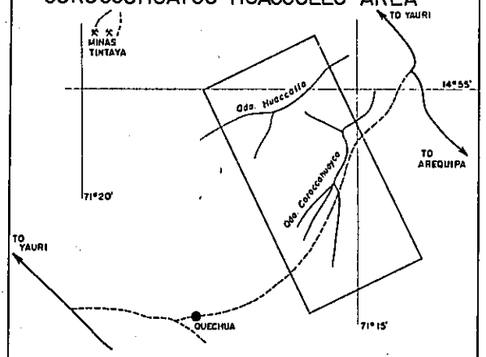
GEOLOGICAL SURVEY OF YAURI AREA, SOUTHERN PERU

(PHASE Ⅲ)

GEOLOGICAL MAP OF THE COROCCOHUAYCO-HUACCOLLO AREA

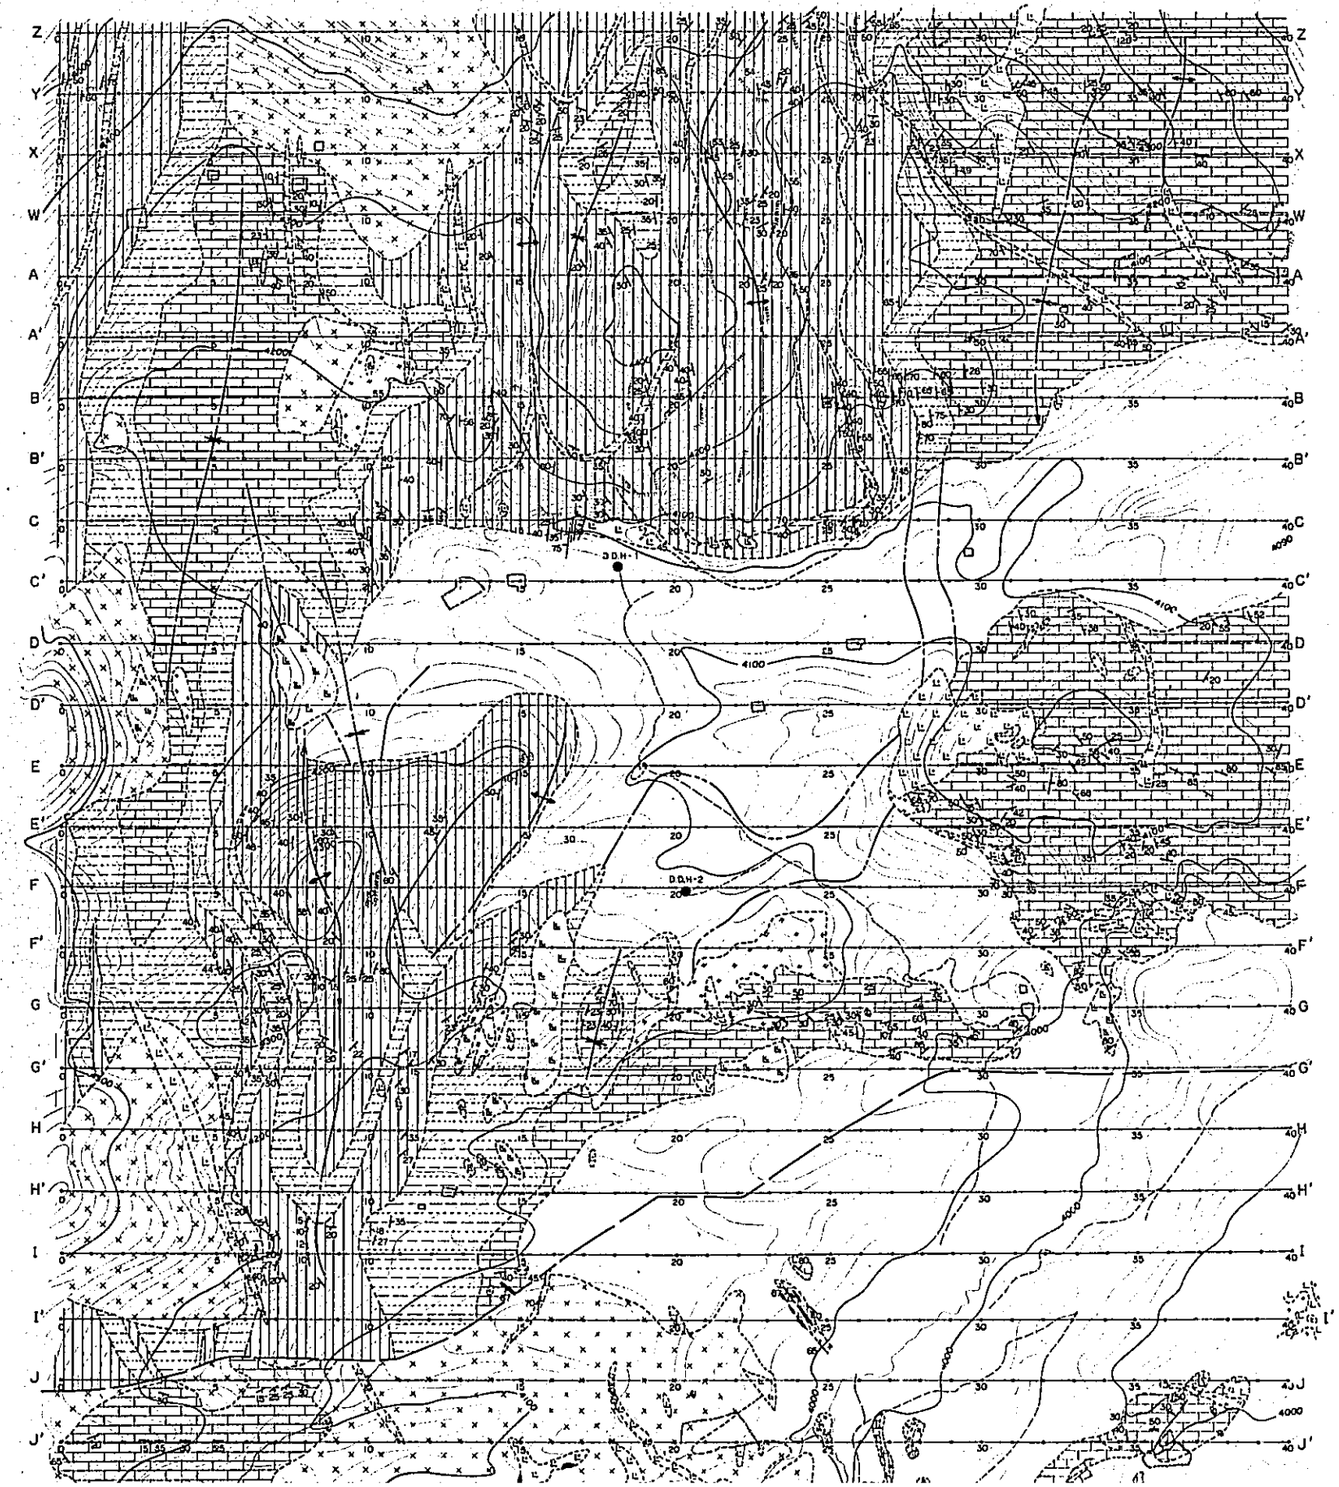


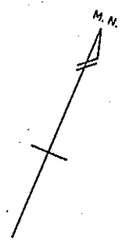
METAL MINING AGENCY

OVERSEAS TECHNICAL COOPERATION AGENCY
GOVERNMENT OF JAPAN

JULY 1974

Prepared by MITSUI KINZOKU ENGINEERING SERVICE CO, LTD.



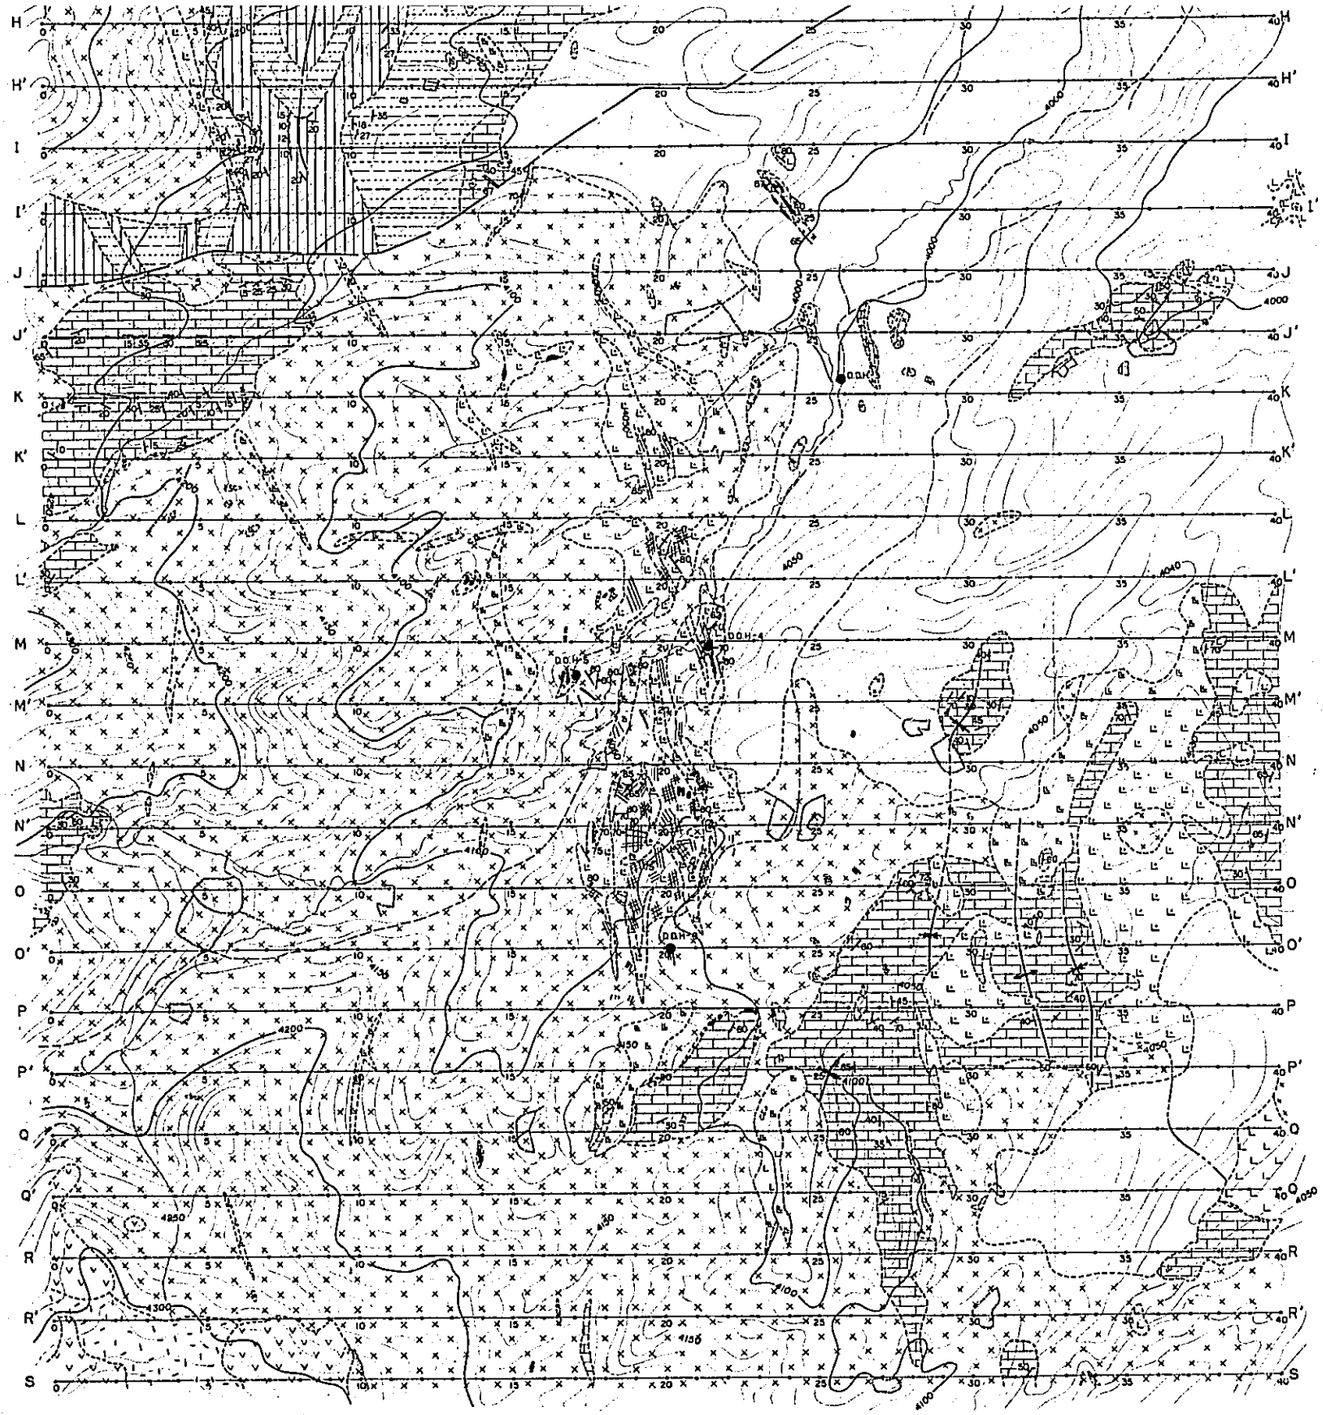


0 200 400 600 800 1,000m

Scale 1 : 10,000

LEGEND

- Alluvium / Glacial deposit
- Andesite / Basalt
- Rhyolitic tuff
- Limestone
- Shale / Sandstone
- Quartzite
- Granite porphyry
- Quartz monzonite porphyry
- Granodiorite porphyry
- Granodiorite
- Gabbro / Diorite / Quartz diorite
- Skarn (magnetite, garnet, etc.)
- Copper showing
- Bedding plane



- Shale / Sandstone
- Quartzite
- Granite porphyry
- Quartz monzonite porphyry
- Granodiorite porphyry
- Granodiorite
- Gabbro / Diorite / Quartz diorite
- Skarn (magnetite, garnet, etc.)
- Copper showing
- Bedding plane
- Fault
- Fracture / Quartz vein
- Axis of anticline
- Axis of syncline
- Subsurface rock-boundary estimated
- Location of drilling hole

