#### 4. CARGO TERMINAL

##### 1. General

As the division of various landuses proceeds in the course of modernization, urbanization and industrialization, the distance between places of production and those of consumption has been constantly enlarged not only for agricultural products, but also for industrial products.

And so, to organize an efficient cargo transportation system of circulation networks, vehicles and cargo terminals is indispensable. It is beneficial not only in an economic sense, but also it would remove a considerable amount of multi-directional short distance cargo movements within the city center.

##### 2. Typology

According to the variation of facilities contained, cargo terminals are classified into three major types as follows:

###### Type-I (Cargo Transferring)

The mode of transportation differs according to the travel distance and commodities. It is transformed from one to another by cargo transferring facilities. The cargo transferring, in most cases from long distance freight trucks to local distributing trucks, and vice versa, which in an unadvanced stage is taken care by individual small-scale enterprises, is concentrated upon a large scale cargo terminal to maximize the efficiency.

Fig. 3

Location:

Lot Module:

Standard Lot Size: 200 M x 250 M

Small Lot: 5 HA

Medium Lot: 20 HA

Large Lot: 40 HA

### Type-II (Cargo Transferring & Storing)

In most industries especially in agriculture, there is a gap between the time of production and that of consumption. This gap exists more or less in any kind of industry due to the market conditions, and it is adjusted by organizing storages maintaining the stability in market economy.

### Type-III (Cargo Transferring, Storing and Manufacturing)

Adequate locations of manufacturing facilities, especially assembling and processing facilities, should be carefully studied to minimize the loss in the movement of materials and products.

Type-III will be equipped with manufacturing facilities in addition to cargo transferring and storing facilities. If it is possible to combine manufacturing facilities with storages and transferring facilities, the loss in the intermediate goods movement would be eliminated to a large extent.

## 3. Facility Design

In this section design of cargo terminals including the lot size, the layout of facilities and the network system of goods and pedestrian circulation is going to be mentioned.

### i) Facility Layout

There are two types of traffic flow, pedestrian and goods movement in a cargo terminal, and the layout of facilities should reflect

mainly the goods flow.

Facilities which serve for cargo transferring, such as a truck terminal and a distribution center should be close enough to the access way.

Those for processing and/or assembling should be behind the cargo transferring facilities.

Those with storing functions such as a wholesale market and a storage, and also the administration section should be in-between those two groups mentioned above.

The boundary areas of those three groups and the fringe of a lot should accommodate sustaining facilities such as a truck repairing facility, a gas stand, parking lots, recreational facilities following the location of main facilities.

The conceptual layout by types is as in Fig. 4.

ii) Network System

It would be desirable to separate rather distinctively the goods circulation and the pedestrian networks. The circulation system by types is as in Fig. 6.

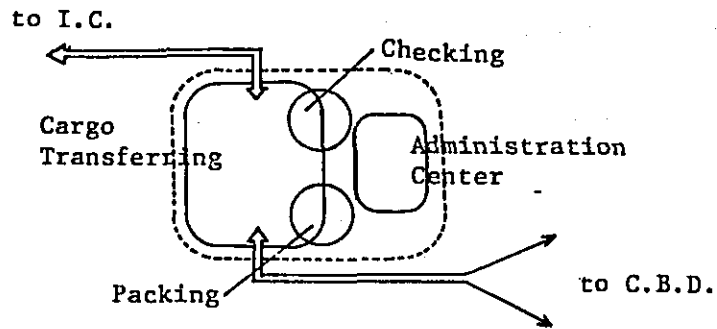

iii) Some Detail Arrangement of Green Zone

\* Buffer Zone

A green belt of 20 M wide should be reserved around a lot, when a foot path is necessary, it should be located within it.

Pattern of Circulations

Basic Pattern

————— : Goods Circulation

----- : Pedestrian Circulation

Type I

Type II

Type III

\* **Green Belt**

It would be desirable to locate non-goods-oriented facilities such as an administration center, recreational facilities in a green belt to protect the field of human activity from goods movement.

4. Lot Size

The size of a cargo terminal depends upon its type mentioned previously. The following table indicates the average ground areas by major types.

Table 5 : Average Ground Areas by Major Type

Type	Functions	Ground Area	Facilities
I	Cargo Transferring	20 Ha 40 Ha 60 Ha	Trucks Terminal, Distribution Center, Storage, Cargo Handling Yard, etc.
II	Cargo Transferring + Storing	100 Ha	In addition to those Type I: Storage, Wholesale Market, Information Center, etc.
III	Cargo Transferring + Storing + Processing & Assembling	200 Ha	In addition to those of Type II: Processing & Assembling Facilities, Storage, etc.

The size of cargo terminal represented in each type by a ground area of truck terminal and number of berth required are figured out by the following methods.

i) Ground area required for a truck terminal

- to figure out the amounts of goods carried by regular long distance truck services by directions.
- to project the above figures in future proportionally to other economic statistics such as the total amount of industrial production values, the total income within the region, the G.N.P., the population, etc.
- to estimate the percentage of the amount of goods handled at cargo terminals taking the administrative policy into account.
- to figure out the area required based upon the assumption of the unit area of 23 M<sup>2</sup>/ton/day.

ii) Number of berthes required

- to estimate the number of berthes for arrival and departure trucks based on the assumption that each of the number of departure and arrival berthes is a half of the number of departure and arrival trucks. Or else, this is done (A) from the tonnage of cargo accumulated on platforms, or (B) from the tonnage of cargo handled during the peak hours.

A. From the tonnage of cargo accumulated on platforms.

When,

D: The maximum amount of cargo on departure platforms.

Ordinarily, 65% of the daily departure cargo which is about 9 - 10% more than the average daily departure cargo.

A: The maximum amount of cargo on arrival platforms.

Ordinarily, 55% of the daily arrival cargo which is about 9 - 10% more than the average daily arrival cargo.

R: The amount of cargo accumulated on platforms, less than 20% of the amount of the cargo handled daily.

T: The amount of time required in dealing with cargo.

- Td for departure platform : about 3 hours

- Ta for arrival platform : about 6 hours

C: The capacity of a platform:

- Cd for departure platform : about 4 tons/hour

- Ca for arrival platform : about 6 tons/hour

Then,

- The number of departure berthes =  $\frac{D - R}{T_d \cdot C_d} = 0.033 V$

- The number of arrival berthes =  $\frac{A}{T_a \cdot C_a} = 0.007 V$

Where, V = Average daily cargo handling volume.

B. From the Tonnage cargo handled during peak hours

When,

V: The average daily cargo handling volume.

r: The ratio of the maximum tonnage of cargo handled to the average tonnage of cargo handled daily, around 1.09 or 1.10.

d: The ratio of the tonnage of departure cargo to V, around 59%.

a: The ratio of the tonnage of arrival cargo to V, around 41%.

P: The ratio of the tonnage of cargo handled during peak hours to the maximum tonnage of cargo handled daily.

Pd for departure cargo : 19%

Pa for arrival cargo : 11%

C: The capacity of a platform

Cd for departure platform: about 5 tons/hour

Ca for arrival platform: about 5,5 tons/hour.

Then,

$$\text{- The number of departure berthes} = \frac{V.r.d.Pd}{C_d}$$

$$\text{- The number of arrival berthes} = \frac{V.r.a.Pa}{C_a}$$

#### 5. Size of Cargo Terminal and Terminal Cost

By adding administration, maintenance and cargo handling costs to the construction cost terminal utilization fare (terminal cost), for the amortization, will be determined. In order to avoid the influence of location of a terminal to a total construction cost, land acquisition cost is set aside for the analysis of terminal cost.

Cargo handling cost contains not only handling cost itself but also the cost of parking area and loss in waiting time for cargo transferring. Those costs are generally explained by the function of the terminal size and the cargo volume handled.

Among the determinants of size of a cargo terminal, those affecting terminal cost directly are the size of platform and parking facilities. Based on this, the relation between terminal cost and cargo handling volume is analysed and presented diagramtically (see Fig. 7). A general curve derived from the abovementioned curves will give the relation between minimum terminal cost and cargo handling volume (see Fig. 8).

Fig. 9

METHODOLOGICAL FLOW CHART FOR SELECTION OF TERMINAL LOCATIONS BY TRANSPORTATION COSTS

1) Cost of Long Distance Freight Truck Services (LDFTS)

- Selection of Major Cities by Directions

- Amount of Cargo Carried by LDFTS

- Travel Distance to Major Cities

- [Cargo Carried] x [Travel Distance]

- Development Situations in Future  
- Estimate of Future Demand By Commodities  
- Future Highway Networks  
- etc.

- Projection of [Cargo Carried] x [Travel Distance] in Future

- Travel Distances between Major Cities and Alternative Terminal Locations  
- LDFTS Cost/Tonnage

- LDFTS Cost among Major Cities and Alternative Terminal Locations

- Total LDFTS Cost for Each Alternative Location

2) Regional Distribution Cost

- Survey on Destinations of Regional Cargo Distribution

- Zone Division of Region

- Setting Zonal Center for Each Zone

- Regional Distribution Cost/Tonnage

- Regional Distribution Cost between Each Zone and Each Alternative Terminal Location

- Total Regional Distribution Cost for Each Alternative Terminal Location

- [Total Regional Distribution Cost] + [Total LDFTS Cost] for Each Alternative Location

## 5. VEHICLE OPERATING COST AND TIME VALUE

### A. Vehicle Operating Costs for Representative Vehicles

The vehicle operating cost for representative vehicles travelling on a tangent paved road are calculated as shown in the succeeding pages. The variation of the operating costs corresponding to the vehicle travel speeds is also computed.

