DETAIL DESIGN SURVEY TEAM
FOR
THE PROJECT OF THE CENTER FOR DEVELOPMENT OF APPROPRIATE AGRICULTURAL ENGINEERING TECHNOLOGY (C.A.A.E.)
(ATA-220)

12th September, 1988

Dr. Ir. A. Muin Pabinru
Director General of Food Crop Agriculture,
Ministry of Agriculture

Dear Sir,

Re: The model infrastructure work for the Project of the Center for Development of Appropriate Agricultural Engineering Technology (ATA-220)

We, the Detail Design Survey Team, have been organized by JICA for the purpose of promoting infrastructure improvement work which is as stipulated in the clause V of the Annex of the Attached Document to the Record of Discussions between the authorities concerned of the Government of Japan and the Government of the Republic of Indonesia on the Japanese Technical Cooperation for the Project of the Center for Development of Appropriate Agricultural Engineering Technology (AT-220) signed on 7th February, 1988.

The Team has, so far, made a series of site reconnaissances and discussions with your staff concerned in order to fix and determine the scales and sizes of expected facilities.

We would like to hereby confirm the matters which were mutually understood and agreed through discussions and site reconnaissances as per the attachment.

In accordance with the above confirmed items, we will proceed with your staff to further field surveys and investigations at the site and to make the detail design on the basis of the result of those surveys, though some revisions might be necessary in relation with costs incurred. After the completion of detail design and assessment of its costs estimated by JICA, you will be informed its result through the JICA Indonesia office.

Further, for the timely commencement of the construction we would like to request you to take the necessary formalities in due consultation with the JICA Indonesia office.

Lastly, we would like to appreciate for kind cooperation of your staff during the survey work.

Sincerely yours,

M Irie

MICHIO IRIE

FIELD REPORT OF THE JICA EXPERTS
(Information of Outline on Construction Work)

I. Introduction

This Report was prepared in accordance with the attached documents (outline of the schedule on the project) of our letter dated 12th September, 1988. This presents an information of outline on the construction work for infrastructure improvement for the Center for Development of Appropriate Agricultural Engineering Technology.

During the Team's stay in Indonesia, it made a series of field surveys, investigations and discussions with Indonesian and Japanese staff concerned. The Team, so far, made rough design on the basis of the result of those surveys and discussions as will be stated hereinafter.

In accordance with the rough design, the detail design will be made in Japan. After the completion of detail design and assessment of its costs estimated by Japan International Cooperation Agency (JICA), the Government of the Republic of Indonesia will be informed its result through the JICA Indonesia office.

It is noted that views and opinions of personnel concerned were reflected in the process of the determination-making on the location and scale of the facilities.

II. On-farm Development

1) The area which can be used for agricultural purpose is approximately 2.9 ha, which can be categorized into two, existing upland field with approximately 1.6 ha located on the south of the existing road, and newly developed field with approximately 1.3 ha situated in the north of the said road.

   The former is not proposed to be graded since irrigation will not be made by gravity. The latter is further divided into two, the upland field with 0.8 ha and wetland (rice) field with 0.5 ha. Both fields of the

latter will be levelled because irrigation will be performed by gravity or by ponding water.

2) Three types of road are proposed to be constructed. One is asphalt paved road which is facilitated to access the structures to be constructed such as carwash, warehouse, office, etc. This road is designed to be 5 m wide. The other two are designated as farm road which will be constructed to access each farm lot. Two types of farm road are proposed to be provided according to the intensity of traffic. One is 5 m wide and the other is 3 m wide. The 5 m wide road will be paved with gravel.

III. Irrigation and Drainage Facilities

1) A deep well will be drilled near the existing water tank to supply water to all the field lots. The well will be approximately 200 m deep. The well will be equipped with a submergible motor pump to lift up water to the said tank. The water stored in the tank will be boosted by another volute pump which will be connected with PVC pipeline that conveys water to each field lot. The pipeline will be equipped with hydrants. To operate the two pumps electric wires will be furnished from the control panel located in the existing laboratory and testing.

Deep well		
- Depth	:	Approx. 200 m
Submergible motor pump		
- Total pump head	:	80 m
- Capacity	:	330 liter/min.
Volute pump		
- Total pump head	:	25 m
- Capacity	:	500 liter/min
PVC pipeline		
- Length	:	480 m
- Diameter	:	ø 3"
Steel pipe		
- Length	:	52 m
- Diameter	:	ø 3"
- Hydrant	:	15 nos.
- Air valve	:	2 nos.
Electric wire		
- Length	:	Approx. 450 m

2) Drainage canals will be excavated to collect excess water. The water collected by the canals will be drained into five pits which will be excavated in the low lying area. The design is made to drain water of 100 mm/day.

