#### 1. NATIONAL SOCIO-ECONOMY

#### **1.1** Location and Administratives

Ecuador has an area of 270,670 sq.km. Its continental territory is located on the west coast of South America, between parallels 1°30' latitude north and 5°05' latitude south and between 81° and 75°10' longitude west. It borders Colombia in the north, Peru in the east and south, and the Pacific Ocean in the west. The Galapagos Islands, 1,000 km off the coast, are also part of Ecuador's territory. The equator crosses both the continental territory and the islands.

The Andean range, divided into east and west branches, crosses the country from north to south and forms three natural regions, i.e. the Highlands (called as La Sierra), the Coast (La Costa) and the Amazonic region (La Amazonia/El Oriente). La Sierra consists of ten provinces as Charchi, Imbabura, Pichincha, Cotopaxi, Tungurahua, Bolivar, Chimborazo, Canar, Azuay and Loja. La Costa has five provinces as Esmeraldas, Manabi, Los Rios, Guayas and El Oro, and La Amazonia has five provinces as Sucumbíos, Napo, Pastaza, Morona Santiago and Zamora Chinchipe.

The official language is Spanish. In some regions, Quichua and other languages are spoken. Religion is freedom. The Majority of the population is Catholic.

The government sovereignty resides in the people and is exercised through three branches of government, i.e. the Executive, Legislative and Judicial.

The Executive branch is led by the President of the Republic who is elected by direct suffrage. The Vice-President chairs the National Council for Development (CONADE). Ministries have the following portfolios;

Ministry of Government and Police, Ministry of National Defense, Ministry of Foreign Affairs, Ministry of Finance and Public Credit, Ministry of Education and Culture, Ministry of Education and Human Resources, Ministry of Social Welfare, Ministry of Public Health, Ministry of Agriculture and Livestock,

- A.1--

Ministry of Energy and Mines,

Ministry of Industry, Commerce, Integration and Fishing, Ministry of Public Works and Communication,

Ministry of Housing and City Planning and

Ministry of Information and Tourism.

The Executive function of the government is roughly shown in Fig. A.1 including several institutes concerning the Project.

#### 1.2 Population

Population in Ecuador is projected by CONADE as 10,203,000 people in 1990 as shown in the Table below.

|                              | and the second |               |       |       | a de la composición d |
|------------------------------|----------------|---------------|-------|-------|---|
| Year                         | 1970           | 1975          | 1980  | 1985  | 1990  |
| Population (in 1,000 people) | 6,051          | 7,035         | 8,123 | 9,378 | 10,203  |

Source: Oficina de Planificacion, CONADE.

The National Institute of Statistics/Census (INEC) also made a population estimation in each province and its projection targetted to the year 2020 as shown in Table A.2 and A.3. According to this Table, population in 1990 was 9,648,200 people in the whole country, and about 96% of the population were lived in the regions of La Sierra and La Costa. Urbanization of the country was 55 % in 1990, and 44 % in Guayas and Pichincha provinces and 16 % in Manabi and Azuay provinces in the same year.

Population growth ratio of the country was rather high as around 3.0 % during five years from 1970 to 1975, but it gradually decreased since then as indicated in the above Table.

#### **1.3** Gross Domestic Product

Gross Domestic Product (GDP) of Ecuador at current price amounts to S/.8,130 billion in 1990 on the increase by about s/.7,800 billion against that in 1981 (Table A.4). Its annual growth rates was 43 % as also shown in this Table. However, the real growth rate of GDP at 1975 constant price was only 2 % per annum during the period from 1981 to 1990 shown in Table A.5.

On the other hand, the per capita GDP showed S/.791,641 in 1990 at the average growth rate of 38.69 % per annum at current prices, while the real annual growth rate was actually decreased by the rare of 0.75 % at the 1975 constant prices (see Table A.6).

The sectors of agriculture, petroleum and mines, manufacturing and commerce dominated contributing to about 61 % of the GDP in 1990. This tendency has continued since 1981.

#### 1.4 Trade and International Balance of Payment

Exports and imports of Ecuador indicated US\$2,714 million and US\$1,711 million respectively in 1990. Here, the amount of imports, US\$1,711 million, is adjusted by paid balance, whereas the actual import amount was US\$1,862 million as shown in Table A.7.

The export was represented by crude oil which accounted for 46 % of the total exports in 1990. Among the other commodities of exports, agro-industrial commodities such as banana, coffee and shrimp were secondary large part contributing to around 34 % of the total exports in the same year.

Concerning the imports, the primary materials, especially the industrial materials accounted for 44 % of the total imports in 1990. The second important commodity of imports was the industrial goods accounted for 20 %. This tendency has continued since 1981. Those two commodities belong to the industrial sector, so it seems that Ecuador attached importance to industrialization during these ten years.

- A.3 -

#### **1.5** Government Finance

In 1990, the Government finance of Ecuador at current budgetary position amounted S/.1,363,149 million (equivalent to 16.3 % of the GDP) for net current revenue and S/.1,207,566 million (14.5 % of the GDP) for expenditure at the annual rise rates of 48.39 % and 48.45 % respectively during the 1985 - 1990 as shown in Table A.8.

In the expenditure, the development expenditure accounted only for 4.0 % in 1990, or S/.48,158 million. Therefore, it seems that the development was limited by funds. And, nearly 70 % of this development expenditure were utilized for MAG, INERHI, CEDEGE, and the CRM which they engaged in developing water resources for potable water, industrial water, irrigation water and so on.

