3.2 List of Existing Basic Bus Routes.....	2
3.3 List of Existing Bus Routes with Aggregation of the Same Routes.....	3
DATA BASE.....	4

1. INTRODUCTION

- Various public transport surveys were conducted during the duration of this study in order to come up with important data needed for planning and analysis.
- This document presents information on jeepney and bus routes gathered from those surveys. They are as follows:
 - A. Jeepney
 - A.1 Existing Individual Routes
 - A.2 Basic Routes
 - A.3 Jeepney Panel Route Names
 - B. Bus
 - B.1 Existing Individual Routes
 - B.2 Basic Routes
 - B.3 Aggregation of the Same Individual Routes

2. JEEPNEY

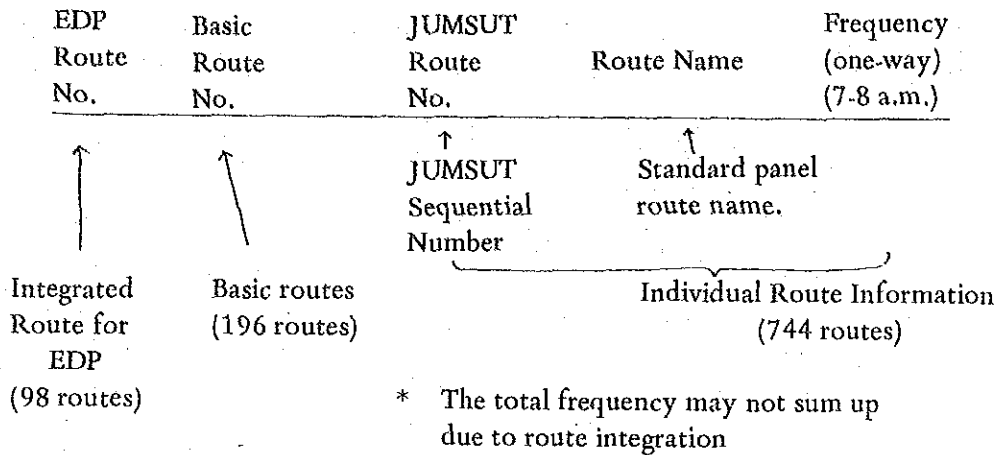

2.1 MASTER LIST OF EXISTING INDIVIDUAL JEEPNEY ROUTES

- This list has been compiled based on the results of the Route Reconnaissance Survey (December 3 to 7, 1983) and Jeepney Frequency Survey (December 13, 1982 to January 11, 1983) conducted by JUMSUT. It has been arranged alphabetically for easy reference.
- The original jeepney route list identified during the Reconnaissance Survey was modified considerably and updated using the results of the Frequency Survey. The total number of routes finally identified is 744.
- Since this list was made based on the panel routes, there are several routes which are actually the same but under different names. Therefore, this gives a complete and unedited version of all existing Metro Manila jeepney routes.

2.2 LIST OF EXISTING BASIC JEEPNEY ROUTES

- This list has been compiled using the results of the route integration process done by both computer and manually based on the JUMSUT 64-zone system. It has been divided into two groups as follows:
 - 1) Interzonal jeepney routes – include those which run between different zones.
 - 2) Intrazonal jeepney routes – include those which run within one zone of the 64-zone system
- All 744 jeepney routes obtained from the Route Reconnaissance and Frequency Surveys were initially integrated by computer into 361 routes. These routes were then integrated manually into 196 interzonal and 37 intrazonal basic routes. The interzonal routes were still further integrated into 98 EDP routes by comparing their individual route maps. Standard panel route names have been used with their corresponding one-way frequency (7-8 a.m.).

The format followed in compiling this list is as follows:

2.3 LIST OF JEEPNEY PANEL ROUTE NAMES

- From the master list of existing individual jeepney routes, a list of jeepney panel route names has been compiled. However, some panels route names do not often coincide with actual names of streets or places. Some are not always the same even if actual operations are exactly the same; while the others still have end terminals/turning points and vias which are not placed in order.

3. BUS

3.1 MASTER LIST OF EXISTING INDIVIDUAL BUS ROUTES

- This list has been compiled based on the results of the Bus Frequency Count Survey conducted by JUMSUT from January 12 to 14, 1983. It has been classified into seven groups by service type as follows:
 - 1) Ordinary Bus (ORB) 162
 - 2) Provincial Regular (PRB) 172
 - 3) Provincial Aircon (PAB) 6
 - 4) Minibus (MNB) 118
 - 5) Love Bus or Pag-ibig Bus (LBB) 28
 - 6) Limited Bus (LMB) 5
 - 7) Double Decker (DDB) 3
- Unlike jeepneys, bus routes are listed by bus corporation and service type. For this reason, the same route may appear more than once in the list. Each route has its corresponding route length and one-way frequency (7-8 a.m.). Most of the existing bus routes in and around Metro Manila are expected to have been covered during the survey.

3.2 LIST OF EXISTING BASIC BUS ROUTES

- As in the Basic Jeepney Route List, this list has been compiled using the results of the route integration process. However, out of a total of 494 bus routes obtained from the Frequency Survey, only 345 individual routes have been included (149 routes have been left out because they are being used by provincial buses whose destinations are beyond Bulacan in the North; beyond Cavite and Calamba, Laguna in the South).

- These routes were initially integrated by computer into 106. They were then further integrated manually into 94 basic routes; and still further into 41 EDP routes by comparing their individual route maps. Standard panel route names have also been used with their corresponding one-way frequency (7-8 a.m.).
- The list is divided into 5 groups by service type as follows:
 - 1) Ordinary (BOR) including two double deckers — 54
 - 2) Provincial Regular (BPR) — 5
 - 3) Limited Bus (BLM) — 4
 - 4) Love Bus (BLB) — 19
 - 5) Minibus (MNB) — 12

The format followed in compiling this list is as follows:

EDP Route No.	Basic Route No.	JUMSUT Sequential Route No.	Route Name	Frequency (one-way, 7-8 a.m.)
---------------	-----------------	-----------------------------	------------	-------------------------------

Integrated Routes for EDP (41 routes)	Basic Routes (94 routes in total)	JUMSUT Sequential Number	Standard Panel Route Name
---------------------------------------	-----------------------------------	--------------------------	---------------------------

Individual route Information
(345 routes in total)

- * exclusive provincial buses going outside Bulacan for the North and outside Cavite and a part of Laguna (up to Calamba) for the south
- ** The total frequency may not sum up due to route integration.

3.3 LIST OF EXISTING BUS ROUTES WITH AGGREGATION OF THE SAME ROUTES

- This list has been prepared for convenience to determine those routes which are the same but are operated by different corporations/companies. This list covers the following:
 - 1) Ordinary Bus (ORB)
 - 2) Provincial Bus (PRB)
 - 3) Minibus (MNB)
