5.4 Basic Design Drawings

Basic Design Drawings consists of the following:

(1) Mahankal Chaur project

Drawing No.	Title of Drawing
1.	General Plan
2.	Treatment Plant General Plan
3.	Different in Water Level of Treatment Plant
4.	Bio-Filter Plan and Section
5.	Sedimentation Basin Plan and Section
6.	Rapid Sand Filter Plan
7.	Rapid Sand Filter Section
8.	Clear Water Reservoir Plan and Section
9.	Flow Sheet
10.	Flow Diagram of PAC Feeding System
11.	Flow Diagram of Slaked Lime Feeding System
12.	Flow Diagram of Solidum Hypochlorite System
13.	Flow Diagram of Bleaching Powder Feeding System
14.	Electrical Installations Plan
15.	Sub-Station
16.	Power Control Panel and Wiring List
17.	Pressure Control Valve and Valve Room
18.	Balancing Reservoir Plan and Section
19.	Conveyance Pipe Plan and Profile (1/5)
20.	Conveyance Pipe Plan and Profile (2/5)
21.	Conveyance Pipe Plan and Profile (3/5)
22.	Conveyance Pipe Plan and Profile (4/5)
23.	Conveyance Pipe Plan and Profile (5/5)

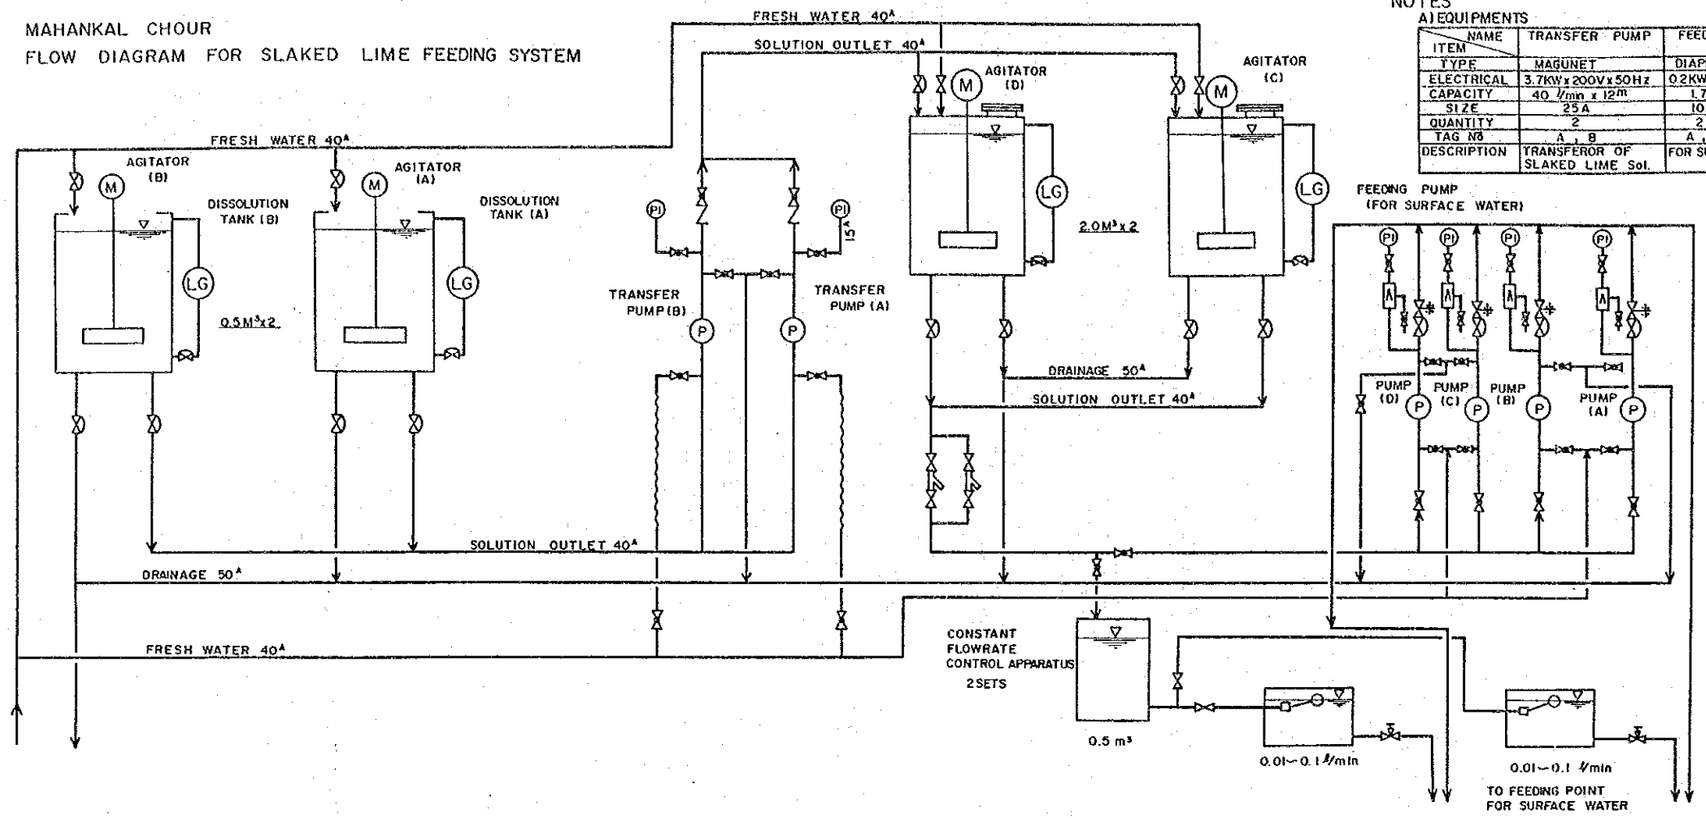
FLOW DIAGRAM FOR SLAKED LIME FEEDING SYSTEM



NOTES

A) EQUIPMENTS

NAME / ITEM	TRANSFER PUMP	FEEDING PUMP		AGITATOR	SOLUTION STRAGE TANK
TYPE	MAGUNET	DIAPHRAGM		OSCILLATION	ROUND - VERTICAL
ELECTRICAL	3.7KWx200Vx50Hz	0.2KWx 200V x 50 Hz		2.2KWx200V x 50Hz	---
CAPACITY	40 l/mn x 12m	1.7 l/mn	0.85 l/min	196 cpm	2.0m3
SIZE	25A	10A	10A	---	ø1,400mm xH 1,580mm
QUANTITY	2	2	2	4	2
TAG Nō	A , B	A , B	C , D	A , B , C , D	A , B
DESCRIPTION	TRANSFEROR OF SLAKED LIME Sol.	FOR SURFACE WATER		AGITATOR OF SLAKED LIME HYDROLYSIS	STRAGE OF SLAKED LIME SOLUTION

NOTE

OTHER EQUIPMENTS (DISSOLUTION TANK etc) SEE SHEET OF FLOW DIAGRAM SODIUM HYPOCLORITE.

