TABLE OF CONTENTS

| | <u>Page</u> |
|--|-------------|
| GLOSSARY AND LOCAL TERMS | 1 |
| ABBREVIATION | |
| ANNEX I CLIMATE, HYDROLOGY AND WATER BALANCE | 1-1 |
| 1.1 CLIMATE | 1-1 |
| 1.2 HYDROLOGY | 1-9 |
| 1.2.1 Data Collection | 1-9 |
| 1.2.2 Stream Flow Measurement | 1-12 |
| 1.2.3 Checking of Existing Hydrological and Metero Stations | 1-14 |
| 1.2.4 Proposed Meteoro & Hydro Stations to be Established | 1-15 |
| 1.2.5 River Flow of the Komerling | 1-16 |
| 1.2.6 Drought Runoff Analysis | 1-17 |
| 1.2.7 Flood Runoff Analysis | 1-18 |
| 1.2.8 Runoffs of the Ogan, Pisang and Tulangbawang Rivers | 1-18 |
| 1.2.9 Flow Conditions of the Komerling River in the Lower Reach | 1-20 |
| 1.3 WATER BALANCE | |
| 1.3.1 Assumption | 1-25 |
| 1.3.2 Water Balance | 1-31 |
| ANNEX II SOILS | 11-1 |
| 2.1 GENERAL | 11-1 |
| 2.2 PROCEDURE OF SOIL SURVEY | 11-1 |
| 2.2.1 Field Work | 11-1 |
| 2.2.2 Laboratory Work | 11-2 |

| | | |
|-----------|---|--------|
| 2.3 | CHEMICAL AND PHYSICAL PROPERTIES OF SOILS | 11-3 |
| 2.3.1 | Chemical Properties | 11-3 |
| 2.3.2 | Physical Properties | 11-4 |
| 2.4 | SOIL CLASSIFICATION | 11-5 |
| 2.5 | MAIN FEATURE OF MAJOR SOIL UNIT | 11-7 |
| 2.5.1 | Bellang Extension Area | 11-7 |
| 2.5.2 | Tulangbawang Area | 11-10 |
| 2.5.3 | Lampung Area | 11-12 |
| 2.5.4 | Lower Komerang | 11-13 |
| 2.6 | LAND SUITABILITY CLASSIFICATION | 11-16 |
| 2.6.1 | The Standard of Land Suitability Classification | 11-16 |
| ANNEX III | AGRICULTURE AND AGRO- SOCIO ECONOMY | 111-1 |
| 3.1 | PRESENT CONDITION | 111-1 |
| 3.1.1 | General | 111-1 |
| | I) Population | 111-1 |
| | II) Gross Regional Products | 111-3 |
| | III) Rice Demand and Supply | 111-4 |
| 3.1.2 | Present Land Use | 111-4 |
| 3.1.3 | Present Cropping Pattern | 111-7 |
| 3.1.4 | Present Farming Practices | 111-7 |
| 3.1.5 | Crop Yield and Production | 111-9 |
| 3.1.6 | Livestock | 111-10 |
| 3.1.7 | Agricultural Supporting Services | 111-11 |
| | I) Agricultural Extension Services | 111-11 |
| | II) Research Works | 111-12 |
| | III) Seed Multiplication and Distribution | 111-12 |
| | IV) BIMAS Credit | 111-13 |
| | V) Cooperatives | 111-14 |

| | <u>Page</u> |
|---|-------------|
| 3.1.8 Market and Prices | III-16 |
| 3.1.9 Farm Budget | III-17 |
| 3.1.10 Transmigration | III-17 |
| 3.2 AGRICULTURAL DEVELOPMENT PLAN | III-48 |
| 3.2.1 Basic Concept for Development | III-48 |
| 3.2.2 Proposed Cropping Pattern | III-48 |
| 3.2.3 Proposed Farming Practices | III-51 |
| 3.2.4 Anticipated Yield and Production | III-53 |
| ANNEX IV IRRIGATION AND DRAINAGE | IV-1 |
| 4.1 IRRIGATION WATER REQUIREMENTS | IV-1 |
| 4.1.1 General | IV-1 |
| 4.1.2 Consumptive Use of Water by Crops | IV-1 |
| 4.1.3 Farm Requirements | IV-3 |
| 4.1.4 Diversion Requirements | IV-6 |
| 4.2 DRAINAGE REQUIREMENTS | IV-7 |
| ANNEX V HYDROPOWER DEVELOPMENT | V-1 |
| 5.1 GENERAL | V-1 |
| 5.2 FIELD ACTIVITY | V-2 |
| 5.3 PRELIMINARY STUDY ON HYDROPOWER DEVELOPMENT | V-4 |
| 5.4 POWER MARKET | V-6 |
| 5.4.1 Present Power Situation | V-6 |
| 5.4.2 Forecast of Future Power Demand | V-8 |

