SCALE	AS SHOWN	DATE	
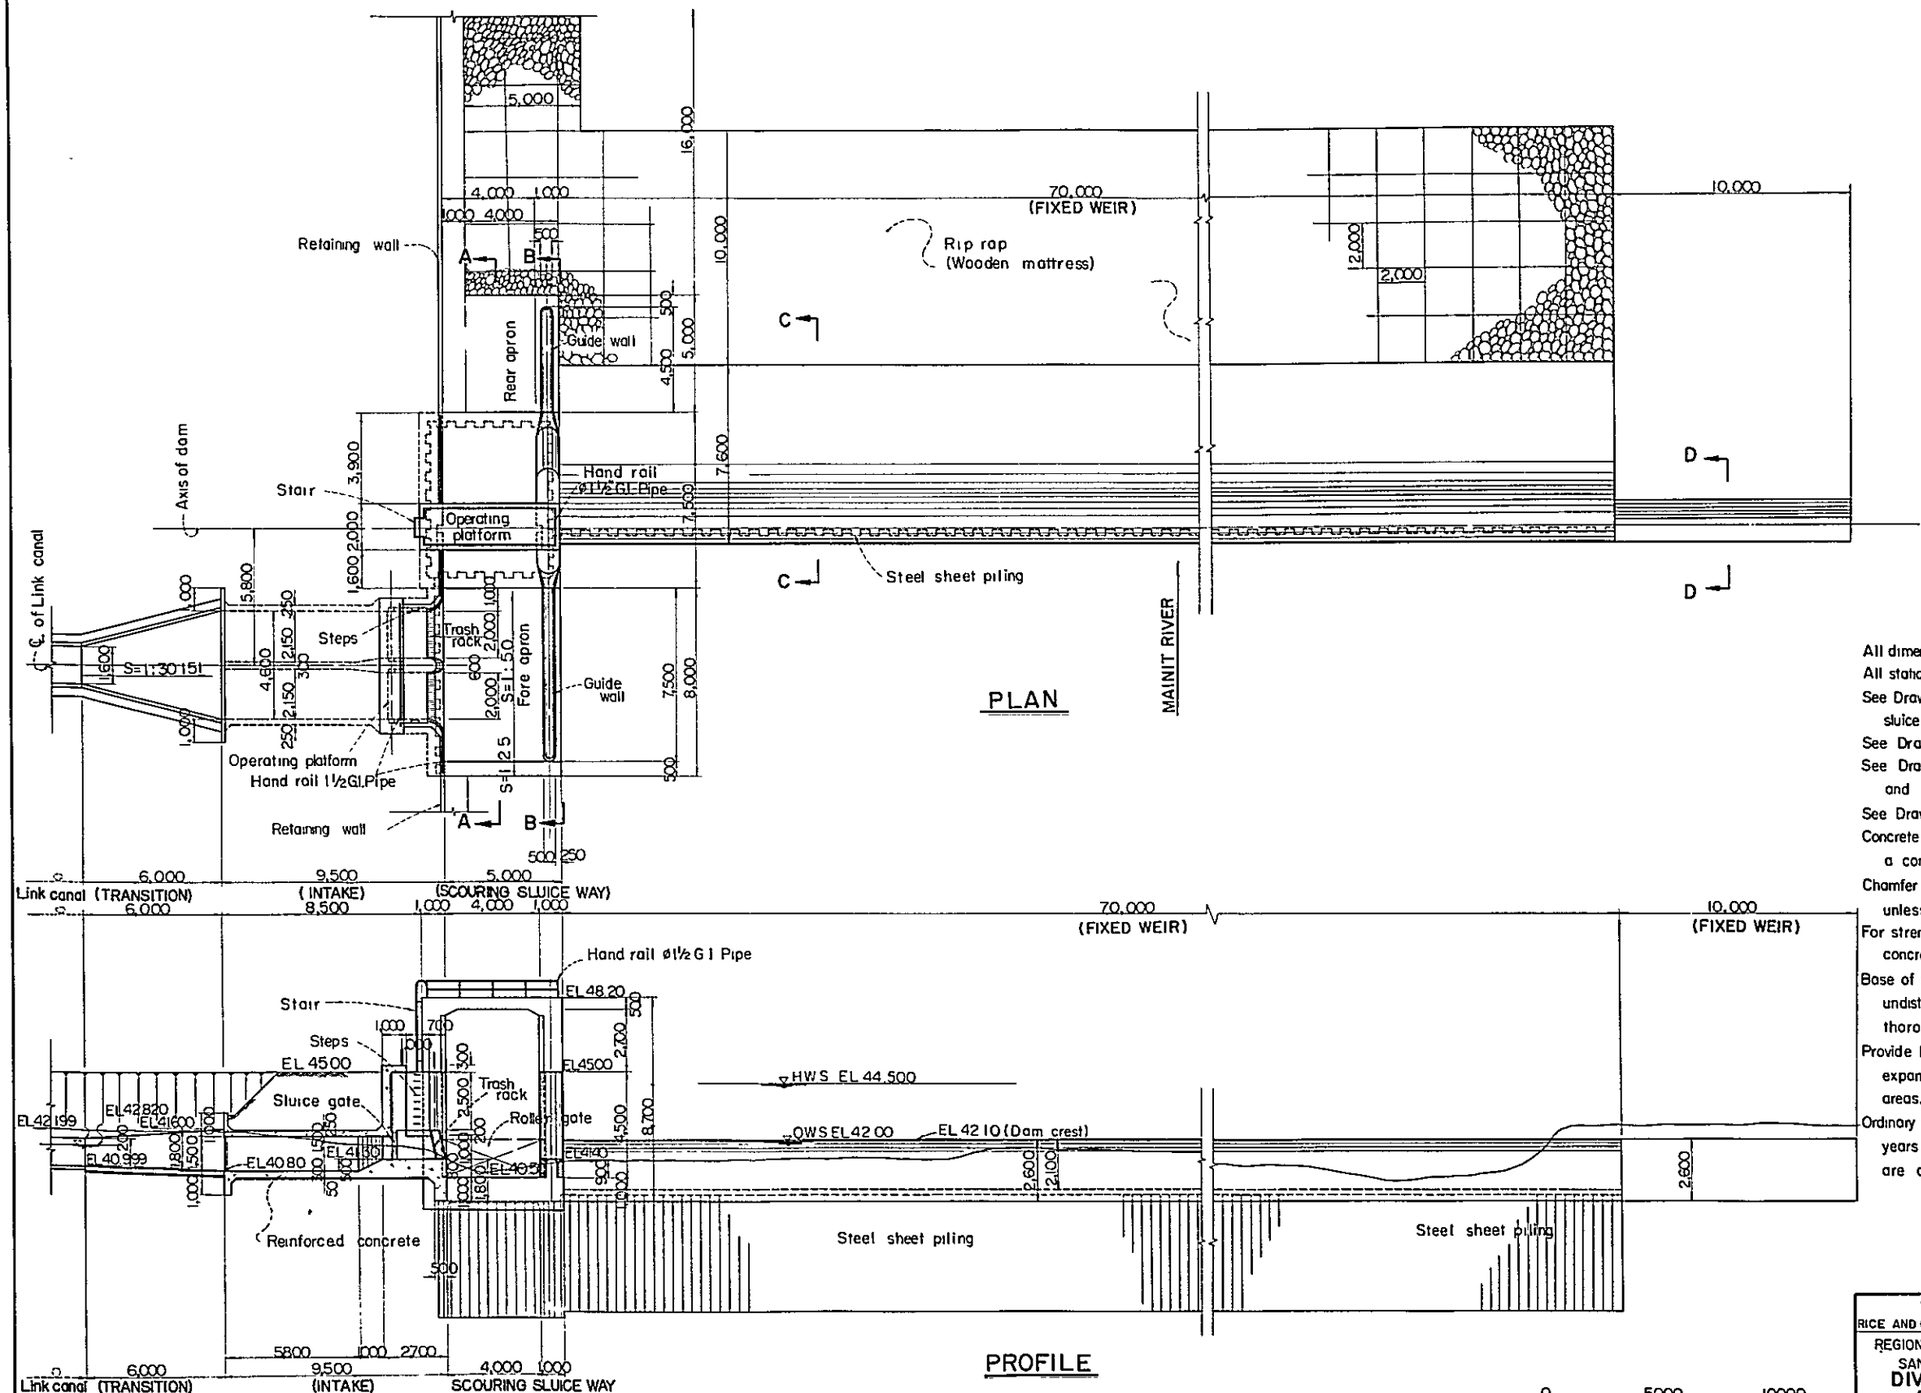
SHEET NO	OF	DRAWING NO.	D-1