B) DESIN ITEMS

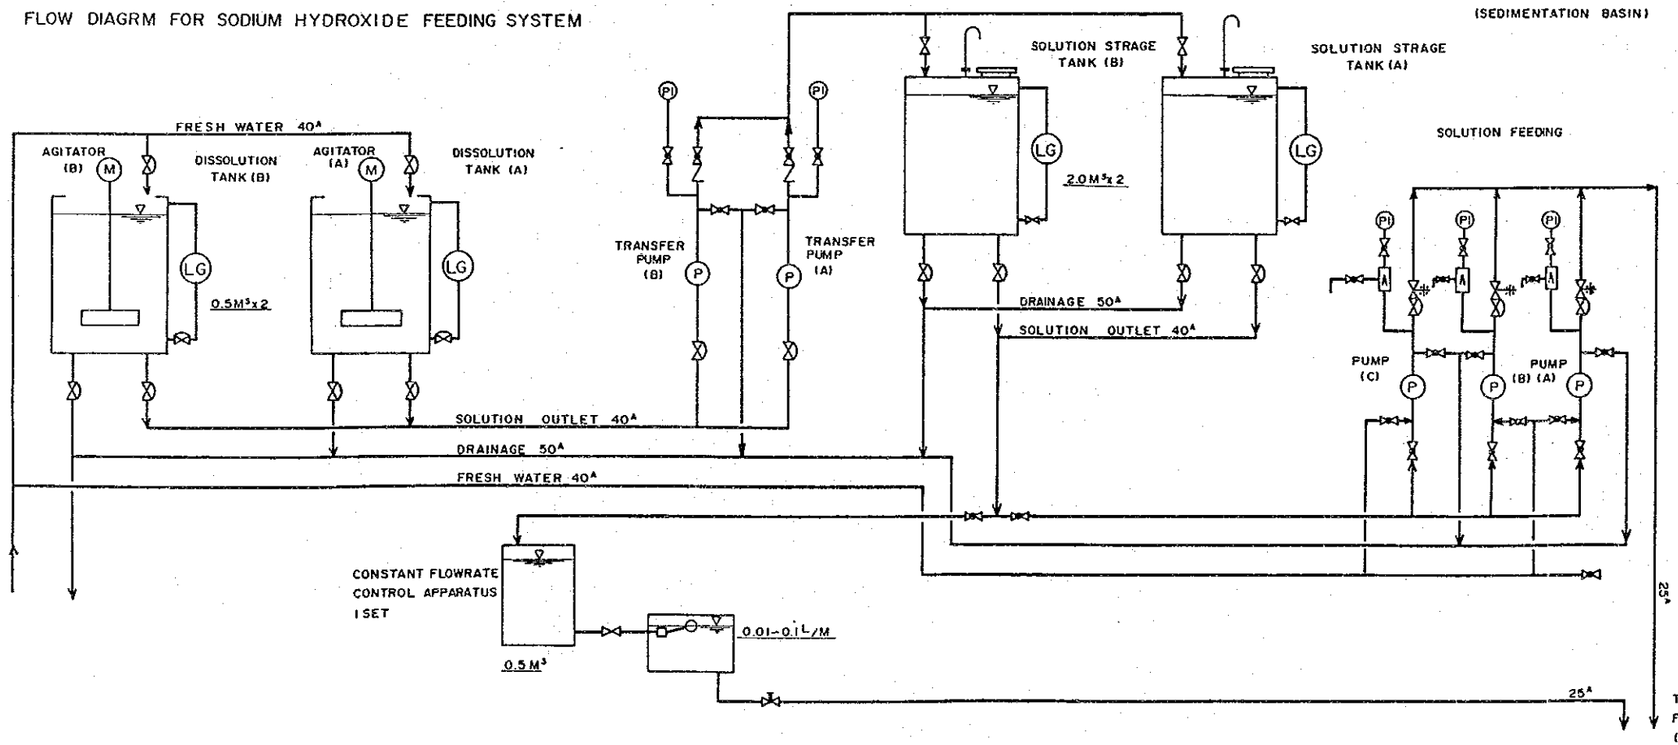
B-1. QUANTITY OF FLOW

WATER	MINMUM	MAXIMUM
SURFACE	8,500m3/day	25,400m3/day

B-2. RATE OF DOSING (MEAN)

WATER	SEASON	MEAN
SURFACE	RAIN-FALL	20 mg/l
	DRY	5 mg/l

FLOW DIAGRM FOR SODIUM HYDROXIDE FEEDING SYSTEM



NOTE

A) DESIGN ITEMS

A-1. QUANTITY OF FLOW

GRAND WATER 19.000m3/day

A-2. RATE OF DOSING

MEAN 20mg/

B) EQUIPMENTS

NAME / ITEM	FEEDING PUMP	SOLUTION STRAGE TANK
TYPE	DIAPHRAGM	ROUND-VERTICAL
ELECTRICAL	0.2KWx200V x 50Hz	—
CAPACITY	0.85 l/min	2.0m3
SIZE	10A	ø1,400mm xH 1,580mm
QUANTITY	3	2
TAG Nō	A , B , C	A , B

