HIS MAJESTY'S GOVERNMENT OF NEPAL

Ministry of Water and Power

The Honorable Minister of State

Bishnu Kumar Tumbahamphe

Acting Secretary

Bharat Bahadur Pradhan

Department of Hydrology & Meteorology

Director

Rama Prasad Nepal

Acting Deputy Director

Sharad Prasad Adhikary

I am very happy to see the first publication of the meteorological data in such a systematic form. This is another achievement in our efforts towards collection of basic data. I congratulate the Department on this accomplishment.

Bishnu Kumar Tumbahamphe
Minister of State
for Water and Power.

Information on weather and climate is one of the essential data for agriculture, forestry, aviation and many other activities. The publication of this record marks a milestone in the development of meteorological service in Nepal. Within a short period of two years of its existence, the Department has done remarkably well in establishing a network of observation station and recording and compiling the data as seen in the following pages. It is heartening to note that other departments and agencies of the government are increasingly depending upon its services and the duplication of expenditure hitherto incurred by them for collecting these informations has been greatly reduced. It is hoped that the Department will continue to develop further in the coming years .

I congratulate the staff of the Department on this notable accomplishment and also express my appreciation of the services rendered by Mr. Steinitz and his predecessor, Mr. Gilead, the U.N. experts .

B. B. Pradhan
Acting Secretary
Ministry of Water & Power

Meteorology is also one of the Sciences and is the science of atmosphere. Any body might raise the question about the type of this science and that can be solved by saying "It is an observational science" because it is difficult to control the atmospheric condition. We have to face whatever effects it brings. Yet we can minimise its hazards by an elaborate observation and analysis and side by side we can utilise to the maximum extent the favourable weather, to the well being of mankind.

The meteorological research has made great strides in knowledge of weather and climate and has found its applications in every spheres of life. For example air pilot, construction engineer, farmer, industrialist, research worker all of them are concerned with meteorological factors. Some of them are concerned with the weather for the next few hours or days, while other, with climatological factors for a long period. To fulfill this varied demands the meteorologists need the accurate observation of meteorological variables. By the help of this long observational data only the climatological records are prepared.

So to say, the present developed countries have made a rapid progress in this branch of science to develop the various fields of organisation as agriculture, horticulture, industry, air, sea and land transport and other construction works etc.

A peculiar cloud formation

Our country is also one of the developing countries on her own way. We need and seek the help and contribution of this branch of science in every field of development. The various agencies realise the necessities of climatological data, But there was no such specialised agency to solve this increasing demands from all over. So most of the agencies who are solely dependent on it, they established their stations in various parts of the country. Among them were mainly rainfall stations. These agencies used to keep all the records with themselves, so it was difficult to get the data, when some other agencies or firms were in need of them. So to keep these scattered data and to observe elements of weather and climate systematically and analyse them scientifically, as well as to solve the problems which come across this field needed a special agency and this Meteorological Service was established in 1966. Not only the establishment of a Service was sufficient to achieve the goal, without solving the problems of increasing demands of the information of weather and climate. The collection and careful analysis of data of

On way to establish a Meteorological Station

"climatic elements" such as rainfall, temperature, humidity, wind, cloud, sunshine, evaporation etc only could solve the required problem. So the Service concentrated its attention in collection of data, scattered around various sources. Many of these sources had only rainfall stations so it could collect mainly the rainfall data. Some of the stations could contribute the records for 2 to 3 years old only, other could supply for 10 to 15 years. The maximum records collected from Sundaridal are of 27 years. As concerned with temperature data, a few stations were equipped with thermometers so they could supply limited data for limited periods. No other records could be made available. We are grateful to India Meteorological Department for their valuable cooperation in collecting these data.

After collection now attention is paid towards these data to find out, what actually they reveal. In this connection, while considering the rainfall figure, obtained from the various parts of the country, one finds the influences of the topography and altitudes upon the distribution of rainfall. Mainly the country is influenced by the south-east monsoon, so most of rain falls in summer, which accounts more than 75% of the total annual amount and less than 25% of it comes in winter. In the eastern part of the country maximum rainfall occurs in summer and goes on decreasing towards the west. But in contrast the western part gets maximum of the winter rain which decreases towards the east. Thus it becomes clear that rainfall is not evenly distributed all over the country.