NOTES

All dimensions are given in millimeters
All stations and elevations are given in meters
See Drawing D-3 for sections of scouring sluice way and weir.
See Drawing D-6 for sections of intake.
See Drawing D-8 for handrail, trash rack and stair.
See Drawing D-9 for details of gates.
Concrete design, except precast, based on a compressive strength of 80 kg/cm^2
Chamfer all exposed corners 20 mm, unless otherwise shown.
For strength and aggregate size of concrete, see specifications.
Base of concrete structure to be placed on undisturbed natural foundation or thoroughly compacted fill.
Provide 10mm~20mm elastic filler in all expansion joints at all concrete contact areas.
Ordinary flood anticipated once in about 10 years and elevation for ordinary floods are calculated on crest of dam at EL42.10

All dimensions are given in millimeters

See Drawing D-3 for plan and sections

Unless otherwise shown, place reinforcement so that the clear distance between face of concrete and the nearest reinforcement is 50mm except provide a clear distance of 100mm from face of concrete placed against earth

Lap all bars 30 diameters at splices.

All reinforcing steel to be plain bar with standard hook each end in addition to length shown.

Hook with 180° bends, lengths of 10 bar diameters to be provided where shown.

Use 10.5 bar diameter radii for bends of main reinforcement at the corner of rigid flame or Rahmen.

NOTES

All dimensions are given in millimeters.
All stations and elevations are given in meters.
Concrete design, except precast, based on a compressive strength of 80kg/cm².
Chamfer all exposed corners 20mm, unless otherwise shown.
For strength and aggregate size of concrete, see specifications.
Unless otherwise shown, place reinforcement so that the clear distance between face of concrete and the nearest reinforcement is 50mm except provide a clear distance of 100mm from face of concrete placed against earth.
Lap all bars 30 diameters at splices.
All reinforcing steel to be plain bar with standard hook each end in addition to length shown.
Hook with 180° bends, lengths of 10 bar diameters to be provided where shown.
Use 10.5 bar diameter radii for bends of main reinforcement at the corner of rigid flame or Rahmen.
Base of concrete structure to be placed on undisturbed natural foundation or thoroughly compacted fill.
All welds to be full penetration continuous and smooth.
Class 'A' concrete to be placed at all portion unless otherwise shown.

TURNOUT GATE

0 500 1,000

SCALE OF MILLIMETERS

NOTES

All dimensions are given in millimeters

See Drawing A-19 for the general location of each gate.

Welding H-beam shown in this drawing may be substituted by H-beam with adequate market size.

All welds to be full penetration continuous and smooth.

Non-corrosive studs and nuts on flap valve.

Malleable iron washers to be used unless otherwise shown.

