THE MAE KLONG PILOT PROJECT

3-1. Present Situation of the Project Area

3-1-1. The Mae Klong District No.1

The Project Area is located in the Tha Maka irrigation district included in the Greater Mae Klong Project, extending in about 400 ha paddy fields along the IL-IR canal. The Area administratively belongs to Tambol Muan-Chum and Tambol Ban Mai in Amphoe Tahmuang, Changwat Kanchanaburi.

The Mae Klong river water is diverted by Vajilalongkorn weir to IR canal and pumped up at the rate of about 1.0 cu,m/s to be conveyed to IR-IL canal. In 1974, the construction works of ditches and dikes had been implemented to improve the terminal water distribution systems in the Mae Klong Area and its vicinity, including eight irrigation ditches provided in the Pilot Project Area.

In the wet season no shortage of the irrigation water takes place, but the river discharge in the dry season can meet quite insufficiently the water requirements to cover its vast irrigation areas. The Ban Chao Nen Reservoir under construction is expected to properly control the river flow when completed within a few years, and produce the good effect to irrigation water supply.

At present, most of the Area (400 ha) is cropped with paddy (355 ha) in the wet season, but the water shortage in the dry season prevents paddy cropping therein. Almost upland field (44 ha) is cropped with sugar cane.

Although seven officials including two extension officers have been assigned to the agriculture extension office in Changwat Kanchanaburi, only one officer to the Amphoe office. Since the two officers in the Changwat office serve concurrently to administrative works, only little

extension services are available at present. The extension services in the Amphoe level have been carried out in the manner to hold meetings from time to time for giving technical guidances to the farmers' groups (37 groups in the Changwat). No intensive guidances in the extension activities have been made in the Project Area to date.

3-1-2. The Mae Klong District No.2

This Area (about 500 ha) is located in the Kampeng Sach irrigation district included in the Greater Mae Klong Project, being bounded by the Tha Sarn drainage canal in the north and the west, and by the Mac Klong left bank main canal in the south.

The 3L canal, which bifurcates from the left bank main canal of the Kampeng Saen irrigation project, runs through the Area longitudinally The irrigation in the Area, however, is carried out in the plot-to-plot method due to absence of effective terminal irrigation facilities. The present land use of 500 ha contains paddy fields of 340 ha (68%) and upland fields of 140 ha (32%) and the upland field ratio to the paddy field is higher as compared with the other cases. The most of all upland fields are cultivated with sugar cane. No specific agriculture extension services have been carried out just like in the case of the District No.1.

3-2. Approaches

3-2-1. The Scope of the Study

The scope of this study will be limited to the basic plan formulation for the Mae Klong District Irrigated Agriculture Development Project, and the detailed study with final design shall be made by another study team that is scheduled to follow this team.

Agricultural infrastructure consolidation

As the main irrigation and drainage canals are fully provided in the both districts of the Mae Klong No.1 and 2, the study for land consolidation works was taken up in this program. It may be required, however, to conduct further survey for suitability of function of the existing irrigation and drainage facilities for the irrigated agriculture development program to be proposed.

The deliberate consultation between the Government of Thailand and Japan has concluded that the intensive land consolidation will be applied to the District No.1 and the extensive land consolidation to the District No.2

The so-called intensive land consolidation is made in the same method applied to the Chao Phya Pilot Farm Project that will provide not only the water distribution system to the terminal plots, but also land consolidation to meet the requirement for improvement of farming techniques and of their practical application in the near future. Such intensive way for land consolidation will allow th execute effective water management, to alleviate heavy burden of farming labor and to facilitate the introduction of the farm mechanization.

Contrarily, the extensive land consolidation is made mainly by improvement of terminal water utilization facilities and providing the farm road networks; however, the extensive way of land consolidation is to be designed to be able to turn to the intensive method, if necessity arises in the future.

The construction machineries, which shall be used in the works of the District No.1, are planned to be converted to implementation of the District No.2.

Agriculture supporting services

In the District No.1, the trial farm and model farms will be provided and the experts in various fields will station in the job site to give technical guidances to the farmers. The farmers, who will crop in the District No.2, will be able to learn and apply the results obtained in the trial farm in the District No.1 to improve the farming

works in their own fields, and also the farmers will be able to receive the guidance by the experts servicing in the trial farm in the District No.1 from time to time.

3-2-2. The Mae Klong District No.1

a. Proposed Farming Scheme

Implementation of land consolidation will enable to complete the terminal irrigation facilities which will enable to make and effective water utilization and increase in cropping acreage in the dry season.

