

V Schematic view of the facilities (1) Attached compost plant (Bang Khun Tian)

(2) Incineration plant (Yanawa)

(3) Final disposal site

## Chapter 1 INTRODUCTION

- 1.1 Background and Progress of the Bangkok  
Solid Waste Management Study ..... 1-1
- 1.2 Outline of the Study ..... 1-2

## **TABLE OF CONTENTS**

# CONTENTS

	Page
Chapter 1. INTRODUCTION	
1.1 Background and Progress of the Bangkok Solid Waste Management Study .....	1-1
1.2 Outline of the Study .....	1-2
1.2.1 Goals of the study .....	1-2
1.2.2 Study work flow and time schedule .....	1-3
1.2.3 Organizations relating to the Bangkok Solid Waste Management Study .....	1-5
Chapter 2. VOLUME AND PROPERTIES OF SOLID WASTE	
2.1 Present State of Solid Waste Generation Volume and Composition .....	2-1
2.1.1 Collected volume of solid waste .....	2-1
2.1.2 Solid waste generation unit .....	2-1
2.1.3 Solid waste collection volume by generation source .....	2-1
2.1.4 Solid waste generation volume .....	2-6
2.1.5 Solid waste properties .....	2-8
2.1.6 Fluctuation of solid waste generation volume and change of its composition .....	2-11
2.2 Forecast of the Future Solid Waste Generation Volume .....	2-14
2.2.1 Forecast of the future solid waste generation volume in the city .....	2-14
2.2.2 Solid waste generation volume by district and by zone ....	2-19
2.2.3 Collection and disposal plan .....	2-19
2.2.4 Forecast of the future market waste volume .....	2-24
2.3 Forecast of the Future Solid Waste Properties .....	2-25
2.3.1 Forecast of the future solid waste physical composition (dry basis) .....	2-25
2.3.2 Forecast of physical composition (wet basis), moisture content and bulk density .....	2-27
2.3.3 Forecast of the future solid waste chemical composition ..	2-31
Chapter 3. RECOMMENDATION OF SHORT-TERM IMPROVEMENT PLAN	
3.1 Summary of Short-term Improvement Items .....	3-1
3.2 Procedure for Formulation of Short-term Improvement Plan ....	3-7

	<u>Page</u>
3.3 Short-term Improvement Plan .....	3-10
3.3.1 Collection system .....	3-10
3.3.2 Transport system .....	3-25
3.3.3 Compost plant .....	3-35
3.3.4 Final disposal system .....	3-52
3.3.5 Management system .....	3-61
3.3.6 Recommended solid waste treatment measures during floods .....	3-69
3.4 Fund Program for Short-term Improvement Plan .....	3-76

#### Chapter 4. SOLID WASTE MANAGEMENT SYSTEM MASTER PLAN ALTERNATIVES

4.1 Methodology .....	4-1
4.2 Collection and Transportation System .....	4-4
4.2.1 Technical study of collection and transportation .....	4-4
4.2.2 Appropriate plan of the collection and transport system ..	4-4
4.2.3 Number of vehicles and collection workers .....	4-10
4.2.4 Cost of collection and transport .....	4-13
4.3 Intermediate Treatment System .....	4-15
4.3.1 Outline .....	4-15
4.3.2 Intermediate treatment system Master Plan alternatives ...	4-15
4.3.3 Intermediate treatment cost .....	4-27
4.4 Final Disposal System .....	4-29
4.4.1 Foreword .....	4-29
4.4.2 Final disposal system alternatives .....	4-29
4.4.3 Cost required for establishment of final disposal system .....	4-43
4.5 Appropriate Master Plan Alternatives .....	4-47
4.5.1 Formation of solid waste management system alternatives ..	4-47
4.5.2 Planning the location of intermediate treatment and final disposal facilities .....	4-49
4.5.3 Collection and transport simulation .....	4-52
4.5.4 Selection of the appropriate Master Plan alternatives ....	4-72

#### Chapter 5. SOLID WASTE MANAGEMENT FACILITY PLAN AND THE COST ESTIMATION

5.1 Foreword .....	5-1
--------------------	-----

	<u>Page</u>
5.2 Solid Waste Treatment and Disposal Facility Plan .....	5-1
5.2.1 Incineration plant .....	5-1
5.2.2 New compost plant .....	5-8
5.2.3 Final disposal site .....	5-12
5.2.4 Collection trucks parking lot construction plan .....	5-17
5.2.5 The existing compost plant major repair plan .....	5-17
5.2.6 Equipment acquisition plan .....	5-18
5.2.7 Man power plan .....	5-18
5.3 Solid Waste Management Facilities Construction Plan .....	5-21
5.3.1 Intermediate treatment facilities construction plan .....	5-21
5.3.2 Final disposal site construction plan .....	5-22
5.4 Cost Estimation .....	5-26
5.4.1 Scope and method of the cost estimation .....	5-26
5.4.2 The facilities construction cost .....	5-27
5.4.3 Land acquisition cost .....	5-38
5.4.4 Operation and maintenance cost .....	5-38
5.4.5 Movable equipment acquisition cost .....	5-43
5.4.6 Recapitulation of the cost relating to the facilities ....	5-45
 Chapter 6. ECONOMIC AND FINANCIAL ANALYSES	
6.1 Preface .....	6-1
6.2 Economic Analysis .....	6-2
6.2.1 Methodology .....	6-2
6.2.2 Economic benefit .....	6-3
6.2.3 Economic cost .....	6-15
6.2.4 Economic analysis .....	6-20
6.3 Financial Analysis .....	6-28
6.3.1 Investment cost and financing plan .....	6-28
6.3.2 Revenue plan .....	6-34
6.3.3 Financial expense .....	6-41
6.3.4 Financial analysis .....	6-46
6.4 Comprehensive Evaluation of Economic and Financial Analyses .....	6-52

## Chapter 7. ENVIRONMENTAL IMPACT ASSESSMENT

7.1	Method of Environmental Impact Assessment .....	7-1
7.1.1	Objective of the study .....	7-1
7.1.2	Scope of the study .....	7-1
7.1.3	Procedure of the study .....	7-2
7.1.4	Definitions and terminology .....	7-3
7.2	Study of the Present Status .....	7-4
7.2.1	Socio-economic environment .....	7-4
7.2.2	Natural environment .....	7-6
7.2.3	Living environment .....	7-7
7.2.4	Features of the proposed sites .....	7-10
7.2.5	Present status of the existing compost plants .....	7-10
7.2.6	Laws and regulations relating to environment in Thailand .....	7-10
7.3	Screening of the Environmental Impact Elements, Environmental Factors and Environmental Indicators .....	7-12
7.3.1	Screening of the environmental impact elements .....	7-12
7.3.2	Screening of the environmental factors and environmental indicators .....	7-13
7.4	Forecast of the Environmental Impacts .....	7-14
7.4.1	Environmental factors to be used for forecast .....	7-14
7.4.2	Forecast of the environmental impacts .....	7-14
7.5	Assessment Criteria .....	7-25
7.6	Environmental Impact Assessment .....	7-27
7.6.1	Outline of assessment items and results .....	7-27
7.6.2	Environmental impact assessment .....	7-27
7.6.3	Results of environmental impact assessment .....	7-36
7.7	Comparison of the Appropriate Master Plan Alternatives .....	7-38
7.7.1	Method of comparison .....	7-38
7.7.2	Results of comparison .....	7-40

