LONG TERM PLANNING

FOR

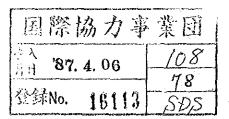

DEVELOPMENT OF TELECOMMUNICATIONS SYSTEM

(VOLUME II)

A PROPOSAL FOR REPELITA-V

FEBRUARY 1987

JAPAN INTERNATIONAL COOPERATION AGENCY

CONTENTS

VOLUME II A PROPOSAL FOR REPELITA-V

| | | Page |
|-----------|---|------|
| CHAPTER 1 | INTRODUCTION | 1 |
| CHAPTER 2 | DEMANDS FORECASTS AND DEVELOPMENT TARGETS | 5 |
| 2-1 | The Planning Policies | . 7 |
| 2-2 | Telephone Service Development Plan | 9 |
| 2-3 | Non-Telephone Service Development Plan | 14 |
| 2-4 | Management Strategies | 17 |
| CHATRPTE | 3 TRAFFIC FORECASTS AND CIRCUIT CALCULATION | 19 |
| 3-1 | Telephone Service Traffic Forecast | 21 |
| 3-2 | Non-Telephone Service Traffic Forecast | 32 |
| 3-3 | Establishment of Toll Circuits | 35 |
| CHAPTER 4 | 4 FACILITY EXPANSION PLAN | 39 |
| 4-1 | Switching Systems | 41 |
| 4-2 | Subscriber Line Facilities | 47 |
| 4-3 | Terrestrial Transmission Facilities | 51 |
| 4-4 | Satellite Communication Facilities | 54 |
| CHAPTER ! | 5 FINANCIAL EVALUATION | 57 |
| 5-1 | Investment Cost Estimation | 59 |
| 5-2 | Expenditure and Revenue | 63 |
| 5-3 | Financial Studies | 67 |

| CHAPTER 6 | PROJECT IMPLEMENTATION PLAN 71 |
|-----------|--|
| 6-1 | Project List 73 |
| 6-2 | Project Digest |
| 6-3 | Kalimantan - Sulawesi Submarine Cable Project 76 |
| | |
| CHAPTER 7 | REVIEW OF PELITA-IV81 |
| 7-1 | Progress of PELITA-IV up to 1986 |
| 7-2 | Trans Sumatera Digital Microwave Project 84 |
| 7-3 | Second Jawa-Bali Digital Microwave Project 87 |
| | and the control of th |
| ANNEX 1 | TELEPHONE SERVICE FACILITIES IN EACH KABUPATEN |
| | FOR REPELITA-V |
| ANNEX 2 | ROUTING MATRIX BETWEEN SECONDARY CENTERS |
| ANNEX 3 | TOLL CIRCUITS BETWEEN SC AND PC FOR REPELITA-V 119 |
| ANNEX 4 | TOLL CIRCUITS DISTRIBUTION FOR REPELITA-V 125 |
| ANNEX 5 | TERRESTRIAL TRANSMISSION LINK IN REPELITA-V 143 |
| annex 6 | MAIN PROJECT DIGESTS FOR REPELITA-V |
| | |
| | |
| | |
| | |

