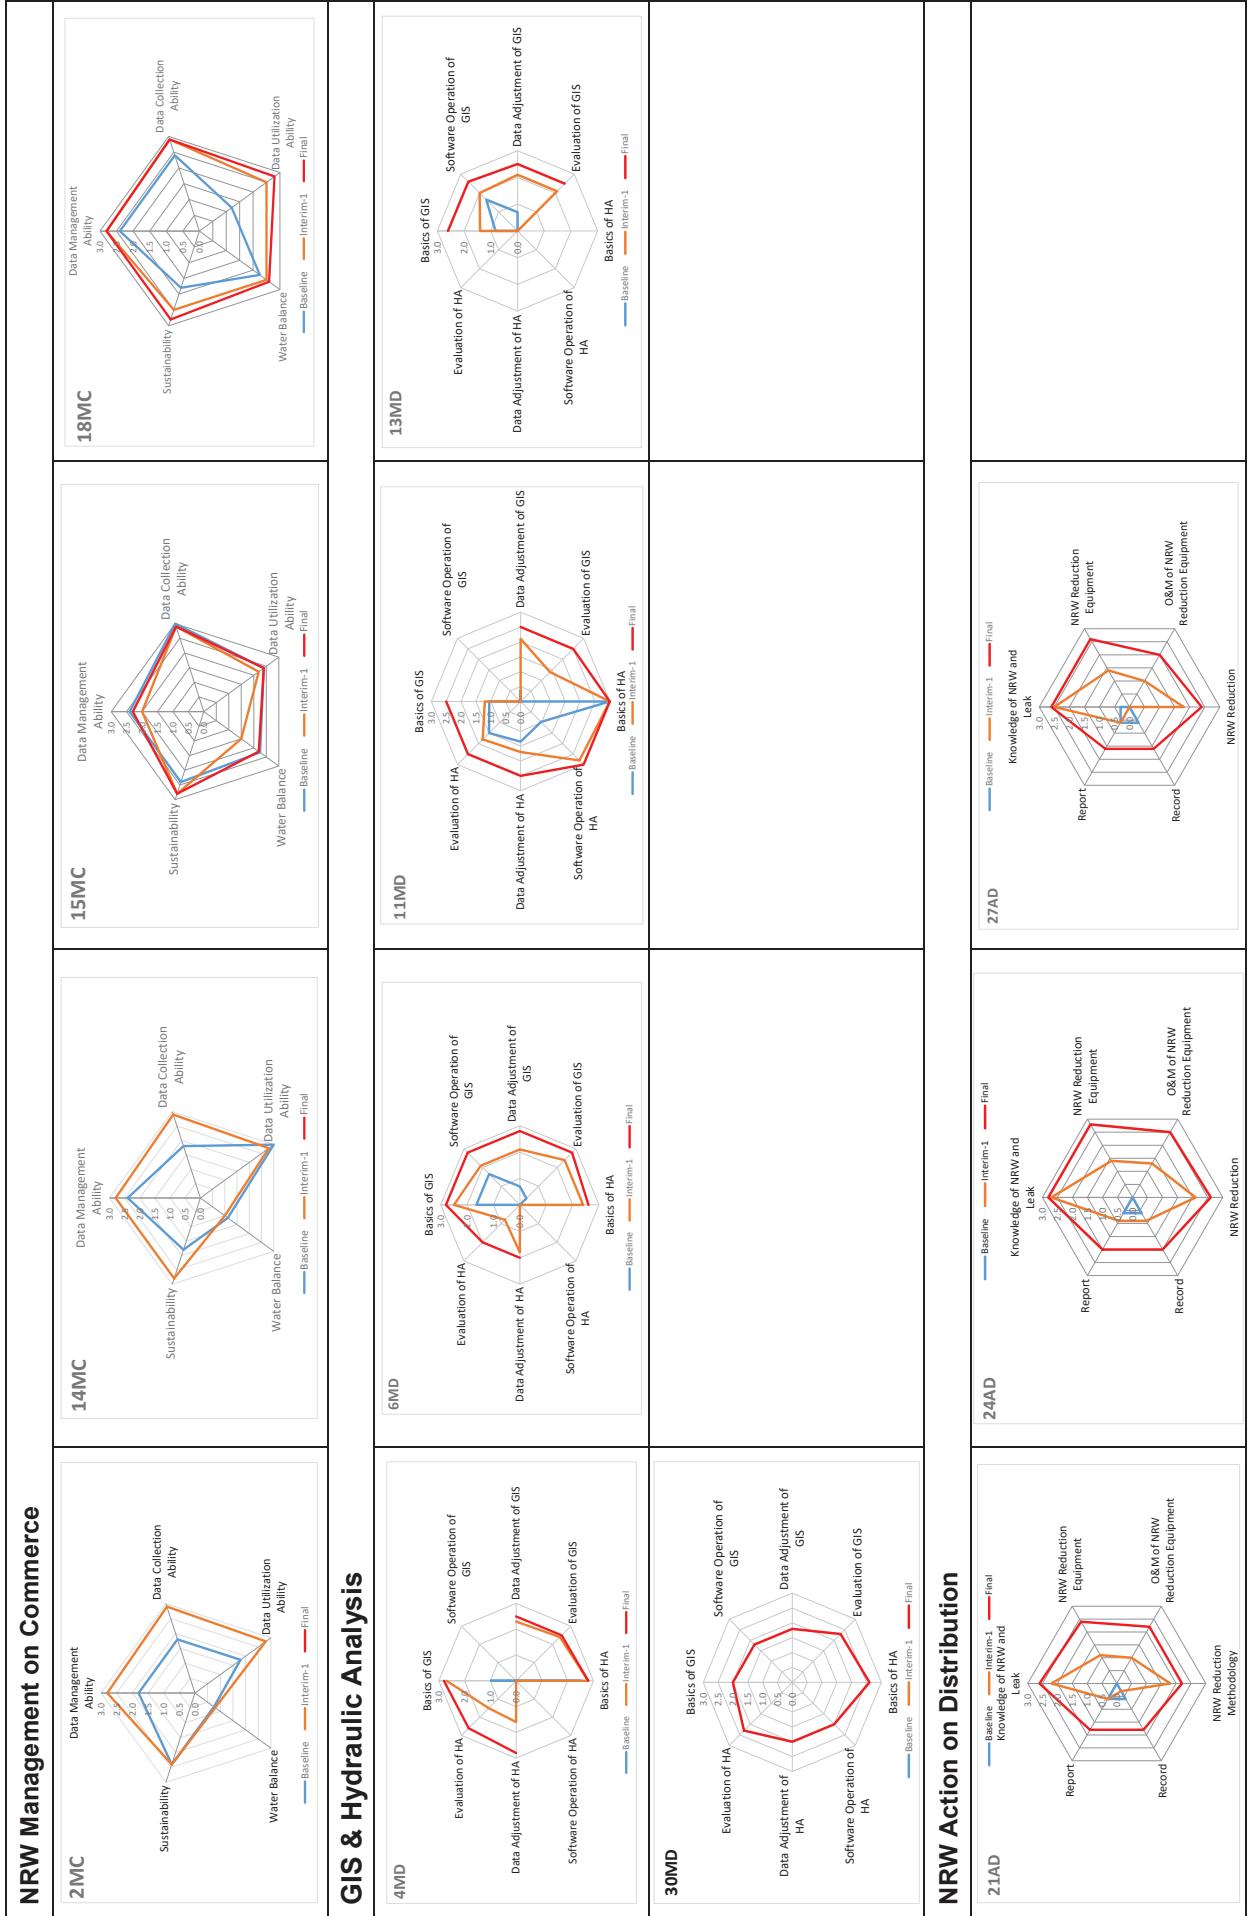

All three groups have limited ability of NRW reduction operations commercially because of no systematic way based on clear understanding of NRW reduction. This result indicates necessity of full supports to groups.

NRW Management on Distribution

2.2 Capacity Development Plan at Individual Level

(1) Capacity Development Plan at Individual Level

Based on the result of CAs at individual level, the Project prepared CD plans for individuals in consideration of his/her position, experience and intention through further communication.

The CD plans at individual level are based on the following basic concepts by CA area. Regardless of higher rate as baseline at this time, the Project makes sure of his/her full understanding through practical experience and encourages him/her to keep it or attain higher status with motivation.

1) NRW Management on Distribution (MD)

For distribution (technical) sector in the FCTWB headquarters, the Project aims primarily at development of their capacity of NRW reduction in order to supervise pilot projects and develop medium-term strategic plan for NRW reduction on their own initiative. Secondarily, the Project ensures their full understanding and knowledge of data management, collection and utilization, and sustainability to put NRW reduction on a firm basis.

2) NRW Management on Commerce (MC)

For commercial sector in the FCTWB headquarters, the Project aims primarily at development of their capacity of NRW reduction in order to supervise pilot projects and develop medium-term strategic plan for NRW reduction on their own initiative. Secondarily, the Project ensures their full understanding and knowledge of data management, collection and utilization, and sustainability to put NRW reduction on a firm basis.

3) GIS & Hydraulic Analysis (GIS&HA)

The Project ensures their capacity for developing GIS database and conducting hydraulic analysis, according to his/her role and responsibility in FCTWB. Off-JT by local organization / professional for GIS operation will be provided. In particular, the Project aims at leadership and acceleration in GIS and hydraulic analysis by the members belonging to Logistic Unit and GIS Unit.