The next comes the temperature figure which is again controlled by altitude. It goes on decreasing from south to north. In terai region temperature is generally high, sometimes it reaches upto 44°C in summer. But towards the north temperature decreases with increasing elevations which fall below 0°C in winter and rises upto 10°C in summer in the Himalayan region. Considering the necessity of these data in various fields, the data in whatever way and form are collected are put forward now, even if continuity is not maintained.

So far as the reliability of data are concerned, it is hoped that they are sufficiently reliable, as these data are collected from various sources and this is too early to make any research work on them.

The data collected are published without much alterations and it is hoped that various agencies will be benefited by this. Suggestions from critics are always welcome and improvement is expected in future .

Temperatures are observed in Namche Bazaar

CLIMATOLOGICAL RECORDS OF NEPAL

1967 AND 1968

PREPARED BY:

Department of Hydrology & Meteorology
Ministry of Water & Power

Kathmandu
1st. Chaitra 2027
14th March 1971

H. M. G. NEPAL
METEOROLOGICAL SERVICE
Climatological Summary
PART I

HIS MAJESTY'S GOVERNMENT OF NEPAL

Ministry of Water and Power

The Honorable Minister

Nav Raj Subedi

The Honorable Assistant Minister

Chaturbhuja Prasad Singh

Secretary

Krishna Rajbhandari

Department of Hydrology & Meteorology

Act. Director

Gokul Lal Amatya

Act. Deputy Director

Janak Lal Nayava

Preface

Part I of this issue gives a Summary of the climatological data for 1967 while Part II contains a Summary of such records for 1968.

Compared with the previous publication, the present issue has been brought forward with a slight change in its presentation. The column for the mean daily temperatures has been deleted, and instead, monthly mean temperatures observed at 0840 and at 1740 Nepal Standard Time (corresponding to 0300 GMT & 1200 GMT) have been given in separate columns. Besides, the summary tables include monthly mean values for relative humidity recorded at 0840 & at 1740 NST as well.

Precipitation data of all the recording or observation stations are given under the title "Rainfall Summary" wherein these stations have been grouped together in a column, each group being headed by the corresponding (administrative) Zone to which they belong.

In the List of Stations given in the beginning of both Part I & II, each of the stations has been numbered with four figures, the first two figures being the (administrative) zonal number as specified below:

<u>Zone</u>	<u>Number</u>
Mahakali	01
Seti	02
Karnali	03
Bheri	04
Rapti	05
Dhaulagiri	06
Lumbini	07
Gandaki	08
Narayani	09
Bagmati	10
Janakpur	11
Sagarmatha	12
Kosi	13
Mechi	14

It should be mentioned that steps were taken in checking the correctness of each value.

Periods for which the data could not be obtained or their mean values were not possible to be worked out just because of the insufficient number of daily records being avail-

able, the space, as can be seen inside each square in question, has been left vacant.

A dashed (-) line, on the other hand, in any column of these tables of frequency is simply an indication that no case of that particular type of occurrence during the period could be recorded.

Mean Values marked by an "i" have been calculated out by interpolation.

In the tables under Rainfall Summary, the figure 0.0 stands for "no precipitation".

IN COVER: A map is given showing the yearly mean precipitation in mm for 5 years periods (1964-1968).

Solid dots on the map stand for the rainfall stations in Nepal.