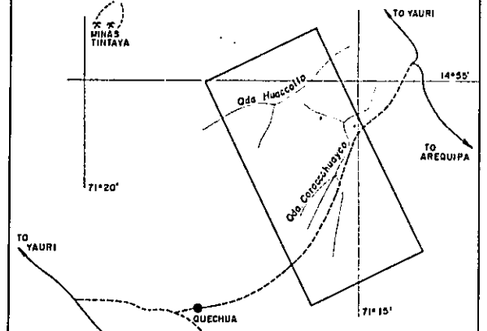
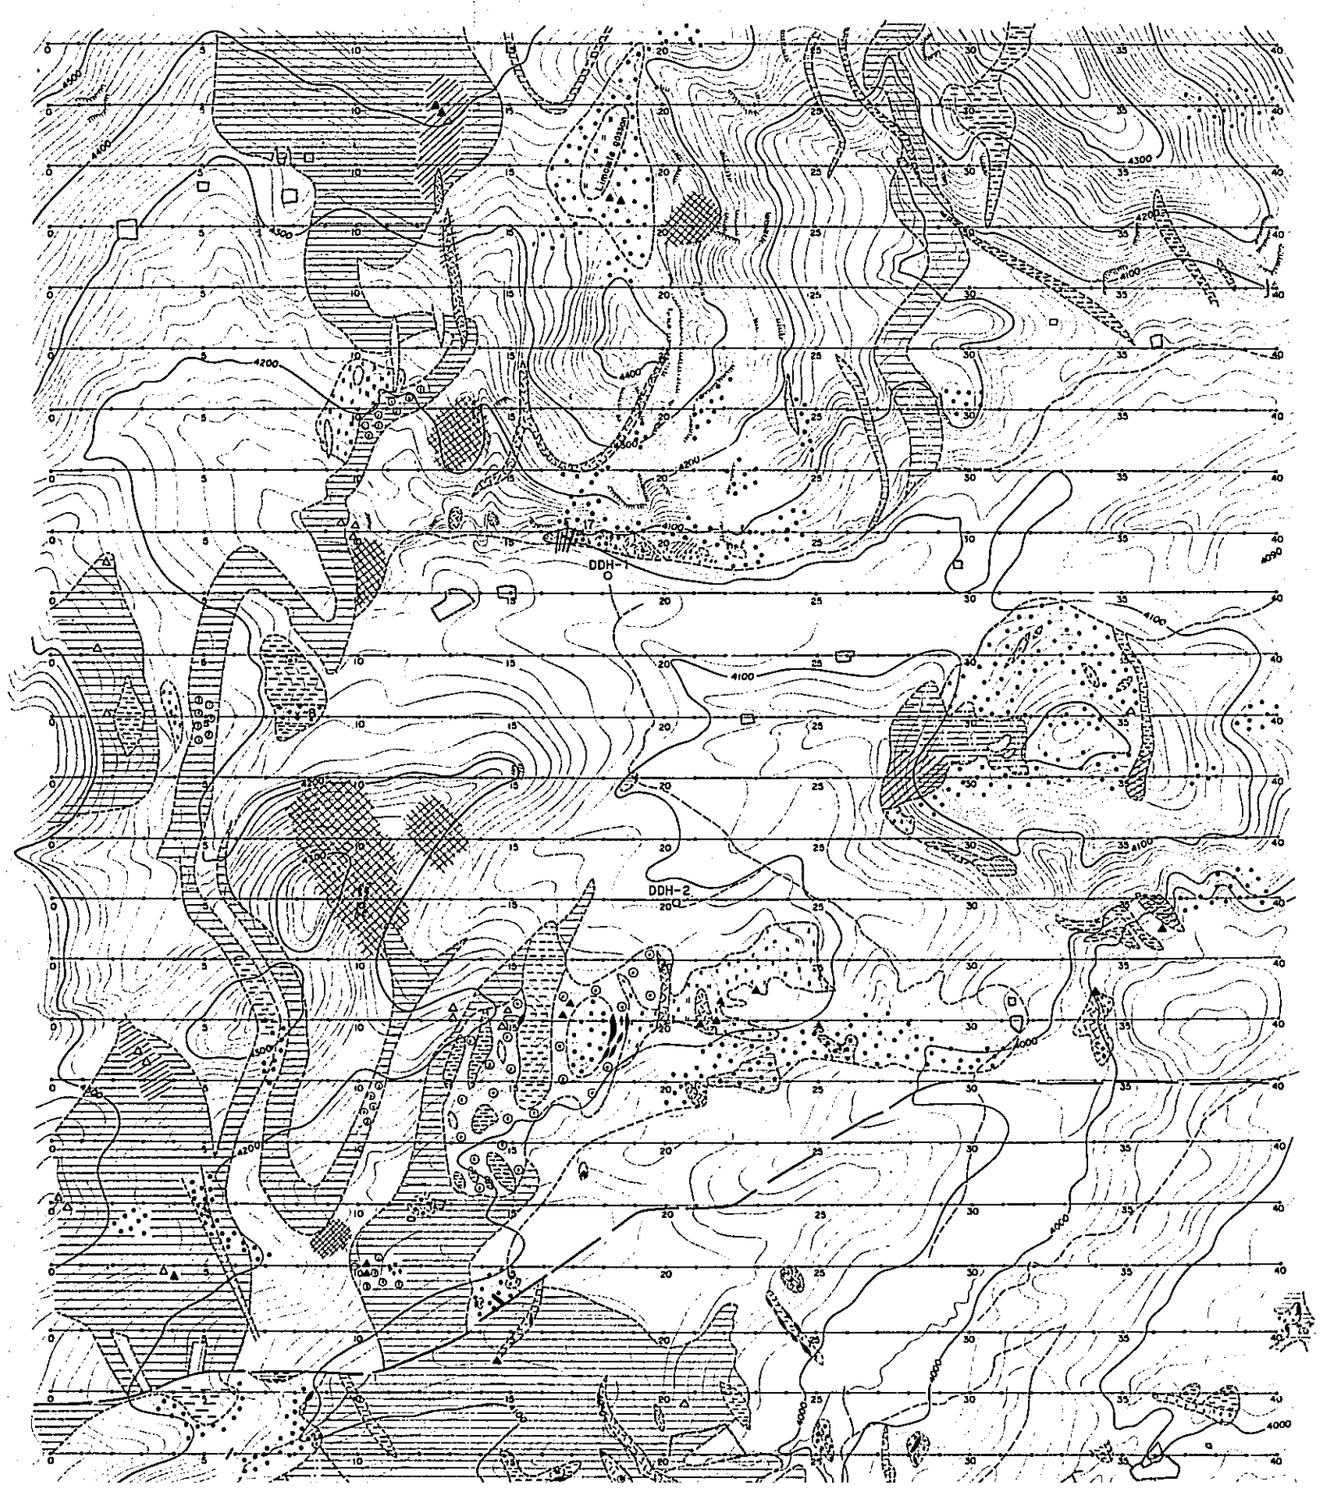
ALTERATION MAP OF THE COROCCOHUAYCO-HUACCOLLO AREA



METAL MINING AGENCY
OVERSEAS TECHNICAL COOPERATION AGENCY
GOVERNMENT OF JAPAN

JULY 1974

Prepared by MITSUI KINZOKU ENGINEERING SERVICE Co. LTD



0 200 400 600 800 1,000m

Scale 1 : 10,000

LEGEND.

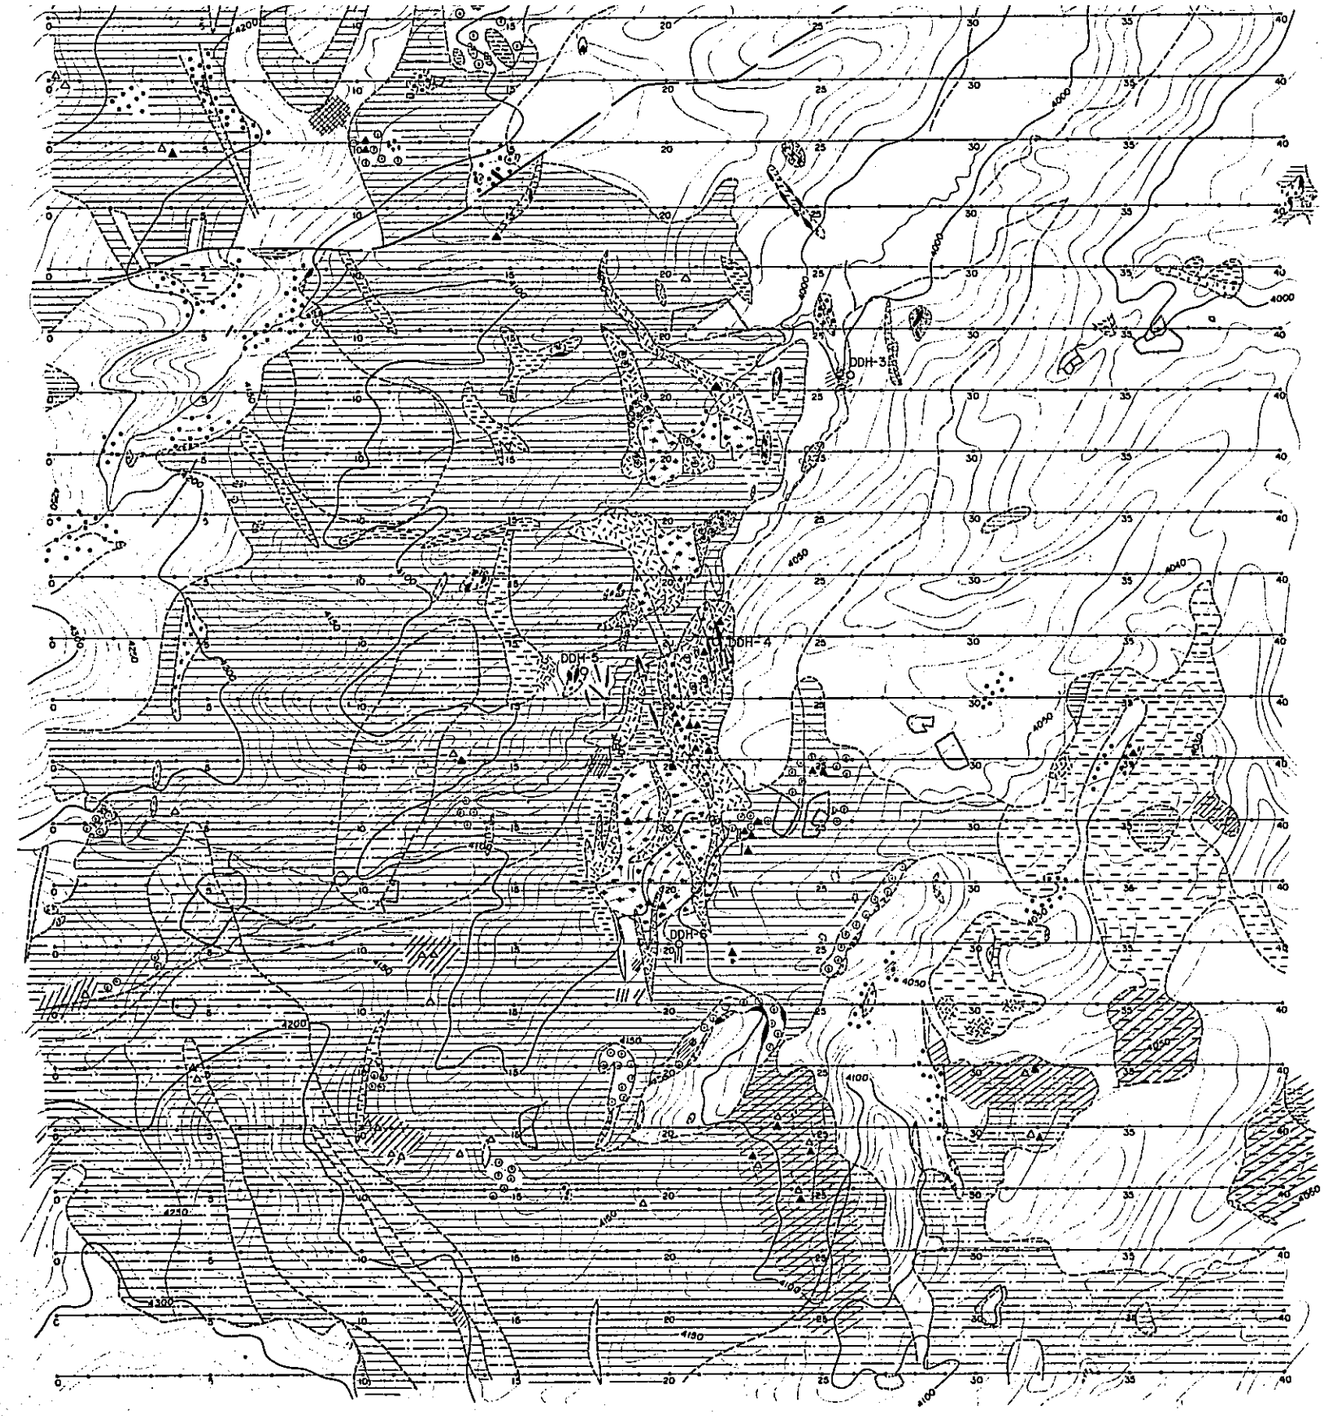
1 : Clear alteration

2 : Very weak or local alteration

1 2

Silicification

Argillization and / or sericitization



LEGEND.

1 : Clear alteration

2 : Very weak or local alteration

1 2

Silicification

Argillization and / or sericitization

Skarnization or contact metasomatic alteration

Chloritization frequently associated with epidotization

Carbonitization

Copper mineralization including supergene ores

Pyritization rarely with pyrrhotite

Highly fractured and limonite - filled zone

Limonitization

10		Glacial deposits (?) containing abundant gravels of quartzite, and a little of limestone, shale, intrusives and andesitic volcanics in a brown, unconsolidated, ill-sorted and sandy matrix							
20									
30									
		38.5m							
40		Weathered granodiorite extremely decomposed and highly argillized	Network films and stains of limonite sparsely with green copper.	1001	1.5	0.17		0001	
				1002	2.0	032	0.28	0003	
				1003	2.0	0.30		0001	
		45.0m		1004	2.0	0.49	0.47	0.001	0.27
		Medium-grained, plagioclase-porphyritic, biotite-hornblende granodiorite	Network of limonite-chlorite veinlets with small amounts of green copper and oxidized pyrite, generally dipping 60° to 80°.	1005	2.0	0.48		0002	
50		45.0m-53.0m: fairly weathered, markedly chloritized, weakly argillized and carbonitized		1006	2.0	0.45	0.42	0001	
			51.5m	1007	2.0	025		0.001	
		53.0m-53.2m: Sheared and highly argillized	Fine network of pyrite-bearing limonite-chlorite veinlets with dips of 60° to 80°. 53.2m	1008	2.0	0.04	003	0001	
		53.2m-55.5m: moderately chloritized, weakly argillized, sericitized, carbonitized, and with "pink-to salmon-colored" plagioclase	Sparsely-penetrated pyrite-chlorite veinlets mostly dipping 70° to 80°. Weak limonitization along veinlets.	1009	2.0	0.18		0002	1.76
			Fine network of chalcopyrite-bearing pyrite-specularite-chlorite veinlets, and disseminations of pyrite and a little chalcopyrite	1010	1.0	0.66	0.28	—	
			58.5m along veinlets.	1011	1.0	1.81		0005	
60			Abundant pyrite-bearing specularite-chlorite veinlets with dips of 60° to 80°, cut by sub-horizontal pyrite-quartz veinlets and latest Pyrite stringers with dips of 60° to 80°.	1012	1.0	026	0.13	0005	
		55.5m-72.0m: weakly to moderately Silicified and sporadically epidotized in addition to the above alteration	Disseminations of pyrite, specularite and magnetite near veinlets.	1013	1.0	009		0022	
			63.1m	1014	1.0	005	0.01	tr	
			1.5-cm vein and network veinlets of chalcopyrite-pyrite-specularite-quartz-chlorite assemblage. A little disseminated ores. 65.2m	1015	1.0	0.04		0001	
				1016	1.0	0.08	002	—	
				1017	1.0	103		tr	
				1018	1.0	2.90	0.16	—	
				1019	1.0	0.11		—	
70			Abundant pyrite-specularite-chlorite veinlets and subordinate pyrite-quartz veinlets, dipping generally 70° to 85°, and a little disseminations of pyrite and rare chalcopyrite mainly associated with chloritized mafic silicates. A 1-cm pyrite vein with a dip of 80°, bearing a little chalcopyrite, at 70.5m. 72.0m	1020	2.0	0.08	003	tr	388
				1021	2.0	007		—	
				1022	2.0	0.29	0.10	0001	
		72.0m-77.3m: chloritized, weakly argillized, sericitized and carbonitized	Very sparsely-penetrated pyrite-specularite-chlorite veinlets, and sporadic dissemination of pyrite mainly replacing chloritized mafic minerals.	1023	2.0	0.03		—	
			Fairly abundant "barren" chlorite veinlets mostly dipping 5° to 20°. 77.3m	1024	2.0	003	001	—	
80		77.3m-82.8m: Slighly silicified with a little "pink" plagioclase in addition to the above alterations	Fairly abundant pyrite-specularite-chlorite veinlets mostly dipping 70° to 80°, and a little pyrite-quartz veinlets with dips of 40° to 70°.	1025	4.0	004		—	0.87
			Sparse dissemination of pyrite. 82.8m	1026	4.0	004	002	—	
		82.8m-85.1m: with almost same alterations as above except for much stronger Silicification	Fairly abundant quartz-chlorite veinlets bearing pyrite and minor specularite. 85.1m						
		85.1m-91.5m: weakly chloritized, carbonitized, argillized, and with a little "pink" feldspars and fracture-filling biotite-	A little pyrite-specularite-bearing quartz-chlorite veinlets uncommonly with a small amount of chalcopyrite	1027	4.0	0.05		tr	

Depth (m)	Section	Observation: Rock	Observation: Mineralization	Sample No	Core Length	Assay T-Cu %	Assay S-Cu %	Assay Mo %	Assay S %
110		100.0m-104.0m: weakly silicified, chloritized, carbonitized, slightly sericitized, and commonly with "pink" feldspar and secondary biotite	Sparse veinlets of quartz and/or chlorite bearing pyrite and specularite, dipping 60° to 85°; and poorly disseminated pyrite. Chalcopyrite-bearing veinlets at 101.0m 104.0m and 104.6m.	1031	4.0	004		0002	
		104.0m-114.8m: weakly chloritized, carbonitized, and with "pink" plagioclase and secondary biotite (hydromica ?) mainly along fine fractures	Sparsely-penetrated chlorite veinlets with a little Pyrite and specularite, mostly dipping 70° to 85°. A chalcopyrite-bearing veinlet at 105.5m.	1032	4.0	003		0001	027
				1033	4.0	003		0002	
		114.8m-116.0m: weakly silicified in addition to the above alterations	114.8m Network of pyrite-rich veinlets; Pyrite dissemination near veinlets. 116.0m	1034	4.0	003		0002	
120		116.0m-117.3m: weakly chloritized	A little Pyrite-bearing chlorite veinlets, 117.3m	1035	4.0	003		0001	072
		117.3m-126.4m: distinctly chloritized, Slightly to weakly Silicified, weakly carbonitized, and with "pink" feldspar	Network of pyrite stringers from 117.3m to 118.0m. Fairly abundant veinlets of pyrite-quartz, pyrite-specularite-chlorite and pyrite-chlorite assemblages from 118.0m to 126.4m.	1036	2.0	002		0002	
			A 0.8-cm pyrite-specularite-quartz vein dipping 75° at 120.5m. Pyrite dissemination, generally poor, but heavy from 119.0m to 122.0m and from 125.0m to 125.5m.	1037	2.0	004		0001	
				1038	2.0	003		0001	
130		126.4m-137.2m: weakly chloritized, carbonitized and with a little "pink" feldspar	126.4m Sparsely-penetrated specularite-pyrite-chlorite veinlets mostly dipping 70° to 80°. A little dissemination of pyrite.	1039	4.0	002		0002	
			A chalcopyrite-bearing pyrite-chlorite veinlet dipping 70° at 130.3m.	1040	4.0	003		0002	079
		137.2m-139.3m: fairly markedly chloritized and Silicified	137.2m A 1-cm pyrite-quartz vein dipping 75° at 138.0m, and fairly abundant veinlets of pyrite-quartz and pyrite-specularite-chlorite 139.3m	1041	4.0	003		0001	
140		139.3m-142.3m: mylonitized, distinctly chloritized, weakly carbonitized and argillized	Abundant specularite-chlorite veinlets with a little pyrite. Sporadic dissemination of a little pyrite. 142.3m	1042	4.0	004		0001	
		142.3m-145.7m: fairly markedly silicified, weakly chloritized and slighly carbonitized	Fairly abundant pyrite-quartz veinlets sparsely with a little chalcopyrite and pyrite-specularite-chlorite veinlets. Pyrite dissemination rarely with chalcopyrite 145.7m	1043	4.0	011		0002	120
		145.7m-150.7m: slighly silicified, weakly chloritized, carbonitized, and with a little "pink" plagioclase	Several pyrite-specularite stringers. A little dissemination of Pyrite. 147.5m	1044	4.0	006		0002	
150		150.7m-151.5m: distinctly silicified, weakly chloritized and carbonitized	Abundant pyrite-specularite-chlorite veinlets and a little disseminated Pyrite. A 0.5-cm chalcopyrite-bearing veinlet at 148.5m 150.7m	1045	4.0	004		0001	
		151.5m-158.8m: distinctly chloritized, carbonitized, slightly silicified, and with "pink" plagioclase	Network of pyrite-quartz stringers from 150.7m to 151.5m. Fairly abundant pyrite-specularite-chlorite/quartz veinlets, mostly dipping 70° to 80°, and a little dissemination of pyrite and specularite from 151.5m to 158.8m.	1048	4.0	005		0002	092
160		158.8m-159.1m: Strongly Silicified and weakly chloritized	Highly disseminated pyrite from 158.8 m to 159.1m.	1047	4.0	003		0003	
		159.1m-163.0m: Strongly chloritized, carbonitized, and argillized	Disseminations of specularite and a little pyrite, and several pyrite-specularite-chlorite veinlets from 1519m to 163.0m 163.0m	1048	4.0	002		0002	
		163.0m-174.2m: distinctly chloritized, carbonitized and with a little "pink" feldspar	Abundant sub-horizontal chlorite veinlets bearing specularite, and a little Pyrite-bearing veinlets with dips of 80° to 85°.	1049	4.0	002		0001	038
170			A little dissemination of specularite.	1050	4.0	002		0002	
		174.2m-177.9m: Sheared up to breccia, and highly chloritized and carbonitized	174.2m Fine network of pyrite-bearing specularite-chlorite veinlets, and breccia-filling specularite.	1051	4.0	002		0001	
180		177.9m-185.3m: moderately to weakly chloritized, weakly carbonitized locally silicified and argillized	177.9m Fairly abundant specularite-chlorite veinlets with a little pyrite, and Several pyrite-specularite-quartz veinlets, mostly dipping 70° to 85°.	1052	4.0	002		0002	067
			Pyrite dissemination from 182.0m to 182.2m. 185.3m	1053	4.0	003		0001	
		185.3m-191.4m: weakly chloritized, carbonitized and with a little "pink" feldspar	Sparse pyrite-specularite-chlorite, veinlets and a little disseminated Pyrite near the veinlets	1054	4.0	002		0001	

