JAN• 11, 81 TLX NO• (604)

DR• K• MERA,
JICA TEAM LEADER FOR IIE FEASIBILITY STUDY,
TOKYO- JAPAN

RE: 1) NPC LETTER REF• 128/20/6127 OF 18/12/1980•
2) YOUR INTERIM REPORT ON IIE OF 20/12/1980•

FOLLOWING ARE THE MAJOR COMMENTS OF THE COUNTERPART COMMITTEE ON YOUR INTERIM REPORT:-

1• LOCATION

1•1 SITE AS PER FIG• 1PLAN (A) IS APPROVED, PROVIDED THAT INCREASE IN LAND COST DOES NOT RENDER THE WHOLE PROJECT UNVIABLE, AND THAT SUBSEQUENT INCREASE IN RENTS DOES NOT RENDER THEM TO BE UNACCEPTABLE TO THE INVESTORS AND INCOMPETITIVE WITH THOSE OF SAHAB•

1•2 TO PROVIDE FOR FUTURE EXPANSION AND TO AVOID LAND PRICE INCREASES IT IS RECOMMENDED THAT 50 HECTARES BE ACQUIRED•

1•3 TO AVOID UNORGANISED BUILDING ACTIVITIES IN THE SURROUNDING AREAS OF IIE SITE IT IS RECOMMENDED THAT IMMEDIATE ACTION BE TAKEN TO PREPARE DETAILED LAND USE PLANS FOR THOSE AREAS•

2• ADMINISTRATION

2•1 SINCE OWNERSHIP OF IIE BY JIEC IS IMPOSSIBLE, THOUGH CONSIDERED MOST APPROPRIATE, ESTABLISHMENT OF IDA IS APPROVED•

2•2 IDB DUE TO LIMITATIONS BY ITS BYLAWS MAY NOT SUBSCRIBE TO IDA CAPITAL•

2•3 IDB CANNOT COMMIT ITSELF TO SECOND STAFF MEMBERS TO IDA, BUT IS WILLING TO TRAIN IDA STAFF•

3. DEMAND ESTIMATES

IN THE ADOPTED PROCEDURES TO ESTIMATE DEMAND FOR 1985, IT APPEARS THAT NO CONSIDERATION HAS BEEN GIVEN TO PROSPECTIVE CLIENTS, WHO BY THE LAPSE OF TIME, MAY HAVE SOLVED THEIR LOCATION PROBLEMS ON THEIR OWN INITIATIVES.

CONSEQUENTLY THE RESULTS APPEAR TO BE INACCURATE AND TEND TO BE UNREASONABLY HIGH.

4. LAND AND FLOOR AREA FOR EACH FACTORY

4.1 IT APPEARS THAT NO ACCOUNT HAS BEEN TAKEN TO MEET FUTURE EXPANSION NEEDS OF PLOTS ASSIGNED TO EACH FACTORY.

4.2 DETERMINATION OF FACTORY FLOOR AREAS IS APPARENTLY BASED ON RESULTS OF THE ENQUIRIES. IT IS THOUGHT MORE APPROPRIATE IF MODERN PLANNING TECHNIQUES HAVE BEEN ALSO TAKEN INTO CONSIDERATION.

4.3 STANDARD FACTORY BUILDINGS SHOULD BE PREFERABLY OF MODULAR TYPE DESIGNED TO SATISFY DEMAND OF MAJORITY OF INDUSTRIES. CUSTOM BUILT FACTORIES SHOULD BE A LOWEST MINIMUM.

5. INCENTIVES TO CLIENT INDUSTRIES SHOULD BE AT LEAST SIMILAR TO THOSE OF JIEC. PROPOSAL OF ADDITIONAL INCENTIVES DUE TO IRBID LOCATION ARE VERY MUCH DESIRED.

6. PROJECTED INDUSTRIES

THEY ARE SIMILAR TO THOSE COMMON FOR JORDAN. EXCEPT FOR ADVANTAGES OF IRBID REGION TO AGRICULTURAL INDUSTRIES, SPECIFIC LOCATIONAL ADVANTAGES FOR THE OTHER INDUSTRIES ARE NOT HIGHLIGHTE

7. TERM OF REFERENCE 4.3 IS NOT TREATED IN THE INTERIM REPORT.

8. THE MMRA IS TO PURSUE THE QUESTION OF DEVELOPING RAMTHA CUSTOMS OFFICE TO BE CAPABLE OF INDEPENDANTLY HANDLING CUSTOMS CLEARANCES.

KIND REGARDS.
COUNTERPART COMMITTEE.

Annex 1.4 Official Comments of the Counterpart Committee on the Draft Final Report of the Feasibility Study of Irbid Industrial Estate

The Counterpart Committee for
the Feasibility Study of I.I.E.,
C/O Ministry of Municipal
Rural and Environmental Affairs,
Amman - Jordan.

Amman July 29th, 1981

Dr. Koichi Mera,
The International Development
Center of Japan
Shuwa Daini Toranomon Bldg.
21-19 Toranomon 1-Chome,
Minato - Ku Tokyo 105,
Japan.

Dear Dr. Mera,

Re: Feasibility Study of I.I.E.
Draft Final Report

Following are the major observations and comments of the counterpart committee on your A.M. Report.

A- Chapters 1 to VI

A-1 Check whether 8m width of passage/service road between standard factories is sufficient.

A-2 Location of the fire station is not indicated on the drawings.

A-3 No account is made on the drawings (ESPEC. Fig 5.13) For locating El. substations.

A-4 In chapter VI water and electricity demand were taken as for AIE without verification or discussion. especially electricity demand is considered by JEA and JEPCO to be very high compared by local standards.

B- Chapter VII

B-1 Define the method used for computing each cost items listed in table 7.4

B-2 Project estimated cost shall be adjusted to the year 1983 taking inflation into account. The so adjusted project cost shall be basic for all other calculations.

2/...

B-3 50 percent of the cost of electricity distribution system and substations shall be charged to the project cost. Same for telecom.

B-4 Project cost shall also include working capital and preliminary expenses (including interest during construction.)

