TABLE OF CONTENTS

1. INTRODUCTION.....	1
2. TERMINALS	1
2.1 Jeepney.....	1
2.2 Bus	1
2.3 Tricycle.....	1
3. ROAD INFORMATION.....	2
3.1 Physical Structure	2
3.2 Traffic Data.....	2
3.3 Traffic Capacity	2
DATA BASE	3

1. INTRODUCTION

- This document lists important data on the following aspects:

A. Terminals

- A.1 Jeepney
- A.2 Bus
- A.3 Tricycle

B. Road Information

- B.1 Physical Structure
- B.2 Traffic Data
- B.3 Traffic Capacity

The information gathered were of vital help in the preparation of the proposed rerouting plan for Metro Manila.

2. TERMINALS

2.1. JEEPNEY

- Jeepney terminals have been defined as locations where jeepney routes start/end. Based on this concept, a survey on jeepney terminals was conducted. Considering the location and actual utilization of the terminals in Metro Manila, those which can be regarded as the same were classified together.
- The results of the survey showed that many of the terminals relate to other public transport modes such as tricycle, bus and PNR. Other important results gathered from the survey include the following:
 - a) Traffic situations on queuing
 - b) Total no. of frequency
 - c) No. of passengers boarding/alighting

2.2 BUS

- In general, buses have their own terminals. City buses normally use on-road spaces as passenger terminals while provincial buses use off-road spaces as terminals.
- The terminals surveyed were classified according to type: Ordinary, Provincial, Mini-bus, Love bus, Limited bus, and Double-decker. Other important features gathered from the survey are internodal function, total number of frequency (16 Hrs.), traffic situation, etc.

2.3 TRICYCLE

- On the basis of the tricycle terminal survey conducted, the following characteristics were determined:
 - a) Tricycle normally operates for approximately 16-20 hours between 6 a.m. to 10 p.m.
 - b) Tricycle makes 10-40 commercial trips/day per vehicle.
 - c) It carries two to four passengers at a time.
 - d) The service area of tricycles is usually residential.
- The other important aspects gathered with regards to tricycle terminal characteristics are terminal start-year, terminal fee, other modes relating, etc.

3. ROAD INFORMATION

3.1 PHYSICAL STRUCTURE

- The structure of the different roads in Metro Manila were determined considering their length, width, and pavement type/condition. The data gathered were used in the preparation of rerouting plans and other planning/analysis tasks.

3.2 TRAFFIC DATA

- These were compiled based on traffic count surveys. The observed traffic volume on major corridors was determined with due consideration of the physical road condition, such as the width of carriageway, number of lanes, etc.

The important data gathered included average daily traffic, peak hour traffic, etc.

3.3 TRAFFIC CAPACITY

- It has been determined that many road sections have reached their traffic capacities. Although traffic congestions can be attributed to various reasons such as illegal parking, lack of traffic signals, etc., it is considered that the fundamental point is an absolute lack of road space and capacity compared to its demand for the size of a city like Metro Manila.
- This section lists the important facets of the different roads/corridors in Metro Manila. It gives such information as carriageway width, estimated capacity, traffic (PCU), etc.

A. TERMINALS

A.1 Jeepney Terminal Data

JEEPNEY TERMINAL DATA

Area	No.	Combined Terminal Name	Term. Code	Individual Terminal Name	Land Use	Intermodal Function	Traffic Characteristics		Terminal Location (On/Off Road)	Traffic Situation (Opening or not)	No. of Routes	Total No. of Frequency (16 hrs.)	No. of Passengers