LIST OF TABLES

| | | Page |
|---|--|------|
| | 2-2-1 Telephone Demand for WITELs in 1994 | 10 |
| | 2-2-2 Telephone Supply Plan for REPELITA-V | 13 |
| | 2-3-1 Data Communication Service Subscriber Demand by WITEL | ÷ |
| | in 1994 | 15 |
| | 2-3-2 Data Communication Service Supply Plan | 15 |
| | 2-3-3 Radio Paging Service Supply Plan | 16 |
| | 2-3-4 Land-Mobile Radio Telephone Service Supply Plan | 16 |
| | | |
| | 3-1-1 Echange Capacity by Secondary Area in 1994 | 24 |
| | 3-1-2 Toll Telephone Traffic between SCs in 1994 | 25 |
| | 3-1-3 Toll Telephone Traffic by SA in 1994 | 27 |
| | 3-1-4 Routed Traffic Matrix in 1994 | 29 |
| | 3-1-5 Traffic and Circuits for Demand Assignment in 1994 | 31 |
| | 3-2-1 Projections of Telegraph Service Subscribers | 33 |
| | 3-2-2 Projections of Telex Service Traffic | 34 |
| | 3-3-1 Toll Telephone Circuit Requirements in 1994 | 36 |
| | | |
| | 4-1-1 Expansion Plan for Local Exchanges (REPELITA-V) | 42 |
| | 4-1-2 Expansion Plan of Trunk Switching Capacity (REPELITA-V) | 44 |
| | 4-1-3 Replacement Plant of EMD Switching Systems (REPELITA-V) | 45 |
| | 4-2-1 Local Cable Expansion Plan (REPELITA-V) | |
| | (Primary Cable Pairs) | 47 |
| | 4-2-2 Local Cable Expansion Plan in Kotamadya | |
| | (Primary Cable Pairs) | 48 |
| | 4-2-3 Local Cable Expansion Plan in Kabupaten | |
| | (Primary Cable Pairs) | 49 |
| ٠ | 4-2-4 New Installation of Radio Subscriber in REPELITA-V | 50 |
| | 4-4-1 New Installation of SBK (REPELITA-V) | 56 |
| | | |
| | 5-1-1 Construction Costs per Line Unit (December 1986 Price) | 62 |
| | 5-3-1 Simulation Results (Profit/Loss Statement) GDP: 5%, Plan 2 | 69 |
| | 5-3-2 Simulation Results (Profit/Loss Statement of PERUMTEL) | 70 |
| | 5-3-3 Simulation Results (Cash Flow Statements) | 70 |
| | | |
| | | |

| 5-3-4 | Simulation Results (Source and Application Statement, PERUMTEL) | 70 |
|-------|---|----------|
| 6-1-1 | Main Project in REPELITA-V | 74 |
| 7-2-1 | Circuit Configuration for Trans Sumatera Microwave System | 85 |
| | LIST OF FIGURES | |
| 4-3-1 | Configuration of Backbone Terrestrial Transmission Systems | Page |
| 4-4-1 | in REPELITA-V | 53 55 |
| | | |

WORDS AND ABBREVIATIONS

DITJEN POSTEL: Directorate General of Posts and Telecommunications

PERUMTEL : Telecommunication Common Carrier in Indonesia

WITEL : Regional Bureau of PERUMTEL

JICA : Japan International Cooperation Agency

PELITA-IV : The 4th 5 Year National Development Plan

REPELITA-V : The 5th 5 Year National Development Plan

Kotamadya : Municipality

Kabupaten : Regency

Kecamatan : Sub District

Desa : Village

ISC : International Switching Centre

TC : Tertiary Centre

SC : Secondary Centre

PC : Primary Centre

LE : Local Exchange

RSU : Remote Switching Unit

L.U. : Line Unit

IDN : Integrated Digital Network

ISDN : Integrated Services Digital Network

PALAPA : Name of Indonesian Satellite

SBB : Large Type Earth Station

SBS : Medium Type Earth Station

SBK : Small Type Earth Station

SCPC : Single Channel Per Carrier

GDP : Gross Domestic Product

IRR : Internal Rate of Return

Abbreviation of Exchange/Radio Station Name (1/6)

CHAPTER 1 INTRODUCTION

CHAPTER 1 INTRODUCTION

The objectives of national development in Indonesia during REPELITA-V plan are to establish the self-supplying capability of foods in the agricultural sector and to promote and establish business firms manufacturing capital goods. The role of telecommunications is to support firmly the realization of these national development objectives.

To meet this requirement, development of the telecommunications services during the REPELITA-V period is mainly focused on reduction of ever increasing waiting applicants and expansion of subscriber automatic dial network as far as to the rural areas.

The proposed number of new line units to be installed during the REPELITA-V period is 1,000,000 in addition to the carry over program from PELITA-IV. To realize this target, necessary planning policies, facility expansion plans and detailed project lists are proposed.

In this proposal for REPELITA-V, the following basic conditions were considered;

- 1) The average annual growth rate of GDP will be 5%.
- 2) The carry over from PELITA-IV program will be 200,000 L.U.
- 3) The necessary fund for facility expansion will be available sufficiently.

If these conditions are changed, the modification of this plan will be necessary.

