#### I. INSTRUCTIONS TO APPLICANTS FOR PREQUALIFICATION

- 1. Introduction
- 2. Prequalification Questionnaire
- 3. Evaluation of Application

#### I. INSTRUCTIONS TO APPLICANTS FOR PREQUALIFICATION

#### 1. Introduction

The Ministry of Agriculture and Fisheries of the Government of the Sultanate of Oman (hereinafter called the Ministry) intends to invite tenders in the near future from the prequalified firms, joint ventures or partnerships for the construction works of an earth dam and appurtenant facilities of the Wadi Jizzi Agricultural Development Project on the Batinah Coast in the north of the Sultanate of Oman.

The Contract is expected to be signed in the near future and it is anticipated that the Construction Works are to be completed in 17 months including preparation and take-over of the completed Works.

In view of the foregoing, the Ministry will receive applications for the Prequalification from firms, joint ventures or partnerships. The successful parties will be invited to a Tendering for the said Construction Works.

The information given in these documents are intended to define the scope of work and to give general information to parties applying for Prequalification.

#### 2. Prequalification Questionnaire

#### 2.1 Qualification of Applicants

The parties eligible for the prequalification and the tender are firms, joint ventures or partnerships experienced in similar types of civil works construction.

#### 2.2 Submission of Application

All FORMS and documents attached herewith under II.

PREQUALIFICATION QUESTIONNAIRE must be completed in English in accordance with these Prequalification Documents by the party interested in receiving invitation for tender. Information edited in any other language should be accompanied by its translation in English.

In the case of a partnership or a joint venture, these FORMS and documents shall be completed not only for the partnership or joint venture itself but also separately for each individual partner or firm, and all of them shall be put in one sealed envelope as one set. The envelope shall bear the marking "Original" or "Copy". In cases of discrepancies between the "Original" and the "Copy", the "Original" shall govern. One "Original" set and two sets of "Copy" are further to be put in a larger sealed envelope. All the envelopes (both large and small) shall bear the following inscriptions on the cover.

Ministry of Agriculture and Fisheries

Wadi Jizzi

Agricultural Development Project

PREQUALIFICATION

Name of Enterprise

Month, Year

The	envelop	e must	be	submi	tted	by ,	· /	hours	(Omani	standard
time	.),	th			_, 19	986	to the	followin	g addre	ess.

H.E. The Undersecretary
Ministry of Agriculture and Fisheries
P. O. Box 467, Muscat
Sultanate of Oman

Any applicant with late submission will not be considered unless the Ministry decides otherwise.

- 2.3 Detailed financial statements of the last three years certified by a CPA (certified public accountant) or a CA (chartered accountant) is to be attached to Form "A" "Identification and Financial Data Sheet". The percentage of foreign equity of the individual company or corporation or the joint venture should be given in this financial statement.
- 2.4 Erasures and other changes should be noted over the initials of the person signing the application.
- 2.5 A partnership or joint venture can be organized as a union consisting of one sponsor (sponsor firm) and no more than four partners (partner firms) joined together legally with specific proportional interest in the union. The partners (firms) would have to bid capacities totalled, at least equal to the estimated value of the project. All securities would be binding on the partnership or joint venture and each individual partner (firm).
- 2.6 Positive answers should be given to all questions in the Prequalification Questionnaire. If necessary or required, additional sheets shall be attached to give full and detailed information.
- 2.7 The Ministry will inform all the applicants who are selected under the terms of the prequalification to tender for the said contract.
- 2.8 Prequalified applicants will be invited to obtain the tender documents from the Ministry/Tender Board and submit tenders. They are, however, under no obligation to do so.
- 2.9 Documents submitted by prospective applicants in connection with the prequalification will be treated as confidential and will not be returned.

- 2.10 Prequalified applicants shall base their tenders exclusively on the design and specifications stated in the tender documents, and unless specifically requested no alternative proposals will be entertained.
- 2.11 The Contract will be interpreted in accordance with laws of the Sultanate of Oman. The language of the Contract Documents will be English and the contractor's senior supervisory staff shall be able to speak, read and write the English language fluently.

#### 3. Evaluation of Application

- 3.1 The evaluation of prequalification will be first made by the consultant (hereinafter called the Engineer) who will submit their report to the Ministry. The Ministry will then make the recommendations to the Tender Board for final decision.
- 3.2 It must be clearly understood that if discrepancies are found in the prequalification information submitted, the same will be considered unsatisfactory, and the applicant may be ineligible to tender. The Ministry may ask the applicant that the discrepancies be satisfactorily explained/resolved. The Ministry or the Engineer will not enter into lengthy correspondence with applicants relating to prequalification when seeking clarification.
- 3.3 The Ministry has the right to judge whether to accept or to reject the qualification of applicants based on the application submitted by applicants. The decision of the Ministry in this concern will be final.