ABBREVIATIONS AND LOCAL TERMS

Abbreviations and local terms used in this report are listed below:

A. ABBREVIATIONS

1. Length

| | |
|----|------------|
| mm | millimetre |
| cm | centimetre |
| m | metre |
| km | kilometer |

2. Area

| | |
|-----------------|------------------|
| ha | hectare |
| km ² | square kilometer |
| m ² | square metre |

3. Volume

| | |
|----------------|-------------------------------|
| lit | litre = 1,000 cm ³ |
| m ³ | cubic meter |

4. Weight

| | |
|-----|-------------|
| mg | milligramme |
| g | gramme |
| kg | kilogramme |
| ton | 1,000 kg |

5. Time

| | |
|-----|--------|
| sec | second |
| min | minute |
| hr | hour |

6. Electrical measures

| | |
|---|--------|
| V | Volt |
| A | Ampere |

| | |
|-----|-----------------|
| KV | Kilovolt |
| W | Watt |
| KW | Kilowatt |
| MW | Megawatt |
| KWH | Kilowatt hour |
| MWH | Megawatt hour |
| KWH | Kilovolt ampere |

7. Other measures

| | |
|---------------------|------------------------------|
| % | Percent |
| PS | Horse power |
| PH | Scale for acidity |
| °C | Centigrade |
| m ³ /sec | Cubic meter per second |
| lit/sec/ha | Liter per second per hectare |
| T.S.P. | Triple Super Phosphate |
| t/ha | Ton per hectare |
| Nos | Numbers |
| m.e. | milligram equivalent |
| E.C. | electric conductivity |
| C.E.C. | cation exchange capacity |

8. Technical terms

| | |
|----------|--------------------------------|
| EL | Elevation above mean sea level |
| H | Height |
| H.W.L. | High water level |
| L.W.L. | Low water level |
| T.W.L. | Tail water level |
| F.W.L. | Flood water level |
| A.W.L.R. | Automatic water level recorder |
| S.G. | Staff gauge |
| G.H. | Gauge height |
| C.A. | Catchment area |
| Q | Discharge |

9. Money

| | |
|------|------------|
| US\$ | Us Dollar |
| Rp. | Rupiah |
| US\$ | = Rp.625.- |

10. Other Abbreviations

| | |
|--------|---|
| FAO | Food and Agriculture Organization of United Nations |
| UNDP | United Nations Development Program |
| DPU | Departemen Pekerjaan Umum (Department of Public Works) |
| PLN | Perusahaan Umum Listrik Negara (State Electricity Corporation) |
| IRRI | International Rice Research Institute |
| JICA | Japan International Cooperation Agency |
| G.R.P. | Gross Regional Products |
| G.D.P. | Gross Domestic Products |
| BRI | Bank Rakyat Indonesia (Indonesian People's Bank) |

B. LOCAL TERMS

| | |
|-------------|---|
| Kab. | Kabupaten |
| Prov. | Provinsi |
| OKU | Kabupaten Ogan Komering Ulu |
| OKI | Kabupaten Ogan Komering Ilir |
| BIMAS Baru | New Mass Guidance for Self-sufficiency in Food |
| BIMAS Biasa | Common Mass Guidance for Self-sufficiency in Food |
| CRIA | Central Research Institute for Agriculture, Bogor |
| PPS | Extension Specialist |
| PPH | Extension Supervisor |
| PPL | Field Extension Worker |
| BPP | Rural Extension Center |

| | |
|-------------------------|---|
| Wilud | Wilayah Unit Desa |
| Desa | Village |
| KUD | Fully developed farmer cooperative Desa |
| BUUD | Village farmer cooperative |
| Kontak-Tani | Key farmer or Leading farmer |
| DOLOG | Depot Logistic |
| Ani-Ani | Small Rice Harvesting Knife |
| Lebak | Back swamp behind river levee |
| Pelita | Five-Year Development Plan |
| Sawah | Wet-Rice Field |
| Kios | Small shop |
| BULOG | Board of Logistic |
| Dalam Angka | Statistical Data |
| Laporan Dinas Pertanian | Report of Agricultural Office |
| Palawijo (Polowijo) | Second Crop |

ANNEX I CLIMATE, HYDROLOGY, AND WATER BALANCE

1.1 CLIMATE

The following data were mainly collected at Sub. P3.S.A. Sumatra Selatan, Sub. P3.S.A. Lampung, Pertanian Office In Baturaja, and Palembang. However, the observation was either completely stopped or conducted intermittently as follows:

