

R6. COMMENTS AND RECOMMENDATIONS

The following are some comments and recommendations based on the results of remote sensing study undertaken as part of the study.

6.1 Landsat Data Analysis

- (1) In this study, false color imagery of relatively good quality has been developed covering the entire country. It turns out to be a most typical imagery to be producible from Landsat data, so that it should serve as good reference for similar imagery to be developed in the future in terms of picture qualities and color tones.
- (2) The vegetation and landuse map and the landform map were compiled primarily on the basis of existing data and interpretations of Landsat imagery with a relatively short period of field work. Therefore, information presented in these maps are to be further substantiated by details to be obtained in the field as they are used in actual projects.
- (3) It is recommended that satellite based nationwide landuse survey will be conducted preferably every ten years or shorter depending on the arise of such needs and/or availability of fund.
 - In the current study, Landsat MSS data (ground resolution: 80m x 80m) were used and analysis made at a scale of 1/250,000. For areas that require more detailed information on a larger scale map (1/50,000 or 1/100,000), it is recommended to use aerial photography, TM data (ground resolution: 30m x 30m) or SPOT data (ground resolution: 20m x 20m).
- (4) Since the Landsat data used in the study were chosen to be of less cloud coverage, all of them were of a dry season (January to March). If rainy season data are effectively used (though they are usually limited in use due to cloud coverage), seasonal changes in river flow and landuse can be studied.
 - Variation of area and water level of the lakes including Lake Victoria can be studied, though it is not addressed in this present study, by comparing Landsat imagery with reliable topographic maps in terms of relative heights. Assessment of the lake water quality from the imagery is yet in a research and development stage, but in time it is quite likely that imagery will be used for monitoring of water quality.

6.2 NOAA Data Analysis

- (1) The present study included analysis of vegetation covers as of 1982 which were characterized by widespread effects of droughts in the preceding years and those of 1989 and 1990 which represent average climatic conditions, and the results have been organized in imagery and made into data files, thus laying baseline information for future reference.

- (2) Unlike other satellite data, NOAA data are observed every day. With ground resolution of roughly 1km x 1km, NOAA data are effective for capturing vegetation information for large areas, but for more detailed study they need to be supplemented by more accurate data such as Landsat, SPOT, aerial photos and field work.
- (3) It is recommended to carry out nationwide study of vegetation cover preferably at every 10 years or shorter. When droughts or floods occur, NOAA data are useful for immediate monitoring of the situations at those occasions.

TABLES

TABLE R2.1 Landsat System

DESCRIPTION OF LANDSAT S-1, -2, -3, -4, and -5

Launch Date: Landsat-1 - July 23, 1972; terminated January 6, 1978
 Landsat-2 - January 22, 1975 ; inoperational since February 25, 1982.
 Shutdown July 1983.
 Landsat-3 - March 5, 1987; of limited use by March 1982.
 Shutdown Sept. 83.
 Landsat-4 - July 16, 1982 ; TM Transmitter loss Feb.1983.
 Landsat-5 - March 1, 1984

Ground Coverage : Between latitudes 81 N and 81 S.

Repetitive Coverage : Landsat-1, -2 and -3 - 18 days :
 Landsat-4, and -5 - 16 days

Satellite Altitude : Landsat-1, -2, and -3 - Approximately 900 km
 Landsat-4 and -5 - Approximately 700 km

Sensors:

A. Multispectral Scanner (MSS), Landsat-1, -2, -3, -4 and -5:

<u>Spectral Band</u>	<u>Wavelength (micrometres)</u>	<u>Spectrum</u>
4 (1)	0.5 - 0.6	Green, Yellow, Orange
5 (2)	0.6 - 0.7	Red
6 (3)	0.7 - 0.8	Reflective Infrared
7 (4)	0.8 - 1.1	Reflective Infrared
8	10.4 - 12.6	Thermal Infrared (Landsat-3 only)

- . Spatial Resolution : 79 m
- . Image Format : 185 km by 185 km
- . Thermal Infrared (band 8) failed to function properly.

B. Return Beam Vidicon (RBV), Landsat-3:

- . Panchromatic : 0.505 - 0.750 micrometres
- . Spatial Resolution : 38 m
- . Image Format : Two cameras aligned to view an across track pair of 98 square km ground scenes with 14 km of sidelap. Two pairs view the same area as an MSS scene.

