I. INTRODUCTION

1.1 General

In the framework of the Development Study on Wastewater Disposal for Denpasar, The Japan International Cooperation Agency (JICA) gives an assignment to PT. SKE DISAIN to conduct Water Quality Survey for Denpasar and its surroundings.

1.2 Background

Bali is one of the main tourism destination in Indonesia has been developed as an International tourism destination. The number of tourists visiting Bali has been increasing from year to year, and Denpasar as the center of tourism has to have sewerage system to anticipate the increasing of tourists and population of Denpasar. To design sewerage system its need much data and water quality analysis is one of them.

1.3 Objective of the Survey

The objectives of the survey are :

- to analyze the quality of river, sea and groundwater.
- to collect data of groundwater (wells).

1.4. Scope of Work

a. Water Quality Survey of Rivers

The number of the samples 25 points, in both dry and rainy season.

The parameters to be analyzed :

Temperature, water temperature, suspended solid, PH, DO, BOD₅, COD_{cr}, T-N, NH₄-N, NO₂-N, NO₃-N, T-P, Fecal Coliform, n-Hexan extracts and Turbidity.

b. Water Quality Survey of Sea

The number of the samples 50 points, in both dry and rainy season.

The parameters to be analyzed :

Temperature, water temperature, COD_{cr}, DO, SS, T-N, T-P, PH, Fecal Coliform, n-Hexan extracts and Turbidity.

c. Water Quality Survey of Groundwater

The number of the samples 50 points, and additional 25 points.

The parameters to be analyzed :

Temperature, water temperatur, SS, PH, DO, COD_{cr}, T-N, NH₄-N, NO₂-N, NO₃-N, T-P and Fecal Coliform.