Depth (m)	Section	Observation: Rock	Observation: Mineralization	Sample No	Core Length	Assay T-Cu %	Assay S-Cu %	Assay Mo %	Assay S %
210		200.7m-201.0m: Sheared and highly argillized	200.7m A little pyrite-bearing stringers. 202.0m						
		201.0m-201.6m: fairly markedly chloritized, weakly carbonitrized and silicified	Network of pyrite-specularite-chlorite veinlets and a little pyrite-quartz veinlets, bearing chalcopyrite very sparsely at 203.4m and 206.9m.	1058	2.0	003		0002	097
			Fairly distinct dissemination of Pyrite from 205.2m to 207.5m. 207.5m	1059	2.0	004		0001	
		201.6m-210.2m: weakly chloritized, carbonitized and with a little "pink" feldspar along chlorite veinlets	A little pyrite-specularite-chlorite veinlets, mostly dipping 70° to 85°. 210.2m	1060	2.0	003		0002	
		210.2m-212.0m: weakly chloritized, Silicified, carbonitized and with a little "pink" feldspar	Fairly abundant pyrite-quartz and/or chlorite veinlets with trace of copper. 212.0m	1061	4.0	003		0002	
220		212.0m-215.2m: chloritized, carbonitized, and weakly Silicified	Abundant pyrite-bearing hematite stringers and a little quartz veinlets, generally dipping 60°-80°. 216.2m	1062	4.0	002		0001	066
		216.2m-218.4m: markedly chloritized, weakly carbonitized, locally with quartz veinlets	Fairly abundant pyrite mainly in veinlets, but hardly recognized copper ores.	1063	4.0	005		0001	
		218.4m-218.7m: highly sheared and altered into clayey rock	220.9m A few chalcopy rite-bearing quartz veinlets 221.1m						
		218.7m-226.5m: fairly remarkably chloritized, weakly carbonitized, argillized, locally Silicified as veinlets	Mostly Pyrite-specularite-chlorite veinlets without chalcopyrite.	1064	4.0	004		0002	
		226.5m-226.7m: crushed, and fairly strongly argillized and carbonitized		1065	2.0	002		0001	
230		226.7m-233.3m: markedly chloritized, weakly argillized and carbonized, and locally silicified as veinlets	230.5m Chalcopyrite in quartz veinlets. 231.0m	1066	2.0	002		0002	070
				1067	2.0	003		0002	
		233.3m-238.5m: weakly to moderately chloritized, weakly argillized, carbonitized and slighly silicified		1068	2.0	005		0001	
				1069	2.0	008		0003	
		238.5m-238.8m: distinctly silicified	Pyrite-specularite-chlorite veinlets and much less pyrite-quartz veinlets.	1070	4.0	003		0001	047
240		238.5m-241.9m: chloritized, weakly carbonitized and locally silicified	Local dissemination of pyrite and specularite.	1071	4.0	003		0003	
		241.9m-244.0m: almost same as above except for more abundant quartz veinlets							
		244.0m-250.4m: chloritized, carbonitized and weakly argillized locally, and with locally-concentrated quartz veinlets usually containing calcite and chlorite	A little dissemination of chalcopyrite at 233.5m, and a chalcopyrite-bearing chlorite veinlet at 239.1m.	1072	4.0	002		0003	
				1073	2.0	004		0002	065
250		250.4m (END)		1074	2.4	008		0001

			126.4m — Sparsely-penetrated specularite-pyrite-chlorite veinlets mostly dipping 70° to 80°.	1039	4.0	0.02		0.002		
130			A little dissemination of pyrite.							
			A chalcopyrite-bearing pyrite-chlorite veinlet dipping 70° at 130.3m.	1040	4.0	0.03		0.002	0.78	
				1041	4.0	0.03		0.001		
		137.2m-139.3m: fairly markedly chloritized and silicified	137.2m — A 1-cm pyrite-quartz vein dipping 75° at 138.0m; and fairly abundant veinlets of pyrite-quartz and pyrite-specularite-chlorite							
140		139.3m-142.3m: mylonitized, distinctly chloritized, weakly carbonitized and argillized	139.3m — Abundant specularite-chlorite veinlets with a little pyrite. Sporadic dissemination of a little pyrite.	1042	4.0	0.04		0.001		
		142.3m-145.7m: fairly markedly silicified, weakly chloritized and slightly carbonitized	142.3m — Fairly abundant pyrite-quartz veinlets sparsely with a little chalcopyrite and Pyrite-specularite-chlorite veinlets.	1043	4.0	0.11		0.002	1.20	
		145.7m-150.7m: slightly silicified, weakly chloritized, carbonitized, and with a little "pink" plagioclase	Pyrite dissemination rarely with chalcopyrite							
			145.7m — Several pyrite-specularite stringers. A little dissemination of pyrite.							
150			147.5m — Abundant pyrite-specularite-chlorite veinlets and a little disseminated pyrite.	1044	4.0	0.06		0.002		
		150.7m-151.5m: distinctly silicified, weakly chloritized and carbonitized	A 0.3-cm chalcopyrite-bearing veinlet at 148.3m.							
			150.7m — Network of pyrite-quartz stringers from 150.7m to 151.5m.	1045	4.0	0.04		0.001		
		151.5m-158.8m: distinctly chloritized, carbonitized, slightly silicified, and with "pink" plagioclase	Fairly abundant pyrite-specularite-chlorite/quartz veinlets, mostly dipping 70° to 80°, and a little dissemination of pyrite and specularite from 151.5m to 158.8m.	1046	4.0	0.05		0.002	0.92	
160		158.8m-159.1m: Strongly silicified and weakly chloritized	Highly disseminated pyrite from 158.8m to 159.1m.	1047	4.0	0.03		0.003		
		159.1m-163.0m: Strongly chloritized, carbonitized, and argillized	Disseminations of specularite and a little pyrite, and several pyrite-specularite-chlorite veinlets from 159.9m to 163.0m.							
			163.0m — Abundant sub-horizontal chlorite veinlets bearing specularite, and	1048	4.0	0.02		0.002		
		163.0m-174.2m: distinctly chloritized, carbonitized and with a little "pink" feldspar	a little pyrite-bearing veinlets with dips of 80° to 85°.	1049	4.0	0.02		0.001	0.36	
170			A little dissemination of specularite.	1050	4.0	0.02		0.002		
			174.2m — Fine network of pyrite-bearing specularite-chlorite veinlets, and breccia-filling specularite.	1051	4.0	0.02		0.001		
		174.2m-177.9m: Sheared up to breccia, and highly chloritized and carbonitized	177.9m —							
180		177.9m-185.3m: moderately to weakly chloritized, weakly carbonitized locally silicified and argillized	Fairly abundant specularite-chlorite veinlets with a little pyrite, and several pyrite-specularite-quartz veinlets, mostly dipping 70° to 85°.	1052	4.0	0.02		0.002	0.67	
			Pyrite dissemination from 182.0m to 182.2m.	1053	4.0	0.03		0.001		
		185.3m-191.4m: weakly chloritized, carbonitized and with a little "pink"	185.3m — Sparse pyrite-specularite-chlorite,							

Depth (m)	Section	Observation: Rock	Observation: Mineralization	Sample No	Core Length	Assay T-Cu %	S-Cu %	Mo %	S %	
		200.7m-201.0m: sheared and highly argillized	200.7m — A little pyrite-bearing stringers.							
		201.0m-207.5m: fairly markedly chloritized, weakly carbonitized and silicified	202.0m — Network of pyrite-specularite-chlorite veinlets and a little pyrite-quartz veinlets, bearing chalcopyrite very sparsely at 203.4m and 206.9m. Fairly distinct dissemination of Pyrite from 205.2m to 207.5m.	1058	2.0	0.03		0.002	0.97	
		207.5m-210.2m: weakly chloritized, carbonitized and with a little "pink" feldspar along chlorite veinlets	207.5m — A little pyrite-specularite-chlorite veinlets, mostly dipping 70° to 85°.	1059	2.0	0.04		0.001		
210			210.2m — Fairly abundant Pyrite-quartz and/or chlorite veinlets with trace of copper.	1060	2.0	0.03		0.002		
		210.2m-212.0m: weakly chloritized, silicified, carbonitized and with a little "pink" feldspar	212.0m —	1061	4.0	0.03		0.002		
		212.0m-215.2m: chloritized, carbonitized, and weakly silicified	Abundant pyrite-bearing hematite stringers and a little quartz veinlets, generally dipping 60°-80°.	1062	4.0	0.02		0.001	0.66	
			216.2m — Fairly abundant pyrite mainly in veinlets, but hardly recognized copper ores.	1063	4.0	0.05		0.001		
220		216.2m-218.4m: markedly chloritized, weakly carbonitized, locally with quartz veinlets								
		218.4m-218.7m: highly sheared and altered into clayey rock	220.9m — A few chalcopy rite-bearing quartz veinlets							
		218.7m-226.5m: fairly remarkably chloritized, weakly carbonitized, argillized, locally silicified as veinlets	221.1m — Mostly pyrite-specularite-chlorite veinlets without chalcopyrite.	1064	4.0	0.04		0.002		
				1065	2.0	0.02		0.001		
		226.5m-226.7m: crushed, and fairly strongly argillized and carbonitized		1066	2.0	0.02		0.002	0.70	
230		226.7m-233.3m: markedly chloritized, weakly argillized and carbonized, and locally silicified as veinlets	230.5m — Chalcopyrite in quartz veinlets.	1067	2.0	0.03		0.002		
			231.0m —	1068	2.0	0.05		0.001		
		233.3m-238.5m: weakly to moderately chloritized, weakly argillized, carbonitized and slighly silicified		1069	2.0	0.08		0.003		
		238.5m-238.8m: distinctly silicified	Pyrite-specularite-chlorite veinlets and much less pyrite-quartz veinlets.	1070	4.0	0.03		0.001	0.47	
240		238.5m-241.9m: chloritized, weakly carbonitized and locally silicified	Local dissemination of pyrite and specularite.	1071	4.0	0.03		0.003		
		241.9m-244.0m: almost same as above except for more abundant quartz veinlets	A little dissemination of chalcopyrite at 232.5m, and a chalcopyrite-bearing chlorite veinlet at 239.1m.	1072	4.0	0.02		0.003		
		244.0m-250.4m: chloritized, carbonitized and weakly argillized locally, and with locally-concentrated quartz veinlets usually containing calcite and chlorite		1073	2.0	0.04		0.002	0.65

	unconsolidated, ill-sorted and sandy matrix									
20										
30										
	38.5m									
40	Weathered granodiorite extremely decomposed and highly argillized	Network films and stains of limonite sparsely with green copper.	1001	1.5	0.17		0001			
			1002	2.0	0.32	0.28	0003			
			1003	2.0	0.30		0001			
	45.0m		1004	2.0	0.49	0.47	0.001	0.27		
	Medium-grained, plagioclase-porphyritic, biotite-hornblende granodiorite	Network of limonite-chlorite veinlets with small amounts of green copper and oxidized pyrite, generally dipping 60° to 80°.	1005	2.0	0.46		0002			
50	45.0m-53.0m: fairly weathered, markedly chloritized, weakly argillized and carbonitized		1006	2.0	0.45	0.42	0001			
		51.5m Fine network of pyrite-bearing limonite-chlorite veinlets with dips of 60° to 80°. 52.0m	1007	2.0	025		0.001			
	53.0m-53.2m: sheared and highly argillized		1008	2.0	004	003	0001			
	53.2m-55.5m: moderately chloritized, weakly argillized, sericitized, carbonitized, and with "pink-to salmon-colored" plagioclase	Sparsely-penetrated pyrite-chlorite veinlets mostly dipping 70° to 80°. weak limonitization along veinlets. 53.6m	1009	2.0	0.18		0002	1.78		
		Fine network of chalcopyrite-bearing pyrite-specularite-chlorite veinlets, and disseminations of pyrite and a little chalcopyrite along veinlets. 55.5m	1010	1.0	0.66	0.26	—			
60			1011	1.0	1.81		0005			
		Abundant pyrite-bearing specularite-chlorite veinlets with dips of 60° to 80°, cut by sub-horizontal pyrite-quartz veinlets and fatal pyrite stringers with dips of 60° to 80°. 59.6m	1012	1.0	028	0.13	0005			
			1013	1.0	009		0022			
			1014	1.0	005	0.01	tr			
	55.5m-72.0m: weakly to moderately silicified and sporadically epidotized in addition to the above alteration	Disseminations of pyrite, specularite and magnetite near veinlets. 63.1m	1015	1.0	004		0001			
			1016	1.0	0.08	002	—			
		1.5-cm vein and network veinlets of chalcopyrite-pyrite-specularite-quartz-chlorite assemblage & little disseminated ores. 65.2m	1017	1.0	103		tr			
			1018	1.0	2.90	0.16	—			
		Abundant pyrite-specularite-chlorite veinlets and subordinate pyrite-quartz veinlets, dipping generally 70° to 85°; and a little disseminations of pyrite and rare chalcopyrite mainly associated with chloritized mafic silicates.	1019	1.0	0.11		—			
70			1020	2.0	0.08	0.03	tr	3.88		
			1021	2.0	007		—			
		A 1-cm pyrite vein with a dip of 80°, bearing a little chalcopyrite, at 70.5m. 72.0m	1022	2.0	0.29	0.10	0001			
	72.0m-77.3m: chloritized, weakly argillized, sericitized and carbonitized	Very sparsely-penetrated pyrite-specularite chlorite veinlets, and sporadic dissemination of pyrite mainly replacing chloritized mafic minerals.	1023	2.0	0.03		—			
			1024	2.0	0.03	001	—			
		Fairly abundant "barren" chlorite veinlets mostly dipping 5° to 20°. 77.3m								
80	77.3m-82.8m: slighly silicified with a little "pink" plagioclase in addition to the above alterations	Fairly abundant pyrite-specularite-chlorite veinlets mostly dipping 70° to 80°, and a little pyrite-quartz veinlets with dips of 40° to 70°.	1025	4.0	004		—	0.67		
		Sparse dissemination of pyrite.	1026	4.0	004	002	—			
	82.8m-85.1m: with almost same alterations as above except for much stronger silicification	Fairly abundant quartz-chlorite veinlets bearing pyrite and minor specularite. 85.1m								
		A little pyrite-specularite-bearing quartz-chlorite veinlets uncommonly with a small amount of chalcopyrite	1027	4.0	005		tr			
	85.1m-91.5m: weakly chloritized, carbonitized, argillized, and with a little "pink" feldspars and fracture-filling biotite-chlorite aggregates	Very poor dissemination of pyrite locally with a few minute specks of chalcopyrite 91.5m	1028	4.0	004	0.01	0001			
90										
	91.5m-95.0m: distinctly silicified and chloritized	Network of pyrite-chlorite-quartz veinlets and subordinate pyrite-specularite-chlorite veinlets, and common dissemination of pyrite 94.0m								
		Fairly abundant pyrite-bearing chlorite veinlets and a little pyrite-quartz veinlets, generally dipping 60° to 85°. A little disseminated pyrite near veinlets. 97.0m	1029	4.0	003		—	0.85		
	95.0m-100.0m: fairly distinctly chloritized, weakly silicified, carbonitized, slightly and with fairly abundant "pink" plagioclase and a little secondary biotite	Sparse veinlets of quartz and/or chlorite with a little pyrite and specularite								
		A chalcopyrite-bearing veinlet at 97.3m	1030	4.0	003	002	0001			
100										