#### (i) Unit Prices and Relevant Factors for Calculation of Operating Costs

The prices for the various cost items of vehicles and their relevant factors for calculations are listed in Table 1-6 which show the weighted average prices for the items where the prices may vary with type or class.

#### (ii) Methods and Equations of Calculation

Vehicle operating costs consist of such cost components as fuel, engine oil, tire/tube wear, depreciation, maintenance and overhead.

##### (a) Equation of Fuel Consumption

$$\text{Sedan} \quad : \quad Y = 0.1391 v^2 - 10.649 v + 337.16$$

$$\text{Bus} \quad : \quad Y = 0.1691 v^2 - 11.657 v + 371.23$$

$$\text{Truck} \quad : \quad Y = 0.1900 v^2 - 11.141 v + 481.13$$

where : Y = volume of fuel consumption per kilometer  
(c.c./km-veh)

V = running speed (km/h)

(Source: Empirical formulae in Japan)

Through the above equations, fuel consumptions in relation to the travel speeds by type of vehicle which are expressed in terms of liter per kilometer are shown in Table 7.

Table 6

AVERAGE PRICES AND RELEVANT FACTORS FOR CALCULATION  
OF VEHICLE OPERATING COSTS

40	0.1338	0.3394	0.1755
45	0.1396	0.3645	0.1891
50	0.1525	0.3990	0.2111
55	0.1722	0.4431	0.2416
60	0.1190	0.4966	0.2805
65	0.2327	0.5597	0.3279
70	0.2733	0.6322	0.3838
75	0.3209	0.7143	0.4481
80	0.3755	0.8058	0.5209

(b) Engine Oil Consumption

It is assumed as follows:

Sedan : 1.2% of fuel consumption

Bus : 2.2% of fuel consumption

Truck : 1.5% of fuel consumption

(Source: Practice in Japan)

(c) Cost of Tire/Tube Wear

Sedan :  $0.713 + 2.296 \times 10^{-6} V^3$  (Rp./km-veh.)

Bus/Truck :  $2.14 + 1.866 \times 10^{-5} V^3$  (Rp./km-veh.)

Costs of tire/tube wear calculated by those above equations include tax and 82% of the calculated costs will be tax free costs, respectively.

(d) Depreciation

Sedan :  $\frac{0.9}{8} \times (\text{purchase price}) \times \frac{1}{\text{annual running kilometer}}$

Bus :  $\frac{0.9}{7} \times (\text{purchase price}) \times \frac{1}{\text{annual running kilometer}}$

Truck :  $\frac{0.9}{7} \times (\text{purchase price}) \times \frac{1}{\text{annual running kilometer}}$

The annual running kilometers of each average running speed are expressed as follows:

Sedan :  $(0.00875 V + 0.570) \times 60,000$

Bus :  $(0.0115 V + 0.435) \times 120,000$

Truck :  $(0.0115 V + 0.435) \times 120,000$

(Source: Empirical formulae in Japan)

(e) Maintenance Cost

Assuming that annual maintenance will cost 10% of the purchase cost for Sedan and 20% of the purchase cost for Bus and Truck, respectively;

$$\begin{array}{l} \text{Sedan} \quad : \quad 10\% \times (\text{purchase price}) \times \frac{0.01 V + 0.50}{\text{annual running kilometers}} \\ \text{Bus} \quad : \quad 20\% \times (\text{purchase price}) \times \frac{0.01 V + 0.55}{\text{annual running kilometers}} \\ \text{Truck} \quad : \quad 20\% \times (\text{purchase price}) \times \frac{0.01 V + 0.55}{\text{annual running kilometers}} \end{array}$$

(f) Overhead

It is assumed as follows:

$$\begin{array}{l} \text{Sedan} \quad : \quad 5\% \text{ of above subtotal} \\ \text{Bus} \quad : \quad 60\% \text{ of above subtotal} \\ \text{Truck} \quad : \quad 80\% \text{ of above subtotal} \end{array}$$

(iii) Calculated Total Operating Costs

The total operating costs, economic (excluding taxes) and financial (including taxes) in relation to the travel speeds of each type of vehicle are calculated and tabulated in Table 1-8 (a) thru (c) and Table 9 (a) thru (c), respectively.

Table 8 (a)

## B. Time Value

Measuring time value is very difficult, involving many uncertain factors.

Generally it is clear that, as far as road users' inclination is concerned, they will use better roads to avoid traffic congestion.

It is safely considered that this kind of inclination can be fundamentally on the basis of time value of individual road users. And the time value of road users must be able to be expressed without great difficulty in many countries.

Time value can thus be estimated on the same assumption as Herbert Mohring's that the road users have an inclination for minimizing the total cost of their trips.

The following formula is an expression of the total trip costs.

$$C = F (V, N, \bar{Z}) + \frac{P}{V^* (V, N, \bar{Z})}$$

Where: P = time value for users

F = all of operation costs except time cost

C = all of trip costs per kilometer

V\* = actual driver's desired travel speed

N = traffic volume

$\bar{Z}$  = other factors

Since the above equation does not involve unmeasurable factors such as comfort and accidents reduction, the calculated time value will result in underestimation of the benefits.

For the urban trips using the Jakarta Ring Road and each street of the tollway system, travel time must be a very important factor which constitutes trip cost. In the case of a road such as the Jakarta Ring Road it is considered that its trip cost would not vary with its traffic volume and that there would be little difference between desired speed and actual travel speed. Therefore, it may be that  $V = V^*$  in the above formula, the factor  $N$  being irrelevant to the trip costs. The above equation is thus simplified as :

$$C = F (V, O, \bar{Z}) + P/V$$

If each user will minimize the total trip costs,

$$\frac{\partial C}{\partial V} = \frac{\partial F}{\partial V} + \frac{\partial P}{\partial V^2} = 0$$

Therefore, 
$$P = V^2 \left( \frac{\partial F}{\partial V} \right)$$

Of the travel cost, the cost of fuel, oil and tire/tube (including overhead cost) being represented by  $F$ , the weighted average values of travel time at drivers' desired speeds can be obtained on the assumption that the desired speeds will form a normal distribution curve centering around, for example, 55 km/hr for Sedan.

Adopting the data and calculation method described in Subsection A above, the value  $F$  for Sedan in terms of financial time value can be calculated

as an example as follows:

$$F = (\text{Fuel Consumption}) \frac{(\text{Fuel Price/l}) + (\text{Oil Consumption}) \times (\text{Oil Price/l})}{1,000 \text{ cubic centimeter/liter}} + (\text{Tire/Tube Cost}) \times (\text{Overhead}).$$

By substituting the respective values,

$$F = (0.1391 v^2 - 10.649 v + 337.16) \frac{70 + 0.012 \times 750}{1,000} + (0.713 + 2.296 \times 10^{-6} v^3) \times 1.05$$

The time value equations of  $v^2 \left( \frac{\partial F}{\partial v} \right)$  by type of vehicle are shown as follows:

a. Financial time value

$$\begin{aligned} \text{Sedan:} & \quad 7.2324 \times 10^{-6} v^4 + 0.023077 v^3 - 0.8833 v^2 \\ \text{Bus:} & \quad 8.9568 \times 10^{-5} v^4 + 0.02374 v^3 - 0.81832 v^2 \\ \text{Truck:} & \quad 10.0764 \times 10^{-5} v^4 + 0.02371 v^3 - 0.69520 v^2 \end{aligned}$$

b. Economic time value

$$\begin{aligned} \text{Sedan:} & \quad 5.9306 \times 10^{-6} v^4 + 0.013131 v^3 - 0.52776 v^2 \\ \text{Bus:} & \quad 7.3446 \times 10^{-5} v^4 + 0.025690 v^3 - 0.88547 v^2 \\ \text{Truck:} & \quad 8.2626 \times 10^{-5} v^4 + 0.025658 v^3 - 0.75224 v^2 \end{aligned}$$

Time Value  
Unit: Rp/hr-Vehicle

7. **FORMULA FOR CALCULATION OF THE NUMBER OF LANES AT THE TOLL GATE**

This section sets forth the criteria for determination of the number of lanes at the toll gate which was described in Sec. 4-3-4 of Chapter 4 of the Main Report. (Refer to Table 4-6 of the Main Report.)

To determine the optimum number of lanes at the toll gate, it is necessary to clarify three factors, that is, traffic volume, service time and service level. If the number of lanes is inadequate, vehicles must wait at the toll gate for a long time when traffic is congested, while if the lanes at the toll gate are too many, the operation cost will unnecessarily increase. The measure of the service level is the average waiting time at the toll gate.