#### 4. Miscellaneous

- 4.1 The Ministry assumes neither obligation nor responsibility whatsoever to compensate or indemnify the applicant for any expenses or losses which may be incurred by the applicant in the preparation of his application nor does the Ministry guarantee that an award will be made under these Prequalification Documents.
- 4.2 All recipients of the Prequalification Documents, whether they apply for Prequalification or not, shall treat the details of the Documents as private and confidential, and should return the whole Documents either completed or blank.
- 4.3 The applicant who finds himself uninterested in applying for Prequalification shall return all the Prequalification Documents to the Ministry within 5 days.
- 4.4 Any questions concerning the Prequalification Documents should be addressed to the Planning Unit, Ministry of Agriculture and Fisheries in writing with a copy sent to the Engineer.

# PREQUALIFICATION QUESTIONNAIRE FOR APPLICANTS INTERESTED IN SUBMITTING TENDERS FOR CONSTRUCTION OF THE WADI JIZZI AGRICULTURAL DEVELOPMENT PROJECT

#### CERTIFICATE

It is understood and agreed that the information submitted herewith is to be used by the Sultanate of Oman and Sanyu Consultants Inc. in determining, according to their sole judgment and discretion, the eligibility and qualification of prospective applicants, to perform work in connection with the Wadi Jizzi Agricultural Development Project.

In consideration of being permitted to submit his qualifications as a prospective applicant for review, the undersigned waives any claim against the Sultanate of Oman and Sanyu Consultants Inc. that might arise with respect to their decision as to a prospective applicant's qualification.

A prospective applicant will not be considered qualified unless he possesses reputation, ability, experience, qualified personnel, availability of equipment, and net current assets or working capital sufficient in the judgment of the Sultanate of Oman and Sanyu Consultants Inc. to render it possible that he can satisfactorily execute the contract, should it be awarded to him, and meet his obligations therein incurred.

The signing by the undersigned of this prequalification questionnaire guarantees, as evidenced by the sworn affidavit required herein, the truth and accuracy of all statements and of all answers to the interrogatories hereinafter made. Any untrue data, statements and answers given by the applicant to the Employer will cause the applicant to be disqualified.

The undersigned hereby authorizes and requests any public official, engineer, architect, surety company, bank, depository, material or equipment manufacturer or distributor or any other person, firm, or corporation to furnish any pertinent information, requested by the Sultanate of Oman and Sanyu Consultants Inc., deemed necessary to verify the statements made or information provided by the undersigned herein, or regarding the competence and general reputation of the prospective applicant.

The undersigned understands and agrees that further qualifying information may be requested, and agrees to furnish any such information at the request of the Sultanate of Oman and Sanyu Consultants Inc. Failure to complete this form adequately and/or the inclusion of any misleading statements may result in disqualification.

## III. PROJECT DESCRIPTION

- 1. Employer
- 2. Engineer
- 3. Location and Geographical Features
- 4. Meteorology and Hydrology
- 5. Topography
- 6. Geology
- 7. Socio-Economic Conditions
- 8. Scope of Work

#### III. PROJECT DESCRIPTION

#### 1. Employer

Employer means the Government of the Sultanate of Oman, and the legal successors in title to the Employer who will employ the Contractor. The address of the Employer shall, for the purpose of the Contract, be deemed to be:

Ministry of Agriculture and Fisheries P.O. Box 467, Muscat Sultanate of Oman

#### 2. Engineer

The Engineer as defined in the Contract will be;

Sanyu Consultants Inc.
Kyowa Bank Bldg.
Nishiki 2-15-22
Naka-ku, Nagoya, 460 Japan
Tel. 052-201-8761
Telex: J59901 SANYU

## 3. Location and Geographical Features

The Wadi Jizzi basin, the objective area intended for water resources development in this Project, is located in the north of the Batinah region, forming one of the large alluvial fans near Sohar. The Wadi Jizzi river, originating from Al-Hajar Al-Garbi and joining a number of affluents, traverses the North Batinah region extending to a length of about 75 km from west to east and stretching over the catchment area of about 1,300 sq.km within a range from latitudes 24°03' to 24°27' N and from longitudes 56°06' to 56°45' E, and empties into the Gulf of Oman at the point near Sohar.