C- Chapter VIII

C-1 In addition to the proposal of creating IDA, the possibility of excluding IIE from Irbid Municipal Boundaries - in order to be owned by JIEC - is stressed by certain governmental bodies.

D- Chapter IX

D-1 Check area of custom built factory (PARA 903)

D-2 In table 9.1 clarify how land rent W. Cont. was computed.

D-3 Check compliance of figures in PARA 949 with table 9.16.

D-4 We believe that the financial analysis should be redone taking into consideration the following:-

D-4.1 Cost of land should be part of IIE project cost (I.E. it will not be rented. But Bought and paid for by IDA or JIFC).

D-4.2 Based on the revised project cost referred to above, the debt/equity ratio shall be computed to an optimum proposal.

D-4.3 For the debt financing interest rate on local borrowing shall not be less than 12 percent and not 9 percent. (E.G. interest on syndicated loans in 1980 was 10.25 percent). For foreign financing interest payable on Japanes export credits (1983) shall be preferably applied.

D-4.4 All Project financial analysis shall be made without inflation, save the increase in rental rates.

D-4.5 The financial analysis shall include (in addition to what is done in the report and to be reexamined in the light of these comments), detailed calculations (for every year of the projected life) of profits to the owners (investors), cash flows, and proforma balance sheets, in the manner discussed with Mr. Oueno during the teams last visit to Jordan.

D-4.6 The sensitivity analysis shall be also made on the following 2 alternatives:
1- Land to be given at no cost to IDA or JIEC.
2- Land cost 100% more than calculated in the project cost.

3/....

E- General

E-1 It is desired that the possibility of phasing the project rxecution be seriously considered. A plan for such phasing shall be proposed. The committee feels that 320 factories are too many to construct and rent in 1 step.

E-2 The possibilities of renting serviced land W/O buildings shall also be discussed.

E-3 The committee emphasizes the need for a planned physical distribution of the various industries within IIE according to industry type. Re final report vol. 5, fig. 324 page III - 120).

E-4 The draft needs editing espec. regarding typing and calculation mistakes.

E-5 Translations of comments received from concerned department are enclosed herewith. These are for your information only.

Before concluding this letter we like to express our deep appreciation for the sincere efforts made by the Japanes team in preparing the report.

Our comments were also subject of telex message No. 740 of July 9, 1981 which was sent directly to you.

Kind Regards.

Dr. S. Tell

Annex 1.5 Answers to the Comments on the Draft Final Report of the Feasibility Study of Irbid Industrial Estate

Following answers are provided within the context of the Scope of Works, The Interim Report, Comments on the Interim Report and the Draft Final Report of this Study.

Chapters I to VI

A-1 The comment refers to para 605 of the Draft Final Report (DFR para 605) and to fig. 6.2 of the Draft Final Report (DFR fig. 6.2). The Team provides a supplementary explanation to DFR para 605 as it is seen in para 605 of the Final Report (FR para 605). The capacity of 8m width road is 870 cars/hour, while the generated traffic volume on that road is 520 cars/day, Therefore, the width of the road is sufficient. In addition, pedestrianas can use a space between Standard Factory Buildings.

A-2 Location of the fire station is indicated in FR fig. 5.16 which was not previously included in DFR.

A-3 Location of the electricity substations is indicated in FR fig. 5.16.

A-4 Water demand in IIE was estimated in DFR para 608 and 609. The Team supplements an additional information by using data of Japanese small and medium scale factories as indicated in FR para 608 and 609. The result is that Japanese standard is higher than the local standard. However, water supply in Irbid is rather tight and the Team recommends to keep the local standard as it was originally indicated. Electricity demand was estimated in DFR para 619 given the premise that the unit value of electricity demand used in Amman Industrial Estate (AIE) was approved by a Jordanian authority. However, the Team supplements an additional information based on Japanese data as indicated in FR para 609. The result is that, in fact, the local standard is higher than the Japanese standard. Accordingly, the estimated demand is revised as shown in FR para 609.

Chapter VII

B-1 The comment refers to DFR table 7.4. The Team supplements FR Annex 7.1 which contains quantity and unit prices of each cost item with domestic as well as foreign distinction, and hence, can be used as a reference to FR table 7.4.

B-2 The comment refers to DFR table 7.4. In the financial analysis, it is a common practice, as the Team did in DFR, to estimate development cost by using the prevailing prices at the time of the Study. Various alternatives can first be examined based on the estimated cost at the time of the Study, i.e., for instance, financial internal rate of return, and then the best alternative is selected based on above. After this process, effects of inflation on the project would be examined as the team did in DFR section 9.4.6. The process should take account of not only inflation up to the year 1983 in which the construction of IIE is scheduled to start but also price increase of various cost components after 1983. However, in response to the request from the Counterpart Committee, all figures related to the development cost of IIE are inflated to 1983 prices as shown in FR table 7.5. An inflation rate is assumed to be 15 percent.

B-3 The comment refers to DFR table 7.1. Accordingly, cost bearers of electricity distribution and substations as well as telephone are amended as shown in FR table 7.1 and, consequently, FR tables 7.4, 7.5 and 7.6 are amended.

B-4 The comment refers to working capital and preliminary expenses (including interest during construction). Chapter VII basically deals with the development cost of IIE itself. Working capital is included in FR table 7.4. Preliminary expenses was indicated in DFR section 9.3 and DFR table 9.14. Promotional expenses, facility maintenance expenses, and office overhead expenses are covering the preliminary expenses. With regard to other preliminary expenses, the Team recommended that " all the preparatory works should be handled by the Committee organized for this study" in order to reduce the required pre-operating expenses for IDA (refer to DFR para 823). Finally, interest during construction is taken into consideration in FR table 9.20.

Chapter VIII

C-1 The comment states "the possibility of excluding IIE from Irbid Municipal Boundaries - in order to be owned by JIEC - is stressed by certain governmental bodies". In the Interim Report, the Team proposed two alternative sites for IIE (refer to page 28, para 7 and page 30, fig. 1 and 2 of the Interim Report). The Counterpart Committee approved fig. 1, plan A as the site of IIE by the official comments on the Interim Report (comment 1.1). Accordingly, the Team proceeded the works of DFR based on that comment. Also, the Team recommended to establish IDA in the Interim Report. In response to this recommendation, the Counterpart Committee approved the establishment of IDA (comment on the Interim Report 2.1). In addition, the word "possibility" used in this comment is quite ambiguous in the context of this study, since, in order to analyze "possibility", many factors such as outer utility facilities, demand conditions, site conditions, organizations, etc., may need to be re-examined. Such tasks are obviously outside the scope of this study.