1) Climatological Data

| <u>Observatory</u> | <u>Observation Period</u> | <u>Interrupted Period</u> | <u>Place of Data Provided</u> |
|--------------------|---------------------------|--|-------------------------------|
| 1. Belitang | 1971-1979, June | Evaporation 1975 March, July 1978 March Rel.Humidity 1971 Jan, Feb, July, Nov. 1975 March 1976 May 1978 March Temperature 1971 Jan, Feb 1972 Jan, Feb 1974 June 1975 Jan, March 1976 May 1978 March Sunshine 1971 Jan, Feb, May-Dec 1972 Feb, July 1973 July 1975 March 1976 April 1978 Feb, March, Sept. Solar Radiation 1971 Feb-Dec 1972 Feb-May 1975 March 1978 March, Sept. Wind Velocity 1971 Feb-Dec 1975 March 1978 March, Sept. | Sub.P3SA Sum-Sel |

| <u>Observatory</u> | <u>Observation Period</u> | <u>Interrupted Period</u> | <u>Place of Data Provided</u> |
|--------------------|---------------------------|---|-------------------------------|
| 2. Banding Agung | 1973, May-1978 | Evaporation 1973 Nov, Dec 1975 Oct, Nov 1976 Jan, July 1977 March, April June, Aug, Nov. 1978 March, April, June, Dec. Rel. Humidity 1973 Nov. 1977 May Temperature 1973 Nov. 1977 Jan, March-May July, Aug, Nov, Dec. Solar Radiation 1975 Feb, March, May, Aug-Dec 1976 Jan-Dec 1977 Jan-Dec 1978 Jan-Nov Wind Velocity 1975 Feb, Dec 1976 Feb-Dec 1977 Jan-Dec 1978 Jan-Dec | Sub.P3SA Sum-Sel |

1.2.2 Stream Flow Measurement

Stream flow measurement was made at Banding Agung, Martapura, Lempuing and Baturaja out of the following gauging stations to check the existing rating curves.

Table 1-1 Hydrometric Stations

| <u>No.</u> | <u>River</u> | <u>Place</u> | <u>Rating Curve</u> | <u>Gauge</u> |
|------------|--------------|------------------|---------------------|--------------|
| 1. | Selabung | Banding Agung | Yes | A.W.L.R. |
| 2. | Komerling | Martapura | Yes | " |
| 3. | Pisang | Sri Numpi I | None | " |
| 4. | Komerling | Kurungan Nyawa | None | S.G. |
| 5. | Belifang | Raman Condong | None | " |
| 6. | Belifang | Cahaya Bumi | None | A.W.L.R. |
| 7. | Lempuing | Cahaya Bumi | Yes | " |
| 8. | Komerling | Menanga | None | " |
| 9. | Komerling | Compaka | None | " |
| 10. | Randu | Suka Bumi | None | S.G. |
| 11. | Arisan | Gunung Batu | None | " |
| 12. | Jambu | Tg. Lubuk | None | " |
| 13. | Sigonan | Suka Raja | None | " |
| 14. | Anyar | Anyar | None | " |
| 15. | Komerling | Kayu Agung | None | A.W.L.R. |
| 16. | Komerling | Kayu Agung | None | S.G. |
| 17. | Ogan | Baturaja Kota | Yes | " |
| 18. | Ogan | Baturaja Terusan | None | A.W.L.R. |

A.W.L.R. : Automatic Water Level Recorder

S.G. : Staff Gauge

Table 1-2 shown the results of measurement.

Table 1-2 Results of Streamflow Measurement

| <u>Gauging Station</u> | <u>Observed Date</u> | <u>Stream Flow</u> | <u>Gauge Reading</u> |
|------------------------|----------------------|----------------------------|----------------------|
| Banding Agung | Oct. 23, 1979 | 15.99 m ³ /sec. | 0.81 m |
| Martapura | Oct. 27, 1979 | 128.62 | 1.94 |
| Baturaja Kota | Oct. 28, 1979 | 129.14 | 1.38 |
| Cahaya Bumi | Oct. 29, 1979 | 73.77 | 3.17 |

The discharges measured were plotted in their rating curves. As they were relatively well fitted to the curves, they are usable for the estimation of the discharge.

1.2.3 Checking the Existing Hydrological and Metero Stations

The following hydrological and climatological stations were checked during the survey.

