CHAPTER 6
EXECUTION OF PROJECT

CHAPTER 6: EXECUTION OF PROJECT

6-1 Scope of Construction Work and Period

6-1-1 Apportionment Scope of Construction Work

During its stay in Egypt, the Basic Design Study Team for the Production of High Quality Seeds Project in Egypt held discussions with the staff in charge at the Egyptian Ministry of Agriculture on the apportionment of the construction work between the Egyptian side and the Japanese side, and an agreement was reached.

(1) Site No. 1

Construction of Egyptian side: greenhouses

Preparation of the site
Clarification of connection
points for electric power
and water supply

Japanese side:

All construction aside from the foregoing; guidance in use, including trial operation

Research

Egyptian side:

Preparation of rooms for installation

Japanese side:

Installing instruments research instruments

Connection of electric power, water supply and drainage

(2) Site No. 2

Construction of

greenhouses

Egyptian side:

Preparation of site

Electric power lead-in to the site (assurance of necessary capacity)

Japanese side:

All construction aside from the foregoing; guidance in use, including trial operation

(3) Site No. 3

Construction of

greenhouses

Egyptian side:

Preparation of site

Assurance of water for irrigation

Assurance of temporary road for construction from the Delta Highway to the site

Obtaining permission for building temporary bridge across the canal

Japanese side:

Construction of greenhouses, attached warehouse and office

Installation of facilities for irrigation water

Laying of temporary road for construction

Machines for cultivation, soil sterilizer, sprayer

(4) Site No. 4

Seed cleaning facility

Egyptian side:

Removal of existing machine not in use

Removal of damaged airconditioning equipment for existing warehouse

Transfer of building under repairment

Obtaining samples of seeds for cleaning and from 10 to 100 liters each of various seeds for trial operation

Assurance up to the building of electric power of required capacity

Japanese side:

Installation of seed cleaning equipment

Installation of air-conditioning equipment for warehouse

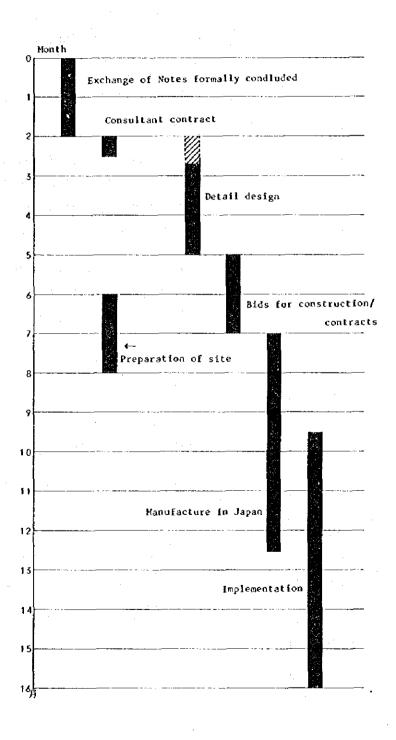

Repairment of building

Wiring for secondary electric power

Guidance in use, including trial operation

6-1-2 Construction Period

The implementation schedule of the construction plan is assumed to be as follows:

6-2 Operation and Maintenance

Implementation of this plan is divided into four locations from Site No. 1 to Site No. 4. All of them are under the direct control of the Vegetable Research Department. These facilities are being operated at the present time and the condition of operation is shown in Table 6-7. By imagining what the situation will be when the expansion of the facilities has been realized, studies have been carried out as follows:

6-2-1 Operation Plan

The plan of operation at the different sites is assumed to be as follows:

(1) Site No. 1

The present personnel will operate the greenhouses and use the machinery and tools for inspection and experiment. No additional factors are considered. The upkeeping budget for the facility is shown in Table 6-3.

(2) Site No. 2

The greenhouses will be operated directly by the personnel of the Vegetable Research Department. That is seemed to be sufficient for upkeeping the expansioned facility, when compared with the present cultivation which is shown in Table 6-7, however, an increase of personnel might be required because of the following factors:

- * Increase of work because of the rotation of crops in the greenhouse.
- * Need of personnel for maintenance and control of the temperature adjustment equipment.

