#### 6.2 Appropriateness of the Project Implementation

The Implementation of the Project for the Road Improvement and Maintenance in Dar es Salaam City, consisting of the Improvement of Road Structures for five packages of roads, in which the improvement measures are consisting Widening of Arterial Roads and Overlay and Reconstruction of Area Roads, and Urgent repair of Pot-holes for the selected roads, is expected to achieve the various social and economic effects described in 6.1.

Total number of population that will benefit directly from the implementation of the Project is estimated to be 540,000 people or 40% of the whole population of Dar es Salaam City(1.3 million). Area that will benefit from the Project would cover the whole urban and unurbanized area of the City.

Despite these positive achievements of the project implementation, however, it will be difficult for the Government of Tanzania to independently implement the whole projects due to financial constraints.

Therefore, the provision of Japanese grant aid for the Project is deemed appropriate. The size and contents of the Project indicated as a result of the Basic Design Study are also deemed appropriate in terms of the project size for Japanese grant aid cooperation and the contents of the original Tanzanian request basically.

From the viewpoints of the existing National Development Plan of Tanzania, the contents requested by Tanzania, the level of improvement, the implementation plan and the maintenance plan, the size and contents of the Project indicated as a result of the Basic Design Study are also deemed appropriate.

## APPENDICES

- 1.1 Organization of Basic Design Study Team
- 1.2 Itinerary of the Study
- 1.3 Minites of Discussions on the Draft Final Report

## Minutes of Discussions for Draft Final Report

Date : December 11, 1990

: Conference Room of Planning

Commission

化转换换电子 医皮肤 医动物病

In responce to the request of the Government of the United Republic of Tanzania (hereinafter referred to as the Government), the Government of Japan decided to conduct a Basic Design Study on the Project for Road Improvement and Maintenance in Dar es Salaam(hereinafter referred to as the Project), and entrusted the study to the Japan International Cooperation Agency (hereinafter referred to as JICA which is an official agency implementing the economic cooperation of the Government of Japan). JICA has prepared a Draft final Report on the Basic Design Study and sent the Study Team headed by Mr. Kotarou NAGASAWA, Chief of Road Survey, Road Division, Chubu Regional Construction Bureau. Ministry of Construction, to the United Republic of Tanzania from December 3, 1990 to December 21, 1990.

The team had a series of discussions on the Draft Final Report and The Government of Tanzania has agreed and accepted in principle the components of the Report.

The major points of understanding reached between them as shown below.

#### 1. TITLE OF THE PROJECT

The title of the Project is the "Road Improvement and Maintenance in Dar es Salaam".

#### 2. OBJECTIVES OF THE PROJECT

The objectives of the Project are to improve existing road structures by overlay, reconstruction and widening to maintain the function of the road network in Dar es Salaam City.

#### 3. EXECUTING AGENCY

The executing agency of the Project is the Dar es Salaam City Council(DCC).

#### 4. THE PROJECT

The Project consists of three categories of improvement measures, namely Category A "Improvement of Road Structures", Category B "Urgent Repair of Selected Roads" and Category C "Improvement of Road Maintenance". Category A is further divided into five (5) contract packages as shown below: (Project Location Map is attached in Appendix 1)

- (1) Category A "Improvement of Road Structures" (86.3 km in total)
  - Lot No. A-1: New Bagamoyo/Upanga Roads (9.8 km)
  - Lot No. A-2: Morogoro Road (5.7 km)
  - Lot No. A-3: Chan'gombe Area Road (19.2 km)
  - · Lot No. A-4: Kariakoo Area Road (31.6 km)
  - Lot No. A-5: Central Area Road (20.0 km)
- (2) Category B "Urgent Repair of the Following Three(3)
  Roads"
  - Lot No. B-1: Morocco, Kinondoni and Mwinjuma Roads
- (3) Category C "Improvement of Road Maintenance System"
  - Lot No. C-1: Provision of Equipment (Sum)

M

600

#### Note:

- (1) The roads to be improved are subject to the result of cost review on the feasibility study report as well as the conditions of Japan's Grant Aid Programme. The final figure of the road to be improved will be presented in the Final Report of the Basic Design Study which is scheduled to be submitted at the end of March. 1991.
- (2) Reconstruction of pavement of New Bagamoyo Road beyond Morocco Road shall be designed taking into consideration the possible future planning of dual carriageway.
- (3) Necessary and appropriate equipment to be provided under Category C shall be determined by the Team on the result of the Basic Design Study.