The problem of handling the vehicles which arrive at the toll gate one after another is solved with the aid of a mathematical procedure based on the so-called queuing theory. The queuing theory has it that the waiting queue can be expressed by three variables:

- 1) Statistical distribution of vehicles that enter the toll gate during a fixed period of time (average vehicle interval)
- 2) Statistical distribution of the time the vehicles stay in the toll gate to pay the tolls (service time)
- 3) Relationship between the number of vehicles that enter the toll gate for a fixed period of time and the time the vehicles stay in the toll gate to pay the tolls

Now let  $a$  be average entering vehicle interval (seconds),  $b$  be average service time (seconds) and  $S$  be number of lanes (toll lanes), and the relationship between the number of vehicle arrivals and the time the vehicles stay in the toll gate can be expressed by the equation

$$P = b/a \quad (\text{capacity of traffic handling})$$

The capacity of traffic handling per lane can be expressed by the equation

$$u = b/Sa$$

The following equations hold true, when the statistic of the entering vehicle interval has Poisson distribution and that of the service time exponential, distribution (as demonstrated by measurements).

$$\text{Average waiting time} = \omega = \frac{Ps}{S \cdot S!} \cdot \frac{b}{(1-u)} \cdot K$$

$$\text{Average number of waiting vehicles} = q = \frac{1}{(1-u)^2} \cdot \frac{Ps}{S} \cdot K = \frac{\omega}{b} \cdot S$$

$$\begin{aligned} &\text{Average number of} \\ &\text{waiting vehicles} \\ &\text{per lane (length of} \\ &\text{the waiting queue)} = \frac{q}{s} = \frac{\omega}{b} \end{aligned}$$

where,

$$\begin{aligned} K &= \frac{1}{1 + P + \frac{P^2}{2!} + \dots + \frac{Ps-1}{(S-1)!} + \frac{Ps}{S!} \cdot \frac{1}{1-P/S}} \\ &= P(0) \quad (\text{Probability that the toll gate is not} \\ &\quad \text{occupied at all}) \end{aligned}$$

The service level (average number of waiting vehicles) number of lanes at the toll gate and capacity of traffic handling which were calculated by the above equations are shown in Table 16.

Table 16 Capacity of Traffic Handling per Lane vs. Service Level

Number of Lanes (S)	Service Level (q/S)	0.5	1.0	1.5	2.0
	1		0.23	0.50	0.61
2		0.57	0.71	0.76	0.85
3		0.70	0.79	0.85	0.88
4		0.75	0.83	0.87	0.90
5		0.80	0.86	0.89	0.92
6		0.83	0.88	0.92	0.94
7		0.85	0.90	0.93	0.95
8		0.86	0.91	0.93	0.95

As is clear from Table 16, the service level being equal, the capacity of traffic handling per lane increases with increasing number of lanes. The values of K and D should be the same as those to be chosen for the main road, but a little greater values should be chosen for K and D to provide an extra margin of capacity for the toll gates in the amusement areas where seasonal traffic congestion is expected or any other areas where extreme traffic congestion is expected to occur on weekends.

The assumption was made in the calculation of the average number of waiting vehicles that the vehicles would be evenly distributed at the toll gate. In actuality, however, people who drive vehicles generally have a sort of preference. Vehicles tend

to choose the central lanes at the toll gate even when traffic is congested there so that the outside lanes have relatively light traffic. When the toll gate has many lanes, the number of waiting vehicles in the central lanes is, as is often the case, larger than the theoretical value. This propensity of drivers should therefore be taken into consideration in the calculation of the number of waiting vehicles at the toll gate.

8. STAGE CONSTRUCTION FOR THE INTERCHANGE WITH SURFACE ROAD (2ND INTERCHANGE)

This section sets forth the criteria for proposition of an interchange with surface road (No. 2 interchange) at the crossing of the ring road and the surface road which was described in Sec. 4-3-6 of Chapter 4 of the Main Report. (Figs. 10 and 11 were reproduced from the Main Report; Fig. 4-14 and 4-15.)

Fig. 10 Stage Construction for the Interchange with Surface Road

Fig. 11 At Grade Intersection

Peak Hourly Traffic  
Flow (One Way)

(1) Assumption of Grade Intersection (Fig. 11)

- 1) Number of lanes : 4 for the access road (separated)  
1 to 4 for the ramp (separated)

2) Left turn

The vehicles are allowed to make a left turn at all entry points at all times.

- 3) The strip width, island dimensions, ramp radius, lane width and shoulder width should be adequate so that the traffic handling capacity of the main road is not reduced at the intersection.

- 4) Special lanes for making left and right turns should be added.

(2) Estimation of the Traffic Volume at Each Entry Point

(Double direction concentration of traffic  $D = 60\%$  and peak hour rate  $K = q\%$ )

1) Condition (a) ..... (Traffic Volumes at Interchange Entry and Exit)

Daily Traffic Volume (veh/day)      Peak Hourly Traffic Volume (veh/hour)

2) Condition (b) ..... (Traffic Volumes at Interchange Entry and Exit + Access Road Traffic Volume)

Daily Traffic Volume (veh/day)      Peak Hourly Traffic Volume (veh/hour)

3) Condition (c) ..... (Access Road Traffic Volume)

Daily Traffic Volume (veh/day)    Peak Hourly Traffic Volume (veh/hour)

(3) Estimation of the Possible Traffic Volume ( $C_p$ ) (Large Vehicle Proportion 10%)

Possible traffic volume = (Basic traffic volume) x  
 (Decrease in traffic volume due to  
 large vehicles)

$$\begin{aligned} \text{Throughway} &= 1,800 \text{ (Vehicles/green light/lane)} \times 0.925 \\ &= 1,665 \text{ (Vehicles/green light/lane)} \end{aligned}$$

$$\begin{aligned} \text{Ramps or noses} &= 1,200 \text{ (Vehicles/green light/lane)} \times 0.925 \\ &= 1,110 \text{ (Vehicles/green light/lane)} \end{aligned}$$

(4) Signal System

The signal system is of the three-light type.

(5) Calculation of the Maximum Necessary Green Light Time Ratio ( $V/C_p$ )

Let the maximum green light time ratios of  $\phi-1$ ,  $\phi-2$  and  $\phi-3$  be  $\rho_1$ ,  $\rho_2$  and  $\rho_3$ , respectively.

1) Condition (a) ..... (Traffic Volumes at Interchange T Entry and Exit)

$$\rho_1 = \frac{1000 \times 0.08 \times 0.60}{1665 \times 1.5} = 0.019219$$

$$\rho_2 = \frac{0.5x \times 0.08 \times 0.60}{1110 \times 1.5} = 0.0000144x$$

$$\rho_3 = \frac{0.5x \times 0.08 \times 0.60}{1110 \times 1.5} = 0.0000144x$$

- 2) Condition (b) ..... (Traffic Volumes at Interchange Entry and Exit + Access Road Traffic Volume)

$$\rho_1 = \frac{y \times 0.08 \times 0.60}{1665 \times 1.5} = 0.0000192y$$

$$\rho_2 = \frac{0.5y \times 0.08 \times 0.60}{1110 \times 1.5} = 0.0000144y$$

$$\rho_3 = \frac{0.5y \times 0.08 \times 0.60}{1110 \times 1.5} = 0.0000144y$$

- 3) Condition (c) ..... (Access Road Traffic)

$$\rho_1 = \frac{z \times 0.08 \times 0.60}{1665 \times 1.5} = 0.0000192z$$

$$\rho_2 = \frac{250 \times 0.08 \times 0.60}{1110 \times 1.5} = 0.0072072$$

$$\rho_3 = \frac{250 \times 0.08 \times 0.60}{1110 \times 1.5} = 0.0072072$$

(6) Critical Signal-controlled Traffic Capacity

The control system is of the cyclical type and the limit of the signal system is considered to have been reached when the sum of  $\rho_1$ ,  $\rho_2$  and  $\rho_3$  calculated in Para. (3) above is 0.9.

$$\rho_1 + \rho_2 + \rho_3 = 0.90$$

The unknown can be known by the above equation as follows.

- 1) When condition (a) is used

$$\rho_1 = 0.019219, \quad \rho_2 = 0.0000144x, \quad \rho_3 = 0.0000144x$$

$$0.019219 + 0.0000144x + 0.0000144x = 0.900000$$

$$\text{Hence, } x = 30,583 \text{ vehicles/day}$$

2) When condition (b) is used

$$\rho_1 = 0.0000192y, \rho_2 = 0.0000144y, \rho_3 = 0.0000144y$$

$$0.0000192y + 0.0000144y + 0.0000144y = 0.900000$$

$$y = 18,750 \text{ vehicles/day}$$

(Traffic volumes at interchange entry and exit + Across road traffic volume)

$$\text{Hence, } 2y = 37,500 \text{ vehicles/day}$$

3) When condition (c) is used

$$\rho_1 = 0.0000192z, \rho_2 = 0.0072072, \rho_3 = 0.0072072$$

$$0.0000192z + 0.0072072 + 0.0072072 = 0.900000$$

$$\text{Hence, } z = 46,124 \text{ vehicles/day}$$

## 9. CRITICAL TRAFFIC CAPACITY OF THE DIAMOND TYPE INTERCHANGE

This section sets forth the criteria for determination of the critical traffic capacity of the diamond type interchange connecting the ring road to the surface road which was described in Sec. 4-3-7 of Chapter 4 of the Main Report. (Figs. 12 and 13 were reproduced from the Main Report; Fig. 4-16 and Fig. 4-17.)