Chapter IX

D-1 This was a typographical error. Accordingly, DFR para 903 is corrected in FR para 903.

D-2 The Team supplements a footnote on FR table 9.1 in order to clarify how land rent with contingency was computed.

D-3 Compliance of figures in DFR para 949 with table 9.16 is checked and, accordingly, they are corrected in the Final Report.

D-4.1 With regard to the land acquisition, the Team recommended in the Interim Report that "the Government of Jordan will provide IDA with the required land on lease basis to allow IDA sub-lease to the occupants (page 35, para 8)". There was no comment from the Counterpart Committee on this recommendation. Hence, our basic stance is kept to be the one we recommended in the Interim report. However, we supplement an additional financial analysis in the Final Report in which the land is bought and paid by IDA. In this case, the land cost is part of IIE project cost as indicated in FR table 9.16.

D-4.2 In the due course to incorporate the comment D-4.1 above, an optimum debt/equity ratio is newly proposed as shown is FR section 9.4.5.

D-4.3 With regard to an interest rate, the Team recommended in the Interim Report that "An arrangement should be made with IDB so that the projects approved by IDA are able to obtain a loan from IDB with normal terms (page 37, para 12)", which, as explained in DFR para 226 and 946, is 8 percent per annum. Therefore, the Team still believes that 9 percent interest rate used in the financial analysis of DFR is appropriate, given the development objectives of IIE. However, assuming a case in which IDB loan be not available, the Team uses 12 percent interest rate in the financial analysis of the Final Report. Accordingly, figures related with the change in the interest rate are ammended.

D-4.4 This comment contradict the comment B-2. For instance, site development and building construction will be undertaken ever after 1983. In this case, if we use the estimated cost at 1983 prices without taking into consideration of inflation after 1983, the resulted cost structure will be distorted. However, in response to the request from the Counterpart Committee, the Team undertakes the financial analysis without inflation as explained in section 9.4.7 in the Final Report.

D-4.5 As it is requested by the comments, the Team provides detailed calculations of profits to the owners and cash flows in the Final Report (refer to FR section 9.4.8). However, we don't see any necessity of providing proforma balance sheets at this level since the cash flow shows all the necessary money movement of the project during its life.

D-4.6 With regard to the first alternative of the comment, i.e., "land to be given at no cost to IDA or JIEC", it contradicts the comment D-4.1 which stated that "cost of land should be part of IIE project cost." However, on the basis of the request from the Counterpart Committee, the alternative is considered in the Final Report (refer to FR para 964). With regard to the secend alternative, i.e., "land cost 100% more than calculated in the project cost", the Team considers that the assumed situation be unlikely. In order to avoid any misunderstanding, the Team would like to point out that the land price of JD 12,000 per donum in 1980 as indicated in DFR para 1014 was the average subdivided urbanized land price including the land development cost such as road, water and power, and, therefore, the pure housing land price at the urban fringe was estimated to be JD 8,400 per donum. Given these data as well as the data supplied by the Land Assessment Committee of Irbid, the agricultural land price of JD 6,600 per donum in the IIE site seems quite reasonable, since the site is predominantly used as agricultural land (see DFR para 403) and is lacated outside the present urban fringe (see, for instance, DFR section 5.3 and fig. 5.7). However, on the basis of the request from the Counterpart Committee, this alternative is also considered in the Final Report (refer to FR para 964).

General

E-1 All the factories will not be constructed and rented in one step. Rather, as indicated in FR fig. 7.1, Standard Factory Buildings will constructed in three steps and Custom Built Factories in two steps. Also, Standard Factory Buildings will be rented in two-year period and Custom Built Factories will be rented in three-year period as indicated in DFR para 935 and table 9.11. The Team would like to point out that, even this construction and lease schedule, it would be difficult to cope with the local demand for serviced industrial plots as detailed in chapter III of the Draft Final Report and the Final Report.

E-2 As to Standard Factory Buildings, it would be very difficult to rent only serviced land without buildings as explained in DFR para 308, 827 and 828. As to Custom Built Factories, the Team undertook the analysis of several alternatives as shown in FR table 9.16.

E-3 A proposal for the grouping of industries in terms of physical distribution is supplemented in the Final Report (see FR fig. 5.15).

Annex 1.6 UN's Definitions of Industrial Zone, Area and Estate

An industrial zone, an industrial area and an industrial estate can be used to invite or locate industries, but have different effects on the industrial development. The UN's "Guidelines for the Establishment of Industrial Estates in Developing Countries" has defined them as follows:

i) Industrial Zone:

An industrial zone is merely an area of raw land set aside for industry. In general, it is created by a municipal by-law and is part of an urban renewal or development program. Any promotional effect it may have is dependent on its location in relation to transport and distribution facilities, and the price of land within the zone.

ii) Industrial Area:

An industrial area is a parcel of improved land sub-divided into plots for the accommodation of industrial establishment and offered for sale or for lease.

It can be an effective stimulant to industrial development, especially in the large- and medium-scale sectors. Its size may allow an advantage of economies of scale in the formation of the infrastructure, which may be passed on to the occupants. An attraction for a prospective occupier is the time saved in finding a site and in preparing the land. The industrial area is essentially a piece of real estate promotion.

iii) Industrial Estate:

An industrial area may approximate an industrial estate, but the essential difference is that in the former there is no unified and continuous management and that, beyond land and utilities, it provides no additional incentive to industry. The term "industrial estate" is taken to mean "a tract of land developed and subdivided into plots according to a comprehensive plan with provision for roads, transport and public utilities with or without built-up (Advance) factories, sometimes with common facilities and sometimes without them, for the use of a community of industrialists."

