# 1. BACKGROUND AND OBJECTIVES

Under the 3rd Five-year Development Plan (1980 $\sim$ 85) of the Kingdom of Saudi Arabia, the development of medical services is given a high priority and the Ministry of Health is endeavoring to expand medical facilities and to train medical personnel.

In recent years, the progress made in establishing general hospitals and implementing free medical care has resulted in a decreasing mortality rate and an increasing life span.

Infectious diseases, such as cholera, dysentry and tuberculosis, are decreasing, but adult diseases, such as cancer and circulatory organ diseases, are becoming problems to be addressed. The medical field of cancer is still in its infancy and cancer statistics, which is the basis for cancer research and care, is still inadequate.

In these background the Government of Saudi Arabia requested technical cooperation to the Japanese Government in August 1982, to establish the National Cancer Center in Jeddah. In response, the Japan International Cooperation Agency (JICA) sent series of missions to Saudi Arabia for discussions and exchange of views (a basic mode of operations for the joint venture), resulting in an agreement by both governments on the purposes, the Basic Concepts, and the Scope of Work of the Cancer Center. Basic Design works began immediately on the Cancer Center.

Under the progress of the Basic Design of the National Cancer Center, the Government of Saudi Arabia also decided to set up the plan for the establishment of the General Hospital within the same complex of the Cancer Center alongside, with joint-use facilities being provided to enable savings through centralization and sharing of various services, personnel, construction and equipment costs.

The National Cancer Center and the General Hospital will not only provide specialized diagnostic and therapeutic services but also such special functions as clinical research, education and training of medical staff, medical information system and public health services effectively using this high standard facility and will also enable to establish the focal point of medical service in the Middle East.

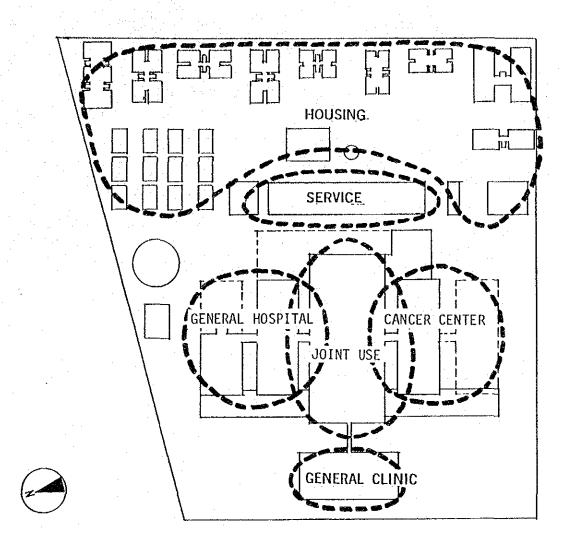

# 2. BASIC DESIGN PRINCIPLES

The design provides for a hospital community with efficient block plans for buildings and traffic circulations, with landscaping to harmonize with the surrounding and mitigate the harsh environmental elements. All necessary facilities for the operation of the Cancer Center and the General Hospital, including housing, parking, and other facilities for staff, patients and visitors will also be provided. So will overnight accomodations and community facilities such as shops, a supermarket, a bank, a library, a restaurant, a mosque, and recreational facilities.

The Cancer Center and the General Hospital will have their own facilities and equipment for their respective functions, but diagnostic, therapeutic and other departments lending themselves to common usage are planned for joint-use to avoid unnecessary duplication. Plans for future extensions in the research area of the Cancer Center and in the radiotherapy, radiodiagnosis, endoscopy and rehabilitation areas of the General Hospital are also included.

To provide for the special circumustances of the Complex, the locale, and the culture, careful considerations have been exercised to assure efficient and disaster-resistant structures, comfortable environment, efficient maintenance and operations, and facilities especially built and arranged in ways respectful of the religion and customs of Saudi Arabia.

(185.9 m<sup>2</sup>/bed)

# 4. MEDICAL EQUIPMENTS

The medical equipment for the proposed Cancer Center and its joint-use medical departments and the General Hospital will be selected to conform to the medical standards in cancer and general medical practices.

The medical equipment were selected with the following considerations:

- Equipment necessary for general purposes plus those necessary for higher level diagnosis, therapy and research;
- Future medical progress;
- Flexibility to use the equipment for extra detail application when required; and
- Equipment of the highest standard in the market; when the --standards of foreign and Japanese equipment were equivalent, the Japanese equipment was selected.

# 5. MANAGEMENT AND OPERATION

"Dual Structure" administrative organization of both HOSPITAL ADMINISTRATION and MEDICAL ADMINISTRATION is proposed and covers both the National Cancer Center and the General Hospital.

The Hospital Administration consists of four departments: the General Business, Services, Maintenance and the Computer Center. They will provide services in these areas to the combined institutions. The Medical Administration consists of eight departments as shown in the organizational chart. They will provide will provide professional and technical medical services to the combined institutions.

A management team consisting of the Executive Director and the top administrators of the Cancer Center and the General Hospital will be responsible for the overall budget-making and management control of the Cancer Center Complex. The Hospital Audit will oversee the medical expenditures, and the Public Relations Department will keep the public informed about health and medical services available.

Gradual introduction of computer toward the total hospital information system is proposed. And for smooth introduction of computer system, proposal is also made to set-up the promoting organization for this purpose in sufficiently earlier phase before hospital operation.

# 6. PROJECT SCHEDULE AND COST

(1) The minimum duration of Detailed Design Phase is estimated 10 months.

The construction period is estimated 36 months.

- (2) Construction Cost of Total Complex