C. Thematic Mapper (TM), Landsat-4 and -5:

<u>Spectral Band</u>	<u>Wavelength (micrometres)</u>	<u>Spectrum</u>
1	0.45 - 0.52	Blue
2	0.52 - 0.60	Green/Yellow
3	0.63 - 0.69	Red
4	0.76 - 0.90	Reflective (near) Infrared
5	1.55 - 1.75	Reflective (middle) Infrared
6	10.40 - 12.50	Thermal (far) Infrared
7	2.08 - 2.35	Reflective (middle) Infrared

- . Spatial Resolution : 30 m (Band 6, 120 m)
- . Image Format : 185 km by 185 km

8 ; good, 5; fair, 2 ; poor

Table R 3.2 Vegetation/Landuse Map Legend

Symbol	Classification	Remarks
F1	Forest	Forest (Dense of Crown)
F2	Woodland	Forest (Sparse of Crown)
Bu1	Bushland (Dense)	Dense Bushland and Shrubland
Bu2	Bushland (Sparse)	Sparse Bushland and Shrubland
G	Grassland	Grassland
B1	Barrenland (S/G)	Barrenland with Sand & Gravel
B2	Barrenland (R)	Barrenland with Rock
S	Swamp	Swamp
W1	Waterbody	River, Lake, etc.
W2	Waters (Artificial)	Dam & Reservoir
C1	Agricultural land (Dense)	Agricultural land (mainly use for crop raising or grazing)
C2	Agricultural land (Sparse)	Agricultural land (mixed Bushland and Grassland)
C3	Plantation	Plantation and Ranch
T	Town	Towns or Villages
O		Reservoir (small in size)
C3 :	will be further classified as follows, if types of plants can be identified.	
Cto : Tea	Ccs : Cashewnut	
Csu : Sugar Cane	Cot : Cotton	
Ccf : Coffee	Cma : Maize	
Ccc : Coconut	Cri : Rice	
	Crn : Ranch	

* In the 1/1,000,000 Map, W1 & W2 were presented as W and O was not presented.

Table R 3.3 Landform Map Legend

Code	Landform
M	Mountains and major scarps
H	Hills
Hl	Hills and minor scarps
Hs	Step-faulted scarps of the Rift Valley
L	Plateau
LI	Plateaus and high-level structural plains
Ls	Step-faulted floor of the Rift Valley
Lc	Coastal Plateaus
Lu	Plateau/upper-level upland transitions
R	Volcanic footridges
F	Footslopes
FT	Footslopes
FY	Footslopes and piedmont plains undifferentiated
Y	Piedmont Plains
U	Uplands
Uu	Upper-level uplands
Uh	Upper middle level uplands
Um	Lower middle level uplands
Ul	Lower level uplands
Ux	Uplands Undifferentiated levels
Uc	Coastal uplands
Up	Uplands/high-level plain transitional lands
Pe	Erosional Plains
Pn	Non-dissected erosional plains
Pd	Dissected erosional plains
Ps	Sedimentary plains
Psh	High-level sedimentary plains
Psm	Middle-level sedimentary plains
Psl	Lower-level sedimentary plains
Psx	Sedimentary plains of undifferentiated levels
Pv	Volcanic Plains
pc	Coastal Plains
Pch	Higher-level coastal plains
Pel	Lower-level coastal plains
Per	Reef coastal plains
Pl	Lacustrine Plains
Pt	Sedimentary Plains of upper river terraces
Pf	Sedimentary Plains of large alluvial fans
Pf1	Older fans
Pf2	Younger fans

A	Floodplains
B	Bottomlands
C	Dunes or dune land
La	Lava flows
S	Swamps
T	Mangrove swamps
V	Minor valleys
W	Badlands
Z	Coastal or lake-side beach ridges

* In the 1/1,000,000 Map, only major classifications were presented

**Table R 3.4 Area of Vegetation and Landuse
(NWMP study 1990)**

Symbol	Classification	Area	Unit : sq km	%
F1	Forest	14,595		2.46
F2	Woodland	21,438		3.62
Bu1	Bushland (Dense)	246,663		41.65
Bu2	Bushland (Sparse)	107,877		18.21
G	Grassland	11,941		2.02
B1	Barrenland (S/G)	4,558		0.77
B2	Barrenland (R)	71,980		12.15
S	Swamp	6,545		1.14
W1	Waterbody	11,794		1.99
W2	Waters (Artificial)	160		0.03
C1	Agricultural land Dense)	45,578		7.70
C2	Agricultural land (Sparse)	32,151		5.43
C3	Plantation	16,352		2.76
T	Town	430		0.07
	Total	592,262		100.00

Note: As measured on Vegetation Landuse Map 1/1,000,000 prepared by this NWMP Study.

Table R 3.5 Land Use in Kenya (KREMU Map 1983)

Land Use Classes	Area in 1,000 sq km	Area in (%)
1. Settlement and associated non-agricultural area	0.3	0.05
2. Horticulture and market gardening	0.3	0.04
3. Perennial cropland	19.0	3.26
4. Arable cropland	44.6	7.66
5. Improved grazing land	32.0	5.49
6. Unimproved grazing land (rangeland)	433.0	74.31
7. Woodlands and forests	36.9	6.33
8. Water bodies	11.8	2.03
9. Badland or barren (agriculturally unproductive)	4.8	0.83
Total	582.6	100.00

Notes:

- (1) Acreage of each Class is planimetered on "Land Use Map in Kenya" prepared by Kenya Rangeland Ecological Unit (KREMU), 1983
- (2) Perennial cropland include tea, sugar cane, coffee, bananas, pyrethrum, cassava, sisal, pineapples, coconuts and cashew nuts
- (3) Arable cropland include maize, rice, cotton, tobacco, wheat, English potatoes, barley, sorghum/millet and beans/green grams/pigeon peas.