## Chapter 8. OPTIMUM MASTER PLAN AND ITS IMPLEMENTATION SCHEDULE

8.1	The Evaluation Procedure .....	8-1
8.2	Evaluation from Technological Viewpoint .....	8-5
8.2.1	Evaluation method .....	8-5

	<u>Page</u>
8.2.2 Result of the evaluation .....	8-5
8.3 Selection of the Optimum Master Plan .....	8-14
8.3.1 Method of overall evaluation .....	8-14
8.3.2 The optimum Master Plan .....	8-18
8.4 The Master Plan Implementation Schedule .....	8-22
8.5 Conclusion .....	8-28
Chapter 9. RECOMMENDATIONS FOR IMPLEMENTATION OF ADMINISTRATIVE ORGANIZATION AND SERVICES	
9.1 Foreword .....	9-1
9.2 Systematization of Laws and Regulations .....	9-1
9.2.1 The existing laws and regulations relating to solid waste management .....	9-1
9.2.2 Systematization of the juristic system .....	9-2
9.2.3 Constitution of the general provisions .....	9-3
9.2.4 Systematization of regulations relating to a solid waste management system .....	9-5
9.2.5 Systematization of regulations covering miscellaneous rules and punitive provisions .....	9-7
9.2.6 Systematization of BMA ordinances and regulations .....	9-8
9.3 Characteristics of Solid Waste Management Enterprises .....	9-9
9.3.1 Patterns of solid waste management .....	9-9
9.3.2 Direct management system .....	9-9
9.3.3 Semi-governmental management system .....	9-10
9.3.4 Commission basis management system .....	9-11
9.3.5 Permission basis management system .....	9-13
9.3.6 Combined management system .....	9-14
9.4 Improvement of Administrative Organization and Execution System .....	9-15
9.4.1 Administrative organizations relating to solid waste management in Thailand .....	9-15
9.4.2 BMA's organization and its solid waste management administration .....	9-17
9.4.3 The present state and the existing problems .....	9-21
9.4.4 Recommendations for solution of the problems .....	9-23
9.4.5 The aims of solid waste management .....	9-27

	<u>Page</u>
9.5 Solid Waste Collection Fee System .....	9-30
9.5.1 Analysis of the existing solid waste collection fee system .....	9-30
9.5.2 Problems involved in the existing collection fee system .....	9-32
9.5.3 Significance of solid waste collection fee .....	9-32
9.5.4 Reformation of solid waste collection fee system .....	9-33
9.6 Business Waste .....	9-35
9.6.1 The present state of business waste treatment and disposal .....	9-35
9.6.2 Estimation of business waste generation volume .....	9-36
9.6.3 The existing problems .....	9-37
9.6.4 Matters to be considered .....	9-37
9.7 Implementation Plan Formulation Method .....	9-41
9.7.1 Aim of the implementation plan formulation .....	9-41
9.7.2 Items to be taken into consideration for the implementation plan and matters to be noted in formulation of the plan .....	9-41
9.7.3 Procedure of formulation of the implementation plan .....	9-48
9.8 Establishment of Engineering Organization .....	9-51
Chapter 10. CONCLUSION .....	10-1

**LIST OF TABLES  
AND FIGURES**

## LIST OF TABLES

		Page
Chapter 2.		
Table 2.1	Solid waste disposal volume (1967-1981) .....	2-2
2.2	Collection volume .....	2-3
2.3	Generation unit .....	2-4
2.4	Collected solid waste volume in 1980 by source ....	2-5
2.5	Solid waste generation volume and the collection percentage of the generation volume (1979) .....	2-7
2.6	Physical composition .....	2-9
2.7	Chemical properties of solid waste .....	2-10
2.8 (1)	Solid waste properties in the rainy season and the dry season - Physical composition of the reception pit waste - .....	2-12
2.8 (2)	Solid waste properties in the rainy season and the dry season - Chemical composition of the reception pit waste - .....	2-13
2.9	GDP, GPP and population.....	2-17
2.10	Forecast of future population by district .....	2-18
2.11	Forecast of the future solid waste generation volume .....	2-19
2.12	Zone table .....	2-20
2.13	Solid waste generation volume by district and by zone .....	2-21
2.14	Solid waste collection and disposal plan .....	2-23
2.15	Solid waste collection volume by districts by zones (Year 2000) .....	2-24
2.16	Forecast of the future material consumption volume .....	2-27
2.17	Forecast of physical composition of solid waste .....	2-28
2.18	Forecast of future physical composition (on wet weight basis), moisture content and bulk density .....	2-30
2.19	Forecast of chemical properties .....	2-32

	Page
Chapter 3.	
Table 3.1	Required number of collection trucks and the purchase plan ..... 3-27
3.2	Number of spare trucks ..... 3-28
3.3	Operating hours of compost facilities ..... 3-25
3.4	Chemical components of BMA compost ..... 3-38
3.5	Chemical composition of city compost (11 samples from 8 facilities) and barnyard manure (6 samples) in Japan ..... 3-39
3.6	Result of exclusion test ..... 3-41
3.7	Compost size grading distribution (mean value) ..... 3-42
3.8	The present status of the final disposal site ..... 3-52
3.9	Field work equipment at disposal sites ..... 3-54
3.10	Solid waste collection during floods (flood condition in the year 1980) ..... 3-71
3.11	Fund program for short-term improvement plan ..... 3-77

Chapter 4.

Table 4.1	Outline and features of intermediate treatment methods ..... 4-16
4.2	Average rainfall and evaporation volumes in Bangkok (Average of the years from 1951 to 1975) ... 4-38
4.3	Operation and maintenance costs (Per ton of solid waste) ..... 4-46
4.4	Master Plan alternatives (20 cases) ..... 4-48
4.5	Land acquisition cost (1980) ..... 4-59
4.6	Composition of local and foreign currencies for the facilities ..... 4-60
4.7	Summary of the basis for computation ..... 4-62
4.8	The Master Plan alternatives (30 cases) ..... 4-64
4.9	Results of collection and transport simulation (Year 2000) ..... 4-65
4.10	Change of cost from adoption of transport transfer ..... 4-66
4.11	Total cost, taking revenue from resource recovery into account (Year 2000) ..... 4-70
4.12	Evaluation items ..... 4-74
4.13	N <sub>1</sub> Master Plan alternatives (15 cases) ..... 4-77