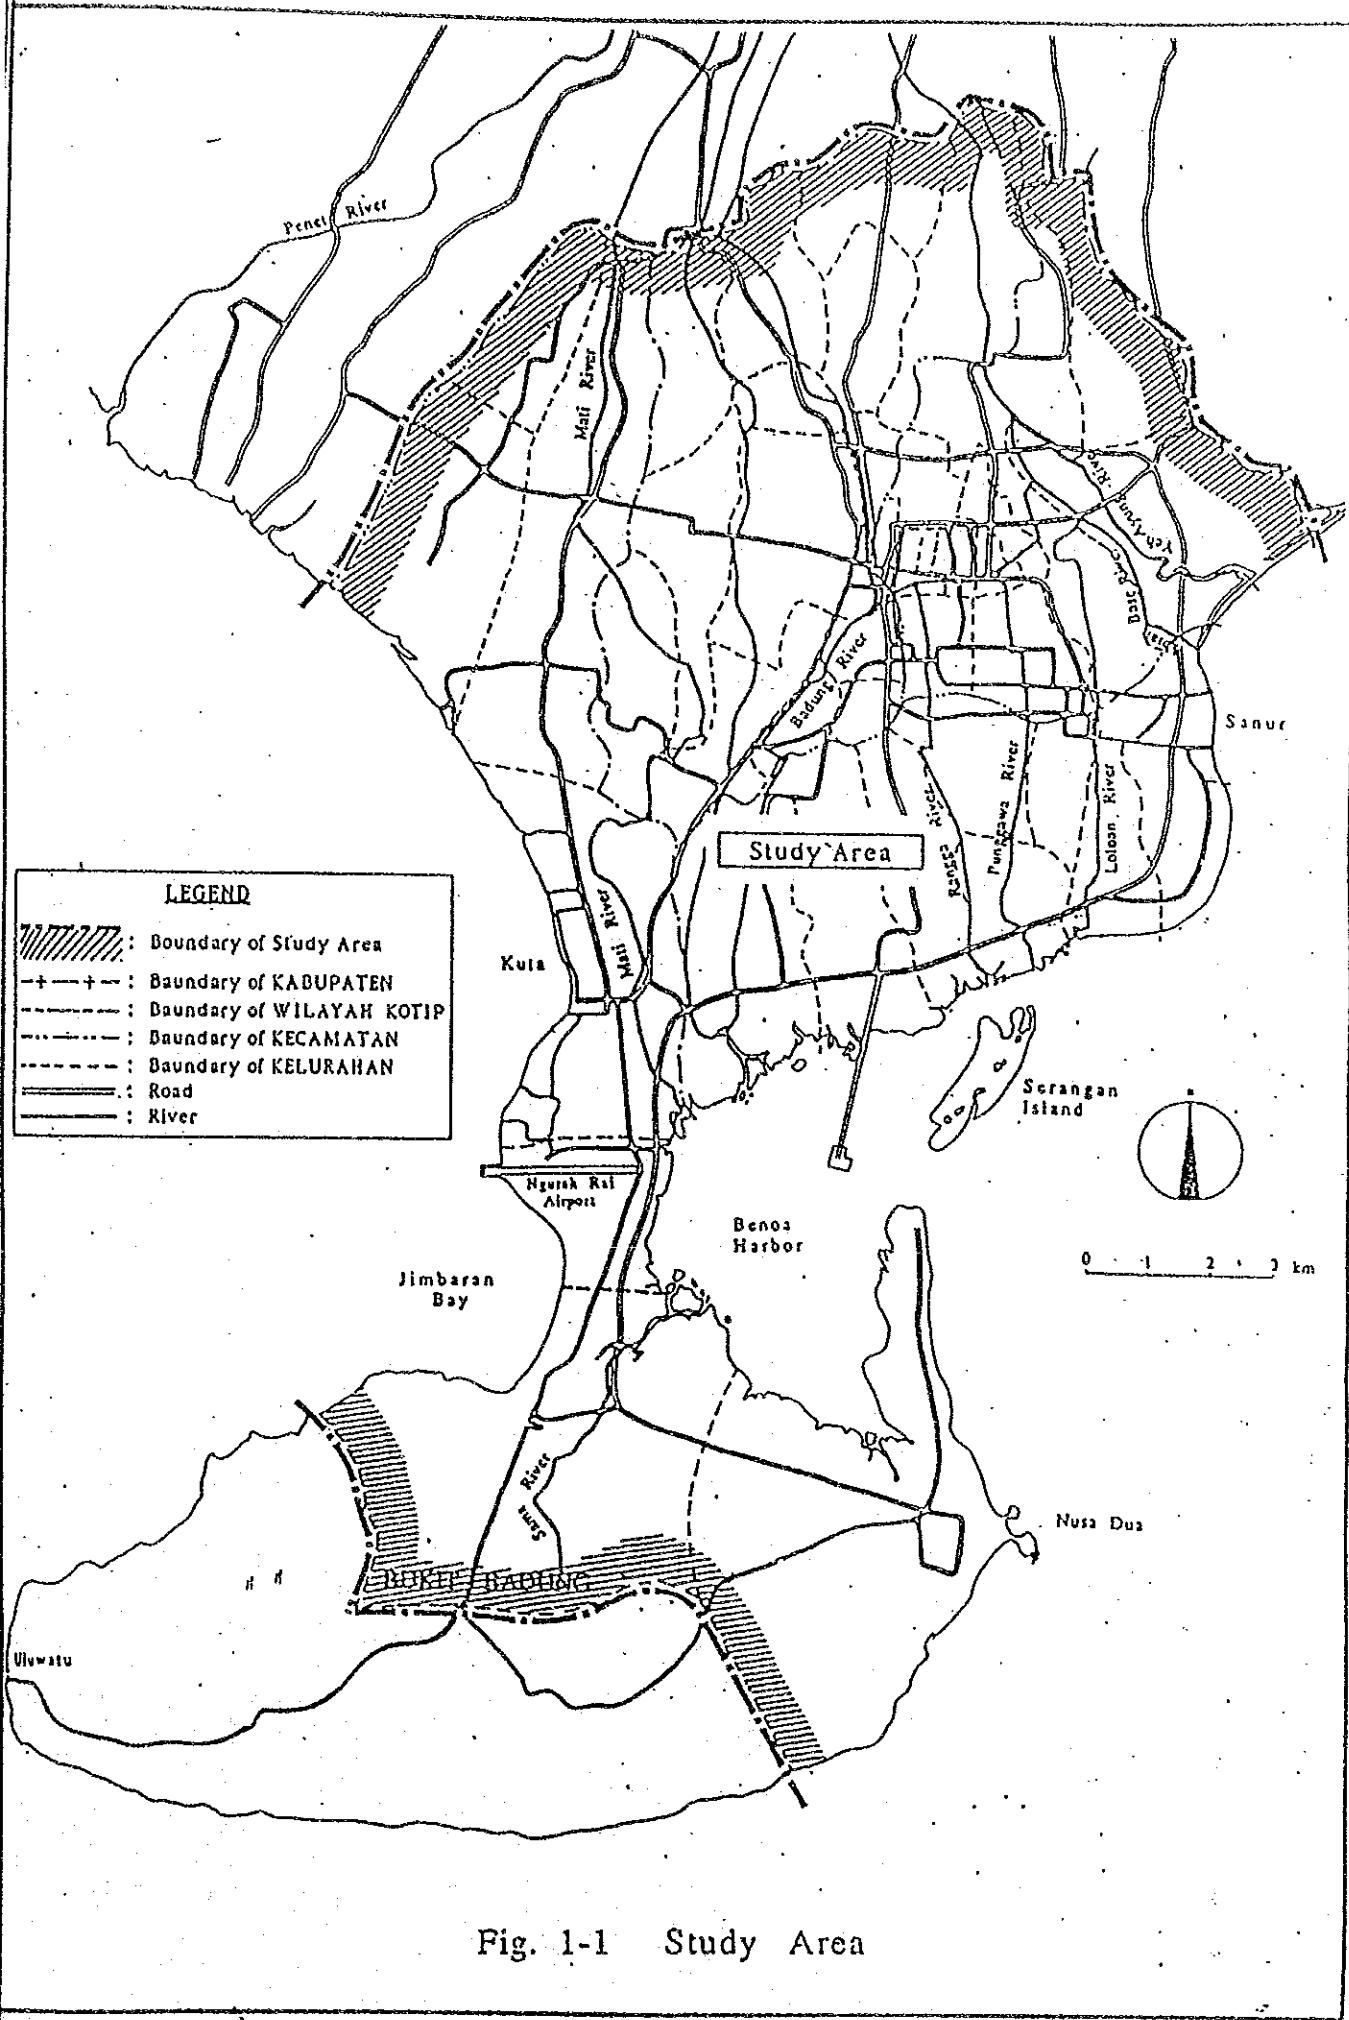

Fig. 1-1 Study Area

II . SAMPLING

Sampling is a process to take samples at the field. Before take the samples its need preliminary survey to select the exact location. Preliminary survey was conducted by PT. SKE DISAIN accompanied with The JICA Study Team.

The results of the sampling are as follows :

2.1. Rivers

Date : October 29, 1991
 Season : Dry
 Weather : Bright

Sample No.	RIVER/LOCATION	TIME	TEMPERATURE (oC)	
			Air	Water
1	Yeh Ayung River	12:00	35	28
2	Yeh Ayung River	14:00	37	29
3	Yeh Ayung River	12:25	34	31

RESULTS OF WASTEWATER LOADING SURVEY

NOVEMBER 1992

JAPAN INTERNATIONAL COOPERATION AGENCY

I - INTRODUCTION

1.1 General

In the framework of the Development Study on Wastewater Disposal for Denpasar, The Japan International Cooperation Agency (JICA) gives an assignment to PT. SKE DISAIN to conduct the Survey of Wastewater Loading Factors for Denpasar and its surroundings.

1.2 Background

Bali is one of the main tourism destination in Indonesia, beside its culture, Bali also known has beach resort such as Sanur, Kuta and Nusa Dua, so Bali has been developed as an International beach resort.

The number of tourists visiting Bali has been increasing from year to year, and Denpasar as the center of tourism has to have sewerage system to anticipate the increasing of tourists and population of Denpasar.

1.3 Objective of the Survey

The objectives of the survey are :

- to estimate wastewater loading factors for various types of wastewater discharge sources.
- to analyze the quality of wastewater.