IV. Other Facilities to be provided in the Center.

Water tightness test pit	:	4 m x12 m
Warehouse	:	8 m x20 m
Office	:	8 m x 4 m
Carwash	:	8 m x 8 m

Dr. Ir. A. Muin Pabinru
Director General of Food Crops Agriculture,
Ministry of Agriculture

Dear Sir,

Re: The model infrastructure work for the Project of the Center for Development of Appropriate Agricultural Engineering Technology (ATA-220)

This is to inform you that the Detail Design Survey Team organized by JICA which came to Indonesia for the purpose of promoting infrastructure work of the Center for Development of Appropriate Agricultural Engineering Technology (AT-220) will terminate its assignment in Indonesia on 1st October, 1988.

During the Team's stay in Indonesia, it made a series of field surveys, investigations and discussions with your staff concerned. The Team, so far, made rough design on the basis of the result of those surveys and discussions as per the attachment.

In accordance with the rough design, the detail design will be made in Japan. After the completion of detail design and assessment of its costs estimated by JICA, you will be informed its result through the JICA Indonesia office.

It is, however, noted that some revisions might become necessary during the course of detail design in relation with cost incurred.

Further, for the timely commencement of the construction we would like to request you to take the necessary formalities in due consultation with the JICA Indonesia office.

Lastly, we would like to appreciate kind cooperation of your staff during the survey work.

Sincerely yours,

M Irie

7.4 Itinerary of the Short-term Experts

ITINERARY OF THE DETAIL DESIGN SURVEY TEAM

Date			Activity
Aug.	24	(Wed)	Arrival at JKT from TYO by GA-873
Aug.	25	(Thu)	Visit to JICA JKT, CP Experts and CDAET
Aug.	26	(Fri)	Collecting Data in JKT, preparation for Topographic Survey
Aug.	27	(Sat)	Preparation for Topographic Survey in JKT
Aug.	28	(Sun)	Establishment of Work Schedule in JKT
Aug.	29	(Mon)	Preliminary Meeting with Japanese Experts, Reconnaissance Survey at CDAET
Aug.	30	(Tue)	Traverse Survey at CDAET
Aug.	31	(Wed)	Traverse Survey and Result Arrangement, Preparation of Mesh-Level Survey at CDAET
Sept.	1	(Thu)	Mesh-Level Survey at CDAET
Sept.	2	(Fri)	-do-
Sept.	3	(Sat)	-do- Plane Table Survey at CDAET
Sept.	4	(Sun)	Plane Table Survey at CDAET
Sept.	5	(Mon)	Preparation of Basic Layout at CDAET
Sept.	6	(Tue)	Data collection of Deep Well at IRIGASI-II in JKT, Internal Meeting on Basic Layout at CDAET
Sept.	7	(Wed)	Meeting with Japanese Experts of CDAET on Basic Layout, Rearrangement of Layout
Sept.	8	(Thu)	Data Collection of Construction Cost at Construction Guidance Service Center in Bekasi, at PU and at JICA in JKT
Sept.	9	(Fri)	Preparation of Layout and Basic Plan of Work, Meeting on Layout with Indonesian Staff of CDAET
Sept.	10	(Sat)	Basic Design, B/Q of Architectural and Electrical Structures, Study on Unit Price
Sept.	11	(Sun)	-do-
Sept.	12	(Mon)	Data Collection of Deep Well, Unit Price at PU, DKI, IRIGASI-II in JKT, Interview with General Contractors and Pump Makers

Date			Activity
Sept.	13	(Tue)	Discussion on Work Progress at CDAET, Collecting Data at JICA in JKT
Sept.	14	(Wed)	Work Volume Calculation at CDAET
Sept.	15	(Thu)	-do- Bearing Capacity Survey at CDAET
Sept.	16	(Fri)	Data Collection of Price for Pump in JKT
Sept.	17	(Sat)	Data Collection of Unit Price in JKT, Study on Unit Price and Work Volume Calculation at CDAET
Sept.	18	(Sun)	Study on Unit Prices and Rough Estimation of Work Quantity at CDAET
Sept.	19	(Mon)	Interview with General Contractor at JKT, Submission of "Basic Plan of Work" at CDAET
Sept.	20	(Tue)	Preparation of General Layout
Sept.	21	(Wed)	Soil Investigation at CDAET. Visit to Embassy of Japan
Sept.	22	(Thu)	Visit to Directorate of Food Crops Production Development Unit Price Survey in JKT
Sept.	23	(Fri)	Unit Price Survey in JKT, Work Quantity Estimate at CDAET
Sept.	24	(Sat)	Unit Price Survey and Collected Data Arrangement in JKT
Sept.	25	(Sun)	Preparation of Field Report of the Experts at CDAET
Sept.	26	(Mon)	Unit Price Survey in JKT, Preparation of "Field Reports of the Experts" at CDAET
Sept.	27	(Tue)	Rough Estimate of Construction Cost at CDAET
Sept.	28	(Wed)	Preparation of "Field Report of the Experts", Rough Estimate of Construction Cost at CDAET
Sept.	29	(Thu)	Preparation of "Field Report of the Experts" at CDAET
Sept.	30	(Fri)	Meeting with staff of CDAET on "Field Report of the Experts", modification and submission of the Report
Oct.	1	(Sat)	Visit to JICA JKT and other persons concerned, Departure to TYO by GA-872
Oct.	2	(Sun)	Arrival at TYO