It is assumed that the crops to be cultivated in the greenhouses will be selected by the personnel of the department in accordance with occasions. For reference, the estimated annual production volume of Basic Seed and the amount of Breeder's Seed and are necessary for this are shown in Table 6-1. The use of greenhouses is, in principle, for crosspolination propagated crop. Additionally the upkeeping budget for the site is shown Table 6-4.

Table 6-1 Annual Amount of Breeder's Seed and Basic Seed

	Basic seed Kg/Year	Breeder's seed Kg/Year	Amount of basic seed production Kg/10a.Year	Amount of basic seed production Kg/Green-house, Year
"Water melon	10,000Kg	14.3Kg	35Kg	11.6Kg
*Cucumber	2,000	5.3	30	9.9
*Squash	2,000	10.0	40	13.2
Tomato	1,000	0.8	25	8.3
Eggplant	25	30 g	30	9,9
Sweet pepper	250	0.5Kg	20	6.6
Okra	3,000	8.0	150	49.5
Pea	60,000	2100.0	100	33
Broad bean	2,000	80.0	100	33
Cow pea	14,000	420.0	100	33
Bean	60,000	2000.0	120	39.6
Lettuce	20	20 g	20	6.6
*Cabage	50	75 g	40	13.2
°Califlower	60	120 g	30	9.9
*Radish	1,000	4.0Kg	100	33
•Turnip	500	0.6Kg	80	26.4
°Spinach	500	6.0	100	33
°Carrot	1,000	2.8	60	19.8

Cross polinated propagation crop

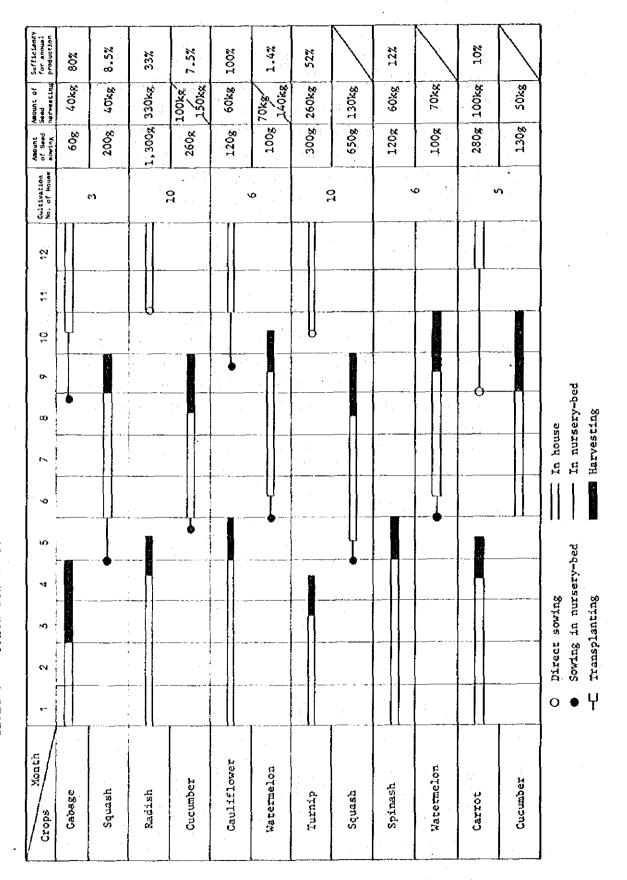

(3) Site No. 3

The greenhouses will be operated, in principle, by the present personnel but as can be seen in the following model of the rotation of crops (Table 6-2), it is necessary for planting of seeds, transplanting, growth, cultivation and other preparations to be carried out efficiently. For this, an increase of temporary personnel will be needed. The machinery for cultivation, soil sterlizer and crop sterilizer is installed for the purpose of increasing the yeild in the limited greenhouse area.

In the crops for which the greenhouses will be used, it is expected that there will be a rotation between cole herbs, which carry much danger of crossing, and other crops, but as shown symmetrically in Table 6-1, it will not be sufficient to attain the scheduled annual amount of Basic Seed.

The upkeeping budget for the facility is shown in Table 6-5.

Table 6-2 Cultivation Model for Basic Seed Production in Site No. 3

(4) Site No. 4

It is possible for the seed cleaning facility to be operated by the present personnel and there are no special factors to be added. By acquiring skill in the operation of the equipment, sufficient capability can be displayed. The upkeeping budget for the facility is shown in Table 6.6.