	Page
Table 4.14	Selection of prospective N <sub>2</sub> Master Plan alternatives ..... 4-78
4.15	Selection of the appropriate Master Plan alternatives ..... 4-79
4.16	Costs of the appropriate Master Plan alternatives ..... 4-83
4.17	Location and capacity of the facilities planned in the appropriate Master Plan alternatives ..... 4-84
 Chapter 5.	
Table 5.1	Outline of incineration plant facility plan ..... 5-3
5.2	Outline of new compost plant facility plan ..... 5-9
5.3	Capacity and area of final disposal site ..... 5-12
5.4	The planned landfill volume (fiscal 1983-2010) ..... 5-13
5.5	Main facilities of final disposal site ..... 5-13
5.6	Outline of parking lot construction plan ..... 5-17
5.7	Movable equipment acquisition plan ..... 5-19
5.8	Man power for collection and transportation work ..... 5-18
5.9	Man power for intermediate treatment and final disposal ..... 5-20
5.10	Incineration plant construction cost (Financial cost) ..... 5-28
5.11	Incineration plant construction cost (Economic cost) ..... 5-29
5.12	Contents of incineration plant construction cost by cost item by capacity (Financial cost) ..... 5-31
5.13	New compost plant construction cost ..... 5-32
5.14	Contents of new compost plant construction cost by cost item (Financial cost) ..... 5-33
5.15	Final disposal site construction cost (Financial cost) ..... 5-34
5.16	Final disposal site construction cost (Economic cost) ..... 5-35
5.17	Parking lot construction cost ..... 5-36
5.18	The existing compost plant major repair cost ..... 5-37
5.19	Land acquisition cost of the facilities construction site (Economic and Financial Costs) ... 5-39
5.20	Incineration plant operation and maintenance cost for five year periods ..... 5-38

	Page
Table 5.21	New compost plant operation and maintenance cost ..... 5-41
5.22	The existing compost plant operation and maintenance cost ..... 5-42
5.23	Summary of operation and maintenance cost (1983-2010) ..... 5-44
5.24	Acquisition cost of vehicles ..... 5-43
5.25	Solid waste collection trucks acquisition cost ..... 5-45
5.26	Total investment cost for each treatment/disposal facility ..... 5-46
5.27	Total investment cost for each treatment/disposal facility by the alternative cases ..... 5-47

Chapter 6.

Table 6.1	Average land cost, 1980 ..... 6-5
6.2	Solid waste collection and transport cost by alternative case (1983-2010 total) ..... 6-7
6.3	Solid waste collection trucks purchase cost, 1980 ..... 6-7
6.4	Total solid waste collection trucks purchase cost by alternative case ..... 6-8
6.5	Total savings in land acquisition cost at the landfill sites ..... 6-8
6.6	Total facilities construction cost at the final disposal sites by alternative case ..... 6-9
6.7	Total maintenance and operation cost at the final disposal sites by alternative case ..... 6-9
6.8	Electricity power for sale and the construction cost of an equivalent power plant ..... 6-10
6.9	Annual expenditure for the power plant operation by capacity ..... 6-11
6.10	Cost saving benefit by incineration plant ..... 6-11
6.11	Indirect benefit by alternative case ..... 6-14
6.12	Total direct benefit by alternative case (1983-2010) ..... 6-15
6.13	Total construction cost (1983-2010) ..... 6-16
6.14	Total land acquisition cost (1983-2010) ..... 6-17
6.15	Total operation and maintenance costs (1983-2010) .. 6-17
6.16	Solid waste collection, transport and truck purchase cost (1983-2010) ..... 6-18
6.17	Total economic cost (1983-2010) ..... 6-18

	Page
Table 6.18	Cost-benefit flow by case ..... 6-19
6.19	Thermal-type power plant construction cost by generating capacity ..... 6-22
6.20	Annual cost of electricity generation plant by capacity ..... 6-23
6.21	Annual benefit for electricity generation in the case of thermal-type power plant ..... 6-23
6.22	Benefit flow for sensitivity analysis ..... 6-24
6.23	Sensitivity analysis (B/C·NPV) ..... 6-26
6.24	Benefit-Cost ratio in without-project case ..... 6-27
6.25	Annual fixed investment costs ..... 6-30
6.26	Fixed investment costs (Case No. 9) ..... 6-32
6.27	Fixed investment costs (Case No. 13) ..... 6-32
6.28	Fixed investment costs (Case No. 19-(2))..... 6-33
6.29	Source of finance ..... 6-33
6.30	Working capital requirements ..... 6-34
6.31	Forecast of BMA revenue ..... 6-35
6.32	Cost and revenue of solid waste management ..... 6-36
6.33	Public utilities charges ..... 6-37
6.34	Forecast of solid waste collection fee revenues ..... 6-37
6.35	Estimated compost sales volume ..... 6-38
6.36	Compost sales ..... 6-38
6.37	Sales of recovered ferrous metal ..... 6-39
6.38	Forecast of total generation requirements ..... 6-40
6.39	Revenue from power supply ..... 6-40
6.40	Planned revenue in fiscal 2010 ..... 6-41
6.41	Planned annual revenue ..... 6-42
6.42	Management cost (fiscal 1983-2010) ..... 6-43
6.43	Financial project cost (fiscal 1983-2010) ..... 6-44
6.44	Cost accounting of newly established compost plants ..... 6-44
6.45	Cost accounting of incineration plants ..... 6-46
6.46	BMA's financing burden (fiscal 1983-2010) ..... 6-47
6.47	R/C and R-C ..... 6-48
6.48	Total landfill volume by case (1983-2010) ..... 6-52
6.49	Year of maximum landfill capacity ..... 6-53
6.50	Project cost (Financial) (1983-2010) ..... 6-54

## Chapter 7.

Table 7.1	Alternatives, their facilities and proposed sites ..	7-1
7.2	Study areas for assessment .....	7-2
7.3	Population characteristics .....	7-4
7.4	Employed persons in Bangkok by occupation (1978) ...	7-4
7.5	Land use in Bangkok (1979) .....	7-5
7.6	Number of registered vehicles (1978) .....	7-5
7.7	Traffic volume of main roads (1977) .....	7-5
7.8	Characteristics of groundwater .....	7-6
7.9	Climate in Bangkok .....	7-7
7.10	Air pollution in Bangkok .....	7-8
7.11	Water pollution in Bangkok .....	7-8
7.12	Noise in Bangkok .....	7-9
7.13	Soil contamination in Bangkok .....	7-9
7.14	Complaints concerning environment in Bangkok .....	7-9
7.15	Features of the proposed sites .....	7-11
7.16	Features of environmental impact elements .....	7-12
7.17	Environmental factors and environmental indicators .....	7-13
7.18	Environmental factors for quantitative forecast ....	7-14
7.19	Concentration of gas at stack outlet .....	7-16
7.20	Maximum concentration on the ground .....	7-16
7.21	Emission gas volume .....	7-17
7.22	Total emission of SO <sub>2</sub> gas .....	7-17
7.23	Noise of incineration equipment .....	7-18
7.24	Noise of incineration plant .....	7-18
7.25	Diffusion of rank odour .....	7-20
7.26	Data used for forecast of land subsidence .....	7-20
7.27	Subsidence .....	7-21
7.28	Conditions for forecast of water pollution .....	7-22
7.29	Water pollution of landfill sites .....	7-22
7.30	Air pollution by the existing compost plant .....	7-23
7.31	Air pollution by collection trucks .....	7-24
7.32	Noise of collection trucks .....	7-25
7.33	Criteria for environmental impact assessment .....	7-26
7.34	Assessment items .....	7-28