1.4. Scope of Work

The study area of this survey covers four locations Sanur, Denpasar City, Kuta and Nusa Dua.

The types of wastewater to be investigated are as follows :

1) Toilet wastewater	1 point
2) Septic tank effluent	2 points
3) Domestic wastewater 3 levels x 3 points	9 points
4) Hotel wastewater 3 levels x 3 points	9 points
5) Restaurant wastewater 3 levels x 1 point	3 points
6) Shop & office wastewater 3 levels x 1 point	3 points
7) Wastewater from factory 3 levels x 3 points	3 points

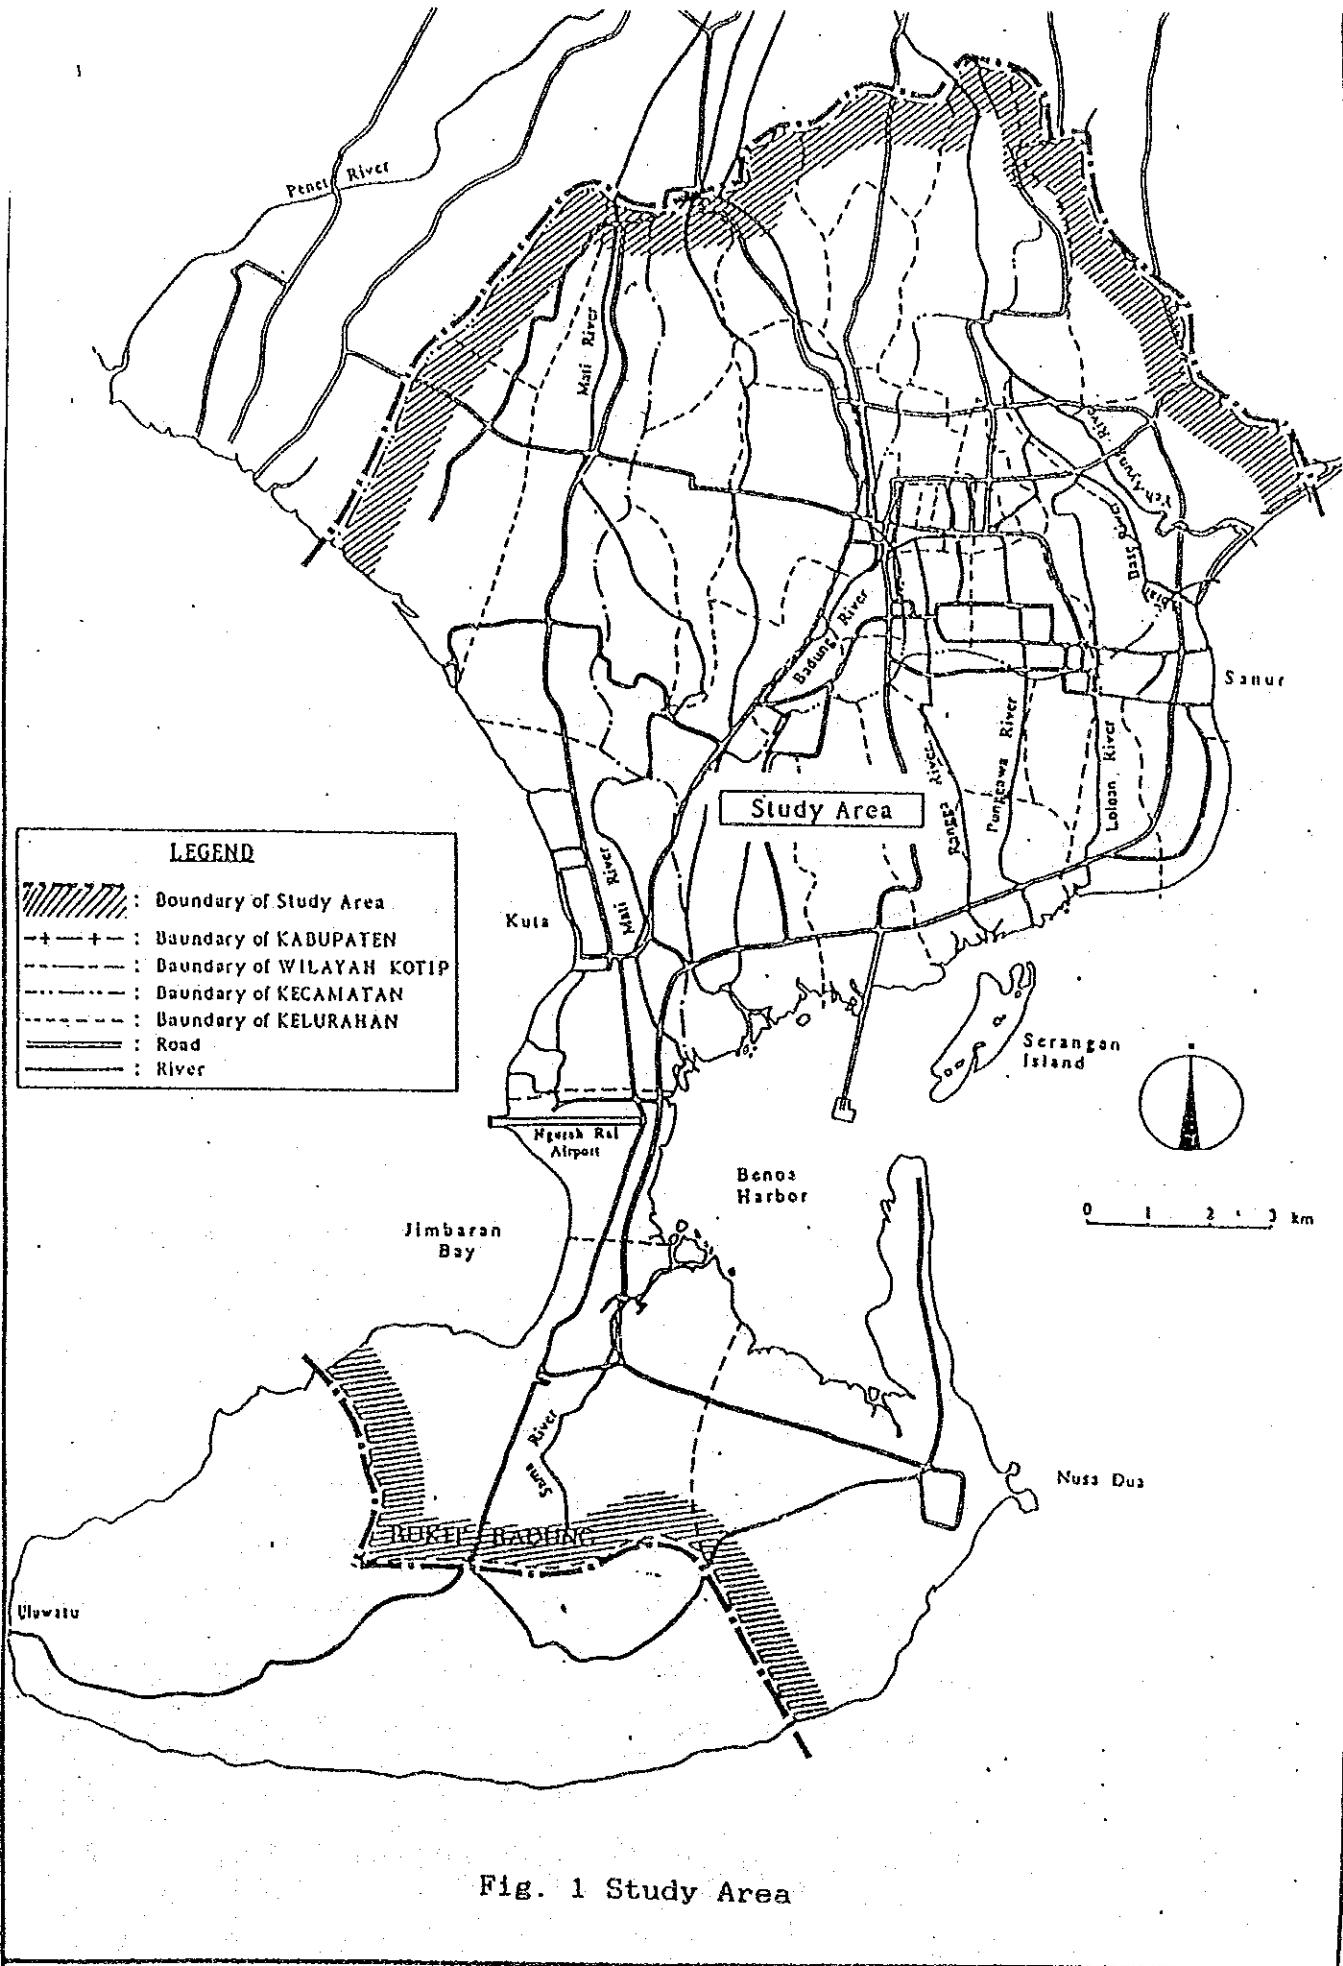

Fig. 1 Study Area

II . SAMPLING

Sampling is a process to take samples from the field. Before take the samples its need preliminary survey to select the exact locations. Preliminary survey was conducted by PT. SKE DISAIN accompanied with The JICA Study Team.

The results of the sampling are as follows :

1) Toilet or Effluent from Septic Tank

CODE	NAME	ADDRESS		LEVEL	NUMBER OF PERSONS	WATER SUPPLY (M3/day)	SAMPLING DATE	TOILET/EFFLUENT (1/day)	TEMPERATURE (oC)	
		Jalan	Kelurahan						AIR	TOILET