CHAPTER 2 DEMANDS FORECASTS AND DEVELOPMENT TARGETS

CHAPTER 2 DEMANDS FORECASTS AND DEVELOPMENT TARGETS

2-1 The Planning Policies

(1) Service Offering Plan

Proposed public telecommunication services up to 1994 are as follows;

- 1) Telephone Service
 - Ordinary telephone service
 - Following new telephone service by digital switching system
 - a) Teleconference
 - b) Call rate display
 - c) Caller number identification
 - d) Call transfer
 - The SLDD service to the all Kotamadya and Kabupaten capitals
- 2) Telegraph Service
 - Quick delivery service to the all Kecamatan capitals
- 3) Telex Service
 - Low speed telex service
 - Teletex service (in the all Kotamadyas)
- 4) Facsimile Service
 - Subscriber facsimile (G-III)
 - Public facsimile by BIROFAX (at the all telegraph offices)
- 5) Packet Switched Data Communication Service (in the all Kotamadyas)
- 6) Radio Paging Service (in principal cities)
- 7) Land Mobile Telephone Service (in principal cities)

- 8) Non-switched Line Service
 - Telephone
 - Telegraph
 - Data Communication
 - Others
- (2) Facility Development Policies

The policies employed during the REPELITA-V period are as follows;

- Development is to be mainly in the urban areas, while in rural areas, the network will be extended up to the Kabupaten capitals and principal Kecamatan capitals.
- 2) Fully supply to waiting applicants at the end of REPELITA-IV
- 3) Reduction of waiting time for telephone installation
 - In urban area, 2 weeks (min.) to 5 years (max.)
 - In rural area, 7 years (max.)
- 4) Replacement of obsolete facilities
- 5) Promotion of automatization and digitalization
- 6) Larger traffic distribution ratio to terrestrial transmission systems than satellite systems
- 7) Improvement of the completion call rate
- (3) Operation and Management Policies

The policies during the REPELITA-V period are as follows;

- 1) Reduction of number of staffs per subscriber
- 2) Reviewing of the tariff system

- 3) Enhancement of efficiency in the departments of planning, construction, operation and maintenance by the introduction of Network Management System
- 4) Expansion of the education and training centers

2-2 Telephone Service Development Plan

2-2-1 Demand Forecast

Based on the total national demand forecast reported in the VOLUME-I of this Report, telephone service subscriber demands for each WITEL, for Kotamadya and for Kabupaten are estimated.

(1) Demands for WITELs

The number of potential subscribers (demand size) for the WITELs in the end of REPELITA-V (1994) was estimated by distributing the total number of potential subscribers according to the distribution shares obtained by the WITEL model.

(2) Demands for Kabupaten and Kotamadya

1) Kabupaten demands

The number of potential subscribers (demand size) for the Kabupaten areas was estimated by using the Kabupaten model. (Refer to the VOLUME-I of this report.) Necessary corrections were made by taking into consideration the number of subscribers and waiting applicants as of December 1985, and the expected number of line units at the end of PELITA-IV.

2) Kotamadya demands

The number of potential subscribers (demand size) for the Kotamadya areas was obtained by subtracting the sum of the Kabupaten demand sizes in WITELs.

Demand size for each Kotamadya within a WITEL is calculated by distribution share of the corresponding number of subscribers plus waiting applicants as of December 1985. Necessary corrections were also made on the results by the same way as described in the calculation of the Kabupaten demands.

Table 2-2-1 shows estimated demands for the WITELs.

Table 2-2-1 Telephone Demand for WITELs in 1994

| Name of WITEL | WITEL DEM By Wit-Mdl | WITEL DEM | Shared INT DEM | KOTA DEM By WITEL | KAB DEM By WITEL |
|------------------|-------------------------|-----------|-------------------|----------------------|---------------------|

| 11 | 124,000 | 2.8 | 123,000 | 83,000 | 40,000 |
| III | 217,000 | 5.0 | 233,000 | 180,000 | 53,000 |
| IV | 1,344,000 | 29.8 | 1,286,000 | 1,245,000 | 41,000 |
| V | 547,000 | 12.4 | 566,000 | 438,000 | 128,000 |
| VI | 428,000 | 10.0 | 445,000 | 310,000 | 135,000 |
| VII | 692,000 | 16.0 | 716,000 | 528,000 | 188,000 |
| VIII* | 179,000 | 4.0 | 177,000 | . 0 | 177,000 |
| IX | 198,000 | 4.5 | 198,000 | 150,000 | 48,000 |
| х | 239,000 | 5.4 | 240,000 | 175,000 | 65,000 |
| XI | 31,000 | 0.7 | 32,000 | 22,000 | 10,000 |
| XII* | 30,000 | 0.7 | 30,000 | 0 | 30,000 |
| TOTAL | 4,414,000 | 100.0 | 4,431,000 | 3,455,000 | 976,000 |