6-2-2 Maintenance Control

Based on the operational plan, a calculation was made of the maintenance cost of the personnel and material required for maintenance control of the facilities. Upon making a comparison with Table 6-7, which shows the present situation, it is believed that certain additions should be recognized based on this plan.

(1) Sites No.1, No.2

Since the facilities at Site No.1 and Site No.2 are directly managed by the Vegetable Research Department, they were added up together.

			(L.E.)
	Personnel Cost	Inspectors, Researcher,	
		Technician 7	23,400
		Personnel to Operate	
		Greenhouses 7	4,356
		(Sites No.1, No.2)

CHAPTER 7 EVALUATION

나는 나는 아이들은 얼마를 하는데 했다.

CHAPTER 7: EVALUATION

What effect will this project have?

In A.R. of Egypt, a high quality seed production scheme is evaluated one of the important pillars of the "General Strategy for Agriculture, Irrigation and Security 80/81-84/85" in other words, the National Five-Year Plan. This plan has however, just launched to implement. It is therefore anticipated that Japan's cooperation will provide a good stimulus for the remarkable development and improvement of vegetable horticulture in Egypt, and that the basic research data on vegetable seeds will be far accumulated through the research activities with expected Japan's Grant Aid Laboratory Equipment in Seed Technology Section, Vegetable Research Department.

(1) Facilities for Production of High Quality Vegetable Seeds

In the production of vegetables, even if seeds are of the same variety, it will offen create a problem just because the harvested quantity and quality of produce are varied by farm. As stated in the foregoing, this is a problem that can be practically ignored if high-quality seeds are employed to cultivate vegetable production. If Japan's cooperation be realized for the facilities of high-quality seed production at Dokki and Qaha, the Vegetable Research Department will produce internationally leveled breeder's and basic seeds, which would be applicable to distribute in public, under the concentrated administration inside the compounds of the Vegetable Research Department at Dokki.

The factors that will contribute to the production of high quality vegetable seeds in Egypt are:

- (1) Stabilization of productivity and increase of yield.
- (2) Enhancement of the quality of seeds.
- (3) Perfection of cultivation control.

- (4) Labor saving.
- (5) Providing materials for breeding.
- (2) Facility for Cleaning and Inspection of High-Quality Seeds

It was pointed out that whether the used seeds are good or bad would affect the harvested quantity and quality of the produce and that the distributed seeds would not be sufficient enough to meet in the international level in the country. In order to remedy the above disadvantages it will be quite timely and significant to improve following items if the up-to-date seed cleaning equipment would be installed as she requested under the Japan's grant aid prompt. The advantages to be derived from this will be:

- (1) Enhancement of the quality of seeds.
- (2) Stabilization of the supply of seeds.
- (3) Acceleration of the germination rate.
- (4) Decrease of the seed consumption amount.
- (5) Improved efficiency of cleaning work.
- (6) Operations safety in working.
- (7) Improvement of the cleaning environment.

From the above viewpoints, it can be seen that the present plan is timely and meaningful. If really come true, it will help contribute further to maintain Egypt-Japan friendship in the field of vegetable seed production.

CHAPTER 8 CONCLUSION AND SUGGESTIONS

고마일 하는 그 보고 있다. 그는 사람들은 보고 있는 것이 되었다. 그는 사람들에게 되었다. 그런 그는 사람들이 되었다. 그는 것이 없는 것을 보고 있다. 그는 그는 것이 없는 것이 없는 것이 없는 사용 선생님에 그렇게 되었다. 기를 보면 되었다면 하고 있는 것이 되었다. 그는 것이 되었다. 그 사람들이 되었다. 그 것이 되었다.

CHAPTER 8: CONCLUSION AND SUGGESTIONS

The Government of Arab Republic of Egypt, aiming at the development of the national economy, is promoting various measures. In this, agriculture holds a position of special importance. The production of vegetables plays a major role in the solution of such problems as improvement of the people's diet, food self-sufficiency and increased output of agricultural produce for export. Improvement of the production system, increase of harvest and assurance of quality are indispensable conditions. Through the basic design study this time, it is proved that the Project is the nucleus for satisfying the necessary conditions. It has been confirmed that proper operation of these facilities will improve Egypt's production of vegetable seeds to a remarkable degree, thereby proving effective in assuring Egypt's food security. It is expected that the Japanese Government will promptly carry out the measures needed for this cooperation.