	Page
Table 7.35	Air pollution caused by incineration plant operation ..... 7-27
7.36	Air pollution caused by the existing compost plant operation ..... 7-29
7.37	Water pollution of landfill sites and plants ..... 7-29
7.38	Rank odour of landfill site ..... 7-30
7.39	Restriction on land use ..... 7-34
7.40	Compost usable area ..... 7-35
7.41	Environmental impact assessment matrix ..... 7-37
7.42	Form of alternatives comparison ..... 7-39
7.43	Environmental phenomena evaluation and element evaluation ..... 7-41
7.44	Evaluation of alternatives ..... 7-42
7.45	Comparison of the alternatives ..... 7-42

#### Chapter 8.

Table 8.1	List of evaluation items ..... 8-2
8.2	List of evaluation items for evaluation from technological viewpoint ..... 8-6
8.3	Evaluation items and evaluation criteria ..... 8-8
8.4	Summary of results of evaluation from technological viewpoint (Score table) ..... 8-13
8.5	Equations for scoring and adjustment of original score of evaluation items ..... 8-15
8.6	Adjusted scores of evaluation items ..... 8-15
8.7	Overall evaluation and project outline ..... 8-19
8.8	Outline of solid waste management system of optimum Master Plan (the year 2000) ..... 8-20
8.9	Construction and manpower schedule ..... 8-24
8.10	Summary of project costs ..... 8-26
8.11	Facilities construction cost and land acquisition cost on the basis of the forecast future prices ..... 8-27

#### Chapter 9.

Table 9.1	Method of contract for construction of incineration plant ..... 9-49
-----------	--

## LIST OF FIGURES

	Page
Chapter 1.	
Fig. 1.1	The study work flow ..... 1-4
1.2	The study schedule ..... 1-5
Chapter 2.	
Fig. 2.1	Work flow of the estimation of the future solid waste generation volume ..... 2-15
2.2	Work flow of the estimation of gross provincial products ..... 2-15
2.3	Distribution map of solid waste generation intensity ..... 2-22
2.4	Forecast of physical composition and chemical properties of solid waste ..... 2-26
Chapter 3.	
Fig. 3.1	Work flow for recommendation of short-term improvement plan ..... 3-9
3.2	Loading equipment to be attached to the 8 m <sup>3</sup> non-compactor truck ..... 3-30
3.3	Record of breakdown of equipment in Nong Khaem compost plant from March 1979 to August 1980 (18 months) ..... 3-37
3.4	Roofing facilities of the secondary fermentation yard (On-Nooch) ..... 3-45
3.5	Plan of the trommel installation ..... 3-46
3.6	On-Nooch landfill site short-term improvement plan ... 3-58
3.7	Nong Khaem landfill site short-term improvement plan . 3-59
3.8	Flood area ..... 3-70
3.9	Guide signs during flooding ..... 3-75
Chapter 4.	
Fig. 4.1	Process flow-chart: formulation of the Master Plan alternatives ..... 4-3
4.2	Flow for formulation of intermediate treatment system Master Plan alternatives ..... 4-17
4.3	Flow diagram of composting ..... 4-20

	Page
Fig. 4.4	Flow of the aerated compost plant facilities ..... 4-21
4.5	Aerated compost plant material balance ..... 4-21
4.6	Construction cost of an incineration plant ..... 4-28
4.7	Construction cost of a compost plant ..... 4-28
4.8	Work flow for establishment of final disposal system alternatives ..... 4-30
4.9	Model shape of embankment section (Average shape gradient 1:3) ..... 4-32
4.10	Model structure of leachate drainage (for new landfill site) ..... 4-34
4.11	Leachate pumping system ..... 4-34
4.12	Water balance model ..... 4-37
4.13	Leachate treatment process flow ..... 4-40
4.14	Evaluation of life expectancy of the existing landfill sites ..... 4-41
4.15	Landfill volume and unit area (h=15.0 m square site) ..... 4-44
4.16	Landfill volume and number of workers ..... 4-45
4.17	Work volume per worker ..... 4-45
4.18	Proposed location of the solid waste management facilities ..... 4-50
4.19	Simulation work flow to determine location ..... 4-55
4.20	Link and node for road network, Bangkok, 2000 ..... 4-58
4.21	Change of unit treatment and disposal cost ..... 4-71
4.22	The process of evaluation ..... 4-75

## Chapter 5.

Fig. 5.1	Facility plan formulation works flow ..... 5-2
5.2	Yannawa incineration plant ..... 5-5
5.3	Dusit incineration plant ..... 5-6
5.4	Sectional view of incineration plant ..... 5-7

## CHAPTER 1 INTRODUCTION

### 1.1 Background and Progress of the Bangkok Solid Waste Management Study

Bangkok city, with an approximate population of 5.1 million, is one of the most prominent cities in the Southeast Asian countries. It has had a long and close relation with Japan in its history. Economic and social development in Thailand has brought a concentration in population to its capital and, as a result, Bangkok city today suffers from miscellaneous urban problems. Above all, solid waste generated from this huge city every day makes it difficult to maintain public health and moderate the living environment. Based on the seriousness of the situation, the Bangkok Metropolitan Administration (BMA) has focused on solid waste management as one of the main priorities for establishment of urban infrastructure in Bangkok city.

Motivated by such background, the Government of Thailand made a request to the Government of Japan for technical cooperation in the study of solid waste management plan in Bangkok city. On acceptance of the request, the Japan International Cooperation Agency (JICA) organized the first preliminary survey team who completed an eight-day field survey in Bangkok city from 28th February, 1979 and formulated a brief implementation plan of the Study. Following the first preliminary survey, JICA organized the second preliminary survey team under the cooperation of Tokyo Metropolitan Government (TMG) and dispatched it to Bangkok during the period from August, 1979 to February, 1980. The second preliminary survey team conducted surveys of solid waste properties and outlined the existing solid waste management system in Bangkok city under supervision of JICA Supervisory Committee. Based on the results of the preliminary surveys, JICA organized the Study team who began the main study in Bangkok in June, 1980. The previous JICA Supervisory Committee was again given the role to supervise the main study. BMA, upon acceptance of the Inception Report from the Study team, organized the Follow-up Committee for cooperation and supervision of the Study, which is headed by the Deputy Governor and composed of 12 high-ranking officials. The Study team has completed 26 months of study and has now reached the stage to present the Final Report. We, the Study team, hereby would like to express our gratitude to the Follow-up Committee members for their hearty cooperation and assistance, and to the excellent counterparts who have made their full effort and collaborated with us for the successful conclusion of the Study.