### 5. IMPLEMENTATION SCHEDULE OF THE PROJECT

The Project will be implemented in line with the procedure and conditions of Japan's Grant Aid System. The tentative implementation schedule is presented in Appendix 2.

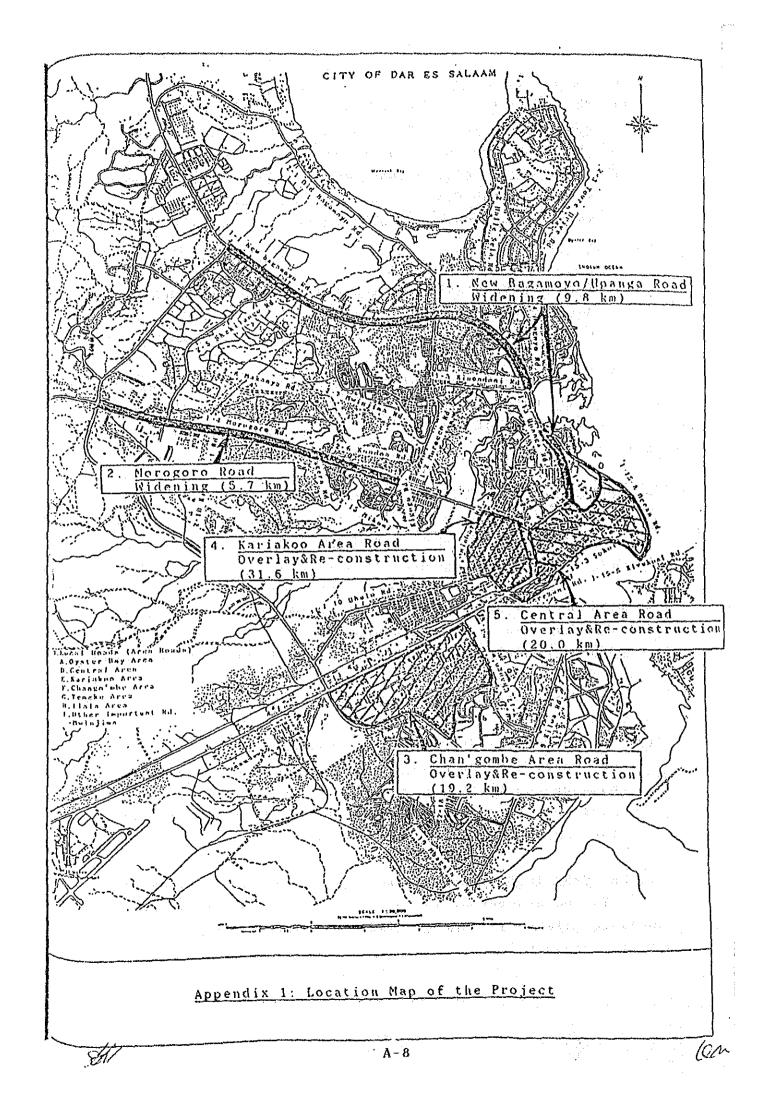

#### 6. SYSTEM OF JAPAN'S GRANT AID PROGRAMME

- (1) The Tanzania side has understood the Japan's Grant Aid System, which include the principle for use of Japanese consulting firm(s) and a Japanese general contractor and /or firm for the implementation of the Project.
- (2) The Tanzania side will ensure the necessary budget and personnel for the proper and effective operation and maintenance of the requested road structures on condition that the Japan's Grant Aid should be extended to the Project.
- 7. MEASURES TO BE TAKEN BY THE GOVERNMENT OF TANZANIA

  The Government of Tanzania will take the necessary
  measures listed in Appendix 3 for the smooth implementation
  of the Project.

6m

A - 9

## Appendix 3: Necessary Measures to be taken by the Government of Tanzania

- To provide data and information necessary for detailed design of the Project.
- 2. To secure, clear, level and reclaim land aquisition and house compensation necessary for the execution of the Project prior to commencement of construction by the contractor and thereby report to the Japanese side.
- 3. To relocate and/or to protect the existing public utilities, such as telephone cable, electric pole and wire, water main etc and thereby report to the Japanese side.
- 4. To ensure prompt unloading, custom clearance and internal transportation of imported materials, equipments and vehicles for the execution of works at the port of disembarkation in Tanzania.
- 5. To exempt any equipment, materials and supplies brought into and/or purchased in Tanzania in connection with the implementation of the project from any tax, duties and levies which are imposed in Tanzania.
- 6. To exempt Japanese nationals engaged in the Project from custom duties, internal taxes and other fisical levies which may be imposed in Tanzania with respect to the supply of the products and services under the verified contracts.
- 7. To accord Japanese nationals whose services may be required in connection with the supply of products and services under the verified contracts the visas, permisions and licences necessary for their entry into Tanzania and stay therein and for performance of their works.