The Project aims to increase in unit yields and in a land use ratio for expansion of the agricultural productivity. The varieties of paddy, the main crop to be introduced in the Area will be those which have high response to fertilizers, short stalk, non-photosensitivity and short maturing period. In order to realize the proposed yield with new varieties, it is required to employ the improved cropping pattern and to dose the fertilizers and agri-chemicals reasonably.

In the proposed land use, the paddy will be centered in the program in consideration of the present land use in the Area. The proposed cropping pattern was designed as following four types:

- 1) Paddy double cropping
- 2) Paddy cropping in the wet season and upland cropping in the dry season
- 3) Sugar cane cropping
- 4) Upland cropping all the year round

In most of the paddy fields, the paddy double cropping (type 1) will be introduced, but in about 10 percent of the paddy fields, and type 2 will be introduced to meet the requirement for crop diversification. The pulse will be cropped as the secondary crop to promote

the soil fertility. For the year-round upland cropping, rotational multi-cropping will be carried out with vegetables (cucumbers and so forth), including the pulse. The upland irrigation will function effectively for the dry season cropping.

Proposed Land Use (ha)

Land Category	Without Project	With Project
Paddy fields Upland fields Sugarcane Vegetables	355.0 95.0 (99.0) (1.0)	332.0 43.0 (42.0) (1.0)
Sub-total	400.0	375.0
Plots for facilit Public lands Sub-total	les -	3.6 21.4 25.0
fotal	400.0	400.0

b. Land Consolidation Scheme

The intensive land consolidation will be executed and the detailed design will be made by the another study team as mentioned in 3-2-1.

Being the case as such, this study will formulate the basic plan of the land consolidation in the District on the basis of the results obtained from the study in the Chao Phya Pilot Farm Project. Size of plot (160m x 50m), unit farm land (19.2 ha), layout of farm roads and ditches that are designed in the Chao Phya case will be all applicable to this scheme as the fundamental plan.

The different topographical condition of the Districts from the Chao Phya Project Area is that the area along the IR canal elevates higher in gradient toward east at 1/2,000 slope on an average, although the Chao Phya Project extends almost flat. Under such conditions, the diversion from the lateral canals to the ditches will be available only in one direction which will require to provide more lateral canals for

irrigation and drainage as compared with the Chap Phya case, while in the Chao Phya area the diversion in both direction is possible.

Another different point from the Chao Phya case is that there have already existed the water sources in the upper reach of the Mae Klong Area.

For a consideration of the topographical conditions of the District No.1, the plot-layout was made as shown in FIGURE III-1. At present, the diversion works are provided at 300 m interval along the IR canal; however, the existing diversion works shall be integrated into two for concentrated water-intake control available.

c. Agriculture Supporting Services

The trial farm and model farms will be constructed and the necessary experts will station in the job site for rendering agriculture supporting services as well as in the Chao Phya case. The trial farm will be available to execute application tests of improved farming techniques in the Suphan Buri Experiment Station. And also the extension officers and selected farmers will be trained in the Suphan Buri Training Center.

The experimental studies in the trial farm will be the application test of the improved techniques to local conditions for paddy double cropping and others; mainly 1) farming practices of paddy transplanting and upland crops, 2) plant protection from damages by birds, animals, insects and diseases, 3) water control, and 4) farm mechanization.

Among the trained farmers in the Center, three farmers, who will be qualified to do the improved farming, shall be selected to manage the model farms which will be given conveniences in supply of necessary fertilizers, agri-chemicals, and farming equipments for facilitating the execution of the new farming practices. The experts assigned in the job site will be in a position to give guidance for preparation of cropping schedule and management upon request of the farmers.

The following farmers' organizations will be necessary for effective execution of the improved farming in the District where the land consolidation is to be implemented. The intensified guidance will be given to the related farmers by the staff of organization concerned and experts for the purpose.

- Promotion of land consolidation
- Strengthening the extension services and farmers training
- Rationalization of water management and farm management
- Supply of agricultural inputs
- Collection, storage, processing and marketing of the farm products
- Establishment of crediting system and promotion of accumulation of owned capital by farmers

3-2-3. The Mae Klong District No. 2

a. Farming Scheme and Agriculture Supporting Services

The main crops in the District No.2 are paddy and sugar cane. The land use will remain unchanged as what it is; paddy fields (322 ha) and upland fields (153 ha). The three types of cropping will be expected in the future; that is, 1) paddy double cropping, 2) paddy cropping in the wet season and upland cropping in the dry season, and 3) sugar cane cropping.