## 1.2 Outline of the Study

### 1.2.1 Goals of the Study

BMA's policy for solid waste management has two targets. One is to realize a clean Bangkok and the other is to promote effective use of city compost, that is to say, promotion of resource recovery from urban solid waste.

The Study team has divided the BMA's policy into four goals at which the future solid waste management system in Bangkok city should aim.

(1) Total volume collection. This goal includes collection of all solid waste generated daily in the metropolitan area, except for properly disposed-of solid waste by the dischargers themselves. According to an estimation by the Study team, the solid waste collection rate in Bangkok city in 1979 was about 77%, and most of the rest (27%) was inferred to have been self-disposed and illegally abandoned.

The collection rate is intended to rise to 97% by the year 2000.

(2) Total volume treatment including sanitary landfill.

This goal aims at the sanitary treatment and disposal of all collected solid waste.

Presently, the collected solid waste other than the part being intermediately treated in compost plants is unsanitarily disposed of in no better way than merely being discarded.

(3) Establishment of a reliable, durable and flexible solid waste management system. This is an indispensable factor for realization of total volume collection and total volume treatment and disposal.

There are many cases in which a sanitary administration was compelled to incur unreasonable expenditures simply because an inadequate system had been adopted based upon poor technical judgement without sufficient experience and adequate knowledge.

Establishment of a reliable management system cannot be achieved only by introducing modern equipment and advanced facilities. It requires the training of highly educated engineers and officers for maintenance of the facilities. As a matter of course, sufficient budget has to be prepared for the management.

(4) Promotion of citizen collaboration. An ultimate goal of solid waste management is to provide the citizens with a beautiful and sanitary living environment. To this end, all possible attempts should be made to obtain the citizen collaboration through promotion of the citizen appreciation of sanitation and solid waste management.

The Study team has undertaken this Study aiming at the goals mentioned above.

A target year and objective areas of the project were fixed as below:

The long term Master Plan aims at the year 2000 as the target whereas the short-term improvement plan intends to improve the existing solid waste management system within the next five years (1982-1986). The scope of the project is limited to 24 districts of Bangkok Metropolis; suburban areas outside Bangkok are not included in the scope.

Concept of solid waste management adopted by the Study team is shown in Appendix 1.1.

Incidentally, Appendix 1.2 "History of solid waste management in Bangkok" was contributed by Mr. Somchitt Trivichien, the director of Technical Division of BOS.

### 1.2.2 Study work flow and time schedule

The Study consists of Phase I (Masterplan Study Phase) and Phase II (Feasibility Study Phase). Fig. 1.1 shows the Study work flow and titles of reports with dates of respective submission. The time schedule is shown in Fig. 1.2.

Phase I study involves the following study items:

- . Survey of the existing solid waste management system
- . Establishment of short term improvement plan to urgently improve the existing solid waste management system within a relatively short term (approximately five years)
- . Survey of the present solid waste composition and generation volume, and their forecast for the future
- . Technical survey concerning solid waste management system alternatives
- . Formulation of 30 cases of Master Plan alternatives and selection of 3 cases of appropriate Master Plan alternatives from among the 30 cases

In order to back up the above study, seven auxiliary field surveys were carried out through the Phase I study period and the initial part of the Phase II study period.

In the Phase II study, the facilities (equipment and man power) plans were set up with respect to each of the above said three appropriate Master Plan alternatives and, through overall evaluation made on the results of three kinds of evaluation such as economic and financial analyses, environmental impact assessment, and evaluation from technological viewpoint, an optimum Master Plan was established. At the same time, implementation schedule of the optimum Master Plan and recommendations for the administrative organization concerning implementation of the optimum Master Plan were formulated. The Study was commenced in June, 1980 and completed in September, 1982 with presentation of the Final Report. The total Study period was 28 months.

1.2.3 Organizations relating to the Bangkok Solid Waste Management Study

a) JICA Supervisory Committee

1. Dr. Shiro Kawaguchi      Chairman      Prof. Faculty of Engineering,  
Tokyo Metropolitan University
2. Mr. Akira Ide      Director, Plant Construction Div.  
Bureau of Public Cleansing,  
Tokyo Metropolitan Government (TMG)
3. Dr. Masaru Tanaka      Chief, Solid Waste Management  
Section,  
Department of Sanitary Engineering,  
The Institute of Public Health
4. Mr. Kazuyoshi Okazawa      Asst. Chief, Environmental service  
section,  
Ministry of Public Health
5. Mr. Masahiro Fujiwara      Asst. Chief, Environmental service  
section,  
Ministry of Public Health

b) The Study team

- |     |                        |                   |  |
|-----|------------------------|-------------------|--|
| 1.  | Mr. Jiro Yamai         | Team Leader       | Bureau of Public Cleansing, TMG                            |
| 2.  | Dr. Ryuji Tsukada      | Asst. Team Leader | Tokyo Metropolitan Environmental Service Corporation (TEC) |
| 3.  | Mr. Yasuyuki Matsumoto |                   | TMG  |
| 4.  | Mr. Yoshiaki Ishikawa  |                   | TMG  |
| 5.  | Mr. Tomoyuki Matsumura |                   | TEC (Commission basis)                                     |
| 6.  | Mr. Takashi Sasaki     |                   | TEC ( - do - )   |
| 7.  | Mr. Yoichi Hanada      |                   | TMG  |
| 8.  | Mr. Yasuo Nemoto       |                   | TMG  |
| 9.  | Mr. Masami Kondo       |                   | TEC (Commission basis)                                     |

23. Mr. Songchai Payomyaam	Engineer, Chief of Nong - Khaem Compost plant Control Sect. BOS
24. Mr. Wichian Punnatrakool	Engineer, On - Nooch Compost plant No. 2 Control Sect. BOS
25. Mr. Pramote Khemtis	Engineer, Chief of On - Nooch Repair & Maintenance Sect. BOS
26. Mr. Kanchit Kururattapun	Engineer, Chief of On - Nooch Compost plant No. 1 Control Sect. BOS
27. Mr. Chalong Suthapradit	Engineer, Chief of Ram - Intra Compost plant Control Sect. BOS

## **Chapter 2 VOLUME AND PROPERTIES OF SOLID WASTE**

- 2.1 Present State of Solid Waste Generation Volume  
and Composition ..... 2-1
- 2.2 Forecast of the Future Solid Waste  
Generation Volume ..... 2-14
- 2.3 Forecast of the Future Solid Waste Properties . 2-25