EXPLANATIONS

; Edge-fillet welds

; Single-V buttjoint weld both sides

; Steel plate

NOTES

All dimensions are given in millimeters
All stations and elevations are give in meters
Chamfer all exposed corners 20 mm, unless otherwise shown.
For strength and aggregate size of concrete, see specifications
Unless otherwise shown, place reinforcement so that the clear distance between face of concrete and the nearest reinforcement is 50mm except provide a clear distance of 100mm from face of concrete placed against earth
Lap all bars 30 diameters at splices
All reinforcing steel to be plain bar with standard hook each end in addition to length shown.
Hook with 180° bends, lengths of 10 bar diameters to be provided where shown.
Use 10 5 bar diameter radii for bends of main reinforcement at the corner of rigid flame or Rahmen
Class 'A' concrete to be placed at all portion, unless otherwise shown.
All welds to be full penetration continuous and smooth
Non-corrosive studs and nuts on flapvalves

NOTES

All dimensions are given in millimeters
See Drawing A-40 for Type "C" and the gate
Concrete design, except precast, based on a compressive strength of 80kg/cm²
Chamfer all exposed corners 20mm, unless otherwise shown.
For strength and aggregate size of concrete, see specifications
Unless otherwise shown, place reinforcement so that the clear distance between face of concrete and the nearest reinforcement is 50mm except provide a clear distance of 100mm from face of concrete placed against earth.
Lap all bars 30 diameters at splices.
All reinforcing steel to be plain bar with standard hook each end in addition to length shown.
Hook with 180° bends, lengths of 10 bar diameters to be provided where shown.
Use 10.5 bar diameter radii for bends of main reinforcement at the corner of rigid flame or Rahmen.
Base of concrete structure to be placed on undisturbed natural foundation or thoroughly compacted fill.
All turnouts not to require the use of trashrack
Maximum velocity through the pipe shall not be greater than 10 m/sec.
Class "A" concrete to be placed at all portion unless otherwise shown

NOTES

All dimensions are given in millimeters

See Drawing A-39 for TYPE "A" and TYPE "B"

Concrete design, except precast, based on a compressive strength of 80kg/cm²

Chamfer all exposed corners 20 mm, unless otherwise shown

For strength and aggregate size of concrete, see specifications

Unless otherwise shown, place reinforcement so that the clear distance between face of concrete and the nearest reinforcement is 50mm except provide a clear distance of 100mm from face of concrete placed against earth

Lap all bars 30 diameters at splices.

All reinforcing steel to be plain bar with standard hook each end in addition to length shown.

Hook with 180° bends, lengths of 10 bar diameters to be provided where shown

Use 10.5 bar diameter radii for bends of main reinforcement at the corner of rigid flame or Rahmen

Base of concrete structure to be placed on undisturbed natural foundation or thoroughly compacted fill.

All welds to be full penetration continuous and smooth

Non corrosive studs and nuts on flap valves

All turnouts not to require the use of trashrack.

Maximum velocity through the pipe shall not be greater than 1.0 m/sec.

Malleable iron washers to be used unless otherwise shown.

NOTES

All dimesions are given in millimeters.
All elevations are given in meters
Concrete design, except precast concrete pipe, based on a compressive strength of 80 kg/cm².
Chamfar all exposed corners 15mm
Unless otherwise shown, place reinforcement so that the clear distance between face of concrete and the nearest reinforcement is 50mm, except provide a clear distance of 100mm from face of concrete placed against earth.
Lap all bars 30 diameters at splices.
All reinforcing steel to be plain bar with standard hook each end in addition to length shown.
Hook with 180° bends, length to 10 bar diameters.

NOTES .

All dimesins are gien in millimeters.

All statiuns and elevations are given in meters

Bndge desighed for one lane of T-6 loading.

All lumer to be treated.

Unit stress of timber and lumler.

Bending ----------90kg/cm²

Compression (columns)--------70kg/cm²

Blaring----------20kg/cm²

Horizontal shear --------- 8 kg/cm²

Non-cossosive studs and nuts.