Most of the paddy fields will be cultivated with paddy in double cropping (type 1), and the type 2 will be introduced into about 10 percent of the paddy fields with pulse growing as main secondary crop, and other upland crops. The irrigation in the dry season will produce good effect to yield increase.

The current technical cooperation program includes no plan to provide the trial farm and the model farm in the District No.2. Then, the farmers in this District shall utilize the related facilities to be provided in the District No.1. The Thai extension officials, therefore,

should play an important role in the agricultural supporting services for the farmers in the District, and also the experts stationing in the District No.1 will be in a position to render services to the farmers in this District upon their request.

b. Land Consolidation Scheme

The extensive land consolidation to be implemented in this District will aim at the followings;

- To facilitate the exchange and consolidation of farm lands
- Por every farm plot to face the farm roads
- To provide irrigation and drainage ditches with every farm plot
- To make the water control possibly simplified and easy
- To arrange the farm plots and roads suitable for partially mechanized farming and animal power farming
- To eliminate the surface water

The following studies were made for successful accomplishment of the purpose.

Dimensions of the farm plot

The width of plot was suitably determined by 50 m, the same length of that in the Chao Phya case, owing to little restriction by topography. The effect of the length of run, which affect the land consolidation works and farming practices, will be conceptionally defined as follows; (In the extensive approach the width of plot, 80 m, is equivalent to the half of the length of run, 160 m, in the intensive approach.)

Effect by Variance of Plot Dimensions

Plot Dimensions (m)	200 x 50 160 x 50	100 x 50	80 × 50
Volume of Land Grading	Large Medium-		∽Small
Public Use Land	Small - Medium -		- Large
Water Management	Difficult -	l'asy	- Easy
Efficiency of Parming Machines	HighHigh		Low
Levelling Works	Difficult -		Lasy

When the land consolidation is executed based on the existing farm plots, exchange of farm lands may be comparatively facile; however, some problems as below will be pointed out in the case.

- 1) The different dimensions of plots will be a bottleneck for efficient water control.
- 2) So far as the sample area, 170 ha, is concerned, the length of run of many plots runs in the same direction as the topographical inclination. This will make it difficult to keep evenly the depth of the water in one unit farm plot.

Parm dithes

There are two ways of laying out for the farm ditches; the one is to provide the ditches on both sides of the farm roads, and the other is to construct one ditch on one side of the farm road and the diversion works installed to convey waters accross the roads to the opposite plot. The comparative study on the construction costs for the both cases revealed that the cost for the former case was roughly estimated not lower than that in the latter.

The one-sided ditch system will be employed in the Project in taking account the easiness of road maintenance and convenience in farming works.

Access road to the farm plots

Access roads to farm plots from the farm roads, crossing the ditches, will facilitate to move the farming machineries.

Since, however, the extensive land consolidation, employing small size farming machineries provides no specific access road, the farmers should use wooden plotes for bridging over the ditches as temporary facilities.

Pavement of community roads

No pavement of the branch roads will be required for the traffics by small-size farming machineries animal-drive equipments, etc.

General idea on the extensive land consolidation

The extensive approach to the land consolidation, which will cost economically and allow the efficient water control available, is summarized as follows.

In this case, the land grading works should be applied to the farm plots only that may be difficult in water intake under the designed irrigation system and plot-reparcelling.

Dimensions of plot: 160 m x 50 m (0.8 ha)

Farm road : width 3.0 m, height 0.4 m

Community road : width 4.0 m, height 0.6 m

3-2-4. Buildings and Facilities

In implementation of the Technical Cooperation for the Irrigated Agriculture Development Project in the Mac Klong District No.1, the temporary field office, lodging accommodation for the experts staying in the site, the trial farm will be provided in the same way as planned in the Chao Phya case.

a. Temporary Pacilities

i) Location

A part of the accommodation that has been provided for the construction works of Vajiralongkorn Dam, will be available for the temporary field office for this Technical Cooperation Project. The relevant accommodation is equipped with the complete supply and disposal systems with considerably vast plot of ground provided for further buildings constructions. The proposed lodging accommodation for experts will be constructed in the said plot for their convenience, accordingly.

ii) Transportation and communication

The means of transportation and communication in the District is well provided, so that the transportation between the office and the job-site can be made by land, and the smooth communication will be available with present facilities.

iii) Supply and disposal systems

As previously mentioned, the supply and disposal systems are completely equipped in the plot of the existing facilities, and the lodging accommodation should be constructed in appropriate location in consideration of the present arrangement of the systems.

iv) Architecture

Temporary field office

The part of existing office building as mentioned above, will be used for the temporary field office with some interior modeling.