Sohar is one of eleven Wilayat in the Batinah region, and Sohar town lies on the Batinah coast in northern Oman, some 220 km north-west of the capital, Muscat.

The four lane paved highway linking Muscat and Sohar through the Batinah coast is the only way to get to Sohar. The Qabail-Buraimi road branches off from the above highway and runs through the left border of the Wadi Jizzi alluvial fan. The dam site is accessible by following the Qabail-Buraimi road for 20 km and then following an earth road for 4 km after turning left from the main road.

## 4. Meteorology and Hydrology

Being located in the arid homoclimatic zone, the Project Area undergoes severe climate conditions. There are two distinct seasons in a year; the winter season and the summer season.

The winter season, from November to March, is characterized by a series of tropical depressions which bring heavy rainfalls in the catchment of rivers causing occasional high flood in them. April is a transitional period between winter and summer. The months from May to September are characterized by extreme continentality with hot and dry climate. In April weather becomes progressively warmer and drier. May and June are usually the hottest and driest with the maximum temperatures rising up to 45°C, and the relative humidity during these two months falls below 60% as a daily average.

October is also a transitional period with weather becoming increasingly cool. November and December becomes again cold with occasional rainfalls.

The annual rainfall changes markedly from season to season and from year to year amounting to 102 mm as an average in the past 11 years at Sohar, of which about 97% concentrates during the winter season and transitional periods from October to April. In other words, the summer

season from May to September accounts for only 3% of annual rainfall. The daily mean temperature varies from 32.6°C in July to 18.2°C in January with an annual average of 25.7°C at Sohar. Major climatic elements, in terms of monthly averages observed at Sohar, are summarized as shown in Table-1 and Figure-1.

The perennial flow in the river are observed in the upper reaches and tributaries where river deposits are shallow and hard rock material reaches as far as the river bed. Several floods a year are usually caused by storms not only making the plain area in a state of emergency but also wasting a considerable amount of surface water into the sea.

Areal rainfalls have been calculated by using Thiessen Polygon Method. The amount of average annual rainfall is as below;

#### Areal Average Rainfall

Basin and Area	Catchment	Areal Rain
	(sq.km)	(mm/yr)
1. Dam Site (Above Dam)	812	128
2. Residual (Below Dam)	471	110
3. River Mouth (Entire Basin)	1,283	121
4. At Sohar	•••	102

## 5. Topography

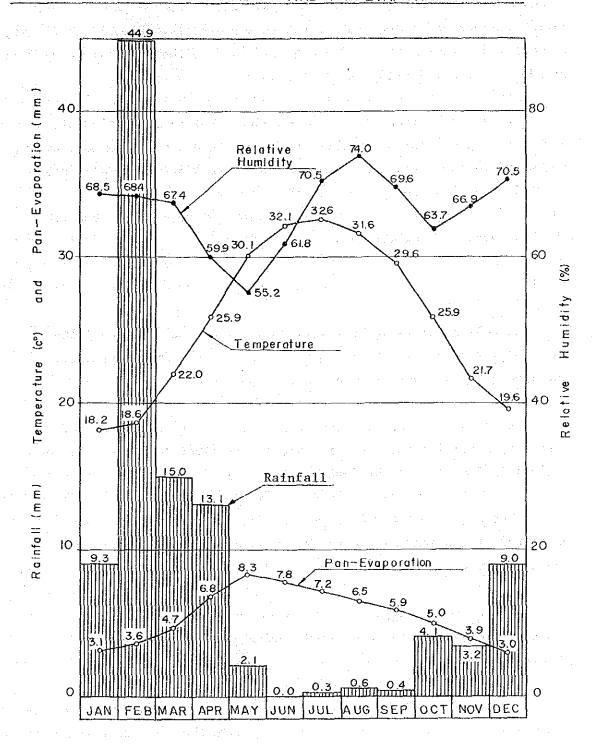

The Wadi Jizzi basin is roughly divided into three topographical classifications; lowlying area consisting of fan land and gravel plains, hill area consisting of river terrace, talus and the foot of the mountain, and central mountain mass consisting of ophiolite. The proposed dam site is located on the mid-stream of the Wadi Jizzi at the confluence of the Wadi Jizzi and the Wadi Awhin. The river bed at the dam site has a width of about 650 m and a gradient of 1/140.

The topographical features of the dam site are described hereunder in the order of the left bank, right bank and river beds.