Annex 3.1 Industrial Survey Questionnaire 1/

INDUSTRIAL SURVEY

PURPOSE OF THE SURVEY

1. Purpose of the Survey:

   (1) to assess the needs and potentialities of an industrial estate development in the suburbs of Irbid.

   (2) to identify the needs, potentialities and future plan of private manufacturing enterprises.

2. Confidentiality:

   All the information obtained will be kept strictly confidential and will not be used for any other purposes except for those stated above. None of the individual name of factories will be used in the report, and all the survey results will be disposed after the analysis.

3. Surveying Body:

   (1) IURPG and the Japanese Team.

   (2) IURPG is the one branch of the Central Government of Jordan to promote economic development in Irbid Region.

   (3) The Japanese Team is dispatched by the Japanese Government to assist IURPG to undertake the feasibility study of the Industrial Estate of Irbid.

4. Base Year: Without specification, 1979 data are requested.

Note: 1/ In the Applicant Interview Survey, part C of Industrial Survey Questionnaire was omitted.

Annex 3.1 (Continued) No. _____

Confidential

INDUSTRIAL SURVEY QUESTIONNAIRE

Part A Present Status: Production and Size

1. Major Products: (a) _____
   (b) _____
   (c) _____

2. Production

Major Products	(a)	(b)	(c)
1979 Volume:	( )	( )	( )
Price:	JD/( )	JD/( )	JD/( )
Value:	JD	JD	JD
Share in Domestic Mkt.:	%	%	%
1975 Volume (Proportion to 1979):	%	%	%

3. Market

	(a)	(b)	(c)
1979 Irbid:	%	%	%
Other Domestic:	%	%	%
Foreign-Arab:	%	%	%
-Non-Arab:	%	%	%

4. Size

4-1. No. of Employee

	Male No.	Frmale No.	Foreign Nationals No., Nationality
Skilled:			
Unskilled:			
Part-timer:			

4-2. Capital

	Year	Land	Building	Machinery
Initial Investment:		JD	JD	JD
Total Additional Investment:		JD	JD	JD
Expected Service Life:			Years	Years

Source of Initial Investment (Capital):

JD ____ % by _____
JD ____ % by _____
JD ____ % by _____

4-3. Physical Size

Land Area: _____ donums
Building Floor: _____ m^2
Production Capacity: ( ) at ( ) hours/day

Annex 3.1 (Continued)

Part B Future Plan

I. Expansion or Relocation Plan

1. Future Prospects of Market Demand in the 1980s.

Domestic: Excellent Good Fair Bad
Export: Excellent Good Fair Bad

2. Total Demand Growth Rate

	1980-85	1985-90
Annual Rate:	____ %	____ %

3. Future Prospects for Your Industry in 1980s.

Excellent Good Fair Bad

4. Future Plan

Expansion ---------- What are the reasons ____
When ____ Where ____
Relocation ---------- What are the reasons ____
When ____ Where ____
New Business ---------- Please go to new sheets and fill them up.
No Change
Reduction ---------- What are the reasons ____

II. Investment Plan

1. Do you have a plan to invest in the future (within 10 years)?

Yes No

2. Total Production Plan (1979 Price)

	1981	1985	1990
Volume:	( )	( )	( )
Market Share - Irbid:		%	
- Other Domestic:		%	
- Foreign - Arab:		%	
- Non-Arab:		%	

3. Investment Plan (1979 Price)

	Land	Building	Equipment
Amount:	JD	JD	JD
Volume:	m^2	m^2	( )
Year:			
Place:			

4. Joint Venture with Foreign Enterprises

4-1. Possibility of Joint Venture: ____
4-2. Foreign Share in Capital: ____ %
4-3. Any Constraints: ____

Annex 3.1 (Continued)

III. Locational Preference

1. What are the important factors choosing your new site?

(1) Inherited from previous owner
(2) Availability of raw materials
(3) Availability of land at reasonable price
(4) Availability of labor (skilled & unskilled)
(5) Large space
(6) Close to market
(7) Availability of utility (water, electricity, telephone)
(8) Access road (major highway, transportation)
(9) Others (specify)

2. Do you have any special area for your plant site in your mind?

(1) Already acquired
(2) Already decided
(3) Not decided

If (1) (2) : Where _____ (Distance from Amman)
_____ (Distance from Irbid)
Size of Land _____
Price of Land _____

IV. Possibility of Locating in IIE

1. Irbid Municipality has a plan of building a new Irbid Industrial Estate (IIE) in its suburbs. Do you consider the IIE for new plant site?

Yes Maybe No

If no, why?
(1) No expansion
(2) No finance
(3) Not profitable
(4) Too far
(5) Inconvenience
Specify _____
(6) Others
Specify _____

2. If "Yes" or "Maybe" what kind of services do you want at the IIE?

(1) Land Size: _____ donums at Sale or Lease
(2) Access: _____ km from Bagdad Road
_____ km from the Center of Irbid City
(3) Utility
(3)-1 Paved road:
(3)-2 Water: _____ liter/day
(3)-3 Power: _____ kw at _____ v
(3)-4 Telephone: _____ subscribers lines

(3)-5 Storm drainage:
(3)-6 Sewer treatment:
(3)-7 Solid waste:
(4) Financial Arrangement: _____

3. With complete availability of above requirements, what is the reasonable price range you will pay for the land?

(1) If you want purchasing, _____ JD/donums
(2) If you want lease, _____ JD/donums

Part C Present Status

I. Input and Production Cost

1. Raw Materials, 1979

Major Raw Material:	(a) _____	(b) _____	(c) _____
Volume/Month	_____	_____	_____
Unit Cost:	JD/( )	JD/( )	JD/( )
Major Country of Supply:	1. _____	1. _____	1. _____
	2. _____	2. _____	2. _____

2. Wages

Skilled:	_____ JD/day
Unskilled:	_____ JD/day
Part-timer:	_____ JD/day

3. Production Cost

All Salaries and Wages:	_____ JD/year
Land Rent and Floor Rent:	_____ JD/year
OM Cost - Raw Material and Inputs:	_____ JD/year
- Subcontracting Cost:	_____ JD/year
- Utilities--Water:	_____ JD/year
Power:	_____ JD/year
Tel.:	_____ JD/year
etc.:	_____ JD/year
- Others (Transp., Sales, Repair, etc.):	_____ JD/year
Depreciation:	_____ JD/year
Interest:	_____ JD/year
Tax:	_____ JD/year
Total:	_____ JD/year

