- ANNEX 3. <u>Sepcification Sheets for Special</u> <u>Training Equipment</u>

ANNEX-1.

Training Plan of Managers and Instructors

To foster the center's staffs such as managers, instructors and assistant instructors is the most important matter for the successful operation of the center, therefore a plan of the training must be made carefully in detail to meet conditions surrounding setting-up of the center in Saudi Arabia.

A tentative plan for the training prior to the commencement of the center is shown as follows:

- Selection of engineers as candidates of managers or instructors, who should have enough knowledge and experience of operation or maintenance for desalination or power plants.
- 2) Implementation of training, How to Teach or How to Manage, in Japan.
- 3) Selection of technicians as candidates of assistant instructors, who should have practical knowledge and skills for operation or maintenance of desalination or power plants.
- Preparation of the center operation plan, training plan and teaching materials in Saudi Arabia, assisted by JICA-despatched experts. Process of these preparation is good opportunity as on-the-job training.
- 5) Learning of how to handle training equipment at the commissioning period of the equipment.

- A tentative training program of the above 2) is as follows:
 - 1. Lecture (3.5 weeks)
 - 1) General orientation
 - Introduction to industrial and labour situation, and vocational training administration in Japan with the comparison with supervisory training programme
 - 3) Introduction to management training in Japan
 - Outline of management training (Introduction)
 - Management training
 - Foreman training and supervisory training
 - On the Job Training (OJT)
 - Quality Control Circle (QC Circle)
 - Methods of supervisory training
 - Trainers training
 - Objective management
 - Human relations at the workshop

2. Exercise (0.5 week)

Target shooting game, Test for promoting active listening, Cooperation game, and Work motivation inventory test.

Each exercise is reviewed by the evaluation and feedback of the process and result of game exercise.

3. Discussion (2 weeks)

Discussion between participants and Japanese staffs on present situation and various problems of supervisory training, based upon the oral presentation and comparative study of country reports prepared by participants. 4. Observation and study tours (2 weeks)

Observation and study tours offer the opportunity to take a close look at the actual situation of Japanese industries and institutions specialized in supervisory training and in its closely related domains. Some of institutions and enterprises and enterprises are selected as samples of case studies for further comprehension.

This programme consists of followings:

- 1) Facilities and institutions for supervisory and vocational training
- 2) Research and Development institutions for human resource and business management
- 3) Small and intermediate scale enterprises and typical Japanese industries

The managers, instructors and assistant instructors trained in the above plan may not be self-supporting for the center operation. During the operation by them, assisted by JICAdispatched experts, they will be able to operate the center by themselves within short period of time.

SPELIFICATION MULLIANT - A & B Quantity SW -5-200 MINI PLANT - A & B each 1 unit each 1 unit Intervent the same or equivalent specification as mentioned below; Specification I. Purpose of Use shall have the same or equivalent specification plant, Power Plant, and Steam Turbine Generator Plant. II. Features Both Mini Plant A&B, although of small scale, are completely functioning plants where the typical process equipment of the above plants such as valves, pumps, heat exchangers, drums and instrumentation for automatic control are arranged exactly the same way as in a commercial plant. Mini Plant sable trainees to be trained or, various aspects of operating ranging from basic operating procedures such as valve opening/closing and the starting/stopping of pumps, to the automatic control of the plant and also maintenance work of the plant. Mini Plant A is designed to train the above basic skills through <u>Air Scrubbing Unit</u>										<u> </u>
Item Mo. Description Quantity SW -5-100 MINI PLANT - A & B each 1 unit									S7EC.S	A21: X0.
SW -5-100 MINI PLANT - A & B each 1 unit Mini Plant - A & B each 1 unit Mini Plant - A & B shall have the same or equivalent specification as mentioned below; Specification I. Purpose of Use To train fresh operators for Desalination Plant, Power Plant, and Steam Turbine Generator Plant. II. Features Both Mini Plant A&B, although of small scale, are completely functioning plants where the typical process equipment of the above plants such as valves, pumps, heat exchangers, drums and instrumentation for automatic control are arranged exactly the same way as in a commercial plant. Mini Plants enable trainees to be trained or, various aspects Of operation ranging from basic operating procedures such as valve opening/closing and the starting/stopping of pumps, to the automatic control of the plant and also maintenance work of the plant. Mini Plant A is designed to train the above basic skills through Air Scrubbing Unit. As for Process flow, Equipment layout, and Equipment specificat refer to Training Equipment List(SW-5), and the following spec. sheets. 4 3 J08 #0.		SPEC	IFICATI	ON					S W-5-	100/200