4) NRW Action on Distribution (AD)

For distribution (technical) sector in Area Offices, the Project aims to develop their capacity of NRW reduction operation by using equipment against leakage, to make the operation sustainable, and then to expand their knowledge and techniques into other areas.

5) NRW Action on Commerce (AC)

For commercial sector in Area Offices, the Project aims to develop their capacity of NRW reduction operation against commercial loss such as illegal connections and defective meter, to make the operation sustainable, and then to expand their knowledge and techniques into other areas.

(2) Approaches to achieve Target Capacity

Approaches to achieve target capacity consist mainly of lectures, discussion, presentation, workshops /seminar, OJT and Off-JT including training in Japan for some members. Table 2-4 shows basic strategy of these approaches by CA area.

Table 2-4: Basic Strategy of Approaches to achieve Target Capacity

CA Area	Approach	Frequency/When	By whom
1) MD	Lectures	Periodically / as necessary	All Experts excluding GIS&HA Expert
	OJT	Routinely	Ditto
	Discussion	Technical meetings /as necessary	Members and Experts
	Presentation	At workshop/seminar, technical meetings	Members
2) MC	Lectures	Periodically / as necessary	All Experts excluding GIS&HA Expert
	OJT	Routinely	Ditto
	Discussion	Technical meetings /as necessary	Members and Experts
	Presentation	At workshop/seminar, technical meetings	Members
3) GIS& HA	Lectures	Periodically / as necessary	GIS&HA Expert
	OJT	Routinely	Ditto
	Off-JT (GIS)	TBD	Local company/professional
	Discussion	Technical meetings /as necessary	Members and Experts
	Presentation	At workshop/seminar, technical meetings	Members
4) AD	Lectures	Periodically / as necessary	Leakage Detection Technology Expert
	OJT	Routinely	Ditto
	Discussion	Technical meetings /as necessary	Members and Experts
	Presentation	At workshop/seminar, technical meetings	Members
5) AC	Lectures	Periodically / as necessary	Commercial Loss Expert
	OJT	Routinely	Ditto
	Discussion	Technical meetings /as necessary	Members and Experts
	Presentation	At workshop/seminar, technical meetings	Members
All Areas	Workshop/ Seminar	Annually	All members and Experts
	Technical Meeting	Monthly	Ditto
	Off-JT (Japan)	3 times for some members	JICA (for Management Team, Action Team and Working Group, respectively)

(3) Monitoring and Evaluation of Capacity Development

As stated in introduction of this document, CD was monitored by an interim and the final assessments. The Project tried to made assessments quantitatively by interview, mini-test, and practical test in consideration of his/her motivation, willingness and contribution.

3 Assessment of Institution, Policy and Society Level

(1) Assessment Method

In principle, institution, policy and society surrounding FCTWB is assessed by means of Detailed Checklist for Water Supply Entity, which are a part of “*Handbook for Capacity Assessment on Urban Water Supply Sector and Water Supply Entity in Developing Country (published by JICA)*”.

(2) Selection of Assessment Items

The Project selected the following two items from the Detailed Checklist in terms of aspects of institution, policy and society.

- External influence
- Law, regulation and guideline

(3) Result of Assessment and Approach by the Project

Table 3-1 shows the result of assessment of institution, policy and society level surrounding FCTWB and also approaches by the Project.

A variety of factors affects the Project positively and/or negatively as shown, but in particular, the following factors affect the Project strongly:

- FCTA has governed FCTWB politically, financially and administratively. The Project communicates closely with FCTA and FCTWB to ensure decision making and timely actions, to implement activities smoothly, to introduce incentives, and to make advantages of NRW reduction recognized for future implementation with budget allocation.
- International Development Partners (IDPs) are key players as contributors to urban water sector in Nigeria. The Project communicates closely with IDPs through information sharing, discussions and seminars for further assistance synergistically to FCTWB.
- Establishment of FCTWB as an autonomous organization brings major changes to a water utility. As long as water supply services generate profits, autonomy can contribute to improvement of facilities, O&M and work performance by incentives. The Project communicates closely with FCTA and FCTWB and provides assistance to the extent possible.