Note: 5% of GDP annual growth rate

Plan 2 in supply speed
* WITEL without KOTAMADYA

2-2-2 Capacity Expansion

(1) Expansion Policies

- 1) To expand capacity in the urban areas centered around Kotamadya.
- To plan network expansion and automatization of manual exchanges in the rural areas centered around the Kabupaten capitals.

(2) Proposed Capacity Expansion

1,000,000 line units and associated facilities will be newly added to the system during REPELITA-V.

(3) Distribution of Capacity

1) Capacity Expansion of the WITELs

The new addition of 1,000,000 L.U. is distributed among the WITELs according to respective exchange capacities at the end of PELITA-IV.

Distribution among Kotamadya/Kabupaten was made for each WITEL.

The distribution of new additions was decided by the expected exchange capacity shares at the end of PELITA-IV. As the result, Kotamadya/Kabupaten distribution share ratio become about 78:22.

2) Capacity Expansion of Kotamadya

According to PELITA-IV, capacity expansion is proposed in 45 Kotamadyas (83%) out of 54 Kotamadyas, while by REPELITA-V capacity expansion into all the Kotamadya areas is proposed.

The capacity distribution to each Kotamadya is made by the share of the expected capacity expansion amount in each WITEL at the

end of PELITA-IV. Some corrections was made considering the existing capacity and demand.

Capacity Expansion of Kabupaten

Capacity expansion of Kabupaten will be determined by taking into account the following policies and the situations of capacity and demand in the exchanges;

- a) Installation of telephone exchanges in all the Kabupaten capitals currently without the service.
- b) Automatization of manual PC exchanges.
- c) Reduction of waiting applicants in automatic exchanges.
- d) Automatization of other important manual local exchanges.

Based on the above policies, the number of Kabupaten proposed for new capacity expansion during the REPELITA-V period is 189 which accounts for the 77% of 246 Kabupatens in the country.

Table 2-2-2 shows the Kotamadya/Kabupaten distribution share of capacity expansion in REPELITA-V. The telephone supply plan for each Kotamadya and Kabupaten is shown in ANNEX-1.

Table 2-2-2 Telephone Supply Plan for REPELITA-V

| • | Capacity | Share(end | of IV) | Supply Vol | ume for RE | PELITAV |
|-------|----------|-----------|--------|------------|------------|---------|
| WITEL | Total(%) | Kota(%) | Kab(%) | Total(LU) | Kota(LU) | Kab(LU) |

| IV | 32.5 | 96.9 | 3,1 | 325,000 | 315,000 | 10,000 |
| Λ | 11.0 | 70.2 | 29.8 | 110,000 | 77,000 | 33,000 |
| VI | 8.9 | 70.8 | 29.2 | 89,000 | 63,000 | 26,000 |
| VII | 15.0 | 81.5 | 18.5 | 150,000 | 122,000 | 28,000 |
| VIII | 4.1 | O | 100.0 | 41,000 | 0 | 41,000 |
| IX | 4.6 | 72.3 | 27.7 | 46,000 | 33,000 | 13,000 |
| X | 5.5 | 68.3 | 31.7 | 55,000 | 38,000 | 17,000 |
| XI | 0.8 | 56.1 | 43.9 | 8,000 | 5,000 | 3,000 |
| XII | 0.7 | 0 | 100.0 | 7,000 | 0 | 7,000 |
| Total | 100.0 | 77.9 | 22.1 | 1,000,000 | 779,000 | 221,000 |

2-3 Non-Telephone Service Development Plan

2-3-1 Telex Service

Estimated telex subscriber demand in 1994 is 39,182, but suppose 20% of this demand is shifted to facsimile service as mentioned in the VOLUME-I of this report, the telex demand goes down to about 31,000.