Table 1-3 Existing Hydrological and Climatological Stations

A. Gauging Station

| <u>Name of Station</u> | <u>Place</u> | <u>Checked Date</u> | <u>Gauge</u> | <u>Maintenance</u> |
|------------------------|------------------|---------------------|--------------|--------------------|
| Ogan | Baturaja Kota | Oct. 22, 1979 | S.G. | |
| Ogan | Baturaja Terusan | Oct. 22, 1979 | A.W.L.R. | |
| Selabung | Bandung Agung | Oct. 24, 1979 | A.W.L.R. | |
| Komerling | Martapura | Oct. 27, 1979 | A.W.L.R. | |
| Komerling | Kurungan Nyawa | Oct. 27, 1979 | S.G. | |
| Pisang | Sri Numpi I | Oct. 29, 1979 | A.W.L.R. | |
| Lempuing | Cahaya Bumi | Oct. 2, 1979 | A.W.L.R. | |
| Belitang | Raman Condong | Oct. 2, 1979 | S.G. | |
| Belitang | Cahaya Bumi | Oct. 2, 1979 | A.W.L.R. | |
| Komerling | Menanga | Nov. 2, 1979 | A.W.L.R. | |
| Komerling | Cempaka | Nov. 2, 1979 | A.W.L.R. | |
| Randu | Suka Bumi | Nov. 11, 1979 | S.G. | |
| Arisan | Gunung Batu | Nov. 11, 1979 | S.G. | |
| Jambu | Tg. Lubuk | Nov. 5, 1979 | S.G. | |
| Sigonan | Suka Raja | Nov. 12, 1979 | S.G. | |
| Anyar | Lubuk Rukam | Nov. 12, 1979 | S.G. | |
| Komerling | Kayu Agung | Nov. 8, 1979 | A.W.L.R. | |
| Komerling | Kayu Agung | Nov. 8, 1979 | S.G. | |

B. Climatological Station

| <u>Place</u> | <u>Checked Date</u> | <u>Remarks</u> |
|-----------------------------|---------------------|------------------------------|
| Raksa Jawa | Oct. 22, 1979 | |
| Baturaja (Pertanian Office) | Oct. 22, 1979 | Standard rainfall gauge only |

| <u>Place</u> | <u>Checked Date</u> | <u>Remarks</u> |
|----------------------------|---------------------|------------------------------|
| Bandung Agung | Oct. 24, 1979 | |
| Bandung Agung (Mess PEMDA) | Oct. 24, 1979 | |
| Bellitang | Oct. 29, 1979 | |
| Martapura | Oct. 29, 1979 | Standard rainfall gauge only |
| Kurungan Nyawa | Oct. 29, 1979 | |

According to the survey, the following problems are pointed out:

1. In Baturaja Terusan gauging station, recording papers had not been supplied for two weeks, and the staff gauge was missing.
2. In Lempuing (Cahaya Bumi) gauging station, the automatic recorder did not work often because the diameter of the floater well was small for moving the float and the weight.
3. In the Randu River, the downstream staff gauge was missing.
4. In Bandung Agung, a standard rainfall gauge was installed at about three meters from the gauge reader house. Then climatological station was removed at Mess PEMDA in 1972 but its automatic rainfall gauge is out of order.

1.2.4 Proposed Meteorological & Hydro Stations to be Established

To consolidate data available, two meteorological stations and two automatic water level gauging stations will be installed in the area. These station sites were decided in the following places in considering future maintenance.

a. Meteorological station

1. Agriculture office in Tulangbawang Transmigration Project I
2. P.U. Office in Kayu Agung

b. Automatic water level gauge station

1. Komering river P.U. office in Muaradua
2. Matja river Cahya Bumi (A floater well and recorded house only has already been installed by P.U.)

1.2.5 River Flow of the Komerling

The Komerling river (named as the Selabung river in the uppermost stream) having a water surface area of about 127 km^2 at water surface elevation of 542 m above mean sea level, and flows to northwest direction up to the confluence of the Baru river, and turn to northeast direction at a right angle. At Muaradua, it joins with the Saka river, one of its large tributaries and flows through hilly area to Martapura.

The Komerling river runs meandering in flat plain to the north. Near Cempaka, most of the streamflow flows into the Ogan river through the Randu, the Arisan, the Jambu, the Sigonang, and the Anyar river.

The catchment area of the Komerling river upstream from Kurungan Nyawa is about $4,474 \text{ km}^2$ including the Lake Ranau's catchment area of about 508 km^2 .

Average run-off of the Komerling river at Martapura is about $223 \text{ m}^3/\text{sec}$. or $7,033 \times 10^6 \text{ m}^3$ in annual runoff. The monthly average discharge of the Komerling river reaches its maximum in April, and is approximately $330 \text{ m}^3/\text{sec}$. The minimum occurs in September, and is approximately $127 \text{ m}^3/\text{sec}$. The river discharge varies from year to year dominated by the amount of rainfall. Therefore, the streamflow pattern is dominated by the seasonal distribution of rainfall. Maximum flood discharge recorded at Martapura in 1977 was $1,079 \text{ m}^3/\text{sec}$. and minimum discharge $26,4 \text{ m}^3/\text{sec}$ in October 1972.