	to the above alterations	Network of pyrite-bearing veinlets; dissemination near veinlets. 116.0m								
	116.0m-117.3m: weakly chloritized	A little pyrite-bearing chlorite veinlets. 117.3m								
120	117.3m-126.4m: distinctly chloritized, slightly to weakly silicified, weakly carbonitized, and with "pink" feldspar	Network of pyrite stringers from 117.3m to 118.0m.	1035	4.0	003		0001	0.72		
		Fairly abundant veinlets of pyrite-quartz, pyrite-specularite-chlorite and pyrite-chlorite assemblages from 118.0m to 126.4m.	1036	2.0	002		0002			
		A 0.8-cm pyrite-specularite-quartz vein dipping 75° at 120.5m. pyrite dissemination, generally poor, but heavy from 119.0m to 122.0m and from 125.0m to 125.5m. 126.4m	1037	2.0	004		0001			
			1038	2.0	003		0001			
	126.4m-137.2m: weakly chloritized, carbonitized and with a little "pink" feldspar	Sparsely-penetrated specularite-pyrite-chlorite veinlets mostly dipping 70° to 80°.	1039	4.0	002		0002			
130		A little dissemination of pyrite.								
		A chalcopyrite-bearing pyrite-chlorite veinlet dipping 70° at 130.3m.	1040	4.0	0.03		0002	0.79		
			1041	4.0	003		0001			
	137.2m-139.3m: fairly markedly chloritized and silicified	137.2m A 2-cm pyrite-quartz vein dipping 75° at 138.0m, and fairly abundant veinlets of pyrite-quartz and pyrite-specularite-chlorite 139.3m								
140	139.3m-142.3m: mylonitized, distinctly chloritized, weakly carbonitized and argillized	Abundant specularite-chlorite veinlets with a little pyrite.	1042	4.0	004		0001			
		Sporadic dissemination of a little pyrite. 142.3m								
	142.3m-145.7m: fairly markedly silicified, weakly chloritized and slightly carbonitized	Fairly abundant pyrite-quartz veinlets sparsely with a little chalcopyrite and pyrite-specularite-chlorite veinlets. Pyrite dissemination rarely with chalcopyrite 145.7m	1043	4.0	0.11		0002	1.20		
	145.7m-150.7m: slighly silicified, weakly chloritized, carbonitized, and with a little "pink" plagioclase	Several pyrite-specularite stringers. A little dissemination of pyrite. 147.5m								
150		Abundant pyrite-specularite-chlorite veinlets and a little disseminated pyrite.	1044	4.0	006		0002			
	150.7m-151.5m: distinctly silicified, weakly chloritized and carbonitized	A 0.2-cm chalcopyrite-bearing veinlet at 148.5m. 150.7m								
		Network of pyrite-quartz stringers from 150.7m to 151.5m.	1045	4.0	004		0001			
	151.5m-158.8m: distinctly chloritized, carbonitized, slightly silicified, and with "pink" plagioclase	Fairly abundant pyrite-specularite-chlorite/quartz veinlets, mostly dipping 70° to 80°, and a little dissemination of pyrite and specularite from 151.5m to 158.8m.	1046	4.0	005		0002	0.92		
160	158.8m-159.1m: Strongly silicified and weakly chloritized	Highly disseminated pyrite from 158.8m to 159.1m.	1047	4.0	003		0003			
	159.1m-163.0m: Strongly chloritized, carbonitized, and argillized	Disseminations of specularite and a little pyrite, and several pyrite-specularite-chlorite veinlets from 159.1m to 163.0m								
		Abundant sub-horizontal chlorite veinlets bearing specularite, and a little pyrite-bearing veinlets with dips of 80° to 85°.	1048	4.0	002		0002			
	163.0m-174.2m: distinctly chloritized, carbonitized and with a little "pink" feldspar	A little dissemination of specularite.	1049	4.0	002		0001	0.36		
170			1050	4.0	002		0002			
	174.2m-177.9m: Sheared up to breccia, and highly chloritized and carbonitized	174.2m Fine network of pyrite-bearing specularite-chlorite veinlets, and breccia-filling specularite.	1051	4.0	002		0001			
	177.9m-185.3m: moderately to weakly chloritized, weakly carbonitized locally silicified and argillized	177.9m Fairly abundant specularite-chlorite veinlets with a little pyrite, and several pyrite-specularite-quartz veinlets, mostly dipping 70° to 85°.	1052	4.0	002		0002	0.67		
180		Pyrite dissemination from 182.0m to 182.2m.	1053	4.0	003		0001			
	185.3m-191.4m: weakly chloritized, carbonitized and with a little "pink" feldspar	185.3m Sparse pyrite-specularite-chlorite, veinlets and a little disseminated pyrite near the veinlets.	1054	4.0	002		0001			
190	191.4m-193.1m: Silicified, weakly chloritized	191.4m Network of pyrite-bearing quartz and/or chlorite veinlets from 191.4m to 193.1m and from 195.8m to 200.7m.	1055	4.0	003		0003	0.52		
	193.1m-195.8m: weakly chloritized, carbonitized and with a little "pink" feldspar	Several pyrite-specularite-chlorite veinlets from 193.1m to 195.8m.	1056	4.0	003		0002			
	195.8m-200.7m: weakly silicified, weakly chloritized and carbonitized	Chalcopyrite-bearing stringers at 195.3m, 195.8m and 197.7m.								
200			1057	4.0	003		0002			

		[illegible]								
		216.2m								
	216.2m-218.4m: markedly chloritized, weakly carbonitized, locally with quartz veinlets	Fairly abundant pyrite mainly in veinlets, but hardly recognised copper ores. A few chalcopy rite-bearing quartz veinlet	1063	4.0	005		0001			
	218.4m-218.7m: highly sheared and altered into clayey rock	220.9m 221.1m								
220	218.7m-226.5m: fairly remarkably chloritized, weakly carbonitized, argillized, locally silicified as veinlets	Mostly pyrite-specularite-chlorite veinlets without chalcopyrite.	1064	4.0	004		0002			
			1065	2.0	002		0001			
	226.5m-226.7m: crushed, and fairly strongly argillized and carbonitized		1066	2.0	002		0002	0.70		
	226.7m-233.3m: markedly chloritized, weakly argillized and carbonized, and locally silicified as veinlets	230.5m Chalcopyrite in quartz veinlets. 231.0m	1067	2.0	003		0002			
230			1068	2.0	005		0.001			
	233.3m-238.5m: weakly to moderately chloritized, weakly argillized, carbonitized and slighly silicified		1069	2.0	008		0003			
	238.5m-238.8m: distinctly silicified	Pyrite-specularite-chlorite veinlets and much less pyrite-quartz veinlets.	1070	4.0	003		0001	047		
	238.5m-241.9m: chloritized, weakly carbonitized and locally silicified									
240	241.9m-244.0m: almost same as above except for more abundant quartz veinlets	Local dissemination of pyrite and specularite.	1071	4.0	003		0003			
	244.0m-250.4m: chloritized, carbonitized and weakly argillized locally, and with locally concentrated quartz veinlets usually containing calcite and chlorite	A little dissemination of chalcopyrite at 233.5m, and a chalcopyrite-bearing chlorite veinlet at 239.1m.	1072	4.0	002		0003			
			1073	2.0	004		0002	0.85		
			1074	2.4	008		0001

10		Non-core							
20									
		-22.0m							
30		Alluvial or glacial deposits with abundant gravels of quartzite, subordinate intrusive porphyries, shale and magnetite skarn in a brown, unconsolidated, sandy matrix							
40									
		-41.5m							
		Quartzitic sandstone highly argillized	Abundant Fe/Mn oxides filling fractures.	2001	2.5	0.11		0001	
		-42.9m							
		Massive quartzite 429m-434m: argillized along fractures 434m-440m: altered into white clay 440m-497m: Strongly argillized along finely developed fractures	Limonite and a little pyrite strongly oxidized, mainly in fractures.	2002	4.0	003	003	0001	0.33
50		497m-503m: altered into white clay		2003	4.0	002		0001	
		503m-515m: argillized and strongly limonitized along finely developed fractures, with sericite spots sparsely 515m-551m: weakly argillized and limonitized along fractures, and with a little sericite aggregates sporadically		2004	4.0	003	003	0003	
		-56.1m							
		Quartzitic sandstone highly argillized	Weak stains of limonite.	2006	1.7	008		0004	
60		-60.5m Quartz monzonite porphyry bleached and highly argillized	576m-596m: Rich stains and fracture-filling films of Fe/Mn-oxides.	2006	2.0	1.11	0.92	0006	0.87
			596m-608m: Distinct stains of Cu-oxides and a little cc coating Py.	2007	2.0	1.35		0002	
		-62.8m	608m-628m: Rich dissemination and stringers of Py > cp > bn > cc	2008	1.1	127	0.05	0002	
		Shale distinctly argillized and partly skarnized	Disseminations and fracture-filling stringers of Py > cp with a little bn and cc (Py: pyrite, cp: chalcopyrite, bn: bornite, cc: chalcocite).	2009	2.0	0.80		0003	
				2010	1.6	1.04	0.05	0003	
		-67.0m							
70		Quartzitic sandstone, fine-grained, hard and compact, with an intercalated thin phyllitic slate; weakly sericitized and argillized, and with fine-grained chlorite-biotite and quartz-clay veinlets	Dissemination of pyrite and a little chalcopyrite.	2011	3.6	0.10		0007	0.55
			Fairly abundant pyrite-clay-quartz veinlets with a little chalcopyrite and bornite.	2012	4.0	0.23	001	0008	
		-73.8m Hornfels of shale with biotite, actinolite and garnet, sericitized, chloritized and argillized	Dissemination of pyrite.	2013	2.0	006		0007	
		-75.5m							
80		Fine-grained quartzitic sandstone weakly argillized, sericitized, chloritized and with a little quartz veinlets	Pyrite-chalcopyrite-bornite-bearing chlorite-clay veinlets and several one-quartz veinlets. A little disseminated pyrite and chalcopyrite.	2014	4.0	1.08	001	0003	
		-80.0m	A little pyrite disseminated.						
		-82.0m	Very abundant euhedral pyrite disseminated and in joints.	2015	4.0	005		0005	1.45
		-86.3m	Very poor copper ore.	2016	4.0	002	001	0004	
			Disseminations and joint-fillings of euhedral pyrite						

Depth (m)	Section	Observation: Rock	Observation: Mineralization	Sample No	Core Length	Assay: T-Cu %	S-Cu %	Mo %	S %
110		Fine-grained quartzitic sandstone with fine-grained secondary biotite now chloritized fairly distinctly	Abundant pyrite disseminated and as stringers. A pyrite-chlorite concentration from 101.5m to 101.8m.	2020	1.4	001		0002	
		-102.5m		2021	0.3	002		0011	
		-103.4m Purplish-colored massive quartzite	Disseminated and joint-filled pyrite.	2022	2.0	001		0006	
		Quartz monzonite porphyry highly argillized	Highly disseminated and joint-filled Pyrite.	2023	1.3	002		0018	
		-105.0m Massive quartzite argillized along fractures	Abundant pyrite filling fractures.	2024	1.3	001		0007	1.60
		-106.3m Quartz monzonite porphyry remarkably argillized, weakly sericitized and chloritized	Pyrite and chalcopyrite as disseminations and joint-fillings.	2025	2.0	069		0002	
				2026	1.7	080		0004	
		-110.0m Purplish-colored massive quartzite argillized along fractures	Pyrite and chalcopyrite mainly in and along fractures.						
		-111.3m Quartz monzonite porphyry argillized, sericitized and chloritized weakly	Pyrite and much less chalcopyrite as disseminations and joint-fillings.	2027	4.0	031		0005	
				2028	4.0	039		0006	
			118.0m Only pyrite mineralization.	2029	1.2	008		0007	
120		-119.2m Hornfels of shale intruded by thin dykes of quartz monzonite porphyry, weakly fractured, and filled with clay, chlorite and pyrite	Pyrite in and along fractures.	2030	3.8	006		0009	050
			Disseminated pyrite and chalcopyrite in argillized porphyry dykes.	2031	4.0	009		0006	
		-128.1m Hornfels of sandstone argillized and weakly silicified	Fairly abundant pyrite as dissemination and fracture-filling.	2032	4.0	002		0013	
130		-132.8m Hornfelsic shale and porhyry dykes	Pyrite only in shale, and pyrite and chalcopyrite in porphyry.	2033	4.0	010		0006	1.91
		-133.8m Quartz monzonite porphyry argillized, weakly silicified and sericitized	Abundant pyrite, much less chalcopyrite and rare molybdenite as disseminations and joint-fillings.	2034	4.0	050		0038	
140		-141.3m		2035	2.3	022		0006	
		Post-ore dyke of olivine basalt, brecciated and including fragments of mineralized porphyry and quartzite from 151.7m to 158.4m		2036	4.0	005		0002	
				2037	4.0	004		0001	035
150				2038	4.0	003		0002	
				2039	4.0	005		0002	
				2040	1.1	009		0006	
		-158.4m							
160		Hornfels of shaly sandstone with aggregates of fine-grained biotite, minor epidote and garnet	Fairly abundant pyrite and rare chalcopyrite disseminated and in clay-filled fractures.	2041	3.6	003		0001	1.43
		-162.3m Hornfels of shale and intercalated thin sandstone, fairly remarkably argillized and weakly silicified	Pyrite and much less chalcopyrite mainly in fractures and quartz veinlets.	2042	4.0	034		0004	
		-167.3m Hornfels of quartzitic sandstone with intercalated thin layers of shale	Abundant pyrite and minor chalcopyrite as dissemination and fracture-fillings.	2043	4.0	0.15		0005	
170		-169.3m Quartz monzonite porphyry altered	More abundant chalcopyrite.						
		-170.5m Hornfels of quartzitic sandstone and shale, and thin porphyry dyke intruding between them Alteration of clay-sericite-chlorite assemblage with minor epidote	Abundant pyrite and generally poor chalcopyrite as dissemination and fracture-filling. More abundant chalcopyrite in porphyry than in hornfels.	2044	4.0	0.11		0005	2.02
		-175.0m Fine-grained quartzitic sandstone intercalating thin layers of hornfelsic shale, weakly argillized and with Sericite-chlorite-filled fractures	Abundant pyrite and a little chalcopyrite disseminated, and chalcopyrite-bearing sericite-chlorite veinlets.	2045	4.0	020		0012	
180		-179.4m Hornfels of black shale weakly fractured and filled with sericite, chlorite and clay	Pyrite and rare chalcopyrite in and along fractures.	2046	4.0	008		0006	
		-183.4m							
		Fine-grained quartzitic sandstone 181.4m-192.0m: fairly remarkably chloritized, sericitized and argillized along fractures	Pyrite-chalcopyrite-chlorite-Sericite-clay veinlets. Dissemination of pyrite	2047	4.0	0.45		0006	154
				2048	4.0	047		0016

67.0m	Quartzitic sandstone, fine-grained, hard and compact, with an intercalated thin phyllitic slate; weakly sericitized and orgillized, and with fine-grained chlorite-biotite and quartz-clay veinlets	Dissemination of pyrite and a little chalcopyrite. Fairly abundant pyrite-clay-quartz veinlets with a little chalcopyrite and bornite.	2011	3.6	0.10		0.007	0.55	
			2012	4.0	0.23	0.01	0.008		
73.8m	Hornfels of shale with biotite, actinolite and garnet, Sericitized, chloritized and argillized	Dissemination of pyrite.	2013	2.0	0.06		0.007		
75.5m	Fine-grained quartzitic sandstone weakly argillized, Sericitized, chloritized and with a little quartz veinlets	Pyrite-chalcopyrite-bornite-bearing chlorite-clay veinlets and several ore-quartz veinlets. A little disseminated pyrite and chalcopyrite.	2014	4.0	1.08	0.01	0.003		
80.0m		A little pyrite disseminated.	2015	4.0	0.05		0.005	1.45	
82.0m		Very abundant euhedral pyrite disseminated and in joints. Very poor copper ore.	2016	4.0	0.02	0.01	0.004		
86.3m		Disseminations and joint-fillings of euhedral pyrite.	2017	4.0	0.01		0.012		
90.2m	Hornfelsic shale locally intercalating thin layers of quartzitic sandstone; chloritized and silicified	Same as above.	2018	4.0	0.01	0.01	0.003	0.72	
97.5m	Fine-grained quartzitic sandstone weakly argillized and chloritized	Same as above.	2019	4.0	0.01		0.003		
99.5m	Purplish massive quartzite	Same as above.							