A	Nirma (septic tank effluent)	Pulau Iae 16	Dauh Puri Kelod	high	6	PDAM, 1,50	15-Dec-91	12	30	28
B	Ianda (septic tank effluent)	Katrangas 45	Sumerta	middle	5	well, 1,20	8-Dec-91	12	29	27
C	Marga (toilet)	Tk.Yeh Aya II/2	Panjer	low	7	well, 1,50	8-Dec-91	112	30	28,5

2) Domestic wastewater (gray water)

CODE	NAME	ADDRESS		LEVEL	NUMBER OF PERSONS	WATER SUPPLY (M3/day)	SAMPLING DATE	GRAY WATER (1/day)	TEMPERATURE (oC)	
		Jalan	Kelurahan						Air	Gray Water
D	Kinog	Tk. Unda 21	Panjer	high	7	PDAM, 2,50	8-Dec-91	1715	31,5	28,5
E	Darmawasika	Tk. Unda V/7	Panjer	high	8	well, 2,20	15-Dec-91	1745	29	27,5

I. INTRODUCTION

1.1 General

In the framework of the Development Study on Wastewater Disposal for Denpasar, The Japan International Cooperation Agency (JICA) gives an assignment to CV. VEYGASI DISAIN to conduct Geological Survey for Denpasar and its surroundings.

1.2 Background

Bali is one of the main tourism destination in Indonesia has been developed as an International tourism destination. The number of tourists visiting Bali has been increasing from year to year, and Denpasar as the center of tourism must have sewerage system to anticipate the increasing of tourists and population of Denpasar. To design sewerage system its need much data and Geological Survey is one of them.

1.3 Objective of the Survey

The objective of the survey is to estimate the bearing capacity of the soil.

1.4. Scope of Work

- a. The number of the boring 2 holes, and the boring depth 30 meter each.
- b. Standard Penetration test were conducted 30 times at each site with every one (1) meter interval.
- c. Three (3) undisturbed soil samples at depth of 2m, 5m and 10 m, of each boring hole.
- d. Following items have been analyzed at laboratory.
 - Consolidation test 2 samples/hole
 - Unconfined compression test 3 samples/hole
 - Grain-size analysis 15 samples/hole
 - Moisture Content 15 samples/hole

III . SAMPLING

Sampling is a process to take samples at the field. Before take the samples its need preliminary survey to select the exact location. Preliminary survey was conducted by CV. VEYGASI DISAIN accompanied with The JICA Study Team.

The results of the sampling are as follows :