## CHAPTER 2 VOLUME AND PROPERTIES OF SOLID WASTE

### 2.1 Present State of Solid Waste Generation Volume and Composition

#### 2.1.1 Collected volume of solid waste

Solid waste generated in Bangkok metropolis is collected by Sanitation Sections of 24 districts and Garbage Collection Division, Bureau of Sanitation (hereinafter referred to as "GCD"). These offices collect not only solid waste discharged from small volume discharges such as general households and petty shop-attached residences but also business waste discharged from business establishments such as hotels, markets, offices and factories. Further, these offices collect road sweeping waste whereas Bureau of Sewage and Drainage collects solid waste in rivers and canals. The collected waste is transported to compost plants and land-fill sites for treatment and disposal. Table AP2.1 shows statistics of solid waste disposal volume. Based on it, volumes of collected waste and disposed-of waste were estimated by weight with reference to volume measuring method, missing value and so forth. The results obtained through such estimating process are shown in Table 2.1. Statistics of solid waste collected volume by districts and by GCD are shown in Table AP2.2 and Table AP2.3 respectively. The measuring method of collected solid waste differs by district. In consideration of this difference, collected volume of solid waste by these offices (District Sanitation Sections and GCD) and collected volume in districts are converted to estimated weight. The results thus obtained are shown in Table 2.2.

#### 2.1.2 Solid waste generation unit

The survey of the properties and generation of solid waste from households and some business establishments was made from 1979 to 1981 (hereinafter referred to as "The Survey of the Properties and Generation of Solid Waste"). The investigations focused on households (residences, petty shop-attached residences, etc.), markets, hotels, offices, large-scaled retailers and factories (textile factories, automobile assembly factories, and sawmills). As for hospitals, an interview survey was made. From the results of investigations, values for solid waste generation unit were obtained as shown in Table 2.3. In addition, interview surveys were made to other business offices than the above-mentioned in 1981. The values for industrial solid waste generation unit in these surveys are shown in Table AP2.4.

#### 2.1.3 Solid waste collection volume by generation source

The solid waste collection volume of 1,966 tons per day in fiscal year 1980 was distributed to each generation source — household, market, hotel, office, hospital, road, river, park, sunday-market, and so forth. Part of total collection volume that did not fall within the above-mentioned generation source is all summarized in "others", which includes restaurant, supermarket, department store, gay quarter, school, airport, factory and the like. The estimated results of solid waste collection volume are shown in Table 2.4. (Note: for the number of markets and

Table 2.1 Solid waste disposal volume  
(1967-1981)

Fiscal Year	Disposal Volume <sup>(1)</sup>			Collected Volume <sup>(2)</sup>	
	Excluding Tung Kru & Minburi		Including Tung Kru & Minburi (1,000 t)	In a year (1,000 t)	In a day <sup>(3)</sup> (t/d)
	Dump Site & Din Daeng Compost Plant (m <sup>3</sup> ) <sup>(4)</sup>	Compost Plant On-Nooch, Ram Intra & Nong Khaem (t)			
1967	1,248,812	-	417.1	438	
1968	1,313,501	-	437.4	459	
1969	1,230,378	-	408.3	429	
1970	1,341,352	-	443.7	466	
1971	1,269,048	-	418.5	439	
1972	1,250,543	-	411.1	432	
1973	1,408,782	-	461.6	485	
1974	1,320,873	-	431.4	453	
1975	1,221,237	-	397.5	417	1,140
1976	1,429,557	-	476.0	500	1,370
1977	1,624,120	-	527.5	554	1,520
1978	1,337,886	118,245	570.4	599	1,640
1979	824,056	310,673	608.0	638	1,750
1980	776,621	405,040	683.3	717	1,966
1981	386,005 <sup>t</sup>	285,322	697.9	737	2,008

Note: (1) Disposal volume by weight was determined by the Study team based upon the records at the processing and disposal sites in Bangkok and upon the estimated bulk density of the solid waste.

(2) Collected volume is estimated as 5% up of the disposal volume based on the recovery of materials at collection sites.

(3) Collected volume in a day was obtained by dividing the annual collected volume by 365 days.

(4) Except for 1981.

Table 2.2 Collection volume

(Unit : t/d)

District Name	Fiscal year					
	1979		1980		1981	
	per office	per district	per office	per district	per office	per district
Phra Nakhon	122.9	122.9	117.1	117.1	126.2	126.2

Grand Total	1,750.0	1,750.0	1,966.0	1,966.0	2,008.0	2,008.0

Note : The figures were determined by the study team on the basis of the data reported by each office and the bulk density of solid waste determined from analysis of the On-Nooch weighing record, that is, 0.292 t/m<sup>3</sup>.

Table 2.3 Generation unit

Type of Discharger	Generation Unit
1. Household*1	315 g/d.person (1.09 L/d.person)
(1) residential	296 g/d.person (1.01 L/d.person)
(2) commercial or industrial	343 g/d.person (1.17 L/d.person)
2. Market*2	17 L/d.store
3. Office	190 g/d.employee
4. Hotel	1.6 kg/d.room
5. Large retail*3 store	0.5 L/d.m <sup>2</sup>
6. Hospital	660 kg/d.hospital
7. Textile Factory	4 L/d.employee
8. Car Ass'y Factory	21 L/d.employee
9. Sawmill	12 L/d.employee

Estimated by the Study team on the basis of "Survey of Properties and Generation of Solid Waste".

Note: \*1 Household in this table means a family or a group of persons who live together in a small house, a flat, a row building, or in some cases, live and work in the same house or the same apartment.

\*2 Generation unit is expressed per store in a market.

\*3 Generation unit is expressed per unit floor area.

\*4 The number of samples examined were as follows:

Household : daily samples from about 180 households over a period of six weeks

Market : 10 samples from 9 markets

Office : 9 samples from 8 office buildings

Hotel : 11 samples from 9 hotels

Large retail store: 9 samples from 8 stores

Hospital : 18 hospitals from which the solid wastes are collected by Garbage Collection Division in 1980.

Textile factory : 8 samples from 8 factories

Car assembly factory : 8 samples from 5 factories

Sawmill : 3 samples from 3 sawmills

Table 2.4 Collected solid waste volume in 1980 by source

Source	Generation Unit	Size	Volume t/d
1. Household	315 g/d·person	4,176,000 *1 persons	1,315
2. Market	17 L/d·store (4.25 kg/d·store)	32,000 stores	135
3. Hotel	1.6 kg/d·room	12,700 rooms	20
4. Office	190 g/d·person	347,100 *2 persons	66
5. Hospital	660 kg/d·hospital	60 hospitals *3	40
6. Road			34 *4
7. Khlong			22.5 *5
8. Park		6 parks (1.24 km <sup>2</sup> )	2.5 *6
9. Sunday Market			4.3 *7
10. Others			326
Total			1,966

Estimated by the Study team

- Note: \*1 : The figure is determined from the population and the estimated collection percentage.  
 \*2 : The figure is adapted from the "Labor Force Survey".  
 \*3 : The figure shows the main hospitals.  
 \*4 : Estimated from the number of the sweepers and the machines (Roadsweeper).  
 \*5 : Estimated on the basis of the data in the BSD report.  
 \*6 : Estimated by using the road refuse amount.  
 \*7 : Estimated by the number of the refuse containers and the collection frequency.

solid waste collection volume by district, refer to Appendix 2.4). Most solid waste generated in slums is left uncollected. Its volume was estimated at approximately 52 tons per day by the Study team. (Appendix 2.5 shows process of estimation).