	argillized, Sericitized and chloritized weakly	chalcopyrite as disseminations and joint-fillings.							
118.0m		Only pyrite mineralization.	2028	4.0	0.39		0.006		
119.2m	Hornfels of shale intruded by thin dyres of quartz monzonite porphyry, weakly fractured, and filled with clay, chlorite and pyrite	Pyrite in and along fractures. Disseminated pyrite and chalcopyrite in argillized porphyry dykes.	2029	1.2	0.08		0.007		
			2030	3.8	0.06		0.009	0.50	
			2031	4.0	0.09		0.006		
128.1m	Hornfels of sandstone argillized and weakly silicified	Fairly abundant pyrite as dissemination and fracture-filling.	2032	4.0	0.02		0.013		
132.8m	Hornfelsic shale and porhyry dykes	Pyrite only in shale, and pyrite and chalcopyrite in porphyry.	2033	4.0	0.10		0.006	1.91	
133.8m	Quartz monzonite porphyry argillized, weakly silicified and Sericitized	Abundant pyrite, much less chalcopyrite and rare molybdenite as disseminations and joint-fillings.	2034	4.0	0.50		0.038		
			2035	2.3	0.22		0.006		
141.3m	Post-ore dyke of olivine basalt, brecciated and including fragments of mineralized porphyry and quartzite from 137.7m to 158.4m		2036	4.0	0.05		0.002		0.35
			2037	4.0	0.04		0.001		
			2038	4.0	0.03		0.002		
			2039	4.0	0.05		0.002		
158.4m			2040	1.1	0.08		0.006		
162.3m	Hornfels of shaly sandstone with aggregates of fine-grained biotite, minor epidote and garnet	Fairly abundant pyrite and rare chalcopyrite disseminated and in clay-filled fractures.	2041	3.8	0.03		0.001		1.43
167.3m	Hornfels of shale and intercaleted thin sandstone, fairly remarkably argillized and weakly silicified	Pyrite and much less chalcopyrite mainly in fractures and quartz veinlets.	2042	4.0	0.34		0.004		
169.3m	Hornfels of quartzitic sandstone with intercalated thin layers of shale	Abundant pyrite and minor chalcopyrite as dissemination and fracture-fillings.	2043	4.0	0.15		0.005		
170.5m	Quartz monzonite porphyry altered	More abundant chalcopyrite.							
175.0m	Hornfels of quartzitic sandstone and shale, and thin porphyry dyke intruding between them Alteration of clay-sericite-chlorite assemblage with minor epidote	Abundant pyrite and generally poor chalcopyrite as dissemination and fracture-filling. More abundant chalcopyrite in porphyry than in hornfels.	2044	4.0	0.11		0.005	2.02	
	Fine-grained quartzitic sandstone intercalating thin layers of hornfelsic shale, weakly argillized and with Sericite-chlorite-filled fractures	Abundant pyrite and a little chalcopyrite disseminated, and chalcopyrite-bearing Sericite-chlorite veinlets.	2045	4.0	0.20		0.012		
179.4m	Hornfels of black shale weakly fractured and filled with sericite, chlorite and clay	Pyrite and rare chalcopyrite in and along fractures.	2048	4.0	0.08		0.006		
183.4m	Fine-grained quartzitic sandstone 183.4m–192.0m: fairly remarkably chloritized, sericitized and argillized along fractures 192.0m–196.3m: suffered from same type of alteration as above, but generally weak	Pyrite-chalcopyrite-chlorite-Sericite-clay veinlets. Dissemination of pyrite and minor chalcopyrite.	2047	4.0	0.45		0.006	1.54	
			2048	4.0	0.47		0.016		
192.0m		Disseminated and fracture-filled pyrite with a little flaky chalcopyrite.	2049	4.0	0.17		0.002		
196.3m			2050	4.0	0.12		0.003	1.06	
197.1m	Hornfelsic shale	Mainly fracture-filled pyrite.							
	Massive quartzite argillized along fractures	Same as above.	2051	4.0	0.09		0.007		
199.5m	Hornfelsic shale								

	totally Silicified	and rare molybdenite disseminated.							
214.0m	Quartzitic sandstone argillized along fractures	Chalcopyrite-pyrite stringers with rare molybdenite.							
215.3m	Massive quartzite argillized along fractures	Pyrite, minor chalcopyrite and rare molybdenite in and along fractures. Molybdenite-bearing chalcopyrite-pyrite stringers or seams at 220.7m, 222.2m and 223.8m.	2055	4.0	0.17		0.015		
			2056	4.0	0.19		0.021	0.77

	15.1m — Network of limonite-clay veinlets with fairly abundant pyrite							0.50
argillized	Network of limonite-clay-carbonate veinlets with a little pyrite, dominantly dipping 60° to 70° and 20° to 30°. A 0.7-cm pyrite-limonite-quartz veinlet dipping 70° at 22.0m. A little dissemination of magnetite.	3005	4.0	0.03		—		
		3006	4.0	0.06	0.05	—		
ɔic rock	Abundant thin stringers of carbonates bearing limonite and a little pyrite. A 1-cm carbonate vein highly stained by limonite at 26.5m. Strongly limonitized parts at 31.0m, 31.2m, 32.0m and 33.6m. A little dissemination of magnetite.	3007	4.0	0.03		—		0.31
·ittle inolitic		3008	4.0	0.03	0.03	—		
epidotized, ry biotite	33.7m — Limonite-bearing carbonate veinlets from 33.7m to 36.0m. Limonite gossan from 36.0m to 36.2m. Limonite-bearing carbonate veinlets from 36.2m to 37.2m. A few chlorite-epidote-quartz veinlets with a little chalcopyrite and bornite from 37.2m to 37.5m.	3009	4.0	0.05		—		0.36
		3010	4.0	0.09	0.04	tr		
chloritized, silicified, aggregates d a little	Limonite-carbonate veinlets with very small amounts of pyrite and chalcopyrite from 37.5m to 40.8m. A little dissemination and stringers of pyrite with very small amounts of chalcopyrite and native copper from 40.8m to 50.1m.	3011	4.0	0.05		—		0.29
		3012	4.0	0.05	0.03	—		
	Pyrite-bearing chlorite veinlets rarely with chalcopyrite, which are often cut by "barren" calcite veinlet from 50.1m to 58.0m.	3013	4.0	0.04		—		
		3014	4.0	0.05	0.02	—		0.30
ioclase- lende	60.0m — Network of limonite-filled joints and a little disseminated pyrite	3015	4.0	0.04		—		
rgillized, locally ericitized	Network of pyrite-bearing carbonate-chlorite veinlets and a little dissemination of pyrite.	3016	4.0	0.02	0.02	—		
	67.3m — Weak limonitization up to 62.6m.	3017	4.0	0.01		tr		0.49
gillized, onitized ed, with a 5m to 79.9m	Fairly abundant specularite-chlorite veinlets with a little pyrite.	3018	4.0	0.02	0.02	tr		
	A little disseminated magnetite-hematite and pyrite.	3019	4.0	0.01		—		
		3020	2.0	0.01	0.01	—		0.87
	78.2m — Abundant pyrite and hematite Chalcopyrite, Pyrite, magnetite and hematite in skarn.	3021	2.0	0.19		0.02		
agnetite skarn	Chalcopyrite, bornite, chalcocite and green copper.	3022	2.0	0.44	0.13	0.001		
ite and garnet	Mainly chalcopyrite and pyrite.	3023	2.0	0.32		0.001		
t-magnetite -actinolite e mica - chlorite	Bornite and chalcopyrite with a little cuprite and native copper. 85.2m — Pyrite and a little chalcopyrite disseminated.	3024	2.0	1.61	0.14	—		
		3025	2.0	0.11		—		
arnized	A little chalcopyrite in skarnized part	3026	2.0	1.27	0.10	tr		0.73
tinalite skarn e- chlorite - garnet	Pyrite and chalcopyrite disseminated. Poor chalcopyrite from 90.0m to 92.8m	3027	2.0	0.05		0.005		
		3028	2.0	0.63	0.08	0.001		
r of	A little pyrite and chalcopyrite as stringers and in fractures.	3029	2.0	0.16		—		
d marble	High-grade ore mainly of bornite.	3030	2.0	2.32	0.33	—		
porphyry	Disseminated pyrite and chalcopyrite.							
ictfied g along	General but poor dissemination of pyrite and minor chalcopyrite, and several chalcopyrite seams.	3031	4.0	0.08		—		-

120	119.2m — Skarn							
	119.2m-121.8m : epidote-bearing garnet magnetite-hematite	Dissemination and seams of chalcopyrite and bornite locally associated with minor amounts of chalcocite, cuprite, galena and sphalerite.						
	121.8m-122.0m : garnet-bearing epidote							
	122.0m-124.8m : epidote-actinolite-chlorite argillized, originated from gabbroic rock?							
	124.8m-127.2m : epidote-actinolite-garnet, argillized							
130	127.2m-128.8m : skarnized and silicified marble							
	128.8m-136.4m : mainly garnet-epidote-hematitized magnetite							
	134.4m-136.2m : mixture of garnet and marble							
	136.2m-140.6m : mainly garnet-epidote							
140	140.1m-141.0m : "white" skarn possibly containing diopside							
	141.0m — Epidotized gabbroic rock	Disseminated pyrite.						
	141.7m — "white" skarn possibly originated from "hibrid rock" formed by the reaction between limestone and gabbro	Dissemination of pyrite and minor chalcopyrite.						
	144.4m — Gabbroic rock remarkably skarnized by epidote, chlorite and actinolite, and a little white skarn	Disseminated and joint-filled pyrite and trace of chalcopyrite.						
150	149.0m — Skarn							
	149.0m-150.0m : mainly epidote-garnet-magnetite	Chiefly dissemination of chalcopyrite, pyrite, bornite and trace of chalcocite.						
	151.0m-152.3m : mainly diopside-garnet-epidote							
	152.3m — Skarnized gabbroic rock	Dissemination of pyrite.						
	153.2m — "white" skarn containing a little garnet and epidote	Same as above.						
	155.2m — Skarnized gabbroic rock markedly argillized	Almost same as above. A little chalcopyrite from 158.0m to 158.3m						
	158.3m — Argillized and chloritized porphyry	Dissemination of pyrite.						
160	159.6m — Skarn							
	159.6m-161.7m : actinolite-magnetite	Dissemination of pyrite and chalcopyrite.						
	161.7m-163.8m : "pale green" skarn rich in diopside							
	163.8m-165.2m : epidote-diopside-actinolite							
	165.2m — Silicified marble	Dissemination of pyrite.						
	166.5m — Brecciated and argillized skarn	Dissemination of pyrite, chalcopyrite and minor bornite.						
	168.0m — Marble weakly skarnized							
170	"White" skarn or "hibrid" rock mainly composed of albite, K-feldspar and quartz with fairly abundant apatite, fine-grained biotite, and a little epidote, garnet and actinolite	Dissemination of a little Pyrite and trace of chalcopyrite.						
	A little skarnized gabbroic rock							
	172.0m — Marble partly skarnized	Pyrite, chalcopyrite and bornit in skarn.						
	176.0m — Mainly garnet skarn	Disseminated pyrite with a little chalcopyrite.						
	177.6m — Gabbroic rock remarkably biotitized	Disseminated pyrite and a little chalcopyrite.						
180	179.3m — Skarn and altered gabbroic rock							
	179.3m-180.7m : "white" skarn or	Almost same as above						
	181.1m-183.2m : "hibrid" rock	Pyrite and lesser chalcopyrite disseminated in epidote-actinolite skarn.						
	180.7m-181.1m : epidote-actinolite skarn							
	183.6m-184.0m : garnet-bearing "white" skarn							
	184.4m							
	185.1m — 185.3m							
190	Medium-grained plagioclase-porphyritic hornblende-biotite granodiorite chloritized. A little skarn (xenolith?), and gabbroic rock chloritized, epidotize and silicified.	A little pyrite mainly in and along chlorite veinlets.						
	196.5m

50			Bn-bearing py-cp-quartz veinlets, sparsely.						
		503m-555m: weakly argillized, sericitized carbonitized, chloritized, and with a little quartz veinlets bearing calcite, and a few epidote-chlorite veinlets.		4024	2.00	0.18	0.03	0.008	
			Bn-bearing cp-py-quartz veinlets with dips of 70°-80°, spacing 10-15cm, often cut by barren calcite veinlets.	4025	2.00	0.18		0.001	
		555m-557m: Sheared and highly argillized	A little dissemination of py and mag.	4026	2.00	0.48	0.03	0.004	0.48
			55.7m						
		557m-602m: distinctly silicified by quartz veinlets, fairly argillized, weakly sericitized, carbonitized and chloritized	Py-bearing bn-cp-quartz veinlets, with dips of 70°-80°, spacing 3-5cm, from 55.7m to 58.5m.	4027	2.00	1.14		0.006	
			Py-bearing mb-bn-cp-quartz veinlets, spacing 1-3cm from 58.5m to 60.2m.	4028	2.00	1.82	0.02	0.282	
60			60.2m						
		602m-622m: highly argillized, weakly silicified by quartz veinlets, carbonitized, sericitized and chloritized	Bn-cp-py-quartz veinlets spacing 5-10cm. A little dissemination of bn, cp and py.	4029	2.00	0.82		0.021	
			62.2m						
		622m-837m: distinctly silicified mainly by quartz veinlets, weakly carbonitized, argillized, sericitized and chloritized	Fine networks of bn-cp-quartz veinlets locally with a little mb and cc.	4030	2.00	1.83	0.04	0.032	
				4031	2.00	1.56		0.008	1.19
			Dissaminations of same sulphides as those in veinlets, fairly distinctly (Bn > cp in amount).	4032	2.00	1.32	0.06	0.011	
			A little dissemination of hem pseudomorph after mag.	4033	2.00	1.61		0.011	
70			70.2m						
			Almost same as above, except for cp > bn in volume ratio of cu-ores.	4034	2.00	1.27	0.03	0.025	
			72.0m						
			Fine to moderate networks of quartz veinlets commonly with a little cp and bn.	4035	2.00	0.45		0.005	
				4036	2.00	0.48	0.04	0.002	0.55
			A little disseminated cp and py near veinlets.	4037	2.00	0.34		0.003	
				4038	2.00	0.30	0.04	0.005	
80			80.5m						
			Moderate networks of quartz veinlets with a little cp, py and rare bn. A little disseminated py and cp near veinlets.	4039	2.00	0.40		0.003	
			83.7m						
		837m-957m: fairly distinctly argillized, carbonitized, weakly silicified partly, weakly chloritized and sericitized	Local narrow bands of thin quartz veinlets with a little cp, py and rare bn, dipping 60°-80°.	4040	2.00	0.42	0.18	0.003	
				4041	2.00	0.22		0.006	0.95
				4042	2.00	0.27	0.08	0.003	
				4043	2.00	0.15		0.005	

Depth (m)	Section	Observation: Rock	Observation: Mineralization	Sample No	Core Length	Assay T-Cu %	Assay S-Cu %	Assay Mo %	Assay S %
		100.0m-110.2m: with same alteration as above	A little disseminations of py furnished by oxidization, hematilited mag and cp.	4049	4.00	0.11		0.001	
				4050	4.00	0.17		0.002	0.26
110			110.2m						
		110.2m-119.0m: distinctly argillized, weakly silicified partly, weakly carbonitized, chloritized and sericitized	Local narrow bands of quartz veinlets with a little py and cp.	4051	4.00	0.09		0.004	
			Dissemination of py with a little cp and mag.	4052	4.00	0.13		0.004	
				4053	4.00	0.13		0.003	0.63
120		119.0m-126.5m: distinctly argillized, carbonitized, weakly chloritized and sericitized	119.0m						
			Dissemination of py rarely with cp.	4054	4.00	0.08		0.003	
			126.5m						
		126.5m-132.0m: fairly distinctly argillized, weakly carbonitized, silicified, chloritized and sericitized	Fairly abundant py dissemination rarely with cp.	4055	4.00	0.21		0.002	
			A little py-quartz veinlets	4056	4.00	0.09		0.003	0.85
130			132.0m						
		132.0m-134.3m: weakly carbonitized, argillized, sericitized and chloritized	A little dissemination of py rarely with cp.	4057	4.00	0.10		0.002	
		134.3m-136.2m: fairly distinctly argillized, weakly carbonitized, sericitized and chloritized	134.3m A little dissemination of oxidized py rarely with cp and bn.						
		136.2m-140.0m: weakly carbonitized, argillized, sericitized and chloritized	136.2m Sparsely disseminated py and hem	4058	4.00	0.06		0.002	
140			140.0m						
		140.0m-142.0m: fairly distinctly argillized, weakly carbonitized, sericitized and chloritized	Fairly abundant dissemination of oxidized py rarely with cp.	4059	4.00	0.09		0.003	0.22
		142.0m-146.0m: weakly carbonitized, sericitized and argillized	142.0m Very sparse dissemination of py (partly oxidized) with hematilited mag and rare cp.						
		146.0m-150.7m: weakly carbonitized, sericitized, argillized and slightly silicified	146.0m Very sparse dissemination of py and mag rarely with cp. A few cp-py-quartz veinlets generally dipping 30°-50°.	4060	4.00	0.08		0.002	
150			150.7m						
		150.7m-154.5m: weakly argillized, carbonitized, sericitized and chloritized	Very sparse dissemination of py and mag rarely with cp.	4061	4.00	0.06		0.001	
				4062	4.00	0.08		0.002	0.27
		154.5m-157.0m: Sheared, locally brecciated, highly argillized and distinctly carbonitized	154.5m Dissemination and stringers of py with hem and mag.						
			157.0m						
		157.0m-162.0m: Fairly distinctly argillized, weakly carbonitized, sericitized and chloritized	Sparse dissemination of py with a little cp, hem and mag.	4063	4.00	0.11		0.002	
160									
				4064	4.00	0.15		0.001	
			162.0m						
		162.0m-165.9m: weakly carbonitized, argillized, silicified and sericitized	Sparse disseminations of Py, hem and mag with cp. Several Py-cp-quartz veinlets.	4065	4.00	0.29		0.003	0.30
			165.9m						
		165.9m-176.0m: weakly carbonitized and argillized	very sparse disseminations of py, cp, hem and mag.	4066	4.00	0.09		0.001	
170									
				4067	4.00	0.11		0.001	
		Hornblende-biotite-bearing quartz monzonite porphyry							
				4068	4.00	0.13		0.002	0.20
		176.0m-182.0m: weakly carbonitized, argillized, partly chloritized and slightly epidotized							
180				4069	4.00	0.17		0.005	
		182.0m-200.0m: weakly carbonitized, Sericitized, chloritized and epidotized							
			186.0m						
			Sparse dissemination of cp.	4070	4.00	0.12		0.001	