Lodging accommodation for experts

The experts to be assigned to the Project, who will have residences in Bangkok as those to the Chao Phya Project, should make services in the job site for the week-days, and the lodging accommodation in job site should be provided for the purpose. If, however, some of the accommodation, which is under construction (completion in 1977) by

the Tai Government in the Vajiralongkorn Dam site for the officials assigned thereto, will be able to be offered to the experts of the Mae Klong Project. There will be no need to provide the new lodgings specially for the Project accordingly.

b. Trial farm

i) Location

The trial farm, the location of which is suitably selected at the north-west corner of the District No.1 along the IR-IL canal, will be constructed. In the trial farm lot, about ten hectares for facilities will be selected along the IR-IL canal in the viewpoint of a accessibility from roads.

ii) Supply and disposal systems

Water supply

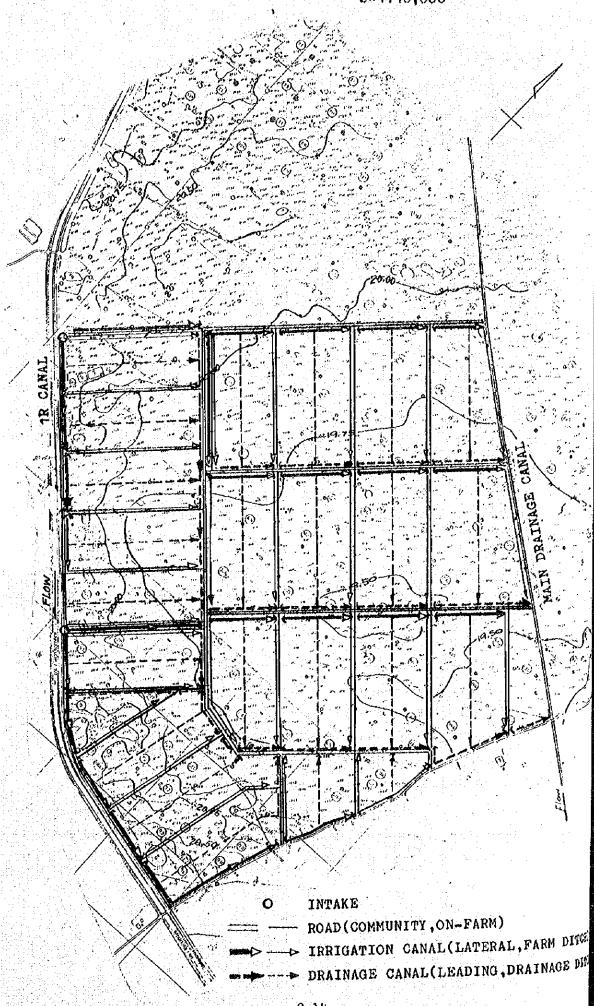

An artesian well will be provided as a water source to utilize the ground water.