Fig. 12 Traffic Capacity of a Diamond Type Interchange

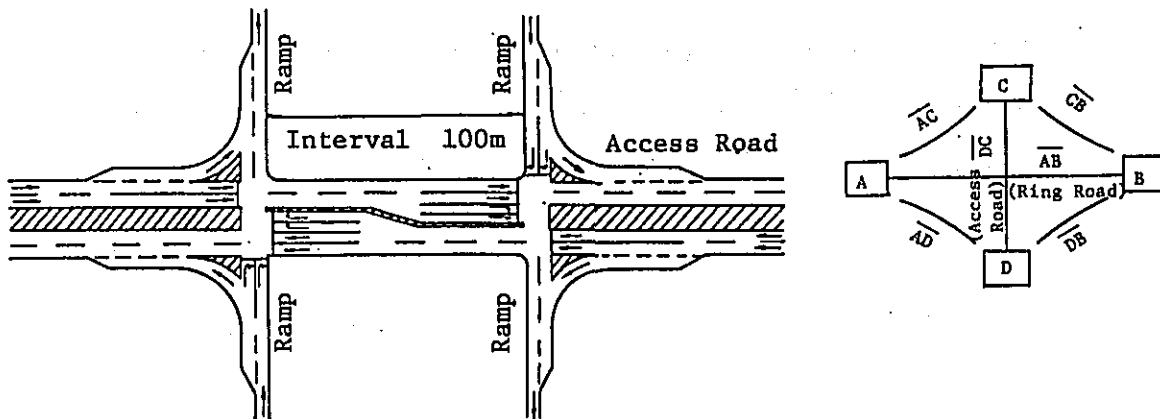

Fig. 13 At Grade Intersection

Peak Hourly Traffic Flow (One Way)

(1) Assumption of Grade Intersection (Fig. 13)

- 1) Number of lanes : 4 for the access road (separated)  
1 to 4 for the lamp (separated)
- 2) Left turn  
The vehicles are allowed to make a left turn at all entry points at all times.
- 3) The strip width, island dimensions, ramp radius, lane width and shoulder width should be adequate so that the traffic handling capacity of the main road is not reduced at the intersection.
- 4) Special lanes for making left and right turns should be added.

1) Condition (1) ..... (Traffic Volumes at Interchange Entry and Exit)

Daily Traffic Volume (Veh/day)    Peak Hourly Traffic Volume (Veh/hour)

2) Condition (2) ..... (Traffic Volumes at Interchange Entry and Exit + Access Road Traffic Volume)

Daily Traffic Volume (Veh/day)    Peak Hourly Traffic Volume (Veh/hour)

3) Condition (3) ..... (Access Road Traffic Volume)

Daily Traffic Volume (Veh/day)    Peak Hourly Traffic Volume (Veh/hour)

- (3) Estimation of the Possible Traffic Volume ( $C_p$ ) (Large Vehicle Proportion 10%)

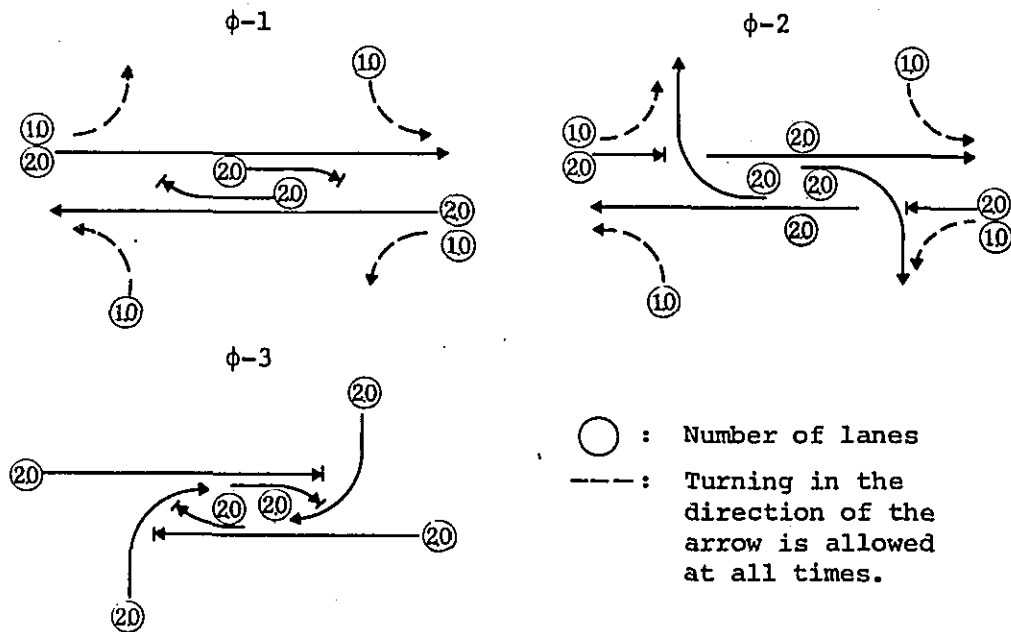

Possible traffic volume = (Basic traffic volume) x  
(Decrease in traffic volume due to  
large vehicles)

Throughway = 1,800 (vehicles/green light/lane) x 0.925  
= 1,665 (vehicles/green light/lane)

Ramps or noses = 1,200 (vehicles/green light/lane) x 0.925  
= 1,110 (vehicles/green light/lane)

- (4) Signal System

The signal system is of the three-light type.

- (5) Calculation of the Maximum Necessary Green Light Time Ratio ( $V/C_p$ )

Let the maximum green light time ratios of  $\phi-1$ ,  $\phi-2$  and  $\phi-3$  be  $\rho_1$ ,  $\rho_2$  and  $\rho_3$ , respectively.

- 1) Condition (1) ..... (Traffic Volumes at Interchange Entry and Exit)

$$\rho_1 = \frac{1000 \times 0.08 \times 0.60}{1665 \times 2.0} = 0.014414$$

$$\rho_2 = \frac{0.25x \times 0.08 \times 0.60}{1110 \times 2.0} = 0.00000541x$$

$$\rho_3 = \frac{0.25x \times 0.08 \times 0.60}{1110 \times 2.0} = 0.00000541x$$

- 2) Condition (2) ..... (Traffic Volumes at Interchange Entry and Exit + Access Road Traffic Volume)

$$\rho_1 = \frac{y \times 0.008 \times 0.60}{1665 \times 2.0} = 0.0000144y$$

$$\rho_2 = \frac{0.25y \times 0.08 \times 0.60}{1110 \times 2.0} = 0.00000541y$$

$$\rho_3 = \frac{0.25y \times 0.08 \times 0.60}{1110 \times 2.0} = 0.00000541y$$

- 3) Condition (3) ..... (Access Road Traffic)

$$\rho_1 = \frac{z \times 0.08 \times 0.60}{1665 \times 2.0} = 0.0000144z$$

$$\rho_2 = \frac{125 \times 0.08 \times 0.60}{1110 \times 2.0} = 0.0027027$$

$$\rho_3 = \frac{125 \times 0.07 \times 0.60}{1110 \times 2.0} = 0.0027027$$

- (6) Critical Signal-controlled Traffic Capacity

The control system is of the cyclic type and the limit of the signal system is considered to have been reached when the sum of  $\rho_1$ ,  $\rho_2$  and  $\rho_3$  calculated in Para. (3) above is 0.9.

$$\rho_1 + \rho_2 + \rho_3 = 0.9$$

The unknown can be known by the above equation as follows.

1) When condition (1) is used

$$\rho_1 = 0.014414, \rho_2 = 0.00000541x, \rho_3 = 0.00000541x$$

$$0.014414 + 0.00000541x + 0.00000541x = 0.900000$$

$$\text{Hence, } x = 81,847 \text{ vehicles/day}$$

2) When condition (2) is used

$$\rho_1 = 0.0000144y, \rho_2 = 0.00000541y, \rho_3 = 0.00000541y$$

$$0.0000144 + 0.00000541y + 0.00000541y = 0.900000$$

$$\text{Hence, } y = 35,686 \text{ vehicles/day}$$

(Traffic Volumes at Interchange Entry and  
Exit + Access Road Traffic Volume)

$$2y = 71,372 \text{ vehicles/day}$$

3) When condition (3) is used

$$\rho_1 = 0.0000144z, \rho_2 = 0.0027027, \rho_3 = 0.0027027$$

$$0.0000144 + 0.0027027 + 0.0027027 = 0.900000$$

$$\text{Hence, } z = 62,125 \text{ vehicles/day}$$

## 10. EARTHWORK AND PAVEMENT PLANNING

This section sets forth the equipment requirements for earthwork and pavement work based on the construction schedule

(Alternative No. T-01, Toll-Flat-120 km/h-All) which was described in Section 8-2-1 of Chapter 8 of the Main Report.

