

Notes for Fig. A.2-6, Fig. A.2-7, and Fig. A.2-8

- (1) All notes for Fig. A.2-3, Fig. A.2-4, and Fig. A.2-5 also apply to these figures.
- (2) Average sailing speed of new trailing hopper dredgers is estimated based on their service speed.
- (3) As for the maintenance dredging for Chao Phraya Second Channel, 75 percent of hopper capacity is estimated to be the dredged volume instead of 80 percent, because most of the bottom sediment is composed of very fine soft silt.

APPENDIX 3 Material for Maintenance and Repair Facilities

Table A.3-1 (1/4) Detailed Construction Cost Estimate of Proposed Bandon Mechanical Center with Slipway and Yard Facilities

Unit : Baht
Price: In 1985

No.	Item	Unit	Quantity	Unit Price Baht	Total	Amount

Contingency (inclusive of transportation charge and cost of additional spare parts)	7,436,000
Total	177,802,000

APPENDIX 5 List of the Study Channels

Appendix 5 List of the Study Channels

The lists are prepared for the 43 study channels on the basis of the review of various sources and the field interviews.

The lists set forth the following items for each of the channels individually.

- I. Characteristics of the channel
- II. Past Record of Dredging
- III. Meteorology, River & Marine Conditions
- IV. Maintenance Volume of Dredging

The information given in the lists is obtained from the following governmental agencies:

- 1 Harbour Department (HD)
- 2 Port Authority of Thailand (PAT)
- 3 Royal Irrigation Department (RID)
- 4 Asian Institute of Technology (AIT)
- 5 Meteorological Department (MD)
- 6 Royal Thai Survey Department (RTSD)

2) Maximum Size of Vessels (GRT)

300

3) Type of the Port

Estuary Port

4) Geographical Features at the mouth of the River

Estuary Bar

5) Seasonal Influences

Not significant

6) Dumping Area

Both banks of the river mouth.

7) Others

() stands for months worked.
() stands for HD's Dredging Programme.

() stands for months worked.
() stands for HD's Dredging Programme.

I. Characteristics of the Channel

1) Dimensions of the Channel

Width (m)	Depth (m)	Length (Km)
60	3	4.0

below LLW

2) Maximum Size of Vessels (GRT)

300

3) Type of the Port

River Port

4) Geographical Features at the mouth of the River

Sand spit named Laem Ta Chi.

5) Seasonal Influences

The channel is protected from NE Monsoon by the long sand spit.

6) Dumping Area

7) Others

- The contract dredging is being carried out for maintaining the channel.
- The new port at the river mouth is capable of accommodating 1,000 GRT Vessels.

II. Past Record of Dredging

1) Capital Dredging

Year	Volume (m ³)	Length (Km)	Dredger
FY69	1,044,939	[10]	C-1
FY70	600,957	[7]	C-1

2) Maintenance Dredging

Year	Volume (m ³)	Length (Km)	Dredger
FY 67			
68			
69			
70

85	(380,000)		Contract

() stands for months worked.

() stands for HD's Dredging Programme.

III. Meteorology, River & Marine

1) Meteorological Conditions

- Wind
- Predominant Monsoon: NE
- Prevailing Wind: E
- Max. Wind Speed (Knots): 40 W
- Annual Rainfall (mm)
- 1,816.3

2) River Conditions

- Name of the River
- Pattani River
- Drainage Area (Km²)

- Mean River Discharge (m³/s)
- 55

- Annual Suspended Sediment Discharge (t)
- 48,635

3) Marine Conditions

- Wave
- Prevailing Wave: E - NE
- Wave Height (m) H = Calm
- Wave Period (sec) T =
- Wave Length (m) L =
- Tidal Level (m)
- HRW +3.3
- MHW +2.67
- MRLW +2.61
- MSL +2.43
- MLW +2.17
- MLLW +2.12
- LLW +1.18
- Ave. Tidal Range 0.44
- Current
- v max. = 0.42 ~ 0.70 m/s

ebb and flood tide at the river mouth

IV. Maintenance Volume of Dredging

1) Estimated Maintenance Volume (m³ p.a.)

120,000

2) Silt Rate (m p.a.)

0.5 (Assumption)

3) Main Cause of Channel Shoaling

Siltation

4) Supply Source of Channel Shoaling

River-borne sediment and Surrounding shallow bay

5) Bottom Sediment (Kind of soil & grain size)

- River Bed Material

Upper Stream:

Midstream:

Lower Reaches:

- Estuary

Silty clay D₅₀ = 15 ~ 25 μ
 $\gamma = 1.62 \sim 1.86 \text{ t/m}^3$

- Coast

6) Others