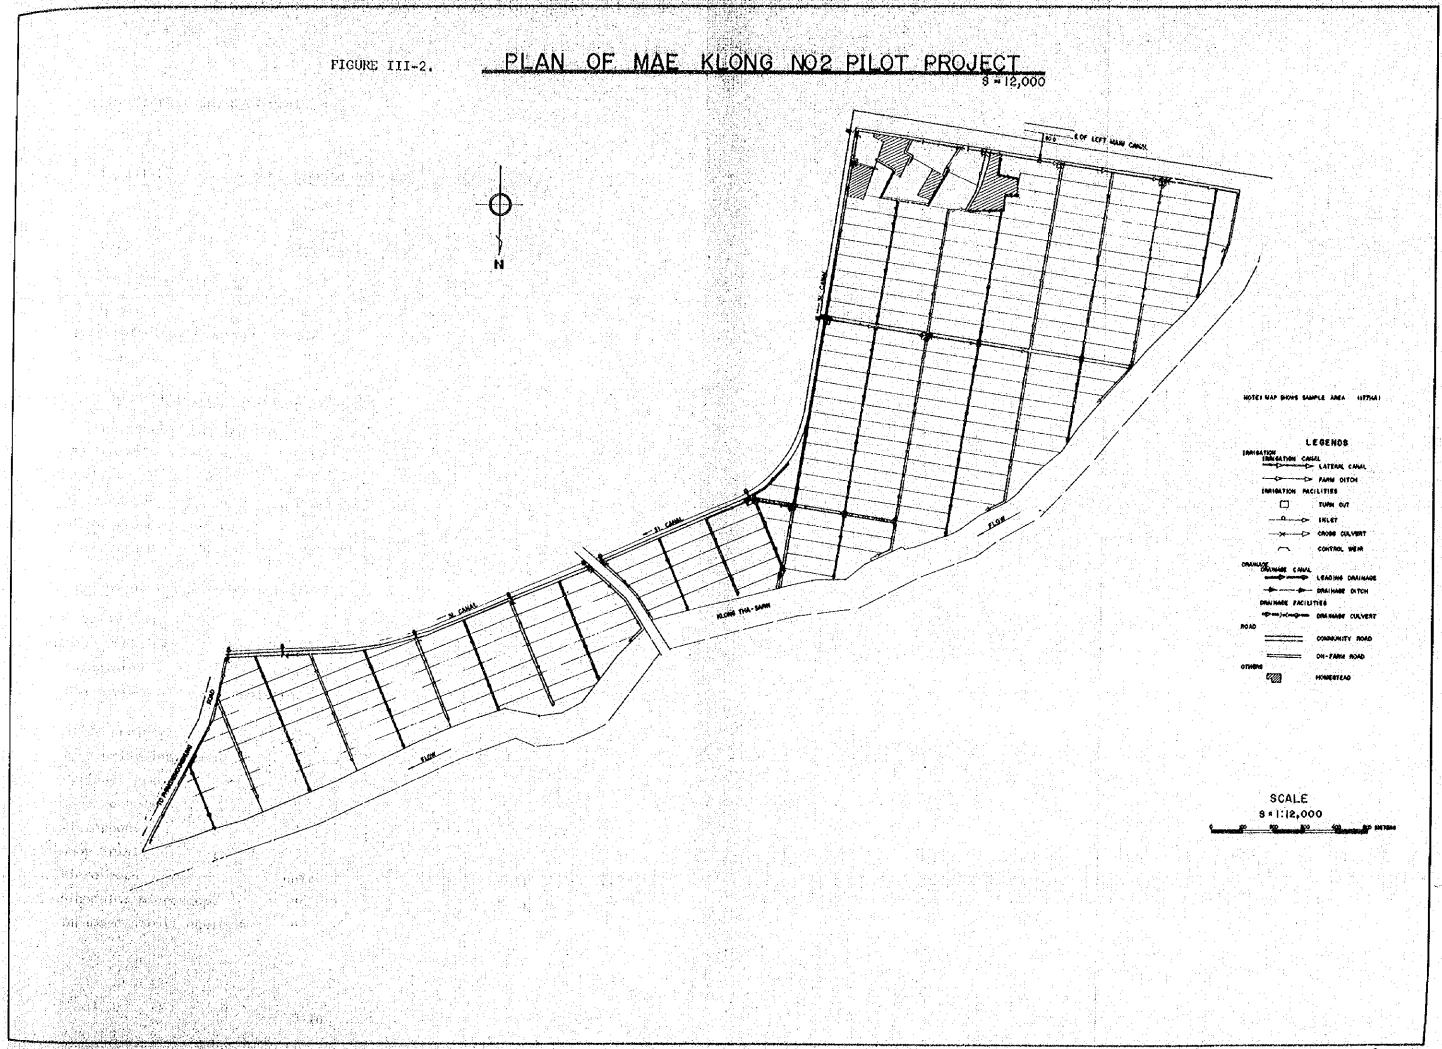

Power supply

High voltage power is distributed to the existing pumping station about six kilometer northwest from the proposed Project site. If the existing supply line have surplus capacity of about 100 KVA, the power source of the Project facilities in the trial farm will be able to rely on these existing supply source. The necessary construction cost to provide the distribution line (about 6 km) was estimated roughly at one million Baht, which will be nearly the same amount, about 1.1 million Baht to cost for construction of the new generating plant with capacity of 100 KVA. As the new generating plant will be uneconomical in taking into account the running cost of equipment, the power supply shall advantegeously rely on the existing distribution system under the condition of its surplus power available.

iii) Buildings

The functions and scale of the trial farm shall be almost the same as the Chao Phya case, and then, the necessary buildings and the related facilities will be the same as those in the Chao Phya as well,

4-1. Suphan Buri Training Schedule

The purpose of the Suphan Buri Training Center Program is to train the related government officials to the irrigated agriculture development projects in the effective utilization of the facilities of the Suphan Buri Rice Experiment Station and the study results accumulated thereby.