5.5 Implementation Plan

5.5.1 Execution policy

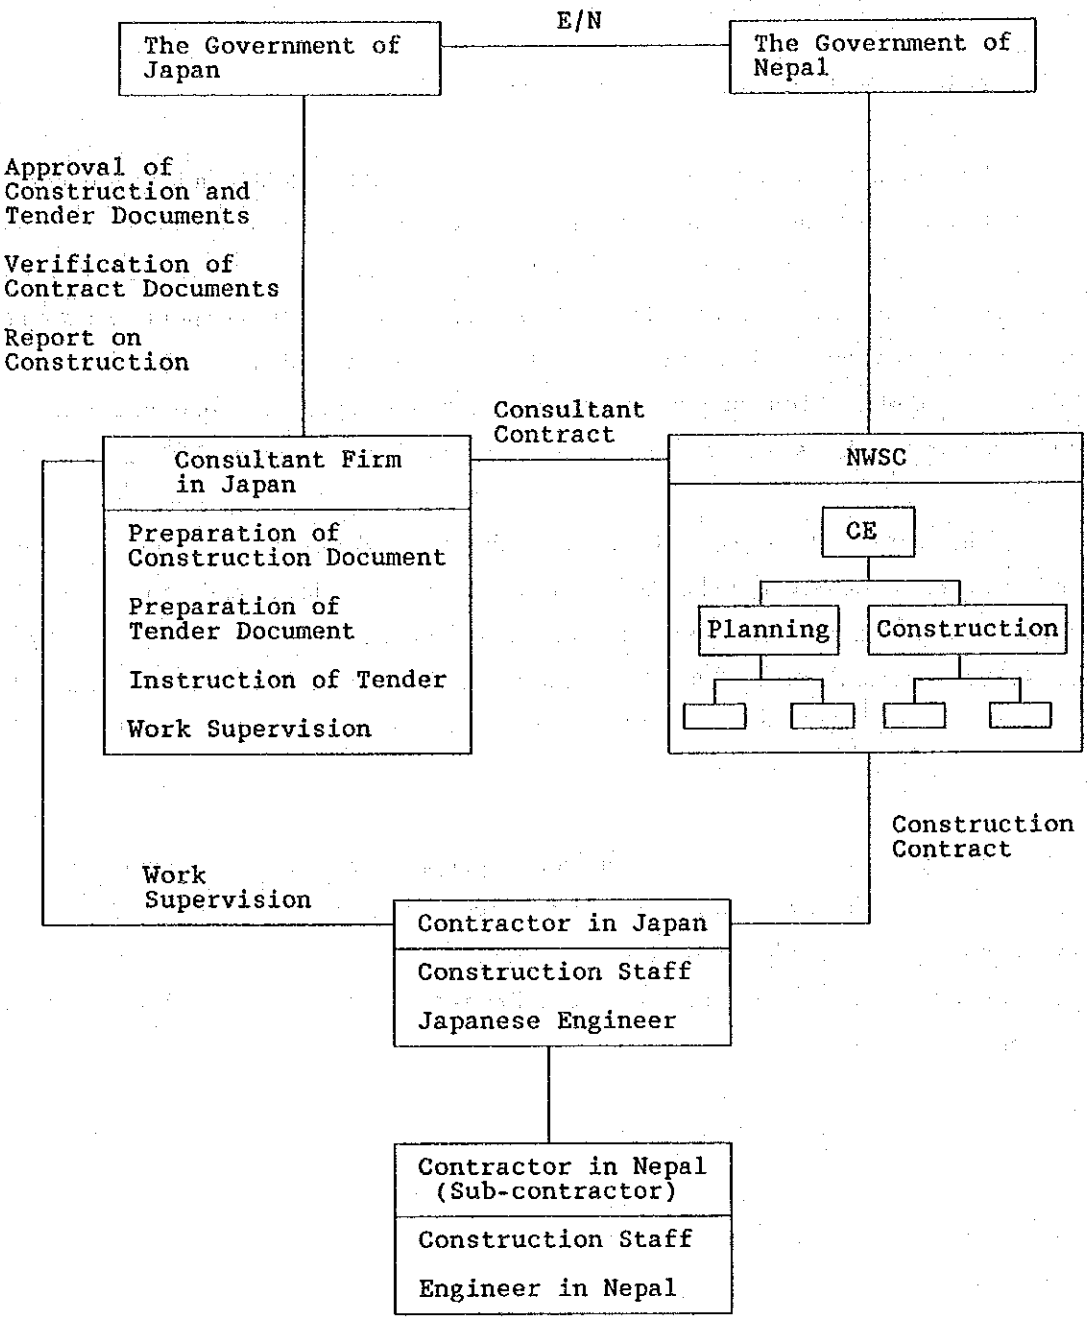
(1) Project implementation organization

The entity to implement the Project is NWSC. NWSC, an independent institution outside the Government, undertakes all waterworks of large cities from planning to operation and maintenance under the direction and guidance of MHPP. Accordingly, the responsible counterpart in Nepal during a detailed design survey is the staff of the design department of NWSC and construction supervision, material and equipment procurement are undertaken by the staff of the construction department of NWSC.

The detailed design, including the preparation of design drawings and tender documents, the execution of the tender, and construction supervision during the construction period should be carried out by a consultant from Japan. NWSC is to make a contract with the consultant for the above-mentioned consultant's services after Exchange Notes with regard to grant aid are signed.

The procurement of material and equipment and the construction are to be carried out by a Japanese contractor. NWSC will conduct the tender assisted by the above-mentioned consultant's service and choose the contractor. Fig. 5.5.1 set forth the Project implementation organization system.

Fig. 5.5.1 PROJECT ORGANIZATION CHART



(2) Scope of allotted responsibilities

The Project is to be implemented under the following scope of allotted responsibilities. The scope of the responsibilities of Nepal is as follows:

1) Land acquisition for the treatment facilities.
2) Construction of administrative facilities.
3) Exemption from taxes and custom duties of materials and equipment imported for the construction work.
4) Exemption from taxes of Japanese staff who take part in the construction work.