ANNEX B STRUCTURAL CALCULATION SHEETS OF PIPELINES

-- for Steel Pipe --

dx1: Deflection due to long term load

dx2: Deflection due to short term load

M : Maximum bending moment due to outer pressure

dx : Total horizontal deflection

-- for Reinforced Concrete Pipe --

P1 : Horizontal load at pipe top

P2 : Horizontal load at pipe bottom

Pc : Breaking or cracking outer pressure in case of zero inner pressure

Hc : Breaking or cracking inner pressure in case of zero outer pressure

Ph : Outer pressure

Do : Nominal diameter of pipe

D : Inner diameter of pipe

Dc : Outer diameter of pipe

T : Thickness of pipe

R : Mean radius of pipe

Wp : Self weight of pipe

Ws : Unit weight of soil

Φ : Angle of internal friction

B : Excavation width at pipe top

T-9: 9 ton truck load / D-11: 11ton bulldozer

K : Rankin's coefficient of earth pressure

e' : Soil coefficient of passive resistance

rsd: Settlement ratio

p : Projection ratio

C : Coefficient of earth pressure for design

Cd : Coefficient of earth pressure for ditch type

Cc : Coefficient of earth pressure for projection type

H : Depth to pipe top from surface of backfill or embankment

He : Depth to pipe top from isometric settlement plane

Wv : Vertical earth pressure

Pv : Horizontal earth pressure

M1 : Maximum bending moment due to long term load

i : Shock factor

α : Vertical load factor due to truck load

Ww : Vertical load due to truck load

Pw : Horizontal load due to road surface load

M2 : Maximum bending moment due to short term load

H1 : Allowable hydrostatic pressure

H2 : Allowable water hammer pressure

$j = \frac{7}{8} \times 28 = 24.5\ cm$

$\tau = 2310 / 96 \times 24.5 = 0.98 < 6.0$ O.K

必要鉄筋周長

$\psi = 2310 / 10.8 \times 24.5 = 8.7\ cm$

Φ9 使用なら ($\psi = 2.83\ cm$)

$@ = 96 / 8.7 / 2.83 = 31.2\ cm$

必要鉄筋断面

$a_t = 117 / 1.6 \times 24.5 = 2.98\ cm^2$

$@ = 96 / 2.98 / 0.64 = 20.6\ cm$

9. 地震力の検討

地震加速度 $a_t = k_i \cdot k_d \cdot k_t$

∴ $a_t = 0.1$

k_i ; 高さ係数 = 0.1
k_d ; 地域係数 = 1.0
k_t ; 地盤係数 = 1.0

(1) X方向 (Ⓐ～Ⓓ列) はレンガ壁が耐震壁として働くものとする。
(2) ①, ②, ⑦ 列フレームもレンガ壁が耐震壁として働くものとする。
(3) ③～⑥ フレームのY方向について検定する。