4. Working Capital

	1979
Cash:	_____ JD
Products in Storage:	_____ JD
Spare Parts:	_____ JD
Total:	_____ JD

Annex 3.1 (Continued)

5. Privileges Enjoying

Subsidy:	JD
Tax Holiday:	Years
Interest Rate:	%
Technical Assistance:	

6. Subcontracting

	(a)	(b)	(c)
Major Items:			
Volume:	( )	( )	( )
Value:	JD	JD	JD

7. Utilities

7-1. Water

Source of Water:	City Water Well Others ( )
Consumption:	m^3/month
Treatment Before Use:	Yes No

7-2. Power

Contracted Power:	kw
Self Generating Capacity:	kw
Consumption (total):	kwh/month

7-3. Transportation of Products and Raw Material

	Products	Raw Material
Truck:	%	%
Train:	%	%
Others:	%	%
Major Destination and Origin:	%	%

7-4. Industrial Waste and Pollution

	Type	Volume	Treatment Method
Solid Waste:		( )	
Waste Water:		( )	

II. Problems and Needs

	Problems	Needs
1. Technology - Proudcts:		
- Process:		
- Managerial:		
2. Material:		
3. Market - Sales system (direct or agent):		
- Constraints of distribution channel:		

Annex 3.1 (Continued)

	Problems	Needs
4. Land - Lack of space:		
- Others about Land:		
5. Transportation - Constraints and shares (%) by mode:		
- Networks:		
- Tariff:		
6. Labor - Local availability of skilled workers:		
- Foreman and middle managers:		
- Availability of labor from other region and abroad:		
- Constraints and remedies toward youth workers, different races and religion, etc.:		
- grading up of quality by local labors (relation with vocational training centers and technical schools):		
7. Infrastructure - Water:		
- Electricity:		
- Telephone:		
8. Finance - Kind of financing sources:		
- Conditions and interest rate, etc.:		
9. Industrial Pollution - Kind and volume:		
- Cordination needs between sewerage planning and industrial estates:		
10. Possibility of distribution and transportation complex such as distribution center at industrial estate:		
11. Complaint from neighbors - Noise:		
- Pollution:		
12. Others (specify):		

Date: _____, 1980

Interviewee: Name: _____

Title: _____

Tel.: _____

Interviewer: _____

1. Name of the Firm: _____
2. Name of the Factory: _____
3. Address of the Factory: _____
4. Date of Establishment: _____

Annex 3.2.1 Overall Results of Factory Interview Survey: Factories Having Investment Plan in the General Survey in Irbid, December, 1980

Sample Number	Sales (S) Lease (L) Either(E)	Land Demand (donum)	Payable Cost Purchase (JD/d)	Payable Cost Lease (JD/d/year)	Products
1	S	5.0	1,000	-	Cast iron
7	E	5.0	500	50	Bedroom furnitures
8	E	3.0	4,500	50	Soft drink

Annex 3.6 Provisional Composition of Common Metal Workshop

The provisional composition of common metal workshop is as follows:

(Price: in thousand yen)

Machines	Quantity	Unit Price on Site of Maker's Plant	Total Price
(1) Cutting and Welding Machines			
High-speed Cut off Machine	3 units	500	1,500
Pipe Threading Machine	3 units	500	1,500
Band Sawing Machine	1 unit	5,000	5,000
Cutting Machine (by gas barner)	4 units	200	800
Cutting and Welding Machine (by prazma arc)	1 unit	3,500	3,500
Electric Welder (Arc Welder)	3 units	500	1,500
Argon Welder	2 units	1,000	2,000
Sub-total	-	-	(15,800)
(2) Machine Tools			
Precision Engine Lathe	1 unit	5,000	5,000
Precision Lathe	3 units	2,000	6,000
Hydraulic Pipe Bender	3 units	1,500	4,500
Hydraulic Pushing Press	1 unit	2,000	2,000
Hydraulic Bending Roll	1 unit	5,000	5,000
Square Shearing Machine	1 unit	3,000	3,000
Thereading Machine	2 units	2,000	4,000
Upright Drilling Machine	2 units	1,500	3,000
Bench Drilling Machine	2 units	300	600
Cast Iron Surface Plate	3 units	1,000	3,000
Radial Drilling Machine	1 unit	4,000	4,000
Shopping Machine	1 unit	3,500	3,500
Surface Grinder	1 unit	4,000	4,000
Face Lathe	1 unit	4,000	4,000

(cont'd)

Machines	Quantity	Unit Price on Site of Maker's Plant	Total Price
Universal Milling Machine	1 unit	5,000	5,000
Electric Spot Welding Machine	2 units	2,000	4,000
Hydraulic Press Broke	1 unit	3,000	3,000
Angle Bender	1 unit	2,500	2,500
By-blow Shearing Machine	2 units	1,500	3,000
Sub-total	-	-	(69,100)
(3) Tooling Machines			
Universal Tool and Cutter Grinder	1 unit	1,000	1,000
Drill Grinder	2 units	900	1,800
Bits Grinder	2 units	900	1,800
Hardness Tester (Shore Type)	3 units	300	900
V Block with Clamp	4 units	150	600
Baby Compressor	2 units	500	1,000
Sub-total	-	-	(7,100)
(4) Other Equipments			
Overhead Travelling Crane	1 unit	3,000	3,000
Steel Rock, Adjusting Shelf	1 unit	1,000	1,000
Carrier (for materials, parts and tools)	1 unit	3,000	3,000
Hand Tools	1 unit	3,000	3,000
Working Tables	1 unit	2,000	2,000
Sub-total	-	-	(12,000)
Total			(104,000)

The delivered price on site of common workshop with regard to a typical machine can be estimated by to the following procedures.

(1) In the case of a Precision Engine Lathe, price on site of maker's plant in Japan is 5 million yen in 1980. Net weight of this machine is 2,150 kg.