Since 1973, the Suphan Buri Rice Experiment Station has conducted the study on the intensive utilization of land and water in paddy cropping under the closest cooperation with Japanese experts, as a nucleus of the research on rice cultivation.

The Suphan Buri Training Center shall function as the integrated training center of the officials of the related government organization to the irrigated agriculture development, such as Department of Agriculture Extension, Department of Agriculture, Royal Irrigation Department, Agricultural Land Reform Office, Central Land Consolidation Office, Department of Land Development, and Office of Acceleration of Rural Development, and aims to give training to about 700 officials during five years. In 1977, the building construction, the introduction of necessary machines and equipments for training will be completed, so that the establishment of general training schedule may be realized. The training will be started in 1978 to last five years up to 1982.

The operation and management of the Center will be executed by Technical Division of Department of Agriculture under the cooperation of Rice Division and other divisions concerned. Staffing for the training center was planned to place 27 officers including 14 existing staff and 13 expected new apointees.

The outline of the training will be as follows:

The first year

The training will be given to those officials dispatched from Department of Agriculture, Royal Irrigation Department, Department of Agriculture Extension, Agricultural land Reform Office, and Office of Acceleration of Rural Development for upbringing of lectures to educate farmers on effective diffusion of farming techniques. The major subjects will be 1) Irrigation and water management, 2) Growing crops, 3) Crop protection, 5) Meteorology, 6) Social study, etc.

The training will have two sessions in a year, one session lasting five months, and the participants (30 persons for the session) should be the university or college graduates.

The second through the third year

The training will be given to the extension officers (Department of Agriculture Extension), and farmers' foremen. The major subjects will be almost the same as those in the First Year, but be more practical and applicable. The qualification of the participants should be restricted to those who have graduated from vocational schools. One training course should last five months and two courses will be available in a year. In each course, 45 persons will be participated and 180 persons will be trained through for two years.

The fourth through fifth year

The trainings shall be classified into two; the in-service training and the short term training. The participants of the inservice training, the extension officers and farmers' foremen, will be trained on irrigation and water control, multiple cropping, and rice cultivation. The five-month training course will be held two times in a year. In each course, 45 persons will be participated and 180 persons will be trained through for two years.

The short-term training will be held for zonemen (Royal Irrigation Department) and those farmers who positively engage themselves in farming works. The subjects will be such practical ones as plowing, puddling, water control, 0 & M of farming machines and crop protection. The training will be given intensively for two weeks and 45 persons will be participated in respective course and 270 persons will be trained through for one year.

4-2. Project Center

The project center will be established in Bangkok as the headquarters to conduct managerial and coordinating works in order to promoto smooth and effective implementation of three sub-projects, Chao Phya Pilot Project, Mae Klong Pilot Project and Suphan Buri Training Project.

ON THE RECORD OF DISCUSSIONS BETWEEN THE JAPANESE AGRICULTURAL SURVEY TEAM AND THE AUTHORITIES CONCERNED OF THE GOVERNMENT OF THAILAND CONCERNING TECHNICAL CO-OPERATION PROJECT ON THE IRRIGATED AGRICULTURE DEVELOPMENT IN THAILAND

The Japanese Agricultural Survey Team, organized by the Japan International Cooperation Agency and headed by Michio Nakahara, visited Thailand from February 13 to April 13, 1977, for the purpose of formulating concrete co-operation plans for the Technical Co-operation Project on the Irrigated Agriculture Development which will be carried out with the Chao Phya Pilot Project, the Mac Klong Pilot Project and the Suphan Buri Rice Experiment Station and Training Center for the Irrigated Agriculture Development as its cores.

During its stay in Thailand, the Team exchanged views with the authorities concerned of the Government of Thailand on the necessary measures to be taken by both Governments to successfully implement the Technical Co-operation Project on the Irrigated Agriculture Development in Thailand. The Team also conducted necessary survey for the implementation of the Project.

As a result of the exchange of views and survey, both parties agreed to recommend to their respective Governments to carry out the matters referred to in the Record of Discussions.