At the end of PELITA-IV, telex capacity is expected to reach 32,300 L.U. which can afford the expected demand until 1994. In view of this, expansion of telex facility is not proposed during the REPELITA-V period.

2-3-2 Facsimile Service

The estimated number of potential facsimile service subscribers in 1994 is 26,500. This figure represents only 1% of the telephone exchange capacity of 2,650,000.

Therefore, it is considered appropriate to provide the facsimile service by the telephone network. Furthermore, there will be no need for specific facsimile network plan.

Public service facsimile terminals will be installed in all telegraph handling offices. The number is about 1,000 units.

2-3-3 Data Communication Service

(1) Demand Forecast

The subscriber demand in 1994 is estimated to 2,075 in whole Indonesia. Since the demand sources of data communications service subscribers and telex service subscribers are considered to be the same, the data communications service subscriber demand is distributed to each WITEL by the WITELs telex service demand share. The results are shown in Table 2-3-1.

Table 2-3-1 Data Communication Service Subscriber Demand by WITEL in 1994

| WITEL | Ratio | Data Demand | Principal City |
|----------|-------|-------------|---|
| I | 0.08 | 166 | Medan |
| II | 0.04 | 83 | Padan |
| III | 0.05 | 104 | Palembang |
| IA | 0.42 | 872 | Jakarta |
| ٧ | 0.06 | 124 | Bandung |
| VI. | 0.06 | 124 | Semarang |
| VII | 0.12 | 249 | Surabaya |
| VIII-XII | 0.17 | 353 | Denpasar, Banjarmasin, Ujungpandang |
| Total | 1.00 | 2,075 | |

(2) Supply Targets

All demand in principal cities will be satisfied. The supply targets are proposed as indicated in Table 2-3-2.

Table 2-3-2 Data Communication Service Supply Plan

| City | Data Terminals |
|--------------|----------------|
| Medan | 200 |
| Palembang | 100 |
| Jakarta | 900 |
| Bandung | 200 |
| Semarang | 200 |
| Surabaya | 300 |
| Denpasar | 100 |
| Batam Island | 100 |
| Total | 2,100 |

2-3-4 Radio Paging Service

Based on the demand forecast as estimated in VOLUME-I, in principal cities where the demand exceeds about 2000, the service will be introduced. The supply plan is shown in Table 2-3-3.

Table 2-3-3 Radio Paging Service Supply Plan

| City | Paging L.U. |
|---------------|-------------|
| Jakarta | 26,000 |
| Surabaya | 7,000 |
| Bandung | 4,000 |
| Medan | 4,000 |
| Semarang | 2,000 |
| Ujung Pandang | 2,000 |
| Total | 45,000 |

2-3-5 Land-Mobile Radio Telephone Service

Based on the demand forecast as estimated in VOLUME-I, the service will be introduced to principal cities where the demand exceeds about 500. The supply plan is shown in Table 2-3-4.

Table 2-3-4 Land-Mobile Radio Telephone Service Supply Plan

| City | Mobile Telephone |
|----------|------------------|
| Jakarta | 3,500 |
| Bandung | 1,500 |
| Semarang | 1,000 |
| Surabaya | 2,000 |
| Total | 8,000 |

2-4 Management Strategies

As the results of the study in the long-term development plan, the following service strategies are proposed for REPELITA-V;

(1) Marketing Plan

In the all service categories, i.e, telephone, telex and new services, the approx. 100% of facility capacity will be connected to subscribers. By this marketing plan, the facility utilization rate will increase, then the revenue from subscribers will increase. The total number of telephone subscriber will reach to 2,650,000 and the telephone density will be 1.33 per 100 persons in 1994.

(2) Manpower Plan

To reduce the operating and maintenance cost, the number of PERUMTEL staff personnel per 1000 subscribers will be reduced to 41 persons.

(3) Tariff System

For telephone service, the call fee will be increased to Rp.85/pulse in the real term (December 1986 price). The charging zone classification will also be changed from 5 zones to 7 zones. By these changes the revenue from subscribers will increase.

The installation fee and monthly rental fee will be increased, if possible.