(Refer to Figure 8-7 of the Main Report)

### (1) Earthwork (Common Excavation and Embankment)

#### 1) Conditions

- Weight of material	1.60 t/m <sup>3</sup>
- Load Factor	0.72
- Average hauling distance	1 Km (70%) 5 Km (30%)
- Average hauling road grade	+ 3.0%

#### 2) Production adjustments

- Effective Work Hour	50 mins 83%
- Operational Environment	75%
- Net combined	62%

#### 3) Production requirement per schedule

- Estimated quantities	5,617,000 m <sup>3</sup>
- Number of working days	
Dry season	- 17 x 22 = 374 days
Rainy season	- 12 x 15 = 180 days
Total	29 months - 554 days
- Spreads	3-spreads

- Production requirement per month
  - Ave. 193,700 m<sup>3</sup>
  - Dry season 223,000 m<sup>3</sup>
  - Rainy season 152,100 m<sup>3</sup>
- Production requirement per day - 10,140 m<sup>3</sup>  
- 3,380 m<sup>3</sup>/1-spread
- Production requirement per hour
  - $3,380 \div 0.62 \div 7 = 779 \text{ m}^3$
  - $\times 0.7 = 545 \text{ m}^3$  (1 Km haul)
  - $\times 0.3 = 234 \text{ m}^3$  (5 Km haul)

4) Equipment requirements

- Motor scraper -

Load per scraper -  $15.3 \times 0.72 = 11 \text{ m}^3$

Hourly loads -  $545 \div 11 = 50 +$  Required

Scraper cycle - Load 0.80 min

Travel 4.70 (Empty 1.70)

Wait 0.30

Spread 0.50

Total cycle 6.30 min

$60 \div 6.30 = 9.5$  cycles/Hr

Scrapers required =  $50 \div 9.5 = 5$  units

- Pushers (Bulldozer 31 ton class) -

Loading cycle Load 0.80 min

Boost 0.10

Return 0.60

Wait 0.20

1.70 min/Load

$60 \div 1.70 = 35 +$  Loads/Hr

Required  $779 \div 11 \div 35 = 2.02$  - Use 2 Pushers

Allow 1D8K to serve both cut and fill

Total D8K - 3 units

- 15 ton Truck -

Load per one unit  $9.4 \text{ m}^3$

Hourly loads  $234 \div 9.4 = 25$  + Required

Dump truck cycles      Load      3.60 min

Wait      1.00

Dump      1.00

Travel      23.50

29.10 min

$60 \div 29.1 = 2.06$  cycles/Hr

Required  $25 \div 2.06 = 12$  unit

- Compactor (18 ton class) -

$$\text{Capacity in } \text{M}^3 = \frac{1000 \times V \times W \times H \times f \times E}{N} \text{ (m}^3/\text{Hr)}$$

$$V = 10 \text{ km/hr}$$

$$W = 4.32 - 2 = 2.16 \text{ m}$$

$$H = 0.20 \text{ m}$$

$$f = 0.90$$

$$E = 0.80$$

$$N = 5.5$$

$$= \frac{1000 \times 10 \times 2.16 \times 0.20 \times 0.9 \times 0.8}{5.5}$$

$$= 563 > 545 \text{ m}^3/\text{Hr}$$

Use 1-Compactor

1 - Tandem Road Roller (For top compaction)

1 - Tire Roller (For top compaction)

2 - Motor Grader (at Cut & Fill)

Summary : Equipment required per 1-spread

Motor Scraper (15.3 m <sup>3</sup> )	5
Bulldozer (D8K)	3
Motor Grader	2
Tractor Shovel	1
Dump Truck	12
Compactor	1
Tire Roller	1
Tandem Roller	1

(2) Pavement (Asphalt Concrete Surface & Asphalt Treated Base Course)

1) Condition

- Weight of materials - A.C. Surface 2.35 t/m<sup>3</sup>
- A.T. Base C. 2.30 t/m<sup>3</sup>
- Average hauling distance

Plant to paver 5 Km

2) Production requirement per schedule

- Estimated quantities
  - A.C. Surface 913,800 m<sup>2</sup>  
(107,400 ton)
  - A.T. Base C. 262,000 m<sup>3</sup>  
(602,600 ton)
- Number of working day
  - A.C. Surface 203 days
  - A.T. Base C. 411 days
- Spreads 3 - spread
- Production requirement per day
  - A.C. Surface 350 m (2-lane/day)
  - A.T. Base. C 600 m (2-lane/day)

3) Equipment requirements

- Asphalt plant -

$$\text{Capacity } C \text{ (t/Hr)} = \frac{A(\text{m}^2) \times H(\text{m}) \times d(\text{t/m}^3)}{T \text{ (days)} \times t \text{ (Hr)}}$$

$$\text{A.C. Surface} = \frac{913,800 \times 0.05 \times 2.35}{203 \times 7} = 75.6 \text{ t/Hr}$$

$$\text{A.T. Base } C = \frac{262,000 \times 2.30}{411 \times 7} = 209.5 \text{ t/Hr}$$

(Use 3 - 100 t/Hr plant)

- Dump Truck (15 ton) -

Load per one unit                      129 ton/day

Scheduled daily rate

$$209.5 \text{ t/Hr} \times 7 \text{ Hr} \times 1/3 = 500 \text{ t/l-plant}$$

Dump truck required  $500 \div 129 \div 0.62 = 6.2$  - Say 7  
Trucks

Summary : Equipment required per 1-spread

Asphalt Mixing Plant (100t/Hr)	1
Finisher (10 feet type)	1
Macadam Roller (10 t)	1
Tire Roller	1
Distributor	1
Dump truck	7

## 11. BUS STOP PLANNING

As city planning in Jakarta city and its vicinity broadens and the roads in the metropolitan area are improved, the sphere of various activities of people from commuting between home and business to amusement will also broaden, thus increasing their dependence on motor transport from year to year. Among other public transports, buses will acquire increasing importance and the bus service will be improved and broadened to cover not only the ordinary roads but the expressways such as inter-city toll road and ring road.

Bus stops will have to be built along the expressways, if they are to be served by buses. The basic considerations for building bus stops along the ring road and the types of bus stop will be discussed in this section, assuming that the ring road will be served by buses.

Bus stops which are built by a motor road are divisible into two types: stop built alone and one built with an interchange. In either case a special bus lane for acceleration and deceleration and a platform must be built so as to avoid an adverse effect of the bus on the flow of other vehicles. The bus stops which are built by a motor road are therefore by far more costly than those built by an ordinary road.

Needless to mention, the greater the number of bus stops, the greater convenience they offer to the bus users. In this case, however, various problems arise: high construction cost, influence

on the flow of other vehicles than buses, and time loss in bus service.

The bus stop spacings should therefore be decided in consideration of the convenience of users, safety of traffic, economics, and other problems. The following six considerations will serve as criteria for siting of bus stops.

(1) Criteria for Siting of Bus Stops

- 1) At the intersection where buses serve the connecting road with high frequency.
- 2) Locations having a population of 20,000 or more.
- 3) Sections where bus stops are 5 km or more apart from each other.
- 4) Interchange or intersection with a main road where the bus can be easily changed for a connecting one.
- 5) The alignment of the road line favors the bus stop.
- 6) Locations offering easy connection to other traffic means or tourist stops.

(2) Types of Bus Stop

- 1) Bus Stop Built Alone
  - a) Separated from the Through-way by an Island (Type-A)
  - b) Separated from the Through-way by a Marking or Chatter Bars (Type-B)

Fig. 14 Bus Stop Built Along the Through-way

2) Bus Stop Built with an Interchange

- a) Bus stop built between the entry and exit of a toll gate (type A)
- b) Bus stop built between the main road and the toll gate (type B)
- c) Bus stop built by the main road with the bus acceleration and deceleration lane forming part of an interchange.
- d) Bus stop built on one side or bus stops built on either side of the main road apart from an interchange (type D)
- e) Bus stop built outside of the toll gate (type E)

Fig. 15 Bus Stop Built at an Interchange

STAGE CONSTRUCTION SEQUENCE

Notes: The figures and table show the area of the case of 3-Stage Construction (T-08). In case of 2-Stage Construction (T-07), 2nd Stage (1984) and 3rd Stage (1989) of 3-Stage Construction completed at the same time by 1984. And the above table of the case of 3-Stage Construction is divided one of All-Construction (T-05).