LIST OF STATION
A-TEMPERATURE & HUMIDITY (1967)

CLIMATOLOGICAL RECORDS OF NEPAL

1969

PREPARED BY:

Department of Hydrology & Meteorology
Ministry of Water & Power

Kathmandu
7th Falgun 2028
19th February 1972

H. M. G. NEPAL
METEOROLOGICAL SERVICE
Climatological Summary
1969

Preface

The List of Stations in the present issue of Climatological Records of Nepal, is arranged in alphabetic order, containing station number , page number in the issue, geographical coordinates and date of establishment for each station published. A map, showing the network of meteorological stations in Nepal is also attached. Every station has been numbered with four figures, the first two being the (administrative) zonal number as specified below:

<u>Zone</u>	<u>Number</u>
Mahakali	01
Seti	02
Karnali	03
Bheri	04
Rapti	05
Dhaulagiri	06
Lumbini	07
Gandaki	08
Narayani	09
Bagmati	10
Janakpur	11
Sagarmatha	12
Kosi	13
Mechi	14

It should be mentioned that steps were taken in checking the correctness of each value.

Periods for which the data could not be obtained or their mean values were not possible to be worked out just because of the insufficient number of daily records being available, the space, as can be seen inside each square in question, has been left vacant.

A dashed (-) line, on the other hand, in any column of these tables of frequency is simply an indication that no case of that particular type of occurrence during the period could be recorded.

Mean values marked by an "i" have been calculated out by interpolation.

In the tables under Rainfall Summary, the figure 0.0. stands for "no precipitation".

A map showing the annual precipitation in Nepal in mm for 1969 is printed on the cover and a map showing the rainfall during the monsoon June - September 1969 can be found after the Rainfall Summary

HIS MAJESTY'S GOVERNMENT OF NEPAL

Ministry of Water and Power

The Honorable Minister	Bishnu Prasad Lohani
The Honorable State Minister	Jog Mehar Shrestha
The Honorable Assistant Minister	Janak Bahadur Shah
Secretary	Krishna Rajbhandari

Department of Hydrology & Meteorology

Act. Director	Gokul Lal Amatya
Act. Deputy Director	Janak Lal Nayava

Meteorological Stations in Nepal

CLIMATOLOGICAL RECORDS OF NEPAL 1970

PREPARED BY:

Department of Irrigation, Hydrology & Meteorology
Ministry of Food, Agriculture & Irrigation

Kathmandu
7th Falgun 2029
18th February 1973

H. M. G. NEPAL
METEOROLOGICAL SERVICE
Climatological Summary
1970

HIS MAJESTY'S GOVERNMENT OF NEPAL
MINISTRY OF FOOD, AGRICULTURE AND IRRIGATION

The Honorable Minister	Hari Bahadur Basnet
The Honorable State Minister	Upendra Bahadur Karkee
The Honorable Assistant Minister	Rameswar Prasad Shah
Secretary	Surendra Raj Sharma

Department of Irrigation, Hydrology and Meteorology

Director-General	Karna Dhoj Adhikaree
Act. Deputy Director-General	Gokul Lal Amatya
Act. Senior Meteorologist	Lochan Mani Acharya
Act. Meteorologist	Bhairab Jha

Preface

The list of stations in the present issue of climatological records of Nepal, is arranged in alphabetic order, containing station number page number in the issue, geographical co-ordinates and date of establishment for each station published. A map, showing the network of meteorological stations in Nepal is also attached. Every station has been numbered with four figures, the first two being the (administrative) zonal number as specified below:

<u>Zone</u>	<u>Number</u>
Mahakali	01
Seti	02
Karnali	03
Bheri	04
Rapti	05
Dhaulagari	06
Lumbini	07
Gandaki	08
Narayani	09
Bagmati	10
Janakpur	11
Sagarmatha	12
Kosi	13
Mechi	14

It should be mentioned that steps were taken in checking the correctness of each value.

Periods for which the data could not be obtained or their mean values were not possible to be worked out just because of the insufficient number of daily records being available, the space, as can be seen inside each squar in question, has been left vacant.

A dashed (-) line, on the other hand, in any colume of these tables of frequency is simply an indication that no case of that particular type of occurance during the period could be recorded. Mean values marked by an "i" have been calculated out by interpolation.

In the table number Rainfall Summary, the figure 0.0 stands for "no precipitation".

cont'd

A map showing the annual precipitation in Nepal in mm for 1970 is printed on the cover and a map showing the rainfall during the monsoon June-September 1970 can be found after the Rainfall Summary.

LIST OF STATION