(2) FOB price of this machine will be:

5 million yen x 1.10 = 5.50 million yen (A)

(3) Ocean Freight will be:

5.50 million yen x 0.10 = 0.55 million yen (B)

(4) Insurance will be:

5 million yen x 0.05 = 0.25 million yen (c)

(5) CIF price at Aqaba port shall be:

(A + B + C) = 6.30 million yen (D)

(6) Import tax will be:

CIF price x 0.06 = 0.378 million yen (E)

(7) CIF price including import tax will be:

D + E = 6.678 million yen (F)

Since the exchange rate was Yen 1,000 = JD 1,333, 6.678 million yen is equal to JD 8,904.

(8) Multiplier for CIF price against price on site of maker's plant will be:

F/(price on site of maker's plant) = 6.678/5.000
= 1.3356 (G)

(9) Transportation expence from Aqaba to Irbid (on site) will be:

2.150 tons x 5.5 JD/ton = 11.825 JD (H)

(10) Delivery price at site of common workshop will be:

8,904 + 11.825 = 8,915.825 JD (I)

(11) Multiplier for delivery price at site against CIF price at Aqaba (including import tax) will be:

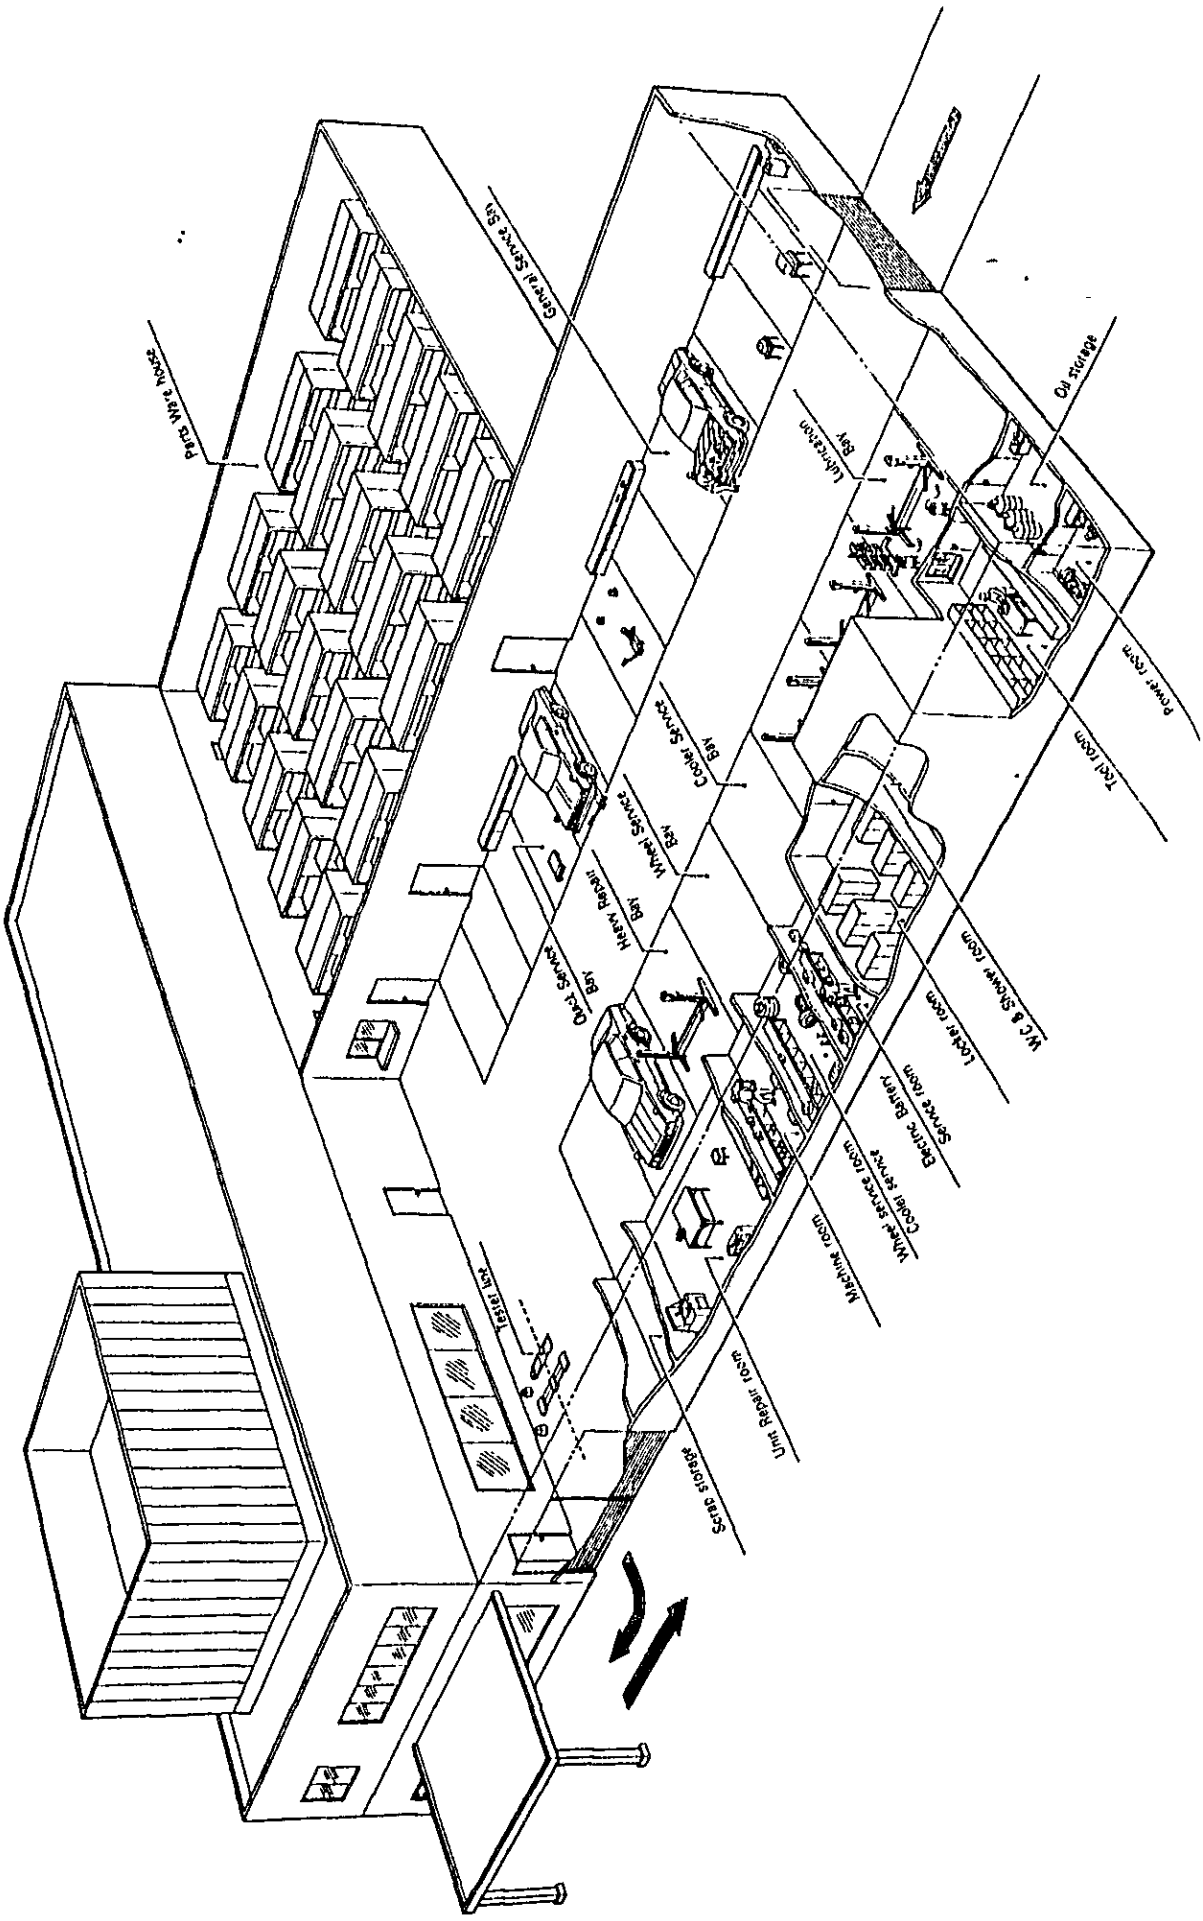
(I)/(F) = 1.0013 (J)