A-10

- 8. To bear all commissions to the Japanese foreign exchange bank for the banking services based on the Banking Arrangement(B/A), in accordance with Japan's Grant Aid procedure.
- 9. To bear all expenses necessary, other than those to be born by the Grant Aid, in connection with the implementation of the Project.
- 10. To maintain and use properly and effectively the facilities constructed and equipment provided under the Grant Aid.

#### 1.4.1 Questionnare for Basic Design Study and its' Answers

#### Basic Design Study

o n

Road Improvement and Maintenance in Dar es Salaam

Main objectives of the Basic Design Study are to confirm the following subjects which have been prepared on the basis of the Basic Design Study Report, through discussion between the Team and the Government of Tanzania and/or agencies concerned:

1. To confirm the priority project to be implemented under this Project. The following is the improvement measures proposed by the Government of Japan to be implemented in this Project. (See Appendix 1)

#### - Category A: Improvement of Road Structures

Lot No. A-1: New Bagamoyo/Upanga Road L= 9.8 km

Lot No. A-2: Morogoro Road L= 5.7 km

Lot No. A-3: Chan'gombe Area Road L=19.2 km/\*

Lot No. A-4: Kariakoo Area Road L=31.6 km/\*

Lot No. A-5: Central Area Road L=20.0 km/\*

Total L=86.3 km

#### - Category B: Urgent Repair of Pot-holes

Lot No. B-1: Urgent Repair of Pot-holes for Selected Road Total  $L=204\ km$  approx.

#### Note:

- (1) The road length of the Area Road is subject to the result of cost review as well as the conditions of the Japan's grant aid system.
- (2) The following two(2) items of improvement measures proposed in the feasibility study were excluded from the scope of this Project in view of relatively low significance and lack of satisfaction of prerequisites respectively.
  - Improvement of Muwinjuma Area Road proposed in Category A.
  - Improvement of Maintenance System in Category C