1) Monthly discharge

Daily discharge of interrupted period at Martapura is estimated by converting the water level available at Kurungan Nyawa gauge station into those at Martapura gauge station.

To find the relationship between the water level of the two gauge stations, correlation analysis is made. In the calculation, 1053 of input data (from 1974 to 1978) are used to find correlation.

The following regression line is obtained.

$$y = 0.814x + 0.043$$

where x : Water level at Kurungan Nyawa

y : Water level at Martapura

Obtained correlation coefficient = 0,85

With the correlation equation, water level at Martapura was obtained, and then converted into the discharge.

II) Rainfall-Runoff correlation

In case of no water level data available at Kurungan Nyawa, the discharge at Martapura is estimated by using rainfall of Muaradua. The calculation procedure is shown below.

1. Accumulated monthly rainfall at Muaradua is obtained at first.
2. By using correlation equation shown in Fig. 1-9, accumulated monthly rainfalls at Muaradua is converted into those at residual basin in between the Banding Agung gauge station and the Martapura gauge station.
3. From accumulated monthly rainfall at residual basin, accumulated loss rainfall is obtained by Fig. 1-20.
4. After getting accumulated loss rainfall at residual basin, effective rainfall is changed into runoff, and it is converted into discharge at Martapura by using Fig. 1-11.

These considerations are based on the fact that the streamflow originally recorded at the Martapura gauge station do not reflect the immediate rainfall, especially during low flow period, since it includes the streamflow from Lake Ranau, which is naturally regulated by the lake.

These figures were derived from the report (Land and Water Resources Development in South Eastern Sumatra Indonesia, Belitang Extension Area Agricultural Development Project prepared by FAO).

1.2.6 Drought Runoff Analysis

The river discharge of the Komering river varies from year to year dominated by the amount of rainfall. Due to the change in the amount of rainfall, drought year occurs in a cycle of about five years, and it causes wide variation in annual discharge.

The maximum and minimum annual streamflows were recorded at 379.9 m³/sec. in 1978, and 148.5 m³/sec in 1963.

Non-excess probable monthly discharges of 1/5 year (20%) at Martapura are estimated by Hazen method from the discharge data for 27 years, (1952-1978) as shown in the following Table 1-4 and Fig. 18.

Table 1-4 Drought Runoff (m³/sec)

| | <u>Jan</u> | <u>Feb</u> | <u>Mar</u> | <u>Apr</u> | <u>May</u> | <u>Jun</u> | <u>Jul</u> | <u>Aug</u> | <u>Sep</u> | <u>Oct</u> | <u>Nov</u> | <u>Dec</u> |
|-----------|------------|------------|------------|------------|------------|------------|------------|------------|------------|------------|------------|------------|
| Discharge | 225 | 190 | 250 | 275 | 210 | 123 | 92 | 82 | 65 | 70 | 110 | 210 |

1.2.7 Flood Runoff Analysis

The flood of the Komering reaches its maximum usually between February and May. The flood discharge at Martapura is estimated by applying Hazen method to the maximum mean daily discharge there.

The probabilities of the flood discharge are taken as 1/5, 1/10, 1/20, 1/50, 1/100, 1/200 and 1/1000 year, and are presented in the following Table 1-5.

Table 1-5 Calculated Flood Run-off at Martapura

| <u>Return Period</u> | <u>W (x) %</u> | <u>Flood Run-off</u> | <u>Remarks</u> |
|----------------------|----------------|----------------------|----------------|
| 5 year | 20 | 860 | |
| 10 | 10 | 900 | |
| 20 | 5 | 960 | |
| 50 | 2 | 1030 | |
| 100 | 1 | 1100 | |
| 200 | 0.5 | 1180 | |
| 1000 | 0.1 | 1330 | |

1.2.8 Runoff of the Ogan, Pisang and Tulangbawang Rivers

i) Stream flow of the Ogan at Seri Kumbang

Discharge at Seri Kumbang is roughly estimated by weighted mean of

specific discharge at Batu Raja and at Tanjung Rambang as shown in the following Table 1-6.