LIST OF TABLES (MAIN REPORT)

	Page
Chapter 1: Present Situation of Study Area	
1 - 1 Climate of Jakarta (1975) .....	1- 2
1 - 2 Zone Code Table .....	1- 5
1 - 3 Population Development in Jakarta Region, Java/Madura and Indonesia .....	1-10
1 - 4 Population Development in Wilayah .....	1-12
1 - 5 Population Development in Bo.Ta.Bek. Area .....	1-12
1 - 6 Housing Situation in Jakarta .....	1-14
1 - 7 Employed Population of Jakarta (1971) .....	1-15
1 - 8 Employed Population of Provinces of Bogor, Tangerang & Bekasi (1971) .....	1-16
1 - 9 Projected Gross Domestic Product (Repelita II) ...	1-18
1 - 10 Car-ownership in Jakarta .....	1-22
1 - 11 Relation between Per Capita GRDP and Rate of Car- ownership .....	1-24
1 - 12 Productivity of Farm Food Crops in Indonesia .....	1-26
1 - 13 Production of Livestock .....	1-27
1 - 14 Number of Livestock Slaughtered in Indonesia .....	1-28
1 - 15 Production of Meat in Indonesia, 1973 .....	1-28
1 - 16 Situation of Forestry Resources, 1973 .....	1-30
1 - 17 Timber Production .....	1-31
1 - 18 Targets in Replita II .....	1-34
1 - 19 Production and Consumption of Goods in Indonesia, 1973 .....	1-36
1 - 20 Production of Farm Food Crops .....	1-37
1 - 21 Production and Consumption of Goods in Jakarta, 1973 .....	1-40
1 - 22 Production and Consumption of Goods by Category in Jakarta, 1973 .....	1-41
1 - 23 Trends in Air Traffic .....	1-43
1 - 24 Model Distribution of Goods Transport .....	1-43
1 - 25 Traffic Situation in Jakarta .....	1-46
1 - 26 Traffic Volume in DKI Jakarta .....	1-48
1 - 27 Composition of Traffic on the Radial Roads .....	1-49
1 - 28 Traffic Volume on the Radial Roads by the Survey in 1977 .....	1-50

LIST OF TABLES ( CONT )

	Page
1 - 29	Traffic Count for Screen Check ..... 1-52
1 - 30	Distribution of Travel Speed ..... 1-54
1 - 31	Main Results of Travel Speed Survey ..... 1-55
1 - 32	Landuse in Jakarta, 1973 ..... 1-57
1 - 33	Landuse in Jakarta, 1972 ..... 1-57
1 - 34	Population Density in Jakarta, 1975 ..... 1-58
1 - 35	Population Density of Bo.Ta.Bek. Area, 1975 ..... 1-58
1 - 36	Distribution of Factories in Jakarta, 1975 ..... 1-63
 Chapter 2: Landuse Plan	
2 - 1	Landuse in 'The Master Plan of DKI Jakarta, 1965 - 1985' ..... 2- 1
2 - 2	Population Forecast in Indonesia ..... 2- 7
2 - 3	Population Forecast in Java/Madura ..... 2- 7
2 - 4	Population Forecast in DKI Jakarta ..... 2-14
2 - 5	Other Population Forecast in DKI Jakarta ..... 2-14
2 - 6	Population Forecast in Bo.Ta.Bek. Area ..... 2-14
2 - 7	Population Forecast in Ja.Bo.Ta.Bek. .... 2-16
2 - 8	Future Distribution of Classified Population by Shelter Conditions, DKI Jakarta ..... 2-19
2 - 9	Employment in DKI Jakarta ..... 2-20
2 - 10	Employment in Bo.Ta.Bek. Area ..... 2-20
2 - 11	Employment in Ja.Bo.Ta.Bek. Area ..... 2-20
2 - 12	Future Sectoral Distribution Forecast by 'Ja.Bo.Ta. Bek. Plan' ..... 2-20
2 - 13	Work Places in DKI Jakarta ..... 2-21
2 - 14	Work Places in BOTABEK Area ..... 2-21
2 - 15	Division of Alignment ..... 2-25
2 - 16	Suitable Landuse by Section ..... 2-26
2 - 17	Amount of Cargo & Size of Terminal Facilities .... 2-35
2 - 18	Roads Construction, DKI Jakarta ..... 2-37
2 - 19	Employment and Work Places in C.B.D., 2000 ..... 2-49
2 - 20	DKI Jakarta Landuse ..... 2-54
2 - 21	Landuse in DKI Jakarta ..... 2-59
2 - 22	Residential Population of DKI Jakarta by Zone .... 2-60

LIST OF TABLES ( CONT )

		Page
2 - 23	Residential Population of Bo.Ta.Bek. Area by Zone (migration) .....	2-62
2 - 24	Residential Population of Bo.Ta.Bek. Area by Zone .....	2-63
2 - 25	Distribution Forecast of Population Classified by Shelter Conditions .....	2-62
2 - 26	Projection of Population Classified by Shelter Conditions .....	2-65
2 - 27	DKI Jakarta Population Classified by Density in 1985 .....	2-66
2 - 28	DKI Jakarta Population Classified by Density in 2000 .....	2-67
2 - 29	Employment Situation in Wilayah .....	2-68
2 - 30	Employment in DKI Jakarta, 1976 .....	2-69
2 - 31	Employment in DKI Jakarta, 1985 .....	2-69
2 - 32	Employment in DKI Jakarta, 1990 .....	2-70
2 - 33	Employment in DKI Jakarta, 2000 .....	2-70
2 - 34	Population, Work Places and Employment, DKI Jakarta .....	2-73
 Chapter 3: Technical Study and Analysis		
3 - 1	Results of Physical Tests of Volcanic Clay .....	3- 2
3 - 2	Settlement against Height of Embankment .....	3- 4
3 - 3	Gradient of Slope .....	3- 5
3 - 4	Depth of Bearing Stratum .....	3- 7
3 - 5	Comparative Evaluation of Different Types of Piles .....	3- 9
3 - 6	Summary of Survey of Quarries .....	3-12
3 - 7	Main Drainage and Bridge Survey Data .....	3-17
3 - 8	Peak Discharge of Main River .....	3-20
3 - 9	Classification of Structures .....	3-21
 Chapter 4: Design Criteria and Alternatives		
4 - 1	Guideline in Route Section .....	4- 2
4 - 2	Highway Geometric Design Standards .....	4- 9
4 - 3	Design Traffic Capacity Analysis .....	4-13

LIST OF TABLES ( CONT )

	Page
4 - 4 Interchange Geometric Design Standard for Ramp Way .....	4-17
4 - 5 Interchange Geometric Design Standard for Ramp Terminal .....	4-18
4 - 6 Hourly Traffic Volume and Traffic Lanes .....	4-21
4 - 7 Installation Criteria of Facilities .....	4-22
4 - 8 Minimum Distance for Weaving .....	4-27
4 - 9 Comparison of Types of Interchange (connecting with regional toll way) .....	4-44
4 - 10 Comparison of Types of Interchange (connecting with ordinary roads) .....	4-45
4 - 11 Location of Interchange (inter-city toll road) ....	4-46
4 - 12 Location of Interchanges Studies (with the arterial toll-free roads) .....	4-47
4 - 13 Flat Tariff (Uniform Toll Rate) System .....	4-49
4 - 14 Zone Tariff (Sectional Toll Rate) System .....	4-50
4 - 15 Toll Free Alternative .....	4-51
4 - 16 I.C. - 1 (0+000) .....	4-52
4 - 17 I.C. - 2 (6+000) .....	4-53
4 - 18 I.C. - 3 (19+960) .....	4-54
4 - 19 I.C. - 6 (17+055) .....	4-55
4 - 20 I.C. - 8 (22+565) .....	4-56
4 - 21 I.C. - 9 (24+570) .....	4-57
4 - 22 I.C. - 10 (29+180) .....	4-58
4 - 23 I.C. - 11 (38+370) .....	4-59
4 - 24 I.C. - 13 (46+610) .....	4-60
4 - 25 Case Number of Construction Cost Estimate .....	4-61
 Chapter 5: Forecast of Future Traffic Volume	
5 - 1 GRDP and Its Average Annual Growth Rate in Jakarta .....	5-13
5 - 2 Forecast of Future GRDP in Jakarta .....	5-13
5 - 3 Future Rate of Vehicle Ownership .....	5-14
5 - 4 Per Capita GRDP and Rate of Vehicle Ownership in Several Countries .....	5-14
5 - 5 Composition Ratio by Type of Vehicle .....	5-16

LIST OF TABLES ( CONT )

	Page
5 - 6	Forecast of Future Vehicle Type Composition ..... 5-17
5 - 7	Forecast of Future Vehicle Ownership by Vehicle Type in Jakarta ..... 5-17
5 - 8	Rate of Vehicle Ownership by Population Density by Year ..... 5-18
5 - 9	Future Passenger Vehicles Registered by Zone..... 5-19
5 - 10	Zone Division of Past O-D Matrices ..... 5-22
5 - 11	Comparison of Traffic at the Screen Lines ..... 5-27
5 - 12	Production and Consumption of Goods in Jakarta, 1973 ..... 5-30
5 - 13	Goods Flow by Mode of Transport, 1973 ..... 5-31
5 - 14	Goods Flow by Mode of Transport, 1976 ..... 5-33
5 - 15	Goods Flow by Truck by Direction, 1973 & 1976 .... 5-37
5 - 16	Framework of Jakarta for the Key Years ..... 5-43
5 - 17	Person Trip by the Population Density Category ... 5-44
5 - 18	Average Number of Persons per Passenger Car by Population Density Ranking ..... 5-46
5 - 19 - 1	Future Trip Ends of Sedan and Bus by Zone ..... 5-47
5 - 19 - 2	Future Trip Ends of Sedan and Bus by Zone ..... 5-48
5 - 20	Forecast of Future Goods Flow by Mode of Transport ..... 5-49
5 - 21	Forecast of Future Cargo Movement by Truck ..... 5-52
5 - 22	Truck Traffic Observed at Tangerang, Cibinong and Bekasi ..... 5-53
5 - 23	Goods Flow by Truck ..... 5-53
5 - 24	Daily Average Goods Tonnage by Truck ..... 5-54
5 - 25	Forecast of Future Goods Tonnage by Truck ..... 5-55
5 - 26	Daily Average Truck Trips ..... 5-55
5 - 27	Daily Average Trip Ends ..... 5-55
5 - 28	Rate of Utilization of Cargo Terminal ..... 5-56
5 - 29	Volume of Cargo Stopping at Cargo Terminal ..... 5-56
5 - 30	Distribution of Cargo Movement to and from Cargo Terminal ..... 5-57
5 - 31	Total Trip Ends of Cargo Terminal and Other Area.. 5-57
5 - 32	Future Trip and Volume of Trucks ..... 5-58
5 - 33	Distribution of Truck Trip Ends by District ..... 5-58