Bangkok, April 8, 1977

Mr. Michio Nakahara Head of the Japanese Agricultural Survey Team Japan International Cooperation Agency

Mr. Prida Karnasut Under-Secretary of State Ministry of Agriculture and Cooperatives

in the presence of

Mr. Xujati Pramoolpol
Director-General
Department of Technical
and Economic Cooperation

RECORD OF DISCUSSIONS

- I. (1) Both Governments will co-operate with each other in implementing the fechnical Co-operation Project on the Irrigated Agriculture Development in Thailand (hereinafter referred to as "the Project") with the Chao Phya Pilot Project, the Mae Klong Pilot Project and the Suphan Buri Rice Experiment Station and Training Center for the Irrigated Agriculture Development (hereinafter referred to as "the Suphan Buri Station") as its cores. The Project aims at contributing to the promotion of land consolidation, the improvement and extension of agricultural production technology, the development and strengthening of farmers' organization and other related activities which will be necessary for increase of rice yield and expansion of multi-cropping area.
 - (2) The Project will be implemented in accordance with the Master Plan as stipulated in Annex I,
 - (3) The Project will be implemented under the supervision and direction of the Project Director referred to in VIII.

and of the figure of the first factor of the contract of the contract of the

- (4) The Project will be implemented in accordance with the annual operational work plan to be formulated annually by the Joint Committee referred to in X. The annual plan will be submitted to the authorities concerned of both Governments for their approval.
- II. (1) In accordance with laws and regulations in force in Japan, the Japanese authorities concerned will take necessary measures to provide at their own expense the services of the Japanese experts as listed in Annex II through the normal procedures under the Colombo Plan Technical Co-operation Scheme.
 - (2) The Japanese experts referred to in (1) above and their

families will be granted in Thailand the privileges, exemptions and benefits no loss favourable than those accorded to expents of third countries working in Thailand under the Colombo Plan Technical Co-operation Scheme.

- III. (1) In accordance with laws and regulations in force in Japan, the Japanese authorities concerned will take necessary measures to provide at their own expense such equipment, machinery, implements, vehicles, tools, spare parts and other materials required for the implementation of the Project as listed in Annex III through the normal procedures under the Colombo Plan Technical Co-operation Scheme.
 - (?) The articles referred to in (1) above will become the property of the Government of Thailand upon being delivered c.i.f. to the Thai authorities concerned at the ports of disembarkation, and will be utilized exclusively for the implementation of the Project in consultation with the Japanese Team Leader referred to in Annex II.
- IV. (1) A part of the goods referred to in III (1) may be rented at reasonable rates to farmers in areas to be decided after mutual consultations between the authorities concerned of both Governments and a part of consumable items such as fertilizer, agricultural chemicals, etc. may also be transferred at reasonable prices to the farmers in the above-mentioned areas.
 - (2) The proceeds from such rentals or transfers will be used exclusively for the implementation of the Project in accordance with laws and regulations in force in Thailand.
 - (3) The provisons of (1) and (2) above will be applied in accordance with the annual operational work plan referred to in I.(4) above, and there will be close consultations between the

Japanese Team Leader referred to in Annex II and the Thai Project
Director referred to in Annex IV as regards their application.

- V. (1) In accordance with laws and regulations in force in Japan, the Japanese authorities concerned will take necessary measures to receive the Thai personnel engaged in the Project for technical training or study tour in Japan through the normal procedures under the Colombo Plan Technical Co-operation Scheme.
 - (2) The Government of Thailand will take necessary measures to ensure that the knowledge and experience acquired by the Thai personnel mentioned in (1) above through technical training and study tour in Japan may be utilized effectively for the implementation of the Project.
- VI. The Government of Thailand will take necessary measures to provide at its own expense:
 - (1) the services of the Thai counterparts and other personnel as listed in Annex IV;
 - (2) land and buildings as listed in Annex V as well as incidental facilities;
 - (3) supply or replacement of equipment, machinery, implements, vehicles, tools, and spare parts, and any other materials necessary for the implementation of the Project other than those provided by the Japanese authorities concerned under III (1);
 - (4) suitably furnished housing accommodations for the Japanese experts and their families;
 - (5) transportation facilities and the grant of the travel allowance for the Japanese experts for the official travel within Thailand.

- VII. The Government of Thailand will take necessary measures to meet;
 - (1) expenses necessary for transportation within Thailand of the articles mentioned in III (1) as well as for the installation, operation and maintenance thereof;
 - (2) all running expenses necessary for the implementation of the Project;
 - (3) customs duties, internal taxes and any other charges, imposed in Thailand in respect of the articles referred to in III (1).
- VIII. The Government of Thailand will appoint the Project Director who will be responsible for the administration and implementation of the Project, and the Japanese experts will provide primarily technical guidance and advice for the implementation of the Project.
- IX. The Government of Thailand shall undertake to bear claims, if any arises, against the Japanese experts engaged in the Project resulting from, occurring in the course of, or otherwise connected with, the discharge of their official functions in Thailand, except for those claims arising from willful misconduct or gross negligence of the Japanese experts.
- X. There will be close consultation between the Japanese experts and the officials concerned of the Government of Thailand for the smooth promotion and effective implementation of the Project. For this purpose, a Joint Committee will be established as specified in Annex VI. The joint Committee will meet at least once a year.
- XI. For the successful implementation of the Project, both Governments will consult with each other when deemed necessary.