This is the first time that Japanese vegetable seed production facilities will be introduced. Their operation and maintenance will require mutual understanding in regard to details. As to the manpower for the operation of the facilities, a transfer from the existing facilities is possible but Japanese guidance is being sought in the phase of operational techniques, including the skilled operation of machinery and tools.

During the discussions held by the Study Team, the Egyptian side expressed the desire for "practical training in Japan of those who will handle the production and cleaning of vegetable seeds." Together with the transfer of technology through the new facilities in Egypt, highly efficient operation and maintenance can be promoted through training conducted in Japan of those concerned with the work.

Big responsibilities will be borne by the Egyptian Government in case this plan is realized. The most important among them have been listed below. It is hoped that, on its part, the Egyptian Government will carry them out in a sincere manner.

- Preparation of the various construction sites and space for the equipment.
- 2) Speedy cooperation in arrangements for the construction plans.
- Cooperation and necessary accommodations concerning design and construction.
- 4) Priority in supply of necessary construction materials and parts.
- 5) Execution of the items to be handled by the Egyptian side.
- 6) Cooperation in promotion of the project.
- 7) Effective operation and maintenance of the facilities.
- 8) Thorough conservation and control of the facilities.

Of the foregoing, understanding is needed in regard to 7) and 8) that assuring the necessary personnel and operating funds is indispensable.

The high-quality seed produced by these Project facilities are only Breeder's Seed and Basic Seed, then the next step for Certified Seed is not included in the scope actually. But in public or private company which produces Certified Seed, it is also necessary to take enough care so as to inherit the superior character of Basic Seed. It is proper to make a technical guidance for them, and not only limiting in the seed branch but also in the stage of farmers who are in charge of vegetable production itself, as stated in the foregoing, it is important especially to be gained better understanding of the consequency and the improvable points according to the vegetable production in Egypt. To prove the Project significant it is fully important to establish the distribution structure all through the country for the vegetable production and to advance the national and farmer's profit. Finally it is strongly desired for the Government of Egypt to make effort for solving problems in the production system of vegetable and also to take a sufficient financial measure for carrying out the policy in a sincere manner.

APPENDIX

- 1. LIST OF MEMBERS OF STUDY TEAM
- 2. EGYPTIAN GOVERNMENTAL AUTHORITIES CONCERNED
- 3. ORGANIZATION OF THE MINISTRY OF AGRICULTURE, A.R.E.
- 4. ITINERARY OF STUDY TEAM
- 5. MINUTES

1. List of Members of Study Team

The Study Team, led by Mr. Takejiro Sato, Examiner of the Seeds and Seedlings Division, Agricultural Production Bureau, Ministry of Agriculture, Forestry and Fisheries, was composed of the following:

Leader	Mr. Takejiro SATO	Examiner, Seeds and Seedlings Division, Agricultural Production Bureau, Ministry of Agriculture, Forestry and Fisheries
Coordinator	Mr. Yoshihisa KONDO	Senior Project Coordinator, Grant-Aid Department, Japan International Cooperation Agency
Chief Mechanical Engineer	Mr. Hiroshi MORI	Daiken Architects & Engineers
Seed Production Specialist	Mr. Hitoshi OZAWA	Daiken Architects & Engineers
Chief Architect	Mr. Kyoichi KITAMURA	Daiken Architects & Engineers

4. Itinerary of Study Team

The Study Team conducted a survey of the basic design for 18 days from January 26, 1982. A summary of the Study Team's Itinerary follows:

Date	Day	Description
Jan. 26	Tue.	. Left Tokyo (Narita)
27	Wed.	. Arrived at Cairo.
		. Courtesy call on JICA Cairo Office: Arrangements for schedule and scope of work
		. Courtesy call on the Embassy of Japan: Explanation on schedule and Inception Report
28	Thr.	. Courtesy call on Dr. Hossary M.O.A. Arrangements for schedule and scope of work
29	Fri.	. Team Meeting: Confirmation of study items
30	Sat.	. Meeting with Dr. Nassar Vegetable Research Department, M.O.A.: Discussion on scope of the Project
		. Survey and measurement at Site No. 4, Seed Cleaning Station in Dokki
31	Sun.	. Submission of the interim report to Ambassador