LIST OF TABLES ( CONT )

		Page
5 - 34	Generation of Truck Trip Ends by Zone .....	5-60
5 - 35	Traffic Capacity Limitation of Roads in Q-V Traffic Assignment .....	5-66
5 - 36	Summary of Links by Road Type .....	5-69
5 - 37	Toll Roads for Traffic Assignment .....	5-69
5 - 38	Toll Rates for Toll Roads .....	5-73
5 - 39	Time Value .....	5-74
5 - 40	Variation of Toll Resistance (in case of 5-lot assignment) .....	5-74
5 - 41	Variation in Percentage of Traffic Volume between Whole Route Construction and Western Section Construction .....	5-75
5 - 42	Assigned Trips on the Ring Road by Vehicle Type ..	5-76
5 - 43	Average Cross-Section Traffic Volume by Year, Section and by Toll System .....	5-77
5 - 44	Evaluation of Alternatives, 1985 .....	5-78
5 - 45	Evaluation of Alternative, 2000 .....	5-78
5 - 46	Trend of Difference in Trip Length between Stage Construction and Whole Route Construction...	5-80
5 - 47	Forecasted Cross-Sectional Daily Traffic Volume by Segment of Ring Road .....	5-84
	- Flat Tariff (300 RP.), Full Segments - .....	5-84
	- Zone Tariff (13.5 RP/Km), Full Segments - .....	5-85
	- Flat Tariff (300 RP.), Western Segments - .....	5-86
	- Toll Free, Full Segments - .....	5-87
 Chapter 6: Preliminary Design		
6 - 1	Major Structures in Case of Alternative of Flat Tariff .....	6-13
6 - 2	Economic Comparison between Elevated Structure and High Bank .....	6-17
6 - 3	Classification of Type of Superstructures .....	6-19
6 - 4	Determination of Type of Superstructures .....	6-20
6 - 5	Major Characteristics of Alternative Roads .....	6-23
6 - 6	Load Frequency of 8.2 ton Equipment Single Axle Vehicle .....	6-51
6 - 7	Pavement Thickness Index .....	6-53

LIST OF TABLES ( CONT )

LIST OF TABLES ( CONT )

	Page
10 - 34 Construction Cost (Financial Allocation (3 Stages) .....	10-23
10 - 35 Construction Cost (Financial) Allocation (2 Stages) .....	10-24

LIST OF FIGURES (MAIN REPORT)

	Page
Chapter 1:	Present Situation of Study Area
1 - 1	Zone Division of DKI Jakarta ..... 1- 3
1 - 2	Zone Division of Ja.Bo.Ta.Bek. Area ..... 1- 4
1 - 3	Population Development in DKI Jakarta ..... 1-13
1 - 4	Development of Vehicle Ownership in DKI Jakarta ..... 1-23
1 - 5	Rates of Vehicles Ownership & Per Capita GRDP in DKI Jakarta ..... 1-23
1 - 6	Existing Transportation Syseem ..... 1-45
1 - 7	Location Map of the Traffic Counting Stations ..... 1-51
1 - 8	Number of Vehicle per Day by Direction ..... 1-53
1 - 9	Travel Speed ..... 1-56
1 - 10	DKI Jakarta Landuse, 1973 ..... 1-59
1 - 11	Location of Kampung, 1975 ..... 1-61
1 - 12	Activity Centers ..... 1-64
1 - 13	Location of Manufacturing Industries, 1975 .... 1-65
1 - 14	Location of Terminal Facilities, 1976 ..... 1-66
Chapter 2:	Land Use Plan
2 - 1	Methodological Flow Chart of Population Forecast, Landuse Planning, Employment Forecast, etc. .... 2- 2
2 - 2	Revised Master Plan, DKI Jakarta, 1965-1985 ... 2- 3
2 - 3	JABOTABEK Plan ..... 2- 6
2 - 4	Population Growth Rates in Indonesia ..... 2- 8
2 - 5	Population Growth Rates in Java/Madura ..... 2- 8
2 - 6	Population Projection in Indonesia & Java/Madura ..... 2- 8
2 - 7	The Maximum Population of DKI Jakarta, (K), Projected by Logistic Curve Transformation .... 2-10
2 - 8	Annual Population Growth Rates in DKI Jakarta.. 2-12
2 - 9	Population Projection in DKI Jakarta ..... 2-12
2 - 10	Annual Population Growth Rates in Bo.Ta.Bek. .. 2-15

LIST OF FIGURES (CONT)

		Page
2 - 11	Population Projection in Bo.Ta.Bek .....	2-15
2 - 12	Annual Population Growth Rates in Ja.Bo.Ta.Bek..	2-17
2 - 13	Population Projection in Ja.Bo.Ta.Bek. ....	2-17
2 - 14	Future Distribution of Population Classified by Shelter Conditions .....	2-18
2 - 15	Landuse Concept .....	2-22
2 - 16	Soil Conditions .....	2-27
2 - 17	Existing Landuse along Alignment .....	2-28
2 - 18	Present Landuse Plan .....	2-29
2 - 19	Examples of Facility Layout around Interchange .....	2-31
2 - 20	Projection of Goods carried by Trucks in DKI Jakarta, (Incoming - Outgoing) .....	2-34
2 - 21	Alternative Locations of Cargo Terminal .....	2-36
2 - 22	Existing Arterial Road Network .....	2-38
2 - 23	Future Arterial Road Network .....	2-41
2 - 24	The Maximum Floor Area Ratio in CBD, Jakarta ...	2-48
2 - 25	Commercial and/or Administration Districts in Dispersed Scheme .....	2-50
2 - 26	Manufacturing Industry Location .....	2-52
2 - 27	Urban Functions .....	2-55
2 - 28	DKI Jakarta Landuse Plan, 2000 (Dispersed) .....	2-57
2 - 29	DKI Jakarta Landuse Plan, 2000 (Concentrated) ..	2-58
2 - 30	Population Projection in Wilayahs .....	2-61
2 - 31	Population Projection in Bo.Ta.Bek. ....	2-64
2 - 32	Number of Work Places by Sector, 1976 .....	2-76
 Chapter 3: Technical Study and Analysis		
3 - 1 - 1	Summary of Soil Survey Test Results .....	3- 3
3 - 1 - 2	Relation between Gradient of Slope and R.O.W. Width .....	3- 6
3 - 2	Quarry Sites Studied :.....	3-11
3 - 3	Chart of Estimated Aggregate Demand by Year ....	3-13
3 - 4	Map of Major Rivers .....	3-16
3 - 5	Rainfall Record & Rivers Catchment Areas .....	3-19

LIST OF FIGURES ( CONT )

		Page
3 - 6	Cross-section of the Eastern Flood Canal .....	3-22
 Chapter 4: Design Criteria and Alternative		
4 - 1	Location and Size of Ring Road .....	4- 1
4 - 2	Study Items on Alternatives .....	4- 3
4 - 3 - 1	Typical Cross-Section .....	4- 7
4 - 3 - 2	Typical Cross-Section (Stage Construction) ....	4- 8
4 - 4	Length of Crest Vertical Curve .....	4-10
4 - 5	Length of Vertical Curve .....	4-11
4 - 6	Super-Elevation .....	4-12
4 - 7	Typical Cross Sections of Interchange .....	4-15
4 - 8	Example of Composition of Toll Collection System .....	4-20
4 - 9	Easement at Toll Gate .....	4-23
4 - 10	Typical Cross Section of Toll Plaza, Clearance of Toll Lane .....	4-24
4 - 11	Arrangement of the Traffic Sign .....	4-25
4 - 12	Length of Weaving Section (Plan) .....	4-27
4 - 13	Length of Weaving Section (Graph) .....	4-27
4 - 14	Categorized Graph .....	4-28
4 - 15	At Grade Intersection .....	4-28
4 - 16	Traffic Capacity of a Diamond Type Interchange .....	4-30
4 - 17	At Grade Intersection .....	4-30
4 - 18	Traffic Flow Volume by Segment .....	4-32
4 - 19	Flood Area in the Project Area .....	4-34
4 - 20	Alluvium Area in the Project Area .....	4-35
4 - 21	Grade Separation Method at the Crossing Point with Radial Roads and Railways .....	4-37
4 - 22	Different Methods of Stage Construction .....	4-39
4 - 23	Design Daily Traffic Volume and Stage Construction Sequence .....	4-41
4 - 24	Flow Diagram for Selection of Interchange Types .....	4-48
4 - 25	Tollway (Uniform Rate and Distance Proportional Rate) .....	4-61

LIST OF FIGURES ( CONT )