FIGURE - 1 SEASONAL VARIATION OF RAINFALL, TEMPERATURE, RELATIVE HUMIDITY AND PAN-EVAPORATION

The left and the right banks are the river terraces consisting of sand and gravel, and rise on the dam axis with slope of about 20 degrees from the river bed. The crests, however, are flat at elevations ranging from EL 165 m to EL 170 m and extend widely. On the flats lie many deep gullies which are developing at high speed.

The recent river bed of the Wadi Jizzi, formed with flood plain deposits, expands abruptly wider at the confluence with the Wadi Awhin, the proposed dam site, and reaches about 10 km width or more in the coastal area. In the upstream portion, the river bed width varies with bulges of the mountain. Four distinct flow courses can be observed at the Wadi Jizzi around the dam.

### 6. Geology

The Wadi Jizzi basin is mainly composed of the Hawasina group of the sedimentary rocks, the metamorphic rocks, the Semail ophiolite of the igneous rocks, and the Quaternary deposits.

Geology of the dam site consists of bed rocks, upper terrace deposits, middle terrace deposits and recent river deposits. The main geological features of them are:

- \* <u>Bed rock</u> consists of serpentine, and is overlain by upper terrace deposits. It is generally hard except some parts, and impermeable layer. However, it does not come into contact with the dam embankment.
- \* Upper terrace deposits consist of well consolidated sand and gravel. Because of the consolidated condition the deposits are regarded as soft rock.

They are overlain by middle terrace deposits, and outcrops at both abutments that come into contact directly with the dam embankment. They are weathered and weakly cemented in the surface. Therefore the permeability is high at the abutments.

- \* Middle terrace deposits consist of consolidated sand and gravel. They are moderately soft, and are regarded as soft rock. They are overlain by recent river deposits. Because they have abundant opened joints and vesicles in lower part, the permeability is high.
- \* Recent river deposits spread over the Wadi channel, and consist of very loose sand and gravel. The average thickness is 3.1 m.

#### 7. Socio-Economic Conditions

Sohar is the largest town in the Batinah coast. The importance as an administrative center of the coastal populous agricultural region and also the headquarters of Wilaya Sohar has resulted in considerable interaction between Sohar and its hinterland.

The area under Wilaya Sohar administration extends about 35 km along the coastline from Majis to Khadaq with a width of about 50 km inland. Industry of Wilaya Sohar consists of agriculture, fisheries, manufacturing, mining and commerce.

There is no large manufacturing industry in Sohar. The industrial development is limited to workshops for carpenters, metal workers and car repairs. Small retail shops, some banks and offices, though limited, contribute to the local commercial development.

The national Sohar copper mining project is currently in operation at the upstream reach of the dam site in the Wadi Jizzi basin.

The town of Sohar is confined to a narrow coastal strip of about seven kilometers long and some 400 m wide from the beach. The government agencies including the police headquarters, hospital, school and power station, are located in the southeast part of the area.

There is one water supply station as a part of Sohar Urban Development Project which is promoted by the Ministry of Electricity and Water and the water supply to the area was commenced from beginning of 1984.

### 8. Scope of Work

The Project consists of construction works of the following facilities:

#### (1) Detention Dam

Location - on the Wadi Jizzi, Wilaya Sohar, Batinah Coast Reservoir Area - 1.25 sq.km

Reservoir Capacity - 5.4 MCM

Dam Body - Zone Fill Type

- Max. height ... 20.4 m
- Dam volume ... 629,000 cu.m

Main Spillway - Gateless overflow and chute type

- 4,700 cu.m/sec (Design flood discharge)
- 5.3 m (Design head of overflow)
- 184.2 m (Width of crest)

Emergency Spillway - Gateless, overflow and chute type

- 3,100 cu.m/sec (Design flood

discharge)

- 3.5 m (Design head of overflow)
  - 278.2 m (Width of crest)

## Conduit

Main Conduit - Steel pipe with accessories,

inside diameter 1,500 mm

Pipe length ... 114 m

Max. discharge ... 13 cu.m/sec

Emergency Conduit - Steel pipe with gate, etc,

inside diameter 1,500 mm,

Pipe length ... 66 m

Gate ...  $1,600 \times 1,600 \text{ mm}$ 

manual operation

Max. discharge ... 10.2 cu.m/sec

# (2) Dispersion Facilities

Location - 3.3 km downstream of the dam Structure - Fill protected with gabions Crest length - 243 m Crest height - 3.7 m

# (3) Observation Facilities

Observation Well

Total number of the Wells			5	Nos.
Diameter of Well	100	m m		
Depth of Well	70	m	-3	Nos.
	40	m	1	No.
	20	m	1	No.
Automatic water level gauge			1	No.