Table 1-6 Discharge of Ogan River At Seri Kumbang

| | Specific discharge in Batu Raja | Specific discharge at Tg. Rambang | Weighted mean specific discharge | Q m ³ /sec | Remarks |
|-----|---------------------------------|-----------------------------------|----------------------------------|-----------------------|-------------------------------------|
| Jan | 0.064 | 0.040 | 0.055 | 154 | Baturaja CA = 2,802 km ² |
| Feb | 0.067 | 0.043 | 0.058 | 163 | = 2096 km ² |
| Mar | 0.063 | 0.042 | 0.055 | 154 | Tg. Rambang |

ii) Stream flow of the Pisang at Palasjaya

Discharge at Palasjaya has been estimated in the report, Hydrological Network Lampung Province Sumatra, Final Report Part 2 Volume 1 Hydrology and Water Resources. Therefore, the discharge was derived from the report (Table 7.4 Estimated Long-term Monthly and Annual Mean Runoff) as shown in the following table

Table 1-7 Discharge at Palasjaya m³/sec

| | Jan | Feb | Mar | Apr | May | Jun | Jul | Aug | Sep | Oct | Nov | Dec | Annual |
|-----------|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|--------|
| Discharge | 6.5 | 6.7 | 5.1 | 4.5 | 3.7 | 2.8 | 2.1 | 1.8 | 1.9 | 2.4 | 3.7 | 5.3 | 3.9 |

iii) Streamflow of the Tulangbawang at Pakuanratu

Discharge at Pakuanratu also has been estimated in the abovementioned report.

Table 1-8 Discharge at Pakuanratu m³/sec

| | <u>Jan</u> | <u>Feb</u> | <u>Mar</u> | <u>Apr</u> | <u>May</u> | <u>Jun</u> | <u>Jul</u> | <u>Aug</u> | <u>Sep</u> | <u>Oct</u> | <u>Nov</u> | <u>Dec</u> | <u>Annual</u> |
|-----------|------------|------------|------------|------------|------------|------------|------------|------------|------------|------------|------------|------------|---------------|
| Discharge | 210 | 260 | 240 | 240 | 190 | 140 | 91 | 81 | 100 | 130 | 180 | 200 | 170 |

C.A. = 3,427 m³/sec

1.2.9 Flow Conditions of the Komering River in the Lower Reach

There are five rivers connecting from the Komering to the Ogan between Cempaka and Kayu Agung, that is the Randu, the Arisan, the Jambu, the Sigonang and the Anyar from upstream to downstrea. On the other hand, the Lempuing river flows into the Komering river between the entrances of the Sigonang river and the Anyar river, and large Lebak area is located along the right bank of the Komering river. Because of such conditions, flow conditions in this area are very complicated.

In these five rivers, the Randu, and the Jambu river have a lot of discharge. Therefore, these two river are used for navigation, but in the case of the Randu river, fast flow and a lot of driftwood make it difficult for ships to pass through the river.

During dry season, river flow is stagnant in the Sigonang, and the Anyar river. People living along these river dig wells in the riverbed.

In the past, Sub.P3SA Sumatra Selatan measured discharge at the following places several times.

| River | |
|-------------|-------------|
| 1. Komering | Cempaka |
| 2. Randu | Sukabumi |
| 3. Arisan | Gunung Batu |
| 4. Jambu | Tg. Lubuk |
| 5. Sigonang | Sukaraja |
| 6. Lempuing | Sri Nanti |

The results of discharge measurement are shown in the table.

| | Cempaka Q1 | Randu Q2 | Arlisan Q3 | Jambu Q4 | Komer Ing QR=Q1-Q2 -Q3-Q4 | QR/Q1 |
|-----------|---------------|-------------|---------------|-------------|---------------------------------|-------|
| Nov. 1976 | 597.7 | 222.7 | 16.4 | 187.7 | 171.5 | 0.29 |
| Feb. 1977 | 326.6 | 116.5 | 7.8 | 116.4 | 85.9 | 0.26 |
| Mar. 1977 | 272.2 | 104.5 | 7.3 | 117.9 | 42.5 | 0.16 |
| Jul. 1978 | 172.9 | 86.2 | 2.3 | 49.9 | 34.5 | 0.20 |
| Aug. 1978 | 225.6 | 80.3 | 4.1 | 76.3 | 64.9 | 0.29 |
| | | | | Average | | 0.24 |

About 45% of the discharge flows into the Randu from the Komerling, and about 25% of the discharge of the Komerling is remaining at downstream from the entrance of the Jambu river. Namely, 75% of the discharge flows into the Randu, the Arlisa, and the Jambu from the Komerling.

| | Cempaka Q1 | Sri Nanti Q2 | Q Q1+Q2 | Kayu Agung Q3 | Q3/Q | Q3/Q1 |
|-----------|---------------|--------------------|------------|---------------------|------|-------|
| Nov. 1977 | 45.0 | 10.8 | 55.0 | 9.2 | 0.16 | 0.20 |
| Aug. 1978 | 225.6 | 73.0 | 298.6 | 78.4 | 0.26 | 0.35 |
| Sep. 1978 | 111.6 | 35.3 | 146.9 | 39.0 | 0.27 | 0.35 |
| Oct. 1978 | 159.0 | 28.4 | 187.4 | 34.3 | 0.18 | 0.22 |
| | | | Average | | 0.22 | 0.28 |

As shown in the above table, about 78% of the discharge from the Komerling and the Lempuing into the Ogan, and about 22% of the above two rivers flows down to Kayu Agung.