5) Long lasting use and effective and appropriate operation and maintenance after completion of the construction work.

The scope of the responsibilities of the Japanese parties is as follows:

1) Construction and installation of water treatment facilities covered by the Project (including water intakes and water conveyance facilities).
2) Expenses required for ocean transportation of materials and equipment imported from Japan and insurance on them.
3) Charges for inland transportation from a port of unloading to Kathmandu.
4) Consultant's services.
5) Supervision for the construction work.

(3) Matters requiring consideration in executing the construction work

In the Project, basic materials such as cement, gravel, sand, timber, brick and light equipment should be procured in Nepal and the construction work be performed by local labor. Accordingly, a local contractor who is familiar with the local conditions and labor is to be engaged as a subcontractor. The local subcontractor having similar construction experience has appropriate work executing skills if

supervised and instructed properly by a Japanese contractor.

Since 90% of annual rainfall is concentrated in the wet season (May through September) in the Kathmandu valley, it is difficult to carry out earthwork during this season. Therefore, it is desirable not to schedule earthwork in this season, and it is necessary to take sufficient allowance in time in a case of being unavoidable as a matter of progress schedule.

High-performance Japanese mechanical and electrical equipment should be imported, and installed by a local contractor under the supervision of Japanese engineers.

Since materials and equipment procured overseas will land at an Indian port, it is necessary to allocate sufficient time for customs clearance and inland transportation in India when making an overall transportation schedule.