By using (G) and (J), the total price of machineries and equipments can be roughly estimated based a total price on the site of maker's plant. Total price of machineries and equipments on the site of maker's plant was estimated as 104 million yen. CIF price at Aqaba including import tax will be 139.4 million yen which is equal to JD185,200. Then, the price at the site of common workshop will be JD185,400.

104 million yen x 1.3356 = 139.4 million yen
≒ JD 185,200

JD 185,200 x 1.0013 ≒ JD 185,400

Annex 3.7 A Scope of Automobile Service Shop



Annex 3.8 Provisional Composition of Comprehensive Automobile Service Shop

Following equipment is required for each job in Comprehensive service shop.

(1) Equipment for Quick (General) Service Bay (2 bays)

Head light tester	1 unit
Engine checker	1 "
Tool porter	1 "
Fender cover	2 units
Seat cover	2 "
Compression gauge	1 unit
Radiater cap tester	1 "
Plug gap gauge	1 "
Hand tool set in box	1 "

(2) Equipment for Heavy Repair Bay

2-post lift	1 unit
Auto-crane	1 "
Tool porter	1 "
Parts cady	1 "
Hand tool set in box	1 "
Hydraulic press	1 "
Parts washer	1 "
Electric drill	1 "
Electric grinder	1 "
Work bench	1 "
V block	1 "
Surface plate	1 "
Dial gauge	1 "
Vernier caliper	2 units
Torque wrench	2 "
Micro meter	1 unit
Bearing puller	1 "
Thickness tape	2 units

(3) Equipment for Wheel and Cooler Service Bay

Wheel balancer (off the car)	1 unit
Tire inflator	1 "
Tire gauge	2 units
Cooler charger	1 unit
Gas leak detector	1 "
Hand tool set in box	1 "
Tool porter	1 "
Parts cady	1 "
Brake tube lock nut wrench	1 "
Garage jack	1 "
Rigid rack	4 units

(4) Equipment for Lubrication Bay

Portable oil lubricator	2 units
Drum can pump	1 unit
Drum can wrench	1 "
Oiler	2 units
Oil drain	1 unit
Grease gun	1 "
Hand tool set in box	1 "
Tool porter	1 "

(5) Equipment for Washing Bay

Steam cleaner	1 unit

(6) Equipment for Body Repair and Painting Bay

Fender tool set	1 unit
Power set	1 "
Body puller	1 "
Disc grinder	1 "
Disc sander	1 "
Spot welder	1 "
Gas welder	1 "
Infrared drier stand	4 units
Hand tool set in box	1 unit

(7) Equipment for Electric and Battery Service Bay

V.A. ohm meter	1 unit
Meggar	1 "
Spark plug cleaner and tester	1 "
Air filter tester	1 "
Dynamo regulator tester	1 "
Starter tester	1 "
Battery charger	1 "
Battery hydrometer	1 "

Annex 4.2 Projected Water Deamnd for Commercial and Industrial Use

This is a summary presentation of water demand projection made by Weston, Inc. in "The Feasibility Report and Preliminary Engineering Studies, Irbid Municipal Water Distribution, Sewerage, Storm Drainage and Solid Waste Disposal Project."

First, the following rates of domestic and total demand per capita per day are used as the basis for demand projection.

Rates of Water Demand

(Unit: liters/capita/day)

		Year			
		1975	1980	1990	2000
(1)	Domestic	70	75	85	95
(2)	Total (Gross)	118	126	144	160

The total gross figures includes an allowance of 20 percent for system losses. Therefore, the total net figures can be derived by subtracting an allowance of 20 percent.