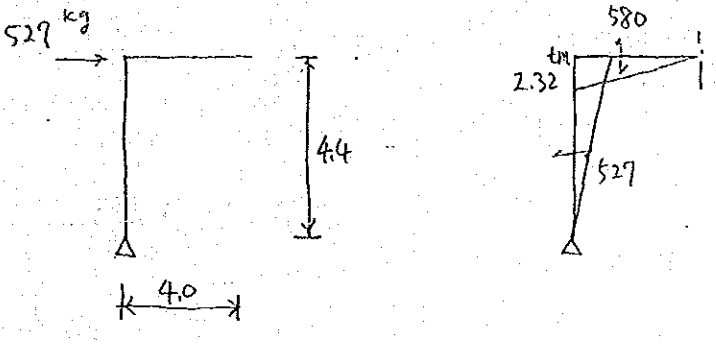
L.L. はないものとする。
柱高の半分が地震対象荷重とする。

Ⓐ-③柱について検討

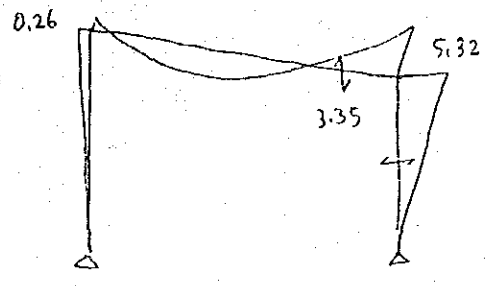
W ; C2 $0.26 \times 0.4 \times 2.4 \times (2.8 + 0.6) \times 1/2 = 0.424$
B1 $0.25 \times 0.5 \times 2.4 \times 4 = 1.248$
B3 $0.2 \times 0.3 \times 2.4 \times 4 = 0.576$
レンガ壁 $0.46 \times 4 \times 1.3 = 2.392$
屋根 $0.02 \times 4 \times 5 = 0.400$
$0.00996 \times 1/0.85 \times 4 \times 5 = 0.234$
$5.274\ t$

水平力 $H = 5.274\ t \times 0.1 = 527\ kg$

簡略のため高さ均一のフレームとする、平均高 $h = 4.4$



長期との合成応力図



B_1 の検定

$M = 5.32^{tm}$　　$Q = 3.35^{t}$

$a_t = 532 / 2.4 \times 40.3 = 5.5^{cm^2} \rightarrow 3-D16$

$\tau = 3350 / 26 \times 40.3 = 3.2 < 12$　O.K

C_2 の検定

$M_t = 5.32^{tm}$

P_t ；　波形スレート　$20^{kg/m^2} \times 4 \times 5 = 400$

母屋　L-75×75×6　$9.96^{kg/m} \times 1/0.85 \times 4 \times 5 = 234$

コンクリート梁　$0.26 \times 0.5 \times 2.4 \times 4 = 1.248$

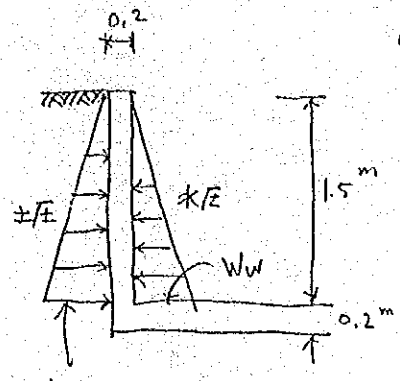
$0.2 \times 0.3 \times 2.4 \times 4 = 0.576$

$P_t = 2.458^{t}$

$\frac{P_t}{bD} = 2458 / 1040 = 2.4$　$\frac{M_t}{bD^2} = 532000 / 41600 = 12.8$

$p_t = 0.63\ \%$,　$a_t = 1040 \times \times 0.0063 = 6.6^{cm^2} \rightarrow 3-D16$

WATERTIGHTNESS TEST PIT



$j = \frac{7}{8} \times 13 = 11.4$ cm

(1) 水が満水で土圧がない場合を想定

$W_w = 1.5$ t/m²

$M = \frac{W_w l^2}{6} = \frac{1.5 \times 1.5^2}{6} = 0.56$ tm

$a_t = 56 / 1.6 \times 11.4 = 3.1$ cm² → 3 - D13

(2) タンクが空で土圧がかかる場合

土の単位重量 $w_s = 1.8$ t/m³ (想定)

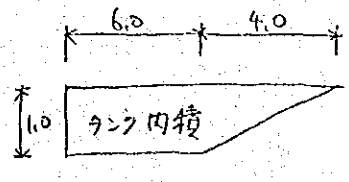
土の主働土圧係数 $K_a = 0.5$ (仮定)

主働土圧力 $P_0 = 1.8 \times 0.5 = 0.9$ t/m²

水圧の場合と同じ.

(3) 浮力に対する検討

タンクが空で, 地下水位が GL-500 と想定



浮力 $= 6.2 \times 4.4 \times 1.2 + 4.3 \times 4.4 \times 1.2 \times 1/2 = 44.1$ t

タンク躯体重量

V: $0.2 \times 4.4 \times 12.7 = 11.18$

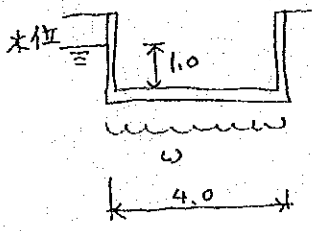
$0.2 \times 1.5 \times (6.1 + 6.1 + 4.2) = 4.92$

$0.2 \times 1.5 \times 6.0 \times 1/2 \times 2 = 1.8$

19.9 m³

$W = 19.9 \times 2.4 = 60.9$ t > 44.1 O.K

タンク底スラブの検討



端部の支持状態を半固定と考える.

$M = \frac{wl^2}{10} = \frac{(1.2 - 0.2 \times 2.4) \times 4^2}{10} = 1.15$ tm

$a_t = 115 / 1.6 \times 11.4 = 6.3$ → 6 - D12