#### 2.1.4 Solid waste generation volume

Some part of solid waste generated in Bangkok city is left uncollected and thrown into vacant lots or into Khlongs or burnt at generation sources. Questionnaires were sent to Sanitation Sections in all districts to determine percentage of solid waste collection. The reply made by each office indicated that a good amount of generated waste was left uncollected in most districts. (refer to Appendix 2.6).

##### (1) Estimation of solid waste generation volume

The following three estimation methods of solid waste generation volume were prepared and the results by these methods were compared with the answers of the above-mentioned questionnaire in order to select the most accurate figures of solid waste generation volume.

- a. Method-1: Estimate of solid waste generation volume based on relation between land-use pattern and solid waste generation density.
- b. Method-2: Estimate the generation volume by multiplying solid waste generation unit by population of the areas.
- c. Method-3: Estimate the generation volume by adding solid waste generation volume in uncollected areas to present collection volume.

The details of the foregoing three methods are shown in Appendix 2.7. Judging from the preceding three methods and also from the replies to the foregoing questionnaires sent to the Sanitation Sections, solid waste generation volume in 1979 was estimated and the results are shown in Table 2.5.

##### (2) Generation unit

Generation unit per capita per day on collection volume basis was calculated by dividing collection volume and generation volume by the solid waste-collected population and the generating population respectively.

The solid waste-collected population was estimated from miscellaneous kinds of information such as the collection area map, land-use map, sub district boundary map, sub district population, and representative population density by landuse type (refer to Table AP2.10).

Solid waste generation population was estimated as the population living in urban areas.

In the agricultural area where population density is low, the generated solid waste can be disposed of by the generators themselves in

Table 2.5 Solid waste generation volume and the collection percentage of the generation volume (1979)

District Name	Generation Volume (t/d)	Collection Volume (t/d)	Collection Percentage of the generation volume (%)
Phra Nakhon	124.1	122.9	99.0
Pom Prap	86.7	85.8	99.0
Pathum Wan	94.1	93.2	99.0
Sam Phan Thawong	67.1	66.4	99.0
Bang Rak	79.1	78.3	99.0
Yannawa	165.4	110.7	66.9
Dusit	192.4	156.7	81.4
Phayathai	184.7	169.7	91.9
Huai Khwang	77.0	60.2	78.2
Phra Khanong	269.3	240.3	89.2
Bang Khen	138.5	107.9	77.9
Bang Kapi	100.0	69.4	69.4
Nong Chok	5.4	3.2	59.3
Minburi	30.0	23.9	79.7
Lat Krabang	10.8	8.2	75.9
Thonburi	115.4	69.3	60.0
Khlong San	92.3	58.5	63.4
Bangkok Noi	203.9	82.2	40.3
Bangkok Yai	57.7	32.4	56.2
Bang Khun Tian	52.3	31.2	59.7
Phasi Charoen	52.3	35.9	68.6
Rat Burana	39.2	34.5	88.0
Taling Chan	11.5	3.9	33.9
Nong Khaem	10.8	5.3	49.1
Total	2,260	1,750	77.4

Estimated by the Study team.

their own gardens, and this is a more practical way than developing collection services for door-to-door collection. The solid waste generation unit of Bangkok city is estimated at 470 grams per day per capita. (Note: for solid waste generation unit by district, refer to Table AP2.12).

#### 2.1.5 Solid waste properties

"Survey of the Properties and Generation of Solid Waste" was carried out over a period of two years in the following months: October, November, and December, 1979; October, November, and December, 1980; and June through September, 1981.

In the household waste survey, samples were taken from 150 to 180 households from residences, shop-attached residences, independent houses, flats, row buildings, etc., in order to examine various kinds of use of buildings and building structures in the selected households. In every month of the survey period, the samples were taken from the households every day in a week.

In the business waste composition survey, markets, hotels, offices, large-scale retailers, and factories (textile factories, automobile assemblers, sawmills) were studied and six surveys were performed in each business sector.

As a representative of total solid waste, incoming solid waste to On-Nooch compost plant (referred to as "reception pit waste") was taken and composition surveys were made on it 14 times during the rainy season and 18 times the dry season.

##### (1) Physical composition

Survey results of solid waste physical composition are shown in Table 2.6. Household waste contains largely vegetables, paper and plastics while market waste contains vegetables and plants. Paper forms a large part of office waste, large-store waste and hotel waste. Solid waste from textile factories contains considerable textile and waste from sawmills has sawdust and synthetic glue. Automobile assemblers' waste includes a large part of wasted packing materials (paper and plastics).

##### (2) Bulk density and moisture content

Table 2.7 shows survey results for bulk density and moisture content.

##### (3) Ultimate analysis, pH and calorific value

Combustibles and miscellaneous of the samples used in the physical composition analysis were further analyzed to chemical components. The results are shown in Table 2.7.

Solid waste containing a considerable volume of plastics shows higher rates of C (carbon) and H (hydrogen) contents. This tendency is conspicuous with solid waste samples from large stores and automobile assemblers.

Table 2.6 Physical composition

Component	Source of Generation						(Unit: Percent on dry weight basis)						Incoming Solid Waste	
	Household	Market	Large Store	Hotel	Office	Textile Factory	Automobile Factory	Sawmill	Percent on dry weight basis	Percent on wet weight basis				
1. Paper	24.7	9.8	59.0	45.1	63.6	5.7	42.0	0.0	18.0	18.3				
2. Textile	4.7	1.1	1.4	3.5	1.5	81.7	6.5	0.2	4.4	3.6				
3. Garbage	25.0	41.7	7.3	11.5	4.9	0.9	1.6	0.0	16.5	29.9				
4. Grass and Wood	7.6	29.7	2.6	5.1	3.5	1.6	4.2	86.5	19.6	23.2				
5. Plastics	11.2	4.7	19.8	9.8	10.1	5.2	18.2	1.4	10.3	7.5				
6. Synthetic Glue	-	-	-	-	-	-	-	11.6	-	-				
7. Rubber and Leather	1.2	0.4	0.6	0.9	0.7	0.5	5.5	0.0	2.7	1.4				
8. Ferrous Metal	5.0	1.2	2.0	5.7	4.1	3.0	10.1	0.2	4.5	2.0				
9. Non-Ferrous Metal	0.3	0.1	0.2	0.7	0.2	0.0	0.2	0.0	0.3	0.1				
10 Glass	5.5	0.9	1.7	7.1	4.2	0.0	0.4	0.0	5.5	2.4				
11. Bones, Stones and Ceramics	8.6	8.3	1.6	3.6	2.0	0.3	0.3	0.1	10.3	5.6				
12. Dry Cells	0.48	0.0	0.8	0.4	0.2	0.0	-	-	0.4	0.2				
13. Sand Paper	-	-	-	-	-	-	5.4	-	-	-				
14. Miscellaneous	5.9	2.1	3.0	6.6	5.0	1.1	5.6	0.0	7.5	5.8				

Note : The figures in the table were determined on the basis of the results of the Surveys of Properties and Generation of Solid Wastes in 1979 to 1981.