XII. The period of the technical co-operation mentioned in this Record of Discussions will be five (5) years from the date of signature and co-operation thereafter will further be consulted between the authorities concerned of both Governments.

Annex I. Master Plan of the Project

The Project consists of the Project Center and three sub-projects, namely Chao Phya Pilot Project, Mac Klong Pilot Project and Experiment and Training Project, in order to promote the Irrigated Agriculture Development Plan in an integrated and effective manner.

1. The Project Center

The Project Center will be established in Bangkok and will function as the headquarter.

The activities of the Center are as follows:

- (1) To give necessary technical advices for planning and implementation of the Irrigated Agriculture Development Plan in the Lower Greater Chao Phya Basin and the Greater Mae Klong Basin, centering around the pilot areas in respective Basins;
- (2) To conduct managerial and coordinating works in order to promote smooth and effective implementation of three subprojects.

2. The Chao Phya Pilot Project

The Chao Phya Pilot Project of about 500 ha for agricultural development of the flood irrigation area will be set up in Tambol Phraya Banlu, Amphoe Lat Bua Luang, Changwat Ayutthaya.

3. The Mae Klong Pilot Project

The Mae Klong Pilot Project (No. 1) of about 400 ha and the Mae Klong Pilot Project (No. 2) of about 500 ha will be set up in Tambol Maungchum and Banmai, Ampoe Tha Muang, Changwat Kanchanaburi and in Tambol Taklamen, Amphoe Tha Maka, Changwat Kanchanaburi respectively

for agricultural development by means of multi-cropping.

The activities of the Pilot Projects mentioned in 2 and 3 above are as follows:

Makaga ng mgagapat paga karajang akabahi di panah baga anta Kalibang atibba

- (1) To plan and execute the improvement works of the agricultural physical infrastructure, such as field rearrangement, farm roads, irrigation and drainage facilities and empoldering dikes (as required in Chao Phya), in each pilot area;
- (2) To advise on technical matters to farmers in the pilot areas and staff concerned for effective water management;
- (3) To conduct trials with improved agricultural techniques of rice cultivation mainly at the trial farm of about 10 ha;
- (4) To provide training and guidance to farmers in the pilot areas and their vicinities on improved agricultural techniques;
- (5) To introduce and demonstrate improved agricultural techniques at a few model farms which will be selected in the pilot areas;
- (6) To foster and strengthen farmers' organizations for water management, joint co-operative activities for distribution of agricultural materials, collection and forwarding of agricultural products and other activities necessary in the pilot areas including their vicinities when necessity arises.

The implementation of the Mae Klong Pilot Project (No. 2) will be of extensive method.

4. Experiment and Training Project

The activities of the Suphan Buri Station located in Tambol Rua Yai, Amphoe Muang, Changwat Suphan Buri are as follows: To conduct experiments and training on improved agricultural techniques for the successful implementation of the Irrigated Agriculture Development in the pilot areas and their vicinities.

The experiment mentioned above will be primarily carried out by the Government of Thailand and the trainees will be agriculture officers and staff concerned.

- 3. Liaison Officer
- Note: 1. Team Leader, a land consolidation expert, an agricultural economy expert and a liaison officer will be attached to the Project Center.
 - 2. A sub-leader will be nominated from among experts in each sub-project.
 - 3. The number of long term experts including a few associated experts to be dispatched concurrently will not exceed 20 persons in total.
 - 4. Some additional short term experts in the fields mentioned above as well as others may also be dispatched when necessity arises.

- Construction machinery and equipment, inleuding pumps and their accessories, and their spare parts.
- Agricultural machinery and implements and their spare parts.
- 3. Pertilizer and agricultural chemicals.
- 4. Machines and tools for repair work.
- 5. Equipment, instruments, tools, their spare parts and other materials for experiment.
- 6. Equipment and materials for public utilities.
- 7. Vehicles and motor boats.
- 8. Teaching materials including audio-visual aids.
- 9. Other necessary equipment, tools, and materials to be mutually agreed upon for the effective implementation of the Project.