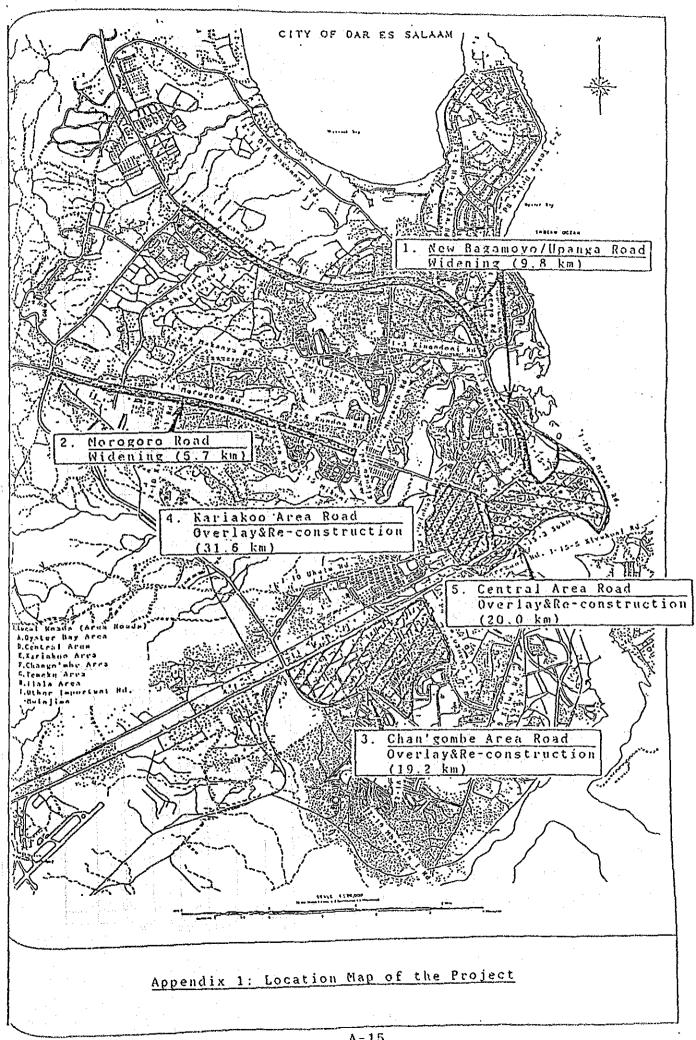

- 2. To confirm the tentative Implementation Schedule proposed by the Team which has been made taking account of the conditions of Japan's grant aid programme. (See Appendix 2)
- 3. To confirm the government of Tanzania to allocate the necessary local budget required for the implementation of Project.
- 4. To confirm the establishment of the Project Office in charge and the executing agency responsible for this Project and its organization.
- 5. To confirm the government of Tanzanian, at his own cost, to remove and relocate the existing utilities and houses, if any, such as, water mains, telephone cable and line, electric line and street column.
- 6. To confirm the government of Tanzania to compensate the cost required for land acquisition and removal of the existing buildings and houses which might be afected by the construction of Project. It is noted that there are temporary buts and sheds illegally build within the road reserve along the Morogoro Road, so that they must be demolished before starting the construction of the Project.
- 7. To confirm the undertakings of the government of Tanzania for the implementation of the Project. (See Appendix 3)
- 8. To explain the Japanese Grant Aid Programme and System to Tanzanian Government in connection with the procurement of Japanese consultant's firm and Japanese general contractor for the implementation of the Project.

## Collection of Data and Information Renigred for Basic Design Study

The Team request the government of Tanzania to provide the following data and information which will be utilized for review of the feasibility study made by JICA in March. 1989 through July, 1990.

- 1. To collect the current price data required for review of cost estimate taking into account the devaluation of the Tanzanian Shillings on December, 1989,
  - Materials cost: fuel and oil, fine and coarse aggregates, cement, timber, plywood, concrete pipe, coral stone, etc.
  - Labour cost : forman, mechanic, operator driver, skilled labour, common labour, etc.
- 2. To collect information and detailed drawings of the existing public utilities and houses, which might be affected by the construction the Project.
  - (1) Location. Dimension and Length of Public Utilities along New Bagamoyo, Upanga and Morogoro roads:
    - Water mains
    - Telephone cable
    - Electric line and column
    - ~ Street Lighting Column
    - Street trees
  - (2) Location, Dimension and Numbers of Building and Houses along Morogoro Road
    - Type A (house built of concrete)
    - Type B (house built of bricks)
- 3. To collect the latest information in connection with the new infrastructures projects to be implemented in the near future, which might be affected by the construction of the Project:
  - (1) Improvement of Tele-communication System in Dar es Salaam
  - (2) Improvement of Water Supply System in Dar es Salaam

Appendix 5.4(1) Alternative Study on Pedestrian Bridge at Manzese

Items of	Alternative 1	Alternative 2
Evaluation	PC Hollow Slab	Metal Plate Floor
1. Project Cost	46,300 Million	47,300 Million
- Super Structure	(34,500)	(40,800)
- Sub Structure	(11,800)	(6,500)
2. Workability	Stagings required for	No staging works are
	construction of the	required.
	super-structure will	
	interefere with pub-	
	lic traffic.	
3. Maintenance	Maintenance cost is	Painting is required
	very small.	at every 7 years.
4. Aethetic View	Excelent	Good
5. Technology Trans- fer	New technology	Ordinary technology
6. Conclusion	The Study Team recomm	endes PC Hollow Slab
	Bridge from the view	point of construcion
	and maintenance costs	as well as aethetic
	aspect and technology	transfer.