1.3 WATER BALANCE

1.3.1 Assumption

i) Irrigation Area

The water balance is calculated based on the monthly streamflow of the Komering river at Martapura, incorporating the runoff from the drainage area, irrigation requirements, and return flow, and maintenance flow.

In calculation of the water balance, the following irrigation schemes are taken into consideration.

| <u>Scheme</u> | <u>Irrigable Area</u> |
|--------------------|-----------------------|
| Belitang proper | 20,600 ha |
| Belitang extension | 48,000 |
| Tulangbawang | 59,300 |
| Lempung | 13,100 |
| Lebak | 76,000 |
| Total | 217,000 ha |

ii) Division of basin

The downstream area from the Mucakkabau Intake site to Sukabumi is tentatively assumed as a drainage area. The drainage area is about 1036 km², in which Lebak area is about 259 km².

iii) Runoff from the downstream area

Since there are no discharge data available from the area, the runoff is estimated by the following methods.

- a) Rainfall in the area: Average monthly rainfall of Belitang and Cempaka are used for analysis.
- b) Base flow: The discharge, 45.0 m³/sec which was measured by Sub.P35A at Cempaka in 1977 Nov. 18, is tentatively estimated as the minimum discharge, judging from the water level at

Menanga In 1977 Nov 18 was W.L. 31.80 m, and It is nearly the lowest water level according to the hydrograph of Menanga.

Therefore, the base flow at Cempaka is estimated to be $45 \text{ m}^3/\text{sec}$.

Thus, the base flow of the drainage area is simply calculated at $20 \text{ m}^3/\text{sec}$ deducting $25 \text{ m}^3/\text{sec}$ at Martapura from the above discharge.

- c) Potential evapotranspiration (ET_o) from the field area: The values of potential evapotranspiration from the field area are derived from the values of irrigation requirements in Annex IV. Actual evapotranspiration is tentatively calculated multiplying 70% of plant coefficient by ET_o from the view point of the present vegetation conditions in the area.
- d) Evaporation from Lebak : The Lebak area is estimated at about 259 km^2 from the topographic map of 1/50,000 in scale. Evaporation from water surface is tentatively calculated multiplying 60% by potential evapotranspiration ET_o.

Table I-10 Runoff from the Downstream Field Area

| Dec. | 110.4 | 38.1 | " | 168.5 | |

As shown in Section I, 1.2.9 Flow Conditions of the Komering in the vicinity of Kayu Agung, the ratio of discharge to the Komering at Kayu Agung as against the discharge at Cempaka is about 28%. Therefore, 30% of monthly runoff from the downstream area is added to the monthly discharge at Martapura as shown below

| | <u>Jan</u> | <u>Feb</u> | <u>Mar</u> | <u>Apr</u> | <u>May</u> | <u>Jun</u> | <u>Jul</u> | <u>Aug</u> | <u>Sep</u> | <u>Oct</u> | <u>Nov</u> | <u>Dec</u> |
|-----------------|------------|------------|------------|------------|------------|------------|------------|------------|------------|------------|------------|------------|
| Q1+Q2+Q3 | 124.8 | 98.9 | 118.4 | 105.1 | 62.5 | 45.1 | 29.7 | 47.3 | 72.5 | 79.5 | 120.4 | 168.5 |
| (Q1+Q2+Q3)x0.3 | 37.4 | 29.7 | 35.5 | 31.5 | 18.8 | 13.5 | 8.9 | 14.2 | 21.8 | 23.9 | 36.1 | 50.6 |

iv) Irrigation Requirements In the Basin

Irrigation requirements in the basin are derived from Table DIVERSION REQUIREMENTS OF EACH DEVELOPMENT AREA. In the following table, monthly irrigation requirements are for Belitang proper area, Belitang Extension area, Tulangbawang area, Lempuing area and Lebak area.

Table I-13 Monthly Irrigation Diversion Requirements (m³/sec)

| Jan | Feb | Mar | Apr | May | Jun | Jul | Aug | Sep | Oct | Nov | Dec |
|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|
| 19.34 | 12.66 | 39.67 | 46.55 | 66.75 | 90.99 | 96.55 | 90.50 | 51.34 | 50.25 | 58.67 | 48.59 |

v) Return flow

A large portion of irrigation water supplied is likely to return to the river system either as seepage (percolation losses) or as surface runoff due to inefficient water control. These return flows are of importance to the projects of which water resources are limited. The followings are preliminary quantifications of the return flows to the Komering at Sukabumi where the Randu Canal connecting the Komering to the Ogan starts. The irrigation areas involved in this study are the Muncakkabau area of 10,700 ha and the upper Lebak area of 29,000 ha as shown in Fig. I-20.