(4) Fund Plan

The fund plan for facility expansion is proposed as follows;

| -PERUMTEL internal reserve | 30% |
|----------------------------|-----|
| -Government equity | 10% |
| -External fund | 60% |

CHAPTER 3 TRAFFIC FORECASTS AND CIRCUITS CALCULATION

CHAPTER 3 TRAFFIC FORECASTS AND CIRCUIT CALCULATION

3-1 Telephone Service Traffic Forecast

In Indonesia, since well organized real data of measured live traffic between centrals are not available, a statistical model is to be used inevitably for the traffic forecast.

To achieve an effective processing of the data required for the formation of traffic matrix and consequent circuit calculations, at first toll traffic forecast between Secondary Centers (SC) was made. Toll traffic forecast between SC and Primary Center (PC) was made later.

It is essential that an attention should be paid on the fact that the results obtained by the statistical model may not represent real traffic volume sometimes. Therefore, careful considerations are requested when dimensioning of facility is made.

3-1-1 Telephone Traffic between SCs

(1) Formulation of the Model

Through the regression analysis of actual traffic data in 114 sections, the following gravity model was formulated for the toll telephone traffic forecast.

$$logX_{ij} = -4.095 + 0.510logS_{i} + 0.570logS_{j} - 1.653logP_{ij} + 0.185D \times logP_{ij}$$

R = 0.85

where

log : Natural logarithmic operator

 $\mathbf{X}_{\mathbf{i}\,\mathbf{j}}$: Traffic from the i th secondary area to the j th

area (Erlang)

 S_{i} : The number of subscribers in the i th secondary area

 S_{j} : The number of subscribers in the j th secondary area

P_{ij}: The number of charging pulses for the minute-call from the i th secondary area to the j th area

D : Dummy variable (For incoming and outgoing with Jakarta D = 1, Others D = 0)

In this model, the number of charging pulses per unit time (P_{ij}) was introduced as a variable which explains both geographical and economic distance between SCs. The dummy variable (D) is also used to adjust characteristic difference between the traffic to/from Jakarta and other areas.

Data used for the regression analysis are outlined as follows;

1) Traffic Data between Exchanges (X_{ij})

Toll traffic data (busy hour traffic between principal exchanges) as of 1984 were obtained from TRAFFICEL of PERUMTEL (Data of 112 links in total). Unbalanced traffic between incoming and outgoing were modified to some extent.

2) Subscriber Data (S_i, S_j)

The number of subscribers for each exchange as of 1984 was obtained from BINPROSENTEL of PERUMTEL and summarized for each Secondary area.

Charging Pulse Data (P_{ij})

The number of charging pulses per minute between SCs was estimated by the tariff table effective as of 1984 obtained from MATEL of PERUMTEL.

(2) Traffic Estimation

The busy hour toll traffic between Secondary areas was estimated by using the regression model. The total exchange capacity in each Secondary area at the end of REPELITA-V was used for the number of subscribers, as shown in Table 3-1-1. The current tariff system was also applied for the charging pulse data. Some corrections were made on the forecasted results and the used data of 112 links so as to make the initial value the same as the actual value by modifying the constant of the model.

Results are shown in the form of 40x40 matrix in Table 3-1-2.

From the traffic matrix, total traffic originating and incoming for each Secondary area are summarized in Table 3-1-3.

Table 3-1-1 Exchange Capacity by Secondary Area in 1994

(3) Traffic Concentration

1) Traffic routing

The traffic routing was determined in accordance with the Fundamental Plan 1985. The routing matrix is shown in ANNEX-2.

2) Traffic concentration

The concentrated traffic between links based on the routing matrix is shown in Table 3-1-4. The direct access traffic by SBK demand assignment circuits for small exchanges is shown in Table 3-1-5 separately.

3-1-2 Telephone Traffic between SC and PC

Traffic was estimated by the following formula with the assumption that all links between SCs and PCs are connected by high usage routes for the approximate dimensioning of transmission links.

 $TRF = SPA \times SCR \times 1.3$

where,

TRF : Outgoing traffic from PCs to SCs

SPA: The number of subscribers within primary areas

SCR: Average calling rate from a SC to other SC

1.3: Coefficient that converts the SCR to the average outgoing calling rate from a PC to a SC. (estimated by Strategy Development Plan of POSTEL)

The results are shown in ANNEX-3.