Household : Daily samples from about 180 households were compiled into one sample which was analyzed.  
 Total number of analysis samples were 30.  
 Market : 6 samples from 6 markets  
 Large store : 6 samples from 6 large stores  
 Hotel : 6 samples from 6 hotels  
 Factory : 2 samples from 6 factories of the same kind  
 Pit : 32 samples

Table 2.7 Chemical properties of solid waste

Category of solid waste	(A) Bulk density and total moisture content		(B) Ultimate analysis of combustible and miscellaneous (dry basis)										(C) Phosphorus and Potassium contents, and pH of combustibles and misc. (dry basis)			(D) Lower calorific value
	Bulk density (kg/L)	Total moisture content (wt%)	C (wt%)	H (wt%)	N (wt%)	O (wt%)	S (wt%)	Cl (wt%)	Ash (wt%)	P (wt%)	K (wt%)	pH (wt%)	(kcal/kg)			
Household waste	0.22	58.3	46.2	6.90	1.20	32.6	0.14	0.68	12.3	0.20	0.25	6.0	1,160			
Market waste	0.22	80.0	39.5	6.70	1.20	32.8	0.25	1.03	18.10	0.21	0.25	6.2	180			
Large store waste	0.09	38.1	52.4	8.43	0.30	30.8	0.13	0.85	7.10	0.06	0.16	5.8	2,800			
Hotel waste	0.15	44.6	42.8	6.90	0.43	33.9	0.19	0.66	15.11	0.09	0.23	6.4	1,790			
Office waste	0.07	26.9	44.0	7.13	0.35	39.4	0.12	0.75	8.30	0.05	0.20	6.2	2,670			
Factory waste Textile	0.12	23.6	50.9	6.92	0.18	37.4	0.21	0.24	4.16	0.04	0.16	7.2	3,230			
Automobile	0.07	21.6	52.0	8.62	0.58	28.4	0.15	0.64	9.60	0.03	0.13	6.3	3,270			
Sawmill	0.30	31.2	48.1	7.44	0.86	28.9	0.06	0.09	14.60	0.09	0.25	5.2	2,450			
Pit waste	0.29	57.1	44.2	6.68	1.02	27.5	0.18	0.69	19.73	0.21	0.34	6.2	1,130			

Note : The figures in the table are derived from the results of the Surveys of Properties and Generation of Solid Wastes made in 1979 to 1981.  
 Lower calorific values are of moist solid waste, measured in Bomb value.

The number of samples were as follows:

- Household : Daily samples from about 180 households were compiled into one sample, which was analyzed.  
 Total number of analysis samples were 30.
- Market : 6 samples from 6 markets
- Large store : 6 samples from 6 large stores
- Hotel : 6 samples from 6 hotels
- Factory : 2 samples from 6 factories of the same kind
- Pit : 32 samples for the column (A), 9 for column (B) and (D) and 6 for column (C)

Market waste was found to contain the largest volume of phosphorus and potassium.

The lower calorific value of the reception pit waste was measured as approximately 1,130 kcal/kg, which is a sufficient value for self-combustion. Considering the facts that the analysis result involves one case of 800 kcal/kg, however, some solid waste might require some additional fuel such as kerosene.

Market waste contains so much water that the lower calorific value is low. On the other hand, solid waste from large stores, offices and factories contains a lot of paper and dried combustibles, so that it has a larger calorific value.

#### 2.1.6 Fluctuation of solid waste generation volume and change of its composition

##### (1) Fluctuation of solid waste generation volume

###### i) Fluctuation by day

Fluctuation of household waste generation volume by day was investigated. The results (Table AP2.13) indicate that there is little difference in household waste generation volume between weekdays, however, there is ten to twenty percent increase in generation volume on Saturdays and Sundays.

###### ii) Fluctuation by month

Judging from monthly solid waste collection volume and difference in solid waste loading volume per collection truck, the ratio of the maximum collection volume per month to the average collection volume per month was calculated to be 1.09 (Refer to Appendix 2.9).

##### (2) Fluctuation of solid waste composition

A physical composition survey was made on the reception pit waste, which was assumed to be representative and possess the average properties of solid waste in Bangkok. Fourteen samples were examined in the rainy season and eighteen samples were examined in the dry season.

Survey results of solid waste physical composition are shown in Table 2.8(1).

Significant physical composition differences were not perceived in individual composition items, with the exception of the item, "stones, ceramics, bones".

In roughly classified items such as "combustibles, incombustibles, miscellaneous", however, the survey revealed significant difference in that there were somewhat more combustibles and less incombustibles in the rainy season than in the dry season.

The difference of combustibles can be interpreted as an accumulation of slight differences in the composition of individual items while difference of incombustibles can be interpreted as reflection of a large difference in the item, "stones, ceramics, bones".

Table 2.8(1) Solid waste properties in the rainy season and the dry season

- Physical composition of the reception pit waste -

Item	Percent on dry weight basis			Moisture content		
	rainy season (mean)	dry season (mean)	Variance ratio	rainy season (mean)	dry season (mean)	Variance ratio
1. Combustibles	73.7	69.2	6.633*	63.0	64.1	0.319

3. Miscellaneous	8.3	6.7	1.354	46.3	44.7	0.532
4. Total	100.0	100.0		57.5	56.7	0.146

Bulk Density (kg/L) :	0.30	0.28	0.667
-----------------------	------	------	-------

Note : Criteria for rejection

\* 5% significance level :  $F(1.30;0.05) = 4.17$

\*\* 1% significance level :  $F(1.30;0.01) = 7.56$

Significant difference was not perceived in moisture content.

Analysis for chemical property was made on the crushed samples of combustibles and miscellaneous items together, which were taken from physical composition samples. Seven samples were analyzed in the dry season, 14 samples in the rainy season. Analysis results are shown in Table 2.8(2).

More contents of C, H, O and combustibles are found in the crushed samples in the dry season than in the rainy season. On the other hand, less ash contents are found in the samples in the rainy season than in the dry season.

A comparison of chemical properties on a wet solid waste basis revealed that there was no significant difference of the contents of C, H, O and combustibles between the rainy season and the dry season. Ash content was significantly higher in the dry season than in rainy season because of the great difference of ash content in incombustibles between the two seasons.

Little difference of calorific value was perceived between the rainy season and the dry season.

Table 2.8(2) Solid waste properties in the rainy season and the dry season