. Meeting with Dr. Nassar: Discussion on technical matters

Mr. Yamazaki at the Embassy of Japan

. Survey at Site No. 2, Seed Farm in Dokki

- Feb. 1 Mon. . Survey in the City: Distribution condition of vegetable seed and collecting seed samples
 - . Survey at construction site in the City
 - . Meeting with Dr. Nassar: Discussion on technical matters
 - . Measurement of Site No. 2, Seed Farm in Dokki
 - 2 Tue. Survey at Barrage: Discussion on the feasibility of the Project experimentation in the Farm
 - . Measurement of the candidate site in Barrage
 - 3 Wed. . Meeting with Dr. Nassar: Discussion on the site evaluation
 - . Survey and measurement at Site No. 3, Seed Farm in Qaha: Discussion on the technical affair for the experimentation of the Project
 - 4 Thr. . Meeting with Dr. Nassar: Discussion on the sites evaluation and agreement with Qaha
 - . Meeting with Dr. Sherbiny, Seed Technology
 Section: Discussion on the inspection equipment
 - . Team Meeting: Discussion on the survey results
 - 5 Fri. . Cropping Survey in Delta
 - 6 Sat. . Submission on the draft of Minutes to JICA office and the Embassy of Japan
 - . Meeting with Dr. Nassar: Submission and discussion on the draft of Minutes, agreement on confirmation of contents
 - . Measurement at Site No. 1 in Dokki
 - . Team Meeting: Unification of terminology and confirmation of Site No.

- Feb. 7 Sun. . Meeting with Dr. Hossary: Submission on the draft of Minutes, agreement of sites evaluation and contents of Minutes
 - 8 Mon. . Receiving check copy of Minutes at M.O.A.
 - 9 Tue. . Minutes signed by Dr. Nassar and Mr. Sato attested by Dr. Hossary
 - 10 Wed. Left Cario
 - . Arrived at Frankfurt
 - 11 Thr. , Left Frankfurt
 - 12 Fri. . Returned to Tokyo

5 MINUTES

MINUTES OF THE DISCUSSIONS

FOR

HIGH-QUALITY SEED PRODUCTION PROJECT IN THE ARAB REPUBLIC OF EGYPT

In response to a request of the Government of the Arab Republic of Egypt for technical assistance of the basic design study on the high-quality seed production project in Egypt, the Government of Japan sent a study team headed by Mr. Takejiro SATO, Examiner, Seeds & Seedlings Division, Agricultural Production Bureau, Ministry of Agriculture, Forestry and Fisheries to Egypt to implement a basic design study from January 27 to February Io, 1982.

The team has held a series of discussions, conducted the field survey, and exchanged views with officials of the Government of Egypt for the high-quality seed production project in Giza, Dokki, Kaha, Egypt.

As a result of the study and the discussions, the Japanese team and the Ministry of Agriculture agreed that the team will complete the final report and submit it to the governments for further study of the implementation of the Project.

The leading issues in the minutes having been confirmed by the Egyptian and Japanese counterparts, are explained in the annexes attached herewith.

In confirmation of mutual agreement, both parties fix our signatures.

Cairo, February 9, 1982.

Juged Hassan Masaar

Dr. Sayed Hassan Nasaar

Under-Secretary for Horticulture & Vegetables

T. Sato

Mr. Takejiro Sato Leader, Japanese Basic Design Study Team.

- Minolandhomer's

Dr. Eng. Ali M. El Hossary Under-Secretary for Engineering Affairs MOA.