Depth (m)	Section	Observation: Rock	Observation: Mineralization	Sample No	Core Length	Assay T-Cu %	Assay S-Cu %	Assay Mo %	Assay S %
		200.0m-205.5m: weakly carbonitized, Sericitized, slightly chloritized and epidotized	Sparse disseminations of cp, py and mag. A 1-cm quartz vein with cp and mag, dipping 15°.	4074	4.00	0.13		0.002	0.31
				4075	4.00	0.14		0.004	
		205.5m-214.8m: weakly carbonitized, Sericitized, locally chloritized, argillized and rarely epidotized	208.0m						
210			very sparse disseminations of py, cp and mag hematilized.	4076	4.00	0.07		0.003	
		214.8m-218.0m: distinctly carbonitized and argillized		4077	4.00	0.05		0.005	0.14
			218.0m						
		218.0m-223.5m: weakly to fairly distinctly carbonitized, weakly Sericitized, slightly argillized, locally silicified and chloritized	very sparse disseminations of cp, Py and hematilized mag. A few chlorite-calcite-quartz veinlets with cp and a little py.	4078	4.00	0.06		0.004	
220			223.5m						
		223.5m-226.2m: distinctly carbonitized and argillized	Sparse disseminations of Py and mag rarely with cp.	4079	4.00	0.07		0.006	
		226.2m-233.0m: fairly distinctly carbonitized, argillized, weakly Sericitized and slightly chloritized	229.0m						
			Sparse dissemination of mag rarely with Py and cp.	4080	4.00	0.08		0.005	0.37
230			233.0m						
		233.0m-234.4m: highly carbonitized and argillized		4081	4.00	0.07		0.003	
		234.4m-240.0m: weakly carbonitized, chloritized and slightly argillized	Sparse disseminations of Py and mag rarely with cp.	4082	4.00	0.04		0.003

				4022	2.00	0.32	0.03	0.044	
48.0m			Dissemination of Py and a little cp Ba-bearing Py-cp-quartz veinlets, sparsely.	4023	2.00	0.42		0.008	
50.3m			Ba-bearing cp-py-quartz veinlets with dips of 70°-80°, spacing 10-15cm, often cut by barren calcite veinlets. A little dissemination of py and mag.	4024	2.00	0.18	0.03	0.008	
				4025	2.00	0.18		0.001	
55.7m			Py-bearing bn-cp-quartz veinlets, with dips of 70°-80°, spacing 3-5cm, from 55.7m to 58.5m Py-bearing mb-bn-cp-quartz veinlets, spacing 1-3cm from 58.5m to 60.2m.	4026	2.00	0.48	0.03	0.004	0.48
				4027	2.00	1.14		0.008	
60.2m			Bn-cp-py-quartz veinlets spacing 5-10cm, A little dissemination of bn, cp and Py.	4028	2.00	1.82	0.02	0.262	
				4029	2.00	0.82		0.021	
62.2m			Fine netwoers of bn-cp-quartz veinlets locally with a little mb and cc.	4030	2.00	1.83	0.04	0.032	
			Dissaminations of same sulphides as those in veinlets, fairly distinctly (Bn > cp in amount). A little dissemination of hem pseudomorph after mag.	4031	2.00	1.56		0.009	1.19
				4032	2.00	1.32	0.06	0.011	
70.2m			Almost same as above, except for cp > bn in volume ratio of cu-ores.	4033	2.00	1.81		0.011	
72.0m			Fine to moderate networks of quartz veinlets commonly with a little cp and bn.	4034	2.00	1.27	0.03	0.026	
				4035	2.00	0.45		0.005	
			A little disseminated cp and Py near veinlets.	4036	2.00	0.48	0.04	0.002	0.55
				4037	2.00	0.34		0.003	
				4038	2.00	0.30	0.04	0.005	
80.5m			Moderate networks of quartz veinlets with a little cp, Py and rare bn A little disseminated Py and cp near veinlets.	4039	2.00	0.40		0.003	
83.7m				4040	2.00	0.42	0.18	0.003	
			Local narrow bands of thin quartz veinlets with a little cp, Py and rare bn, dipping 60°-80°	4041	2.00	0.22		0.005	0.95
				4042	2.00	0.27	0.08	0.003	
		100.0m-110.2m: with same alteration as above	A little disseminations of Py turnished by oxidization, hematilized mag and cp.	4049	4.00	0.11		0.001	
				4050	4.00	0.17		0.002	0.28
110		110.2m-119.0m: distinctly argillized, weakly silicified partly, weakly carbonllized, chloritized and Sericitized	110.2m Local narrow bands of quartz veinlets with a little py and cp. Dissemination of py with a little cp and mag.	4051	4.00	0.09		0.004	
				4052	4.00	0.13		0.004	
				4053	4.00	0.13		0.003	0.63
120		119.0m-126.5m: distinctly argillized, carbonilized, weakly chloritized and Sericitized	119.0m Dissemination of Py rarely with cp.	4054	4.00	0.08		0.003	
				4055	4.00	0.21		0.002	
		126.5m-132.0m: fairly distinctly argillized, weakly carbonilized, silicified, chloritized and sericitized	126.5m Fairly abundant py dissemination rarely with cp. A little py-quartz veinlets	4056	4.00	0.09		0.003	0.65
130		132.0m-134.3m: weakly carbonitized, argillized, Sericitized and chloritized	132.0m A little dissemination of Py rarely with cp.	4057	4.00	0.10		0.002	
		134.3m-136.2m: fairly distinctly argillized, weakly carbonilized, Sericitized and chloritized	134.3m A little dissemination of oxidized Py rarely with cp and bn.						
		136.2m-140.0m: weakly carbonilized, argillized, Sericitized and chloritized	136.2m Sparsely disseminated py and hem	4058	4.00	0.06		0.002	
140		140.0m-142.0m: fairly distinctly argillized, weakly carbonilized, Sericitized and chloritized	140.0m Fairly abundant dissemination of oxidized Py rarely with cp.	4059	4.00	0.09		0.003	0.22
		142.0m-146.0m: weakly carbonilized, Sericitized and argillized	142.0m very sparse dissemination of Py (partly oxidized) with hemalitized mag and rare cp.						
		146.0m-150.7m: weakly carbonilized, Sericitized, argillized and slightly silicified	146.0m very sparse dissemination of Py and mag rarely with cp.	4060	4.00	0.08		0.002	
150		150.7m-154.5m: weakly argillized, carbonilized, Sericitized and chloritized	A few cp-Py-quartz veinlets generally dipping 30°-50°. 150.7m very sparse dissemination of Py and mag rarely with cp.	4061	4.00	0.06		0.001	
		154.5m-157.0m: sheared, locally brecciated, highly argillized and distinctly carbonilized	154.5m Dissemination and stringers of Py with hem and mag.	4062	4.00	0.08		0.002	0.27
		157.0m-162.0m: fairly distinctly argillized, weakly carbonilized, Sericitized and chloritized	157.0m Sparse dissemination of Py with a little cp, hem and mag.	4063	4.00	0.11		0.002	
160				4064	4.00	0.15		0.001	
		162.0m-165.9m: weakly carbonilized, argillized, silicified and Sericilized	162.0m Sparse disseminations of Py, hem and mag with cp. Several Py-cp-quartz veinlets.	4065	4.00	0.29		0.003	0.30
170		165.9m-176.0m: weakly carbonilized and argillized	165.9m very sparse disseminations of Py, cp, hem and mag.	4066	4.00	0.09		0.001	
				4067	4.00	0.11		0.001	
		Hornblende-biotite-bearing quartz monzonite porphyry		4068	4.00	0.13		0.002	0.20
180		176.0m-182.0m: weakly carbonilized, argillized, partly chloritized and slightly epidolized		4069	4.00	0.17		0.003	
		182.0m-200.0m: weakly carbonilized, Sericitized, chloritized and epidolized	186.0m Sparse dissemination of cp	4070	4.00	0.12		0.001	
		200.0m-205.5m: weakly carbonilized, Sericitized, slightly chloritized and epidolized	Sparse disseminations of cp, Py and mag. A 1-cm quartz vein with cp and mag, dipping 15°.	4074	4.00	0.13		0.002	0.31
				4075	4.00	0.14		0.004	
210		205.5m-214.8m: weakly carbonilized, Sericitized, locally chlorilized, argillized and rarely epidolized	208.0m very sparse disseminations of Py, cp and mag hemalitized.	4078	4.00	0.07		0.003	
		214.8m-218.0m: distinctly carbonilized and argillized		4077	4.00	0.05		0.005	0.14
		218.0m-223.5m: weakly to fairly distinctly carbonilized, weakly Sericitized, slightly argillized, locally silicified and chloritized	218.0m very sparse disseminations of cp, Py and hemalitized mag. A few chlorite-calcite-quartz veinlets with cp and a little Py.	4078	4.00	0.06		0.004	
220		223.5m-226.2m: distinctly carbonilized and argillized	223.5m Sparse disseminations of Py and mag rarely with cp.	4079	4.00	0.07		0.008	
		226.2m-233.0m: fairly distinctly carbonilized, argillized, weakly Sericitized and Slightly chloritized		4080	4.00	0.08		0.006	0.37

cp : chalcopyrite

py : pyrite

bn : bornite

hem : hematite

mag : magnetite

	veinlets								
	11.8m-20.6m : fairly argillized, carbonitized, weakly sericitized, chloritized, and cut by ore-quartz veinlets	11.8m — Cp and bn in and near quartz veinlets sparsely penetrated with 60°-85° dip. Disseminated mag often replaced by hem.	4004	2.00	0.48	0.06	0.010	1.02	
			4005	2.00	0.50		0.090		
			4006	2.00	0.32	0.06	0.002		
			4007	2.00	0.45		0.005		
20		20.6m — Some as above	4008	2.00	0.29	0.06	0.004		
	20.6m-24.3m : locally sheared, distinctly argillized, fairly carbonitized, chloritized, weakly sericitized, and with a little ore-quartz veinlets		4009	2.00	0.42		0.003		
		24.3m — Mb-cp-bn-quartz veinlets, 0.5mm to 3mm thick, spacing 2cm to 8cm, A little disseminated mag.	4010	2.00	0.66	0.06	0.004	0.53	
	24.3m-35.8m : fairly distinctly argillized, silicified by abundant quartz veinlets and vein, weakly carbonitized, sericitized and chloritized	28.0m — Mb-cp-bn-quartz veinlets, 0.5-1mm thick, spacing 3-5cm, dipping 70°-80°. 30.3m — Mb-cp-bn-quartz veinlets, 0.5-2mm thick, spacing 0.5-2cm, dipping 70°-80°. 33.0m — Mb-cp-bn-quartz vein from 30.0m to 30.7m dipping 80°, and Mb-cp-bn-quartz veinlets, 1-2mm thick, spacing 0.5-2cm.	4011	2.00	0.61		0.080		
			4012	2.00	1.06	0.08	0.025		
30			4013	2.00	2.98		0.60		
			4014	1.00	3.82	0.02	0.60		
			4015	1.00	5.91		1.56		
		35.2m — Mb-bn-cp-quartz veinlets, 0.5-2mm thick, spacing 2-8cm, dipping 70°-80°. 35.8m — Mb-bearing bn-cp veinlets, generally spacing 5-10cm, but 1-3cm from 36.9m to 37.2m.	4016	2.00	0.98	0.06	0.043	1.76	
	35.8m-48.0m : weakly argillized, sericitized carbonitized, chloritized, and cut by quartz veinlets with ore and a little calcite		4017	2.00	0.29		0.013		
			4018	2.00	0.42	0.03	0.005		
40		39.2m — Bn-bearing cp-quartz veinlets, 0.5-2mm thick, spacing 2-4cm, dipping 70°-80°. 41.0m — Bn-bearing py-cp-quartz veinlets, generally spacing 5-10cm, but 1-3cm from 43.2m to 43.5m A little disseminated mag and hem.	4019	2.00	0.69		0.006		
			4020	2.00	0.48	0.02	0.004		
			4021	2.00	0.24		0.002	0.57	
			4022	2.00	0.32	0.03	0.044		
	48.0m-50.3m : sheared, highly argillized, distinctly carbonitized, weakly chloritized and with a little quartz veinlets	48.0m — Dissemination of py and a little cp Bn-bearing py-cp-quartz veinlets, sparsely.	4023	2.00	0.42		0.008		
50		50.3m — Bn-bearing cp-py-quartz veinlets with dips of 70°-80°, spacing 10-15cm, often cut by barren calcite veinlets. A little dissemination of py and mag.	4024	2.00	0.18	0.03	0.008		
	50.3m-55.5m : weakly argillized, Sericitized carbonitized, chloritized, and with a little quartz veinlets bearing calcite, and a few epidote-chlorite veinlets.		4025	2.00	0.18		0.001		
			4026	2.00	0.48	0.03	0.004	0.48	
	55.5m-55.7m : Sheared and highly argillized	55.7m — Py-bearing bn-cp-quartz veinlets, with dips of 70°-80°, spacing 3-5cm, from 55.7m to 58.5m.	4027	2.00	1.14		0.006		
	55.7m-60.2m : distinctly silicified by quartz veinlets, fairly argillized, weakly sericitized, carbonitized and chloritized	py-bearing mb-bn-cp-quartz veinlets, spacing 1-3cm from 58.5m to 60.2m.	4028	2.00	1.82	0.02	0.262		
60		60.2m — Bn-cp-py-quartz veinlets spacing 5-10cm A little dissemination of bn, cp and py.	4029	2.00	0.82		0.021		
	60.2m-62.2m : highly argillized, weakly silicified by quartz veinlets, carbonitized, Sericitized and chloritized	62.2m — Fine networks of bn-cp-quartz veinlets locally with a little mb and cc.	4030	2.00	1.83	0.04	0.032		
			4031	2.00	1.56		0.009	1.19	
	62.2m-83.7m : distinctly silicified mainly by quartz veinlets, weakly carbonitized, argillized, sericitized and chloritized	Dissaminations of Same sulphides as those in veinlets, fairly distinctly (Bn ¼ cp in amount). A little dissemination of hem pseudomorph after mag.	4032	2.00	1.32	0.06	0.011		
			4033	2.00	1.61		0.011		
70		70.2m — Almost same as above, except for cp > bn in volume ratio of cu-ores.	4034	2.00	1.27	0.03	0.025		
		72.0m — Fine to moderate networks of quartz veinlets commonly with a little cp and bn. A little disseminated cp and py near veinlets.	4035	2.00	0.45		0.005		
			4036	2.00	0.48	0.04	0.002	0.55	
			4037	2.00	0.34		0.003		
			4038	2.00	0.30	0.04	0.005		
80		80.5m — Moderate networks of quartz veinlets with a little cp, Py and rare bn A little disseminated Py and cp near veinlets.	4039	2.00	0.40		0.003		
			4040	2.00	0.42	0.18	0.003		
		83.7m — Local narrow bands of thin quartz veinlets with a little cp, py and rare bn, dipping 60°-80°	4041	2.00	0.22		0.005	0.95	
	83.7m-95.7m : fairly distinctly argillized, carbonitized, weakly silicified partly, weakly chloritized and sericitized		4042	2.00	0.27	0.06	0.008		
			4043	2.00	0.15		0.005		
90		Disseminations of Py, mag and a little cp.	4044	2.00	0.28	0.04	0.005		
			4045	2.00	0.29		0.003		
			4046	2.00	0.25	0.03	0.002	0.36	
		95.7m — Disseminations of Py partly oxidized, mag fairly hematitized and a little cp.	4047	2.00	0.15		0.002		
	95.7m-100.0 : strongly argillized, carbonitized, weakly chloritized and sericitized		4048	2.00	0.15	0.03	0.003		
100									

	weakly silicified, chloritized and sericitized	with a little py and cp. Dissemination of Py with a little cp and mag.	4052	4.00	0.13		0.004		
			4053	4.00	0.13		0.003	0.83	
120	119.0m-126.5m : distinctly argillized, carbonitized, weakly chloritized and Sericitized	119.0m — Dissemination of Py rarely with cp.	4054	4.00	0.08		0.003		
			4055	4.00	0.21		0.002		
	126.5m-132.0m : fairly distinctly argillized, weakly carbonitized, silicified, chloritized and sericitized	126.5m — Fairly abundant Py dissemination rarely with cp. A little py-quartz veinlets	4056	4.00	0.09		0.003	0.65	
130			4057	4.00	0.10		0.002		
	132.0m-134.3m : weakly carbonitized, argillized, Sericitized and chloritized	132.0m — A little dissemination of Py rarely with cp.							
	134.3m-136.2m : fairly distinctly argillized, weakly carbonitized, Sericitized and chloritized	134.3m — A little dissemination of oxidized Py rarely with cp and bn. 136.2m — Sparsely disseminated py and hem	4058	4.00	0.06		0.002		
140	136.2m-140.0m : weakly carbonitized, argillized, Sericitized and chloritized	140.0m — Fairly abundant dissemination of oxidized Py rarely with cp.	4059	4.00	0.09		0.003	0.22	
	140.0m-142.0m : fairly distinctly argillized, weakly carbonitized, Sericitized and chloritized	142.0m — very sparse dissemination of py (partly oxidized) with hematitized mag and rare cp.	4060	4.00	0.08		0.002		
	142.0m-146.0m : weakly carbonitized, sericitized and argillized	146.0m — very sparse dissemination of Py and mag rarely with cp. A few cp-Py-quartz veinlets generally dipping 30°-50°.	4061	4.00	0.06		0.001		
150	146.0m-150.7m : weakly carbonitized, sericitized, argillized and slightly silicified	150.7m — very sparse dissemination of Py and mag rarely with cp.	4062	4.00	0.08		0.002	0.27	
	150.7m-154.5m : weakly argillized, carbonitized, Sericitized and chloritized	154.5m — Dissemination and stringers of Py with hem and mag.	4063	4.00	0.11		0.002		
	154.5m-157.0m : sheared, locally brecciated, highly argillized and distinctly carbonitized	157.0m — Sparse dissemination of Py with a little cp, hem and mag.	4064	4.00	0.15		0.001		
160	157.0m-162.0m : Fairly distinctly argillized, weakly carbonitized, Sericitized and chloritized	162.0m — Sparse disseminations of Py, hem and mag with cp. Several Py-cp-quartz veinlets.	4065	4.00	0.29		0.003	0.30	
	162.0m-165.9m : weakly carbonitized, argillized, silicified and sericitized	165.9m — very sparse disseminations of Py, cp, hem and mag.	4066	4.00	0.09		0.001		
170	165.9m-176.0m : weakly carbonitized and argillized		4067	4.00	0.11		0.001		
	Hornblende-biotite-bearing quartz monzonite porphyry		4068	4.00	0.13		0.002	0.20	
180	176.0m-182.0m : weakly carbonitized, argillized, partly chloritized and slightly epidotized		4069	4.00	0.17		0.003		
	182.0m-200.0m : weakly carbonitized, Sericitized, chloritized and epidotized	186.0m — Sparse dissemination of cp, mag and hem rarely with Py.	4070	4.00	0.12		0.001		
190			4071	4.00	0.31		0.002	0.29	
			4072	4.00	0.25		0.004		
			4073	4.00	0.21		0.003		
200									

