Explanatory Note

1. The Commodity Classification for the Industrial Statistical Survey is composed mainly of "Manufactured Goods Classification". The Classification is supplemented with "Raw Material Classification".
2. "Manufactured Goods Classification" is prepared for classifying the commodities, goods produced in the manufacturing industry. "Raw Material Classification" is for classifying the raw materials, which are produced in agriculture, forestry and fisheries, and mining and quarrying and are consumed as raw materials for production in the manufacturing industry. The raw materials produced and consumed in manufacturing are classified according to "Manufactured Goods Classification".
3. The six-digits code of "Manufactured Goods Classification" is used for filling the column of Commodity Classification Code of the "11. Shipment" and the Code of the "13. Raw materials consumed" in the questionnaire form of the Survey. The six-digits code, first four-digits code shows the class of products, and the codes of fifth and sixth digits code shows the group of products and "91" and "92", are used for separating the column of code into "Receipt from the Commission Work" and "Receipt from the Repair Service".
4. The quantitative units (kg, m², m³, No.) of "Manufactured Goods Classification" are used for filling of the unit, by which quantities of manufactured goods produced and of raw materials consumed are to be reported in the questionnaire form of the Survey.
Sign(-) shows the quantity of production and thus unit are not necessary to report.
5. CPC-code and HS-code of "Manufactured Goods Classification" are shown as reference information, since the classifications of CPC and HS are used for the construction of the Commodity Classification. CPC, Central Product Classification was adopted in February 1989 by the United Nations Statistical Commission for the purpose of providing a framework of statistics for international comparison covering money, goods, services and property. And HS, Harmonized Commodity Description and Coding System was adopted in June 1983 by the Tariff Council and has been used since January 1988 as a result of development of a uniform system of product names and classification to satisfy the needs of customs, trade statistics and transportation industry.
6. The code, title and quantitative unit of "Raw Material Classification", which is shown as "Supplement" on page appendix 177-185, is used only for filling the columns of Raw Material Code and the unit of the "13. Raw materials consumed" in the questionnaire form of the survey.

DEFINITION OF THE DIVISION

This division includes metal ores. The term "ores" applies to metalliferous minerals associated with the substance in which they occur and with which they are extracted from the mine, it also applies to native metals in their gangue (e.g. metalliferous sands).

Preparation of ores for subsequent metallurgical operations, most important by concentrating.

The term "concentrates" applies to ores which have had all or part of the foreign matter removed by special treatments.

With the exception of changes resulting from calcination, roasting or firing, operations which do not alter the chemical composition of the basic compound which furnishes the desired metal are included: crushing; grinding; magnetic separation; gravimetric separation; flotation; screening; grading; agglomeration of powders (e.g. by sintering or pelleting) into grains, balls or briquettes; drying; calcination; roasting to oxidise or magnetise the ore; chemical processes aimed at eliminating the unwanted matter (e.g. dissolution).