ANNEX I

- 1. The objectives of the project are to produce high-quality seeds for public and private companies in which certified seeds are to yield for distributing them to the farmers (1) by modernizing vegetable seed cleaning units at the Vegetable Research Department, Ministry of Agriculture, Giza and Dokki in Cairo, and (2) by improving vegetable seed production units at Dokki in Cairo and Qaha, Kalubia, Egypt.
- 2. The Government of Egypt removing the various existing cleaning equipment, very old-fashioned (50 years old) and partially broken, inside the workshop in the premises of the Horticulture Institute, Ministry of Agriculture, Giza, Cairo, Egypt, a new cleaning unit for various vegetable seeds is to be installed with the capacity of 150 tons per year.
- 3. A set of the cleaning laboratory equipment is to be installed at the unfurnished two lab. rooms of the Vegetable Research Department, Ministry of Agriculture at Dokki, Cairo.
- 4. Vegetable production units for basic seeds are to be installed at suitable locations, namely, air-conditioned lab-size glass houses with partitions and temperature-control glass houses at Dokki, Cairo, and also large-size plastic houses at Qaha, Kalubia, Egypt as illustrated in ANNEX II.
- 5. The Vegetable Research Department, Ministry of Agriculture shall be responsible for the management and operation of the facilities/equipment.
- 6. The outlined description of the facilities/equipment is shown in ANNEX III.
- 7. The Ministry of Agriculture confirmed that the plan and scale of the facilities may have to be adjusted corresponding to the grant-aid budget to be allocated by the Government of Japan.

Cont/d

Hassar Tis

- 8. The team will describe in the study report including detailed function, size, quantity and specifications of facilities and equipment which are considered to be most suitable for the project.
- 9. The Government of the Arab Republic of Egypt shall take at its own expenses, necessary measures;
 - 1) To secure land suitable for establishing facilities and installing equipment,
 - 2) To clear and level the site, workshop, and laboratory, if necessary, before the commencement of the construction/installation of the facilities/equipment and to provide to the site, workshop, and laboratory, electricity, water supply, telephone, and any other incidental facilities necessary for the construction, installation, and operation of the facilities/equipment,
 - 3) To obtain in advance all licences or permit required by the provinces/any other authorities for building facilities/installing equipment, if any,
 - 4) To ensure prompt unloading and customs clearance at the port of entry in Egypt and the internal transportation of materials and equipment to their respective site,
 - 5) To provide all expenses and manpower necessary for the operation and maintenance of the facilities/equipment,
 - 6) To exempt Japanese personnel concerned from taxes, duties, and any other charges & fees which may be imposed on the personnel and any equipment & materials entered into the Arab Republic of Egypt for the purpose of carrying out the services in connection with construction/installation of the facilities/equipment.

Namar T.S

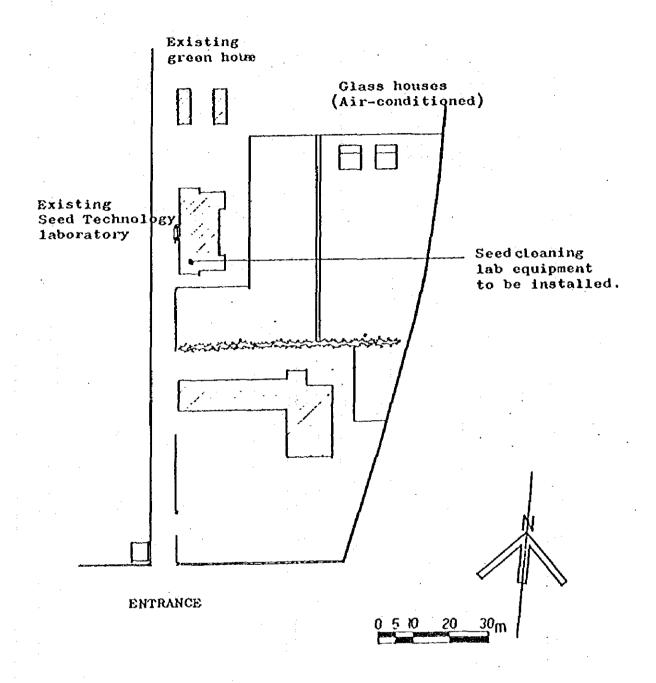

ANNEX II

- 1. Glass houses with partitions (air-conditioned)
 for breeding sophiscated basic seeds in the
 premises of the Vegetable Research Department,
 Ministry of Agriculture at Dokki, Cairo.
- 2. Glass houses with partitions (temperature-controlled) for breeding simple basic seeds in the premises of the Vegetable Research Department, Ministry of Agriculture at Dokki, Cairo.
- 3. Large-size plastic houses (fixed type) for multiplying basic seeds at Qaha, Kalubia, Egypt.

Each plan is attached herewith in separate paper.

4. Suitable fam machinenes and tools und metalite preparation and plant protection as well as neit stendinger.