	214.8m-218.0m : distinctly carbonitized and argillized		4077	4.00	0.05		0.005	0.14	
	218.0m-223.5m : weakly to fairly distinctly carbonitized, weakly Sericitized, Slightly argillized, locally silicified and chloritized	218.0m — very sparse disseminations of cp, Py and hematitized mag. A few chlorite-calcite-quartz veinlets with cp and a little Py.	4078	4.00	0.06		0.004		
220		223.5m — Sparse disseminations of Py and mag rarely with cp.	4079	4.00	0.07		0.006		
	223.5m-226.2m : distinctly carbonitized and argillized		4080	4.00	0.08		0.005	0.37	
	226.2m-233.0m : fairly distinctly carbonitized, argillized, weakly Sericitized and Slightly chloritized	229.0m — Sparse dissemination of mag rarely with Py and cp.	4081	4.00	0.07		0.003		
230		233.0m —	4082	4.00	0.04		0.003		
	233.0m-234.4m : highly carbonitized and argillized								
	234.4m-240.0m : weakly carbonitized, chloritized and Slightly argillized	Sparse disseminations of Py and mag rarely with cp.	4083	4.00	0.11		0.001	0.46	
240	240.0m-242.6m : highly carbonitized and argillized		4084	4.00	0.07		0.004		
	242.6m-245.0m : weakly carbonitized, chloritized and Slightly argillized		4085	4.00	0.03		0.003		
	245.0m-250.3m : Strongly to weakly carbonitized and argillized, and weakly chloritized		4086	2.30	0.02		0.001	0.25

Abbreviation

cp : chalcopyrite

py : pyrite

bn : bornite

hem : hematite

mag : magnetite

mb : molybdenite

	Cp and bn in and near quartz veinlets sparsely penetrated with 60°-85° dip. Disseminated mag often replaced by hem.	4004	2.00	0.48	0.08	0.010	1.02	
		4005	2.00	0.50		0.090		
		4006	2.00	0.32	0.08	0.002		
		4007	2.00	0.45		0.005		
20.6m								
	Same as above	4008	2.00	0.29	0.08	0.004		
		4009	2.00	0.42		0.003		
24.3m								
	Mb-cp-bn-quartz veinlets, 0.5mm to 3mm thick, spacing 2cm to 8cm. A little disseminated mag.	4010	2.00	0.66	0.06	0.004	0.53	
28.0m								
	Mb-cp-bn-quartz veinlets, 0.5-1mm thick, spacing 3-5cm, dipping 70°-80°.	4011	2.00	0.61		0.080		
30.3m								
	Mb-cp-bn-quartz veinlets, 0.5-2mm thick, spacing 0.5-2cm, dipping 70°-80°.	4012	2.00	1.08	0.08	0.025		
33.0m								
	Mb-cp-bn-quartz vein from 30.0m to 30.7m dipping 80°; and Mb-cp-bn-quartz veinlets, 1-2mm thick, spacing 0.5-3cm.	4013	2.00	2.98		0.60		
35.2m		4014	1.00	3.62	0.02	0.60		
		4015	1.00	5.91		1.56		
	Mb-bn-cp-quartz veinlets, 0.5-2mm thick, spacing 2-8cm, dipping 70°-80°.	4016	2.00	0.98	0.06	0.043	1.78	
35.8m								
	Mb-bearing bn-cp veinlets, generally spacing 5-10cm, but 1-3cm from 36.9m to 37.2m.	4017	2.00	0.29		0.013		
39.2m		4018	2.00	0.42	0.03	0.005		
	Bn-bearing cp-quartz veinlets, 0.5-2mm thick, spacing 2-4cm, dipping 70°-80°.	4019	2.00	0.69		0.006		
41.0m								
	Bn-bearing py-cp-quartz veinlets, generally spacing 5-10cm, but 1-3cm from 43.2m to 43.5m. A little disseminated mag and hem.	4020	2.00	0.48	0.02	0.004		
		4021	2.00	0.24		0.002	0.57	
		4022	2.00	0.32	0.03	0.004		
45.0m								
	Dissemination of py and a little cp Bn-bearing py-cp-quartz veinlets, sparsely.	4023	2.00	0.42		0.008		
50.3m								
	Bn-bearing cp-py-quartz veinlets with dips of 70°-80°, spacing 10-15cm, often cut by barren calcite veinlets. A little dissemination of py and mag.	4024	2.00	0.18	0.03	0.008		
		4025	2.00	0.18		0.001		
		4026	2.00	0.48	0.03	0.004	0.48	
55.7m								
	Py-bearing bn-cp-quartz veinlets, with dips of 70°-80°, spacing 3-5cm, from 55.7m to 58.5m. Py-bearing mb-bn-cp-quartz veinlets, spacing 1-3cm from 58.5m to 60.2m.	4027	2.00	1.14		0.008		
		4028	2.00	1.82	0.02	0.262		
60.2m								
	Bn-cp-py-quartz veinlets spacing 5-10cm. A little dissemination of bn, cp and py.	4029	2.00	0.82		0.021		
62.2m								
	Fine networks of bn-cp-quartz veinlets locally with a little mb and cc.	4030	2.00	1.83	0.04	0.032		
	Dissaminations of same sulphides as those in veinlets, fairly distinctly (Bn > cp in amount). A little dissemination of hem pseudomorph after mag.	4031	2.00	1.56		0.009	1.19	
		4032	2.00	1.32	0.06	0.011		
		4033	2.00	1.61		0.011		
70.3m								
	Almost same as above, except for cp > bn in volume ratio of cu-ores.	4034	2.00	1.27	0.03	0.025		
72.0m								
	Fine to moderate networks of quartz veinlets commonly with a little cp and bn. A little disseminated cp and py near veinlets.	4035	2.00	0.45		0.005		
		4036	2.00	0.48	0.04	0.002	0.55

		4046	2.00	0.25	0.03	0.002	0.36	
95.7m								
	Disseminations of py partly oxidized, mag fairly hematitized and a little cp.	4047	2.00	0.15		0.002		
		4048	2.00	0.15	0.03	0.003		

	...lized, chloritized and sericitized	Dissemination of py with a little cp and mag.	4052	4.00	0.13		0.004	
120	119.0m-126.5m: distinctly argillized, carbonitized, weakly chloritized and sericitized	119.0m Dissemination of py rarely with cp.	4053	4.00	0.13		0.003	0.83
			4054	4.00	0.08		0.003	
	126.5m-132.0m: fairly distinctly argillized, weakly carbonitized, silicified, chloritized and sericitized	126.5m Fairly abundant py dissemination rarely with cp. A little py-quartz veinlets	4055	4.00	0.21		0.002	
130			4056	4.00	0.09		0.003	0.85
	132.0m-134.3m: weakly carbonitized, argillized, sericitized and chloritized	132.0m A little dissemination of py rarely with cp.						
	134.3m-136.2m: fairly distinctly argillized, weakly carbonitized, sericitized and chloritized	134.3m A little dissemination of oxidized py rarely with cp and bn.	4057	4.00	0.10		0.002	
	136.2m-140.0m: weakly carbonitized, argillized, sericitized and chloritized	136.2m Sparsely disseminated py and hem	4058	4.00	0.06		0.002	
140	140.0m-142.0m: fairly distinctly argillized, weakly carbonitized, sericitized and chloritized	140.0m Fairly abundant dissemination of oxidized py rarely with cp.						
	142.0m-146.0m: weakly carbonitized, sericitized and argillized	142.0m very sparse dissemination of py (partly oxidized) with hematitized mag and rare cp.	4059	4.00	0.09		0.003	0.22
	146.0m-150.7m: weakly carbonitized, sericitized, argillized and slightly silicified	146.0m very sparse dissemination of py and mag rarely with cp. A few cp-py-quartz veinlets generally dipping 30°-50°.	4060	4.00	0.08		0.002	
150		150.7m						
	150.7m-154.5m: weakly argillized, carbonitized, sericitized and chloritized	very sparse dissemination of py and mag rarely with cp.	4061	4.00	0.06		0.001	
	154.5m-157.0m: sheared, locally brecciated, highly argillized and distinctly carbonitized	154.5m Dissemination and stringers of py with hem and mag.	4062	4.00	0.08		0.002	0.27
	157.0m-162.0m: Fairly distinctly argillized, weakly carbonitized, sericitized and chloritized	157.0m Sparse dissemination of py with a little cp, hem and mag.	4063	4.00	0.11		0.002	
160			4064	4.00	0.15		0.001	
	162.0m-165.9m: weakly carbonitized, argillized, silicified and sericitized	162.0m Sparse disseminations of py, hem and mag with cp. Several py-cp-quartz veinlets.	4065	4.00	0.29		0.003	0.30
	165.9m-176.0m: weakly carbonitized and argillized	165.9m	4066	4.00	0.09		0.001	
170		very sparse disseminations of py, cp, hem and mag.	4067	4.00	0.11		0.001	
	Hornblende-biotite-bearing quartz monzonite porphyry		4068	4.00	0.13		0.002	0.20
	176.0m-182.0m: weakly carbonitized, argillized, partly chloritized and slightly epidotized		4069	4.00	0.17		0.003	
180		186.0m	4070	4.00	0.12		0.001	
	182.0m-200.0m: weakly carbonitized, sericitized, chloritized and epidotized	Sparse dissemination of cp, mag and hem rarely with py.	4071	4.00	0.31		0.002	0.29
190			4072	4.00	0.25		0.004	
			4073	4.00	0.21		0.003	
200								

	214.8m-218.0m: distinctly carbonitized and argillized		4077	4.00	0.05		0.005	0.14
220	218.0m-223.5m: weakly to fairly distinctly carbonitized, weakly sericitized, slightly argillized, locally silicified and chloritized	218.0m very sparse disseminations of cp, py and hematitized mag. A few chlorite-calcite-quartz veinlets with cp and a little py.	4078	4.00	0.06		0.004	
	223.5m-226.2m: distinctly carbonitized and argillized	223.5m Sparse disseminations of py and mag rarely with cp.	4079	4.00	0.07		0.006	
	226.2m-233.0m: fairly distinctly carbonitized, argillized, weakly sericitized and slightly chloritized	229.0m Sparse dissemination of mag rarely with py and cp.	4080	4.00	0.08		0.005	0.37
230			4081	4.00	0.07		0.003	
	233.0m-234.4m: highly carbonitized and argillized	233.0m	4082	4.00	0.04		0.003	
	234.4m-240.0m: weakly carbonitized, chloritized and slighly argillized	Sparse disseminations of py and mag rarely with cp.	4083	4.00	0.11		0.001	0.46
240	240.0m-242.6m: highly carbonitized and argillized		4084	4.00	0.07		0.004	
	242.6m-245.0m: weakly carbonitized, chloritized and slighly argillized							
	245.0m-250.3m: strongly to weakly carbonitized and argillized, and weakly chloritized		4085	4.00	0.03		0.003	0.25
250			4086	2.30	0.02		0.001

		18.7m	Minute grains of native cu and dots of cu-oxides very sparsely in lim-chl veinlets.	5009	1.6	0.19		0.003	
		21.1m							
		18.7m-22.2m: distinctly chloritized, argillized, weakly carbonitized, and locally silicified	A little cc coating py.	5010	1.9	0.14	0.008	0.003	
		22.2m-23.0m: distinctly silicified and chloritized	23.0m						
		23.0m-25.7m: markedly skarnized, chloritized, weakly argillized, carbonitized and locally silicified	Ep-actinolite-mag veinlets with cp, bn and minor cc-coated py.	5011	2.0	1.55		0.012	
		25.7m	A1-cm cp-bn-qtz vein dipping 60° at 23.5m.						
		26.5m	poor in ores	5012	2.0	0.21	0.05	0.003	0.69
		25.7m-26.5m: highly chloritized and carbonitized	cp-bn stringers and grains in skarn veins.	5013	2.0	0.32		0.002	
30		26.5m-28.3m: chloritized and carbonitized, with thin skarn veins	28.3m						
		28.3m-34.7m: chloritized, weakly carbonitized, and locally silicified	Cp-bm-qtz veinlets and bn-bearing cp stringers	5014	2.0	0.56	0.006	0.003	
				5015	2.0	0.25		0.002	
			33.0m						
			A little cp-bn stringers and disseminations.	5016	2.0	0.16	0.04	0.003	
		34.7m-36.5m: fairly remarkably argillized carbonitized and chloritized	34.7m						
			Disseminations of py, cp and lesser bn with a few ore stringers.	5017	2.0	0.24		0.004	
		36.5m-37.0m: Sheared and brecciated	37.0m						
		37.0m-39.2m: distinctly silicified as quartz veins and veinlets	Cp and minor bn in and along qtz vein and veinlets.	5018	2.0	0.55	0.09	0.005	0.82
40		39.2m-41.0m: chloritized and carbonitized	39.2m						
			Poorly disseminated py, cp and minor bn.	5019	2.0	0.20		0.003	
		41.0m-43.6m: moderately to weakly silicified, with a little spotty epidote and joint-filling clay-calcite	41.0m						
			py, cp and lesser bn as veinlets and lesser disseminations.	5020	2.0	0.46	0.13	0.008	
			43.6m	5021	2.0	0.49		0.085	
		43.6m-47.4m: distinctly chloritized and argillized with a little actinolite and epidote	Disseminations of py, cp, bn and minor molybdenite.	5022	2.0	0.31	0.05	0.006	
			47.4m	5023	2.0	0.13		0.003	
		47.4m-51.4m: fairly distinctly chloritized, weakly carbonitized, argillized and locally silicified, with a little epidote spots	Dissemination of py, a little cp and bn with a few ore-qtz veinlets containing trace of cc	5024	2.0	0.25	0.05	0.004	1.12
50			51.4m						
		51.4m-53.7m: strongly carbonitized, argillized and chloritized	Dissemination of py with trace of cp.	5025	2.0	0.07		0.002	
			53.7m	5026	2.0	0.13	0.04	0.002	
		53.7m-57.0m: markedly chloritized, weakly carbonitized, argillized and slightly silicified	Dissemination of py and sparse cp-bearing py veinlets	5027	2.0	0.09		0.003	
			57.0m						
		57.0m-63.5m: chloritized and carbonitized as joint-fillings, and with a little epidote dots	Dissemination of fine-grained py, and py-bearing chlorite-calcite veinlets.	5028	2.0	0.06	0.03	0.002	
60				5029	2.0	0.06		0.001	
			62.0m						
			Py veinlets with a little cp.	5030	2.0	0.08	0.08	0.002	
		63.5m-65.1m: altered into calcite-chlorite-clay rock with quartz veinlets	63.5m						
			Py-cp-bn-cc qtz veinlets.	5031	2.0	1.12	-	0.170	0.97
		65.1m-69.5m: chloritized, carbonitized, weakly argillized, slightly silicified and with vein-formed skarn	65.1m						
			Py, cp, bn and hem as stringers and in skarn and qtz veinlets.	5032	2.0	0.11	0.04	0.004	
				5033	2.0	0.38		0.003	
70			69.5m						
		69.5m-76.0m: chloritized, carbonitized, weakly argillized and with a little epidote as dots and veinlets	Dissemination of fine-grained Py. Py-hem-cal-chl veinlets and sparse py-cp-bn stringers.	5034	2.0	0.10	0.03	0.013	
				5035	2.0	0.05		0.002	
				5036	2.0	0.04	0.02	0.003	
		76.0m-78.0m: almost same as above except for addition of weak silicification	76.0m						
			Py-cp veinlets, and dissemination of py and a little cp.	5037	2.0	0.21		0.012	0.74
			78.0m	5038	2.0	0.08	0.03	0.002	
80		78.0m-85.0m: chloritized, carbonitized, weakly argillized, slightly silicified and epidolized	Several py-cp films with minor bn, and disseminated py and a little cp.	5039	2.0	0.05		0.001	
				5040	2.0	0.05	0.03	0.002	
				5041	2.0	0.04		0.002	
			85.0m						
		85.0m-93.5m: markedly chloritized, carbonitized, weakly argillized, and with a little quartz veinlets, epidote dots and a few skarn-magnetite veinlets near 92.0m	Dissemination of fine-grained pyrite, a little py-cp-qtz-ep dots, and disseminations	5042	2.0	0.03	0.02	0.001	
				5043	2.0	0.05		0.001	0.81
90				5044	2.0	0.04	0.02	0.003	