		Page
4 - 26	Toll Free .....	4-61
4 - 27	Plan .....	4-62
4 - 28	Interval of the Interchange between IC-8 and IC-9 .....	4-63
4 - 29	Uniform Toll Rate (T-01; Toll-Flat-120 km/h-All-300 RP.) .....	4-64
4 - 30	Distance Proportional Toll Rate (T-05; Toll-Zone-120 km/h-All-13.5 RP/km) .....	4-64
4 - 31	Toll-Free (F-01; Free-100 km/h-All) .....	4-64
4 - 32	Arrangement of the Traffic Sign (IC-8 - IC-9) .....	4-66
 Chapter 5: Forecast of Future Traffic Volume		
5 - 1	Conceptual Flow Chart of Forecast of Traffic Demand .....	5- 2
5 - 2	Flow Process of Establishment of O-D Matrices for Passenger Vehicles .....	5- 4
5 - 3	Flow Diagram for the Analysis of Truck Trip Generation by Zone .....	5- 7
5 - 4	Comparative Alternatives for Traffic Forecast .	5-10
5 - 5	Conceptual Relation between Various Factors ...	5-12
5 - 6	Per Capita GDP and Rate of Vehicle Ownership in Several Countries .....	5-15
5 - 7	Trend Diagram of Vehicle Ownership by Type in Jakarta .....	5-15
5 - 8	Relation between Distance and Distribution Pattern (Person Trip) .....	5-26
5 - 9	Screen Line .....	5-28
5 - 10	Relation between Distance and Distribution Pattern (Truck Trip) .....	5-39
5 - 11	Flow of Estimation of Passenger Car and Bus Person Trip .....	5-45
5 - 12	Future Road Network .....	5-68
5 - 13 - 1	Link and Node Number, DKI Jakarta .....	5-70
5 - 13 - 2	Link and Node Number, Highway .....	5-71
5 - 14	Link and Node Number Outside of DKI Jakarta ...	5-72
5 - 15 - 1	Estimated Traffic Flow, (1985) .....	5-88

LIST OF FIGURES ( CONT )

		Page
5 - 15 - 2	Estimated Traffic Flow, (2000) .....	5-89
5 - 15 - 3	Estimated Traffic Flow, (1985) .....	5-90
5 - 15 - 4	Estimated Traffic Flow, (2000) .....	5-91
5 - 15 - 5	Estimated Traffic Flow, (1985) .....	5-92
5 - 15 - 6	Estimated Traffic Flow, (2000) .....	5-93
5 - 15 - 7	Estimated Traffic Flow, (1985) .....	5-94
5 - 15 - 8	Estimated Traffic Flow, (2000) .....	5-95
Chapter 6:	Preliminary Design	
6 - 1	Flow Diagram for Preliminary Design Using Computer .....	6- 2
6 - 2	Fixed or Examined Points for Route Alignment .....	6- 4
6 - 3	Composition of Profiles at Cross Sections with Railway .....	6- 7
6 - 4	Route Alignment Near Ciliwung River .....	6- 9
6 - 5	Typical Section of Side Ditch in Cut Area ....	6-22
6 - 6	IC-1 (0 plus 000), Operation System: Flat, Interchange Type: Modified Cloverleaf .....	6-27
6 - 7	IC-1 (0 plus 000), Operation System: Zone, Interchange Type: Modified Cloverleaf .....	6-28
6 - 8	IC-1 (0 plus 000), Operation System: Free, Interchange Type: Double Trumpet .....	6-29
6 - 9	IC-2 (6 plus 050), operation System: Flat, Interchange Type: Double Trumpet .....	6-30
6 - 10	IC-2 (6 plus 050), Operation System: Zone, Interchange Type: Double Trumpet .....	6-31
6 - 11	IC-2 (6 plus 050), Operation System: Free, Interchange Type: Modified Cloverleaf .....	6-32
6 - 12	IC-3 (10 plus 960). Operation System: Flat, Interchange Type: Diamond .....	6-33
6 - 13	IC-3 (10 plus 960), Operation System: Free, Interchange Type: Modified Cloverleaf .....	6-34
6 - 14	IC-6 (17 plus 055), Operation System: Flat, Interchange Type: Double Trumpet .....	6-35
6 - 15	IC-6 (17 plus 055), Operation System: Zone, Interchange Type: Double Trumpet .....	6-36

LIST OF FIGURES ( CONT )

		Page
6 - 16	IC-6 (17 plus 055), Operation System: Free Interchange Type: Cloverleaf .....	6-37
6 - 17	IC-8 (22 plus 565), Operation System: Flat, Interchange Type: Double Trumpet .....	6-38
6 - 18	IC-8 (22 plus 565), Operation System, Zone, Interchange Type: Double Trumpet .....	6-39
6 - 19	IC-8 (22 plus 565), Operation System: Free, Interchange Type: Cloverleaf .....	6-40
6 - 20	IC-9 (24 plus 570), Operation System: Flat, Interchange Type: Modified Cloverleaf .....	6-41
6 - 21	IC-9 (24 plus 570), Operation System: Zone, Interchange Type: Modified Cloverleaf .....	6-42
6 - 22	IC-9 (24 plus 570), Operation System: Free, Interchange Type: Double Trumpet .....	6-43
6 - 23	IC-10 (29 plus 180), Operation System: Flat & Zone, Interchange Type: Diamond .....	6-44
6 - 24	IC-11 (38 plus 370), Operation System: Flat, Interchange Type: Modified Cloverleaf .....	6-45
6 - 25	IC-11 (38 plus 370), Operation System: Zone, Interchange Type: Modified Cloverleaf .....	6-46
6 - 26	IC-11 (38 plus 370), Operation System: Free, Interchange Type: Double Trumpet .....	6-47
6 - 27	IC-13 (46 plus 610), Operation System: Flat, Zone, & Free Interchange Type: Modified Cloverleaf .....	6-48
 Chapter 8: Construction Schedule		
8 - 1	Overall Schedule of the Project (4-Lane 2-Way All Construction) .....	8- 6
8 - 2	Overall Schedule of the Project (4-Lane 2-Way 2-Stage Construction) .....	8- 7
8 - 3	Overall Schedule of the Project (2-Lane 2-Way 2-Stage Construction) .....	8- 8
8 - 4	Overall Schedule of the Project (2-Lane 2-Way 3-Stage Construction) .....	8- 9
8 - 5	Construction Schedule Analysis (Case No.F-01) .	8-10
8 - 6	Construction Schedule Analysis (Case No.F-02) .	8-11
8 - 7	Construction Schedule Analysis (Case No.T-01) .	8-12
8 - 8	Construction Schedule Analysis (Case No.T-02) .	8-13

LIST OF FIGURES ( CONT )

	Page
Chapter 9: Economic Analysis	
9 - 1 Segment Map .....	9-25

LIST OF TABLES (APPENDIX)

			Page
Table	1	Peak Hour Traffic Volume by Type of Vehicle .....	16
	2	OD Table in 1985 by Type of Vehicle .....	20
	3	OD Table in 2000 by Type of Vehicle .....	48
	4	Traffic Assignment on Toll Ways (OD Table between Ramps/Interchanges).....	76
	5	Average Ground Areas by Major Type .....	91
	6	Average Prices and Relevant Factors for Calculation of Vehicle Operating Costs .....	98
	7	Fuel Consumption by Speed .....	99
	8	Operation Cost by Speed (Excluding Tax) .....	102
	9	Financial Operation Cost by Speed .....	105
	10	Economic Investment Cost .....	113
	11	Annual Economic Maintenance Cost .....	117
	12	Annual Economic Operation Cost .....	121
	13	Annual Economic Benefit .....	125
	14	Construction Cost (2-Lane 2-Way) .....	128
	15	Annual Economic Benefit (2-Lane 2-Way) .....	129
	16	Capacity of Traffic Handling per Lane vs. Service Level .....	132
	17	Summary of Construction Cost .....	157

LIST OF FIGURES (APPENDIX)

		Page
Fig.	1	Location Map of the Traffic Count Stations ..... 2
	2	Hourly Traffic Volume by Direction ..... 3
	3	Location & Lot Module ..... 85
	4	Conceptual Layout of Terminal Facilities by Types ..... 88
	5	Layout Scheme of Cargo Terminal by Types ..... 89
	6	Pattern of Circulations ..... 90
	7	Amount of Cargo Handled & Terminal Cost by Size ..... 95
	8	Minimum Terminal Cost & Amount of Cargo Handled ..... 95
	9	Methodological Flow Chart for Selection of Terminal Location by Transportation Costs ..... 96
	10	Stage Construction for the Interchange with Surface Road ..... 134
	11	At Grade Intersection ..... 135
	12	Traffic Capacity of a Diamond Type Interchange ..... 141
	13	At Grade Intersection ..... 142
	14	Bus Stop Built along the Through-way ..... 154
	15	Bus Stop Built at an Interchange ..... 155
	16	IC-1 (0 plus 000), Operation System; Flat, Interchange Type; Turbine ..... 177
	17	IC-1 (0 plus 000), Operation System; Zone Interchange Type; Turbine ..... 178
	18	IC-9 (24 plus 570), Operation System; Flat Interchange Type; Turbine ..... 179
	19	IC-9 (24 plus 570), Operation System; Zone Interchange Type; Turbine ..... 180
	20	IC-11 (38 plus 370), Operation System Interchange Type; Turbine ..... 181
	21	IC-11 (38 plus 370), Operation System; Zone Interchange Type; Turbine ..... 182