Table 3-1: Result of Assessment of Institution, Policy and Society Level surrounding FCTWB

Assessment Items	Content of Assessment	Current Status	Positive or Negative Factor	Approach by the Project
Influence to FCTWB by a board of directors	The board provides policy direction to itself, advice and guidance to FCTWB management, and also liaises with government.	- Decision by the board affects FCTWB positively and/or negatively.	- To communicate closely with FCTWB, and provide assistance to the extent possible.	
Management of Director	<ul style="list-style-type: none"> - Director of Economic Planning, Research and Statistics of FCTA have strong authority of decision making, etc. - Director of FCTWB is in charge of management with abundant experience. 	<ul style="list-style-type: none"> - Decision and management by Directors affect staff members positively and/or negatively. 	<ul style="list-style-type: none"> - To ensure smooth decision making and timely actions - To encourage them to motivate staff members for smooth implementation. 	
Influence to FCTWB by government	<ul style="list-style-type: none"> - FCTA has governed FCTWB in terms of budget allocation, subsidy, income, personnel affairs and promotion. (Counterpart Fund is supposed to be allocated to the Project.) - Federal Government of Nigeria compiles national budget and approve it. - Autonomy of FCTWB is dependent on FCTA and Federal Government of Nigeria. 	<ul style="list-style-type: none"> - Delay in budgetary process influences budget allocation and its disbursement negatively. - Personnel evaluation and promotion affect staff members positively and negatively. - There are little incentives to motivate staff members. 	<ul style="list-style-type: none"> - To communicate closely with FCTA and FCTWB. - To suggest introducing incentives. - To promote an understanding of advantage of NRW reduction for future implementation based on strategic plan to be prepared. - To contribute to profitability of FCTWB through NRW reduction. 	
Status of procurement procedures	- Equipment and materials in common use for O&M such as pipes, fittings and water meters are procured from local suppliers in Nigeria by quotation comparison or tender , according to the FCTWBs procurement procedures.	- A special kind of equipment and materials is not available in Nigeria, so FCTWB has to import it.		<ul style="list-style-type: none"> - To provide assistance in for example standardization to the extent possible.
Regulation for registering qualified contractor and suppliers	<ul style="list-style-type: none"> - In conformity with Public Procurement Act 2007, contractor and supplier are qualified. 	- Process of qualification, shortlisting and selection of contractor and supplier remains transparent.		<ul style="list-style-type: none"> - To provide assistance to the extent possible.

Law, Regulations and Guidelines				
Assessment Items	Content of Assessment	Current Status	Positive or Negative Factor	Approach by the Project
Contribution by international development partners (IDPs)	<ul style="list-style-type: none"> - Other than the Project, JICA has provided international trainings mainly in Japan for staff members of FCTWB, and will provide renewable source of energy by solar power system at Lower Usuma Water Treatment Plant. - IDPs such as World Bank, AfDB, USAID, AFD have contributed to urban water sector in Nigeria, but no ongoing contributions. 	<ul style="list-style-type: none"> - Capacity development by trainings in Japan affects positively motivation of staff members. - Solar power system will contribute to cost-cutting of fuel and then steady water supply. 	<ul style="list-style-type: none"> - To ensure more effective support through combination with other JICA's schemes. - To communicate closely with IDPs through information sharing, discussions and seminars for further assistance synergistically to FCTWB. 	
Cooperation with IDPs, other Water Utilities, etc.	Regulations	<ul style="list-style-type: none"> - At national level, Water Supply Act or equivalent doesn't exist, but National Water Policy and National Water Supply and Sanitation Policy exist. - At FCT level, FCTA to which FCTWB belongs is founded on the FCT Act. - FCTWB has an internal regulation. - A Bill of Act to establish the FCTWB as an autonomous organization has been presented to National Assembly. 	<ul style="list-style-type: none"> - Nonexistence of related acts works against raising the level of water supply services. - Establishment of FCTWB as an autonomous organization may affect positively and/or negatively. 	<ul style="list-style-type: none"> - To communicate closely with FCTA, FCTWB and FMWR, and provide assistance to the extent possible. - To provide advice about strengthening or revision of penalty for illegal connections.
Referencing of Water Supply Services Act Availability of copies of the updated Acts	Guidelines	<ul style="list-style-type: none"> - At national level, except Nigerian Standard for Drinking Water Quality, guidelines or equivalent of water supply including NRW reduction are not available. 	<ul style="list-style-type: none"> - Nonexistence of guidelines causes inefficiency of O&M, skill retention/diffusion and information sharing, then negatively affect sustainability. 	<ul style="list-style-type: none"> - To communicate closely with FCTWB and FMWR, and provide assistance to the extent possible. - To aim at model case of NRW reduction in Nigeria
		<ul style="list-style-type: none"> - As stated in the above 'Regulation and laws', Water Supply Act or equivalent doesn't exist. - A copy of A Bill of Act to establish the FCTWB as an autonomous organization is available. 	<ul style="list-style-type: none"> - Nonexistence of related acts works against raising the level of water supply services. 	<ul style="list-style-type: none"> - To communicate closely with FCTA, FCTWB and FMWR, and provide assistance to the extent possible.