For the approximation of the return flow, the following assumptions are established.

- a) Around 50% of both the percolation losses in paddy fields and farm application loss in the upland crop fields flow into the Komering as the return flows.

CALCULATION OF RETURN FLOW

| | Jan | Feb | Mar | Apr | May | Jun | Jul | Aug | Sep | Oct | Nov | Dec |
|---|------|------|------|------|------|------|------|------|------|------|------|------|
| 1) Muncakkabau Area (10,700 ha) | | | | | | | | | | | | |
| a. Percolation and farm application losses in mm | | | | | 12.1 | 14.8 | 20.1 | 11.7 | 7.8 | 5.3 | | |
| b. Return flows (50 % of a) | | | | | 6.1 | 7.4 | 10.1 | 5.9 | 3.9 | 2.7 | | |
| - in mm | | | | | 6.1 | 7.4 | 10.1 | 5.9 | 3.9 | 2.7 | | |
| - in m ³ /sec | | | | | 0.24 | 0.30 | 0.40 | 0.24 | 0.16 | 0.11 | | |
| c. Canal conveyance and operation losses in m ³ /sec | 0.34 | 0.10 | 1.01 | 0.13 | 0.78 | 0.96 | 1.26 | 0.73 | 0.51 | 1.26 | 1.08 | 0.41 |
| d. Return flows in m ³ /sec (70 % of c) | 0.24 | 0.07 | 0.71 | 0.09 | 0.55 | 0.67 | 0.88 | 0.51 | 0.36 | 0.88 | 0.76 | 0.29 |
| e. Total return flows in m ³ /sec (b + d) | 0.24 | 0.07 | 0.71 | 0.09 | 0.79 | 0.97 | 1.26 | 0.75 | 0.51 | 0.99 | 0.76 | 0.29 |
| 2) Upper Lebak Area (22,000 ha) | | | | | | | | | | | | |
| a) Percolation and farm application losses in mm | | | | | 10.6 | 17.5 | 28.4 | 31.4 | 19.2 | 5.7 | | |
| b. Return flows (50 % of a) | | | | | 5.3 | 8.8 | 14.2 | 17.2 | 9.6 | 2.9 | | |
| - in mm | | | | | 5.3 | 8.8 | 14.2 | 17.2 | 9.6 | 2.9 | | |
| - in m ³ /sec | | | | | 0.53 | 0.99 | 1.54 | 1.86 | 1.07 | 0.30 | | |
| c. Canal conveyance and operation losses in m ³ /sec | 0.58 | 0.87 | 0.81 | 2.15 | 2.81 | 4.73 | 6.35 | 7.13 | 2.06 | 0.81 | 2.00 | 3.65 |
| d. Return flows in m ³ /sec (70 % of c) | 0.41 | 0.61 | 0.59 | 1.51 | 1.97 | 3.31 | 4.45 | 4.99 | 1.44 | 0.57 | 1.40 | 2.56 |
| e. Total return flows in m ³ /sec (b+d) | 0.41 | 0.61 | 0.59 | 1.51 | 2.55 | 4.30 | 5.99 | 6.85 | 2.51 | 0.87 | 1.40 | 2.56 |
| 3) Total in m ³ /sec (1 + 2) | | | | | | | | | | | | |
| | 0.65 | 0.68 | 1.30 | 1.60 | 3.34 | 5.27 | 7.27 | 7.60 | 3.05 | 1.86 | 2.16 | 2.85 |

b) Around 70% of canal conveyance and operation losses also flow into the Komering as the return flows.

Based on the above assumptions, the following calculation is made (for the details of Irrigation losses vide Annex-IV).

vi) Maintenance flow

a) Navigation water

The minimum water depths for navigation are as follows.

| <u>Kind of boat</u> | <u>Tonnage</u> | <u>Minimum depth</u> |
|---------------------|----------------|----------------------|
| Big boat | 6 - 7 t | 1.5 m |
| Medium boat | 4 | 1 m |
| Small boat | 1 | 0.75 m |

The discharges required for each water depth at the following places are calculated.

1. Kurungan Nyawa
2. Menanga Tengah
3. Suka Bumi
4. Tanjung Lubuk

In the calculation, water slope is assumed to be $1/2,200$, which is obtained from the water levels at Kurungan Nyawa and at Menanga Tengah, and for coefficient of roughness, 0.035 is adopted depending on riverbed materials. The water slope is tentatively applied for Suka Bumi and Tanjung Lubuk.

During dry season, it is said that only small boat can navigate in the Komering river. Therefore, 15 m^3 of the discharge should be released for navigation throughout the year.