Alternative 1: Prestressed Concrete Hollow Slab Bridge

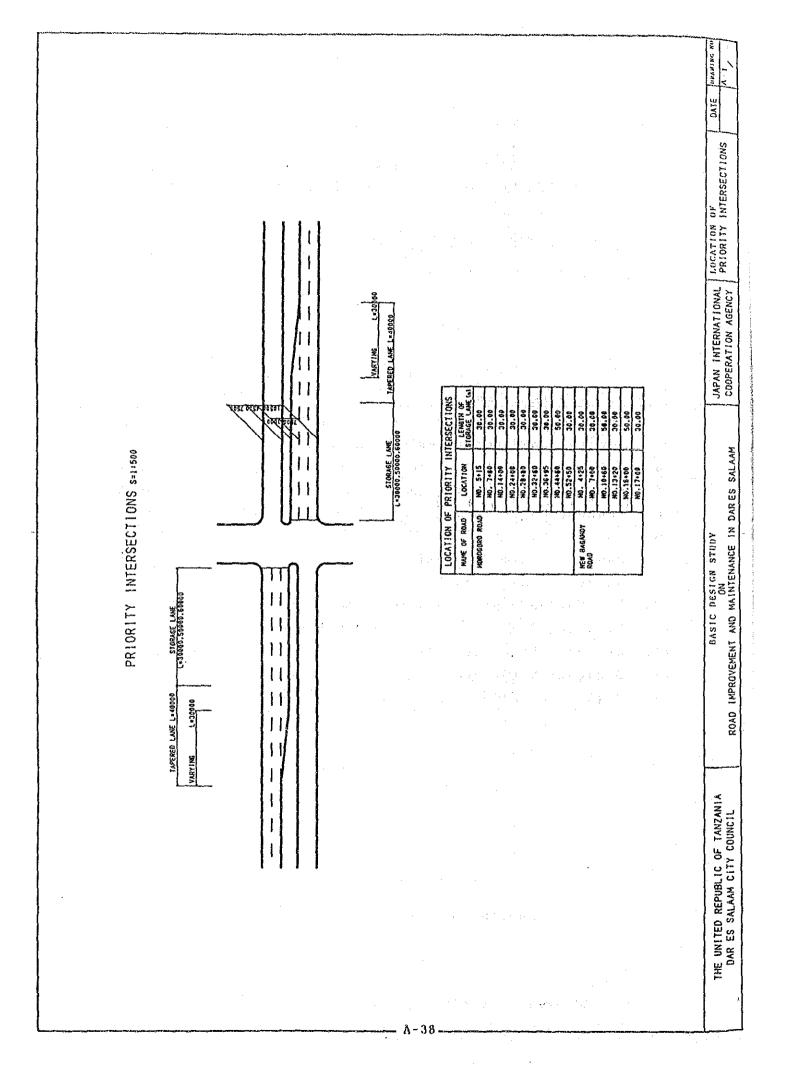

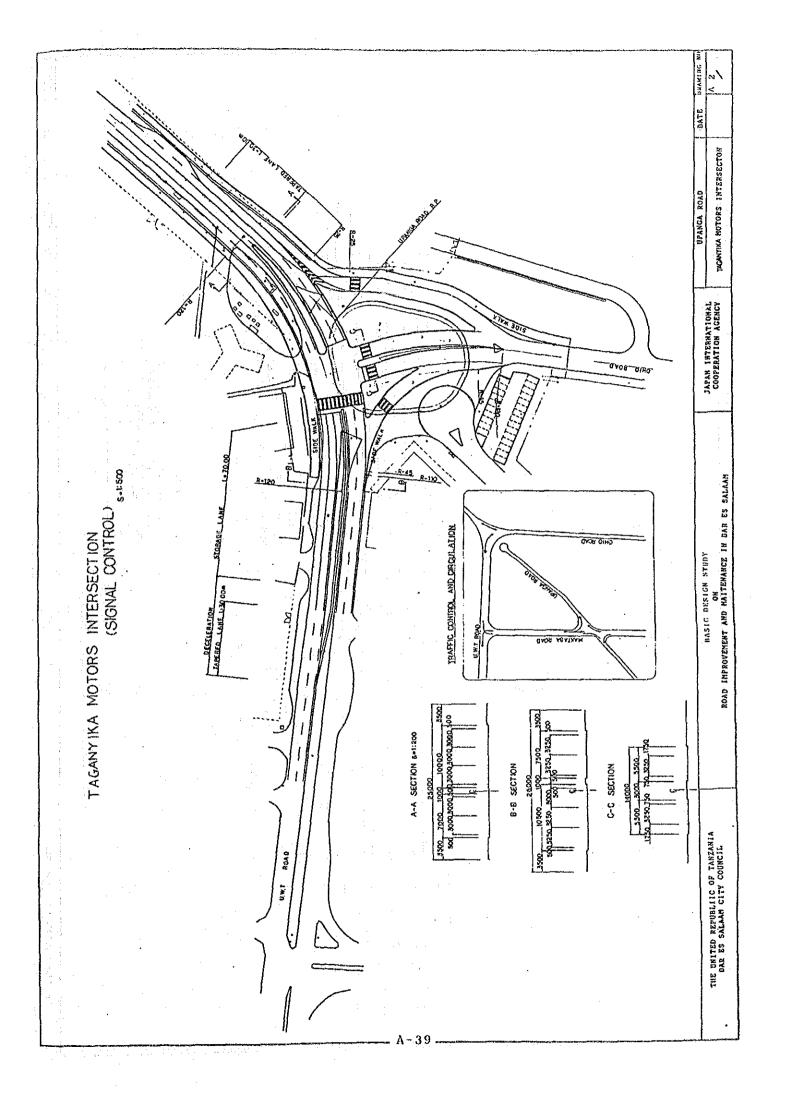

Alternative 2: Metal Plate Floor Bridge

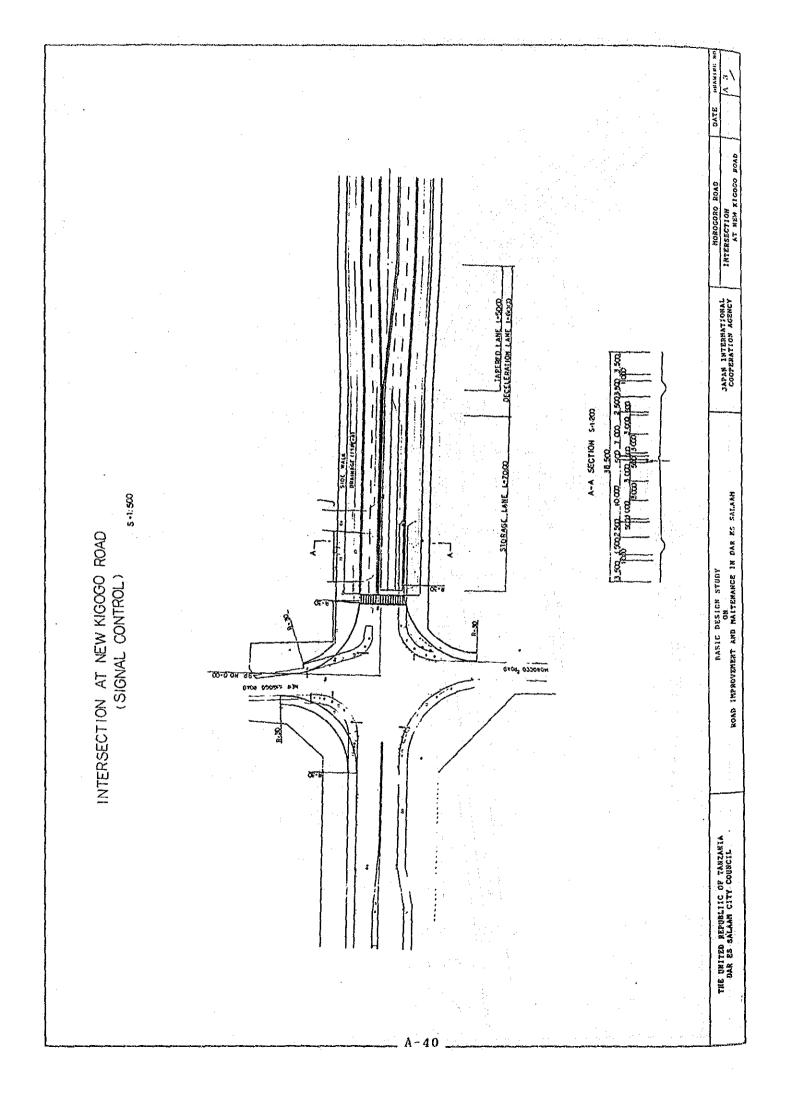

Appendix 5.4(2) Tyoical Cross Section of Alternative Bridges

Appendix 5.6 Unit Quantities of Each Improvement Measures (3)
(Estimated Unit Quantity of Pot-Holes)

As the Result of the PSI Survey , Number of Pot-hall distribution are analized as bellow following the road condition represented by PSI value

PSI	value	·	Pot-	hole ratio
	PSI >	2.5	1	nos./100m
2.5 >	PSI >	1.5	5	nos./100m
1.5 >	PSI		10	nos./100m

Considering the actual size of Pot-holes being observed various size and patern on the existing roads, the following Figures are established as the average size of Pot-hole and the ordinary repair method of Pot-hole for the Calculation of the Urgent repair of Pot-holes.