Depth (m)	Section	Observation: Rock	Observation: Mineralization	Sample No	Core Length	Assay T-Cu %	Assay S-Cu %	Assay Mo %	Assay S %
		100.0m-101.5m: same as above	Same as above	5049	2.0	0.53		0.001	
			101.5m	5050	2.0	0.08		0.003	
		101.5m-109.5m: markedly carbonitized, fairly chloritized mainly as fracuture-fillings, and locally with a little epidote dots and quartz-calcite veinlets	Dissemination of py and rare cp, and several cp stringers	5051	2.0	0.03		0.002	
			A few cp-qtz-chlorite-calcite veinlets at 106.2m	5052	2.0	0.06		0.003	
110		110.0m-113.3m: carbonitized, chloritized argillized markedly, and rich in epidote-actinolite-magnetite, skarn with chalcopyrite and a little garnet as thin veins	110.0m						
			Cp and py disseminations in skarn, and several cp-bn stringers	5053	2.0	0.06		0.002	
			113.3m	5054	2.0	0.10		0.002	
		113.3m-116.0m: altered into white carbonate-clay rock with thin veins and veinlets of skarn	Fairly abundant disseminations of cp, py and bn	5055	2.3	0.39		0.002	0.65
			116.0m	5056	2.4	0.62		0.019	
		116.0m-119.7m: markedly carbonitized, chloritized, argillized and with thin veins of skarn	Disseminations of py and cp in skarn, and a few cp stringers.	5057	2.3	0.18		0.002	
120			119.7m	5058	2.0	0.36		0.008	
		119.7m-126.0m: distinctly silicified in the form of "replacement", weakly epidotized, and with developed chlorite veinlets and calcite veinlets	Disseminations and stringers of cp and bn with rare cc.	5059	2.0	0.53		0.006	
				5060	2.0	1.16		0.005	0.94
				5061	2.0	0.81		0.012	
			126.0m						
		126.0m-127.5m: markedly carbonitized, argillized, and chloritized	A little py-cp-bn dissemination.	5062	2.0	0.22		0.003	
			127.5m						
130		126.0m-132.0m: distinctly silicified and rich in clay-filled joints	Disseminations and joint-fillings of abundant py with a little cp and bn.	5063	2.0	0.27		0.003	
		132.0m-135.2m: weakly silicified and rich in later calcite veinlets	132.0m	5064	2.0	0.19		0.002	
			Stringers and disseminations of bn with a little cc and mb.	5065	2.0	0.32		0.013	0.36
		135.2m-145.0m: markedly chloritized, carbonitized, argillized, and with abundant barren calcite veinlets and a little quartz veinlets	135.2m	5066	2.0	0.43		0.011	
140			Hematite-clay-chlorite veinlets rarely with bn, and a little py-cp-bn-quartz veinlets.	5067	2.0	0.12		0.002	
				5068	2.0	0.10		0.004	
				5068	2.0	0.04		0.003	
				5070	2.0	0.07		0.001	
		145.0m-160.0m: fairly strongly chloritized, weakly carbonitized, locally epidotized weakly, and with a little quartz veinlets	145.0m	5071	2.0	0.08		0.002	0.38
				5072	2.0	0.05		0.002	
				5073	2.0	0.06		0.001	
150			Dissemination of py and rare cp, and a few cp-bearing quartz veinlets.	5074	2.0	0.05		0.001	
				5075	2.0	0.04		0.002	
				5076	2.0	0.04		0.002	
				5077	2.0	0.06		0.001	
				5078	2.0	0.08		0.002	
160		160.0m-162.0m: remarkably skarnized with quartz-calcite veinlets	160.0m						
			Abundant cp and bn, disseminated and in qtz-cal veinlets.	5079	2.0	1.34		0.016	1.46
		162.0m-165.7m: strongly chloritized, carbonitized, argillized, weakly epidotized, and with a little quartz veinlets and skarn veins	162.0m						
			Disseminated py, bn and cp in and around skarn, and bn-cp stringers with rare mb.	5080	2.0	0.33		0.013	
				5081	2.0	0.79		0.014	
			165.7m						
		165.7m-170.0m: chloritized, argillized, carbonitized with a little epidote spots	Disseminations of py and minor bn and cp, und a few ore stringers.	5082	2.0	0.28		0.018	
170			170.0m	5083	2.0	0.10		0.005	
		170.0m-176.0m: strongly skarnized, and with chlorite and talc replacing amphibales	Disseminations and a little stringers of py, cp, bn and rare mb.	5084	2.0	0.38		0.006	
				5085	2.0	0.67		0.021	0.80
				5086	2.0	0.53		0.026	
			176.0m	5087	2.0	0.15		0.006	
		176.0m-178.8m: chloritized, carbonitized, argillized, and with veinlets of skarn	Dissemination of py rarely with cp and bn.	5088	2.0	0.04		0.003	
180		178.8m-180.0m: strongly silicified		5089	2.0	0.04		0.002	
		180.0m-200.0m: chloritized, carbonitized, argillized weakly to moderately, and with a little epidote-actinolite-chlorite veinlets	183.0m	5090	2.0	0.11		0.004	0.91
			A few bn-cp-py-epidote veinlets.						
			184.0m	5091	2.0	0.06		0.002	
			Dissemination of py rarely with cp and bn.	5092	2.0	0.07		0.001	
			187.5m						
			Several cp-py-ep-qtz veinlets.	5093	2.0	0.20		0.002	
190			187.0m						

Depth (m)	Section	Observation: Rock	Observation: Mineralization	Sample No	Core Length	Assay T-Cu %	Assay S-Cu %	Assay Mo %	Assay S %
		200.0m-202.8m: same as above		5099	3.0	0.05		0.001	
		202.8m-206.0m: markedly argillized, and moderately carbonitized and chloritized	Same as above.	5100	3.0	0.05		0.001	
		206.0m-208.5m: highly carbonitized, markedly chloritized, and argillized	206.0m						
			Manganese oxide (?) in calcite veinlets.	5101	2.1	0.05		0.002	
		208.5m		5102	0.9	0.04		0.001	1.41
210	V	Olivine basalt with abundant carbonates and zeolite as cavity-fillings, and cut by "barren" calcite veinlets	Non-sulphides	5103	4.0	0.03		0.002	
	V								
	V			5104	2.2	0.05		0.001

GEOLOGICAL SURVEY OF
YAURI AREA, SOUTHERN PERU
(PHASE III)

CORE LOG and ASSAY

D.D.H. No. 5 Sheet 5

Total Length 251.10m Core Recovery 99.9%

Location M-17 Elevation 4,046m

Direction — Inclination Vertical

Date of Logging from 26th/Nov. to 4th/Dec.

Logged by M. Saito

METAL MINING AGENCY
OVERSEAS TECHNICAL COOPERATION AGENCY
GOVERNMENT OF JAPAN

Prepared by MITSUI KINZOKU ENGINEERING SERVICE CO., LTD.

Abbreviation

lim	:	limonite
hem	:	hematite
mag	:	magnetite
py	:	pyrite
cp	:	chalcopyrite
bn	:	bornite
cc	:	chalcocite
mb	:	molybdenite
ep	:	epidote
qtz	:	quartz
chl	:	chlorite
cal	:	calcite

	104.0m-114.0m: Somewhat decomposed and distinctly argillized	sparsely with cu-oxides and a little py rarely coated by cc.	5004	2.3	0.59	0.42	0.003		0.41
	114.0m-147.0m: distinctly epidotized and argillized		5005	0.4	0.69		0.005		
	147.0m-151.0m: altered into epidote-clay-limonite gossan (altered skarn)		5006	2.0	0.58	0.47	0.007		
	151.0m-187.0m: distinctly epidotized and argillized, and locally silicified		5007	1.6	0.47		0.002		
	Quartz monzonite porphyry highly silicified	18.7m Minute grains of native cu and dots of cu-oxides very sparsely in lim-chl veinlets	5008	0.6	0.34	0.19	0.007		
	Medium-grained gabbroic rock		5009	1.8	0.19		0.003		
20	171.0m-187.0m: epidotized, chloritized and argillized remarkably	21.1m A little cc coating py.	5010	1.9	0.14	0.006	0.003		
	187.0m-222.0m: distinctly chloritized, argillized, weakly carbonitized, and locally silicified	23.0m Ep-actinolite-mag veinlets with cp, bn and minor cc-coated py.	5011	2.0	1.55		0.012		
	222.0m-230.0m: distinctly silicified and chloritized	41-cm cp-bn-qtz vein dipping 60° at 23.5m.	5012	2.0	0.21	0.05	0.003		0.69
	230.0m-253.0m: markedly skarnized, chloritized, weakly argillized, carbonitized and locally silicified	25.7m poor in ores							
	257.0m-265.0m: highly chloritized and carbonitized,	26.5m cp-bn stringers and grains in skarn veins.	5013	2.0	0.32		0.002		
	265.0m-283.0m: chloritized and carbonitized, with thin skarn veins	28.3m Cp-bn-qtz veinlets and bn-bearing cp stringers	5014	2.0	0.56	0.006	0.003		
30	283.0m-347.0m: chloritized, weakly carbonitized, and locally silicified		5015	2.0	0.25		0.002		
		33.0m A little cp-bn stringers and disseminations.	5016	2.0	0.18	0.004	0.003		
	347.0m-365.0m: fairly remarkably argillized carbonitized and chloritized	34.7m Disseminations of Py, cp and lesser bn with a few ore stringers.	5017	2.0	0.24		0.004		
	365.0m-371.0m: Sheared and brecciated	37.0m Cp and minor bn in and along qtz vein and veinlets.	5018	2.0	0.55	0.009	0.005		0.82
	371.0m-392.0m: distinctly silicified as quartz veins and veinlets	39.2m Poorly disseminated py, cp and minor bn.	5019	2.0	0.20		0.003		
40	392.0m-410.0m: chloritized and carbonitized	41.0m Py, cp and lesser bn as veinlets and lesser disseminations.	5020	2.0	0.46	0.13	0.006		
	410.0m-436.0m: moderately to weakly silicified, with a little spotty epidote and joint-filling clay-calcite	43.6m	5021	2.0	0.49		0.085		
	436.0m-474.0m: distinctly chloritized and argillized with a little actinolite and epidote	Disseminations of py, cp, bn and minor molybdenite.	5022	2.0	0.31	0.05	0.006		
		47.4m	5023	2.0	0.13		0.003		
	474.0m-514.0m: fairly distinctly chloritized, weakly carbonitized, argillized and locally silicified, with a little epidote spots	Dissemination of py, a little cp and bn with a few ore-qtz veinlets containing trace of cc	5024	2.0	0.25	0.05	0.004		
50		51.4m							1.12
	514.0m-537.0m: strongly carbonitized, argillized and chloritized	Dissemination of py with trace of cp.	5025	2.0	0.07		0.002		
		53.7m	5026	2.0	0.13	0.04	0.002		
	537.0m-570.0m: markedly chloritized, weakly carbonitized, argillized and slightly silicified	Dissemination of py and sparse cp-bearing py veinlets	5027	2.0	0.09		0.003		
		57.0m	5028	2.0	0.08	0.03	0.002		
60	570.0m-635.0m: chloritized and carbonitized as joint-fillings, and with a little epidote dots	Dissemination of fine-grained Py, and py-bearing chlorite-calcite veinlets.	5029	2.0	0.08		0.001		
		62.0m Py veinlets with a little cp.	5030	2.0	0.08	0.03	0.002		
	635.0m-651.0m: altered into calcite-chlorite-clay rock with quartz veinlets	63.5m Py-cp-bn-cc qtz veinlets.	5031	2.0	1.12	.	0.170		0.97
	651.0m-695.0m: chloritized, carbonitized, weakly argillized, slightly silicified and with vein-formed skarn	65.1m Py, cp, bn and hem as stringers and in skarn and qtz veinlets.	5032	2.0	0.11	0.04	0.004		
			5033	2.0	0.39		0.003		
70		69.5m	5034	2.0	0.10	0.03	0.013		
	695.0m-760.0m: chloritized, carbonitized, weakly argillized and with a little epidote as dots and veinlets	Dissemination of fine-grained Py. Py-hem-cal-chl veinlets and sparse py-cp-bn stringers.	5035	2.0	0.05		0.002		
			5036	2.0	0.04	0.02	0.003		
		76.0m	5037	2.0	0.21		0.012		0.74
	760.0m-780.0m: almost same as above except for addition of weak silicification	Py-cp veinlets, and dissemination of py and a little cp.	5038	2.0	0.08	0.03	0.002		
		78.0m	5039	2.0	0.05		0.001		
80	780.0m-850.0m: chloritized, carbonitized, weakly argillized, slightly silicified and epidotized	Several py-cp films with minor bn, and disseminated py and a little cp.	5040	2.0	0.05	0.03	0.002		
			5041	2.0	0.04		0.002		
		85.0m	5042	2.0	0.03	0.02	0.001		
	850.0m-935.0m: markedly chloritized, carbonitized, weakly argillized, and with a little quartz veinlets, epidote dots and a few skarn-magnetite veinlets near 92.0m	Dissemination of fine-grained pyrite, a little Py-cp-qtz-ep dot's, and disseminations of py and cp in skarn.	5043	2.0	0.05		0.001		0.81
90			5044	2.0	0.04	0.02	0.003		
			5045	2.0	0.10		0.006		
			5046	2.0	0.10	0.05	0.004		
	935.0m-960.0m: chloritized, carbonitized, weakly argillized, weakly to slightly silicified, epidotized and with thin veins of skarn	96.0m	5047	2.0	0.34		0.001		
	960.0m-1000.0m: distinctly silicified, slightly chloritized, and with fairly abundant skarn veins	Veins and veinlets of cp-bearing mag-ep skarn and bn-cp-actinolite skarn.	5048	2.0	0.16	0.04	0.001		0.32
100									

	skarn with chalcopyrite and a little garnet as thin veins	cp-bn stringers							
	113.3m-116.0m: altered into white carbonate-clay rock with thin veins and veinlets of skarn	113.3m Fairly abundant disseminations of cp, py and bn	5056	2.4	0.62		0.019		
		116.0m Disseminations of py and cp in skarn, and a few cp stringers.	5057	2.3	0.18		0.002		
		119.7m	5058	2.0	0.36		0.008		
120	119.7m-126.0m: distinctly silicified in the form of "replacement", weakly epidotized, and with developed chlorite veinlets and calcite veinlets	Disseminations and stringers of cp and bn with rare cc.	5059	2.0	0.53		0.006		
			5060	2.0	1.16		0.005		0.94
	126.0m-127.5m: markedly carbonitized, argillized and chloritized	126.0m A little py-cp-bn dissemination.	5061	2.0	0.81		0.012		
	126.0m-132.0m: distinctly silicified and rich in clay-filled joints	127.5m Disseminations and joint-fillings of abundant py with a little cp and bn.	5062	2.0	0.22		0.003		
130			5063	2.0	0.27		0.003		
	132.0m-135.2m: weakly silicified and rich in later calcite veinlets	132.0m Stringers and disseminations of bn with a little cc and mb.	5064	2.0	0.19		0.002		
			5065	2.0	0.32		0.013		
		135.2m	5066	2.0	0.43		0.011		0.36
	135.2m-145.0m: markedly chloritized, carbonitized, argillized, and with abundant barren calcite veinlets and a little quartz veinlets	Hematite-clay-chlorite veinlets rarely with bn, and a little py-cp-bn-quartz veinlets.	5067	2.0	0.12		0.002		
140			5068	2.0	0.10		0.004		
			5069	2.0	0.04		0.003		
			5070	2.0	0.07		0.001		
		145.0m	5071	2.0	0.08		0.002		0.38
	145.0m-160.0m: fairly strongly chloritized, weakly carbonitized, locally epidotized weakly, and with a little quartz veinlets		5072	2.0	0.05		0.002		
			5073	2.0	0.06		0.001

120 130 140 150 160 170 180 190 200

skarn with chalcopyrite and a little garnet as thin veins

113.3m - 116.0m : altered into white carbonate - clay rock with thin veins and veinlets of skarn

116.0m - 119.7m : markedly carbonitized, chloritized, argillized and with thin veins of skarn

119.7m - 126.0m : distinctly silicified in the form of "replacement", weakly epidotized, and with developed chlorite veinlets and calcite veinlets

126.0m - 127.5m : markedly carbonitized, argillized and chloritized

126.0m - 132.0m : distinctly silicified and rich in clay-filled joints

132.0m - 135.2m : weakly silicified and rich in later calcite veinlets

135.2m - 145.0m : markedly chloritized, carbonitized, argillized, and with abundant barren calcite veinlets and a little quartz veinlets

145.0m - 160.0m : fairly strongly chloritized, weakly carbonitized, locally epidotized weakly, and with a little quartz veinlets

160.0m - 162.0m : remarkably skarnized with quartz-calcite veinlets

162.0m - 165.7m : strongly chloritized, carbonitized, argillized, weakly epidotized, and with a little quartz veinlets and skarn veins

165.7m - 170.0m : chloritized, argillized, carbonitized with a little epidote spots

170.0m - 176.0m : strongly skarnized, and with chlorite and talc replacing amphiboles

176.0m - 178.8m : chloritized, carbonitized, argillized, and with veinlets of skarn

178.8m - 180.0m : strongly silicified

180.0m - 200.0m : chloritized, carbonitized, argillized weakly to moderately, and with a little epidote - actinolite - chlorite veinlets

"barren" calcite veinlets

—214.7m—

Medium-grained gabbroic rock, strongly carbonitized mainly as calcite veinlets, markedly chloritized, moderately argillized, and very sparsely with actinolite - magnetite veinlets

Three main types of "calcite veinlet" are recognized as follows :

(a) very sparse quartz - bearing calcite veinlets often with copper ore

(b) fairly rich hematite-bearing chlorite-calcite veinlets

(c) Common "barren" calcite veinlets often cutting ore stringers and ore-bearing veinlets

—251.1m (END)—