3-2 Non-Telephone Service Traffic Forecast

3-2-1 Telegraph Service Traffic

(1) Forecasting Method

To explain the traffic flow of the telegraph service in Indonesia, a forecasting model was estimated by the Ordinary Least Squares Method with using the data compiled by ITU (pooled time series cross section data of 21 countries and 5 year-periods of 1980-1984). The detailed explanation of the data is provided in Section 5-2 in VOLUME-I.

The estimated model is as follows;

TLG =
$$-5.652 + (122.36 + 523.5 \text{ TD}) \times N + (0.33 - 147 \text{ TD}) \times Y$$

-131.98 ID
 $R^2 = 0.974$

where,

TLG: The no. of domestic telegrams (10^5)

N : The size of population (10^6)

TD : Telephone density per 100 persons

Y : Real GDP of 1980 price in US dollars (109)

ID = 1 for Indonesia

O for other countries

(2) Forecast Results

Table 3-2-1 shows the summary of the simple forward projections of the telegraph traffic by the estimated model. The condition is assumed that the real GDP grows by 5% per year and telephone subscribers will increase according to the Plan 2 in discussed in VOLUME-I.

Table 3-2-1 Projections of Telegraph Service Subscribers

| Item | 1984 | 1989 | 1994 |
|-----------------------------|--------|--------|--------|
| GDP (Billion US\$) | 47,555 | 60,694 | 77,462 |
| TEL. DENSITY (/100 persons) | 0.33 | 1.35 | 1.97 |
| TELEGRAM (10 ⁶) | 8 | 10 | 13 |

3-2-2 Telex Service Traffic

(1) Forecasting Method

To explain the traffic flow of the telex service in Indonesia, a forecasting model was estimated by the Ordinary Least Squares Method with using the traffic data of 27 propinsi of 3 year-periods of 1982-1984. The estimated model is as follows;

 $log (XTX) = 6.2730 + [0.36966 + 0.06961 \times log (Y/N)] \times log (SX)$

$$R^2 = 0.943$$

where,

log: Natural logarithmic operator

XTX: The No. of pulses (10^5)

N : The size of population (10^6)

Y : Real GDP of 1975 price in Rp. (10^9)

SX : The No. of telex service subscribers

(2) Forecast Results

Table 3-2-2 shows the summary of the simple forward projections of the telex service traffic by the estimated model for the case of 5% GDP annual growth.

Table 3-2-2 Projections of Telex Service Traffic

| | ····· | | |
|----------------------|--------|-----------|-----------|
| Item | 1984 | 1989 | 1994 |
| GDP (Billion US\$) | 47,555 | 60,694 | 77,462 |
| TELEX SUBSCRIBERS | | 24,596 | 39,182 |
| TELEX TRF (1000 PLS) | | 1,074,811 | 1,559,943 |

3-3 Establishment of Toll Circuits

3-3-1 Toll Circuit Requirements

In order to make an easy processing by computer possible, the same figures as those for the PELITA-IV program was used. They are:

Final Route : loss is 1% High Usage Route : loss is 10%

The estimated toll circuit requirements for telephone service are shown in Table 3-3-1 and ANNEX-3.

3-3-2 Circuit Grouping

(1) Terrestrial Backbone Link

To solve over provision due to the traffic forecast error, the toll circuits to be established were decreased to 70% of the estimated telephone service circuit requirements.

Non-telephone service toll circuits such as the telex service and the data communications service were estimated to take 10% of the toll telephone service circuits.

The total number of toll circuits were distributed between terrestrial and satellite systems by the distribution curve proposed in VOLUME-I. It was determined that satellite TDMA circuits were to be installed when the required number becomes larger than 30 circuits.

The results of the distribution between terrestrial and satellite systems are shown in ANNEX-4.

The terrestrial circuits after the distribution were grouped for each section. The result of the circuit grouping is shown in Chapter 4, Table 4-3-1.

(2) Terrestrial Spur Link

Circuit grouping of spur links is made according to the required number of circuits between SC and PC. Based on the results of the circuits grouping, new terrestrial spur links during the REPELITA-V period are illustrated in ANNEX-5.