Rates of Total Net Demand

(Unit: liter/capita/day)

		Year			
		1975	1980	1990	2000
(3)	Total (Net)	94.4	100.8	115.2	128.0

The difference between the net total demand and domestic demand becomes commercial and industrial demand in term of liter/capita/day as follows:

Commercial and Industrial Demand

(Unit: liter/capita/day)

	Year			
	1975	1980	1990	2000
(4) Commercial and Industrial Demand	24.4	25.8	30.2	33.0

Commercial and industrial demand in the Municipality can be derived by multiplying commercial and industrial demand in terms of per capita per day by the projected population of the Municipality.

Commercial and Industrial Demand in the Municipality

	Year			
	1975	1980	1990	2000
(5) Projected Population	128,000	166,000	242,000	353,400
Commercial and Industrial Demand (5)x(4)	3,123 m^3/day	4,283 m^3/day	7,308 m^3/day	11,649 m^3/day

Annex 4.3 Excerpt of Electricity Tariffs, 1980[1/]

First: Bulk Supply Tariff:

1. By virtue of Article (31) of the General Electricity Law No. (8) of 1976, the prices of electrical energy supplied by Jordan Electricity Authority are determined as follows:

   A. Maximum Demand Tariff:

   The maximum demand tariff is a monthly lump sum for monthly maximum load which occures at the peak period (defined below) for a duration of half an hour at least:

   . All governorates J D 2.40/kW/month

   B. Day Energy Tariff:

   The day Energy Tariff is applied for each kWh sold during the day period between 0700 hours and 2300 hours, or any period may be defined by JEA in the future.

. Amman and Balqa governorates	18.5 Fils/kWh
. Irbid governorate	17.5 Fils/kWh
. Other governorates	18.5 Fils/kWh

   C. Night Energy Tariff:

   The night energy tariff is applied for each kWh sold during the night period between 2300 hours and 0700 hours or any other period may be defined by JEA in the future.

. Amman and Balqa governorates	13.5 Fils/kWh
. Irbid governorate	12.5 Fils/kWh
. Other governorates	13.5 Fils/kWh

2. The above energy rates will be increased by 0.041 fils/kWh for each 100 fils increase in the cost of fuel oil and diesel above JD (30)/ton of fuel oil and JD (42.0)/ton of diesel. In this case, the price of the kWh sold in the concession areas of the Power companies may be increased by 0.047 fils/kWh for each (100) fils increase in the fuel prices as above and after the official approval of JEA.

1/ Source: Jordan Electric Authority, February 1980

3. Electricity bills should be paid monthly. Whenever delay of payment of bills exceeds a period of one month after these payments are due, an interest of 1 percent per month will be applied on amounts due and not paid.

4. The monthly maximum demand is defined as the maximum load in kW occures during the peak period defined below for a period of half an hour at least.

5. The peak period is defined as the period between 1800 hours and 2300 hours in Summer (from May, 1st to October, 31st) and between 1600 hours and 2300 hours in Winter (from November, 1st to April, 30th). This time could be changed by JEA.

6. The consumers should undertake to improve the power factor at their premises at their own expenses to be not less than (0.85). In case of any decrease in the power factor below (0.85), the consumer will pay in addition to his electricity bill the following penalties:

Consumers Power Factor	Penalties
0.85 or more	Nill.
0.85 - 0.70	0.77 percent of the total bill for every 0.01 of the power factor less than 0.85.
0.70 - 0.60	0.95 percent of the total bill for every 0.01 of power factor less than 0.85.
0.60 - 0.50	1.2 percent of the total bill for every 0.01 of power factor less than 0.85.
less than 0.50	1.5 percent of the total bill for every 0.01 of power factor less than 0.85.

JEA has the right not to supply any consumer if his low power factor affects the system and no action has been taken by him to improve it.

Second: Retail Tariff:

By virtue of articles (31) and (32) of the General Electrical Law No. (8) of 1976 the prices of electrical energy supplied in retail

by JEA and electricity companies in their concession areas are determined as follows:

A. Domestic Tariff:

This tariff is applied to domestic purposes, public buildings, hospitals, worship places, broadcasting and TV single and three phase supplies:

. Amman and Balqa governorates	37 Fils/kWh
. Irbid governorate	52 Fils/kWh
. Other governorates	37 Fils/kWh

B. Commercial Tariff:

This tariff is applied to commercial stores, hotels, restaurant, entertainment centers, cinemas, and etc., single and three phase supplies.

. Amman and Balqa governorates	45 Fils/kWh
. Irbid governorate	57 Fols/kWh
. Other governorates	45 Fils/kWh

C. Small Industries Tariff:

This tariff is applied to small industrial consumers who are supplied from LV networks for single and three phase.

First Block: From 1-2500 kWh/month

. Amman and Balqa governorates	39 Fils/kWh
. Irbid governorate	44 Fils/kWh
. Other governorates	39 Fils/kWh

Second Block: over 2500 kWh/month

. Amman and Balqa governorates	27 Fils/kWh
. Irbid governorate	34 Fils/kWh
. Other governorates	27 Fils/kWh

D. Large Industries Tariff:

This tariff is applied to large industrial consumers who are supplied from the H V networks or supplied from L V networks and their maximum demand exceeds 500 kW.

D-1 Maximum Demand Tariff:

As a monthly lump sum for monthly maximum demand which occures at the peak period for half an hour at least.

. Amman and Balqa governorate	JD 3.050/kW
. Irbid governorate	JD 3.050/kW
. Other governorates	JD 3.050/kW

D-2 Day Energy Tariff:

The day energy tariff is applied for each kWh sold during the day period between 0700 hours and 2300 hours or any period may be defined by JEA in the future.

. Amman and Balqa governorates	23 Fils/kWh
. Irbid governorate	22 Fils/kWh
. Other governorates	23 Fils/kWh

D-3 Night Energy Tariff:

Night energy tariff is applied for each kWh sold during the night period between 2300 hours and 0700 hours, or any orher period may be defined by JEA in the future.

. Amman and Balqa governorates	15 Fils/kWh
. Irbid governorate	14 Fils/kWh
. Other governorates	15 Fils/kWh

D-4 Flat Rate Tariff:

As an alternative for the large industries tariff JEA could apply in its distribution areas a bulk supply flat rate tariff of 33 fils/kWh.