On the other hand, the total finance of the Government amounted S/.1,676,782 million in 1990. In 1990, the Ecuadorian Government did not receive any foreign loan, but it has accumulated debt due to former loan. Therefore, the amortization of the loan including interests accounted S/.519,552 million in 1990, equivalent to 31 % of the total expenditures (see Table A.9).

A.4

#### 2. REGIONAL SOCIO-ECONOMY

#### 2.1 Location

The Manabi province is located north-western coastal area of Ecuador and has an area of 18,879 sq.km. In shape, the province resembles a rectangle which has about 80 km from the east to the west and about 190 km from the north to the south. The north end of the province crosses the equator.

Administratively, Manabi Province consists of 16 districts called as "canton". Those cantons are Bolivar, Chone, El Carmen, Flavio Alfaro, Jipijapa, Junin, Manta, Montecristi, Pajan, Pichincha, Portoviejo, Rocafuerte, Santa Ana, Sucre, Tosagua, Veinticuatro de Mayo (24 de Mayo) and Pedernales. Each canton has towns and villages called as "parroquia" which amount to 66 parroquias.

#### 2.2 Population

National Institute of Statistics and Census (INEC) has executed population census since 1950. According to the last census in 1990, the population in Manabi province was 1,031,927 of which urban and rural population constituted about 41 % and 59 % respectively.

Population density of Manabi was 54.7 persons per sq.km in average. On the other hand, number of households was 187,119 in total, so number of persons per household was 5.5 in average. Details are shown in Table A.10. The average annual growth rate of population of Manabi province was 1.30 % during the period from 1982 to 1990, 2.99 % for the urban population and 0.27 % for the rural population. The population in Manabi province is projected at 1,721,359 people in total in 2020 (see Table A.11).

The study area is located in the central area of Manabi province which has an area of 4,871.0 sq.km consisting of 544.0 sq.km of Bahia area, the lower basin of the Chone river, 2,267 sq.km of the Chone river basin and 2,060.0 sq.km of the Portoviejo river basin. The population of the study area was 484,457 in total in 1990, 46.9 % of the total population of Manabi Province. The population density of the study area was 99.5 persons per sq.km which was almost two times of that of the whole Manabi province. The economically active population in the same area was of 123,151 inhabitants in 1990 (Table A.12). In function of the objectives of the Project, the beneficiary population reaches to 685,641 inhabitants in 1990 and 1,240,686 inhabitants in the year 2000 (Table A.13).

- A.5 -

#### 2.3 Gross Regional Product

The Gross regional product (GRP) of Manabi Province was S/.367,418 million in 1989 at current price (see Table A.14), or 6.9 % of the total GDP in Ecuador. In the structure of the GRP, the Agriculture, Forestry and Fishing sector, represent a rather high contribution of about 19.4 % in 1987 and 14.1 % in 1989 to the total GDP in Ecuador comparing with the other sectors. The contribution rates of the same sector to GRP of Manabi province in 1987 and in 1988 were 44.8 % and 42.3 % respectively. It seems that Manabi Province is one of prosperous in regard to this activity.

#### 2.4 Agriculture, Forestry and Fishing

As mentioned above, Manabi Province is one of traditional agricultural province in Ecuador. During these ten years from 1981 to 1990 approximately 40 % or more of economically active population of the province engaged in the activities of this sector as shown in Table A.14. Coffee, cocoa, maize, cotton, banana/platano and orange are the traditional crops. On the other hand, livestock farming is also an important activity of the province, especially cattle and hog farming. In 1990, about 726 thousand heads of cattle and 398 thousand heads of hog were being bred.

The economic active population in the study area was 123,151 in total consisting of 9,346 in Bahia Area, 41,950 in Chone River Basin and 71,855 in Portoviejo River Basin as of 1990 as shown in Table A.12. On the other hand, the economically active population of the beneficiary area was of 166,364 inhabitants in 1990 and according to the projections of the Table A.16, this figure will be increased to 303,199 in the year 2020.

The main cash crops mentioned above, coffee, cocoa, maize, cotton, banana/platano and orange showed their productions of 47,918 tons, 15,755 tons, 89,906 tons, 18,310 tons, 305,493 tons and 36,089 tons in 1990 respectively. The harvested area was 344,707 ha in total in the same year. Total products of those productions were US\$100,189,000, and US\$290/ha in average.

Besides these major products, such marine products as tuna, sardine, macarela and shrimp are also produced in the province. Especially, the aquaculture of shrimp has been developed remarkably at several estuaries including lower reaches of the Chone river. The annual increasing rate of shrimp production was 41.1 % during these ten years. This is very high rate comparing with others.

On cattle cultivation, the area of pasture was 946,300 ha in total in 1990, and 726,100 heads of cattle were breeded there. It means 0.77 heads per ha. On the other hand, the products of meat and milk from cattle were US\$46,528,000. According to the figures, the productivity of cattle cultivation is not so high.

Table A.17 shows these situation about agriculture production from 1981 to 1990.

The main inland fishery in Manabi province is a chame cultivation. Generally said, it is a good protein source in the rural area. However, it was remarkably decreased in production in 1991 comparing with 1986.

According to a survey conducted by the Manabi Rehabilitation Center (the CRM), there were 773 ha and 33 cultivators in 1986, and 752 ha and 44 cultivators in 1991. The yields of chame in 1986 and 1991 were 254 metric tons and 153 metric tons, and those unit yields were 329 kg/ha and 205 kg/ha respectively.

On the other hand, the Department of Rural Development of the CRM has initiated a chame cultivation program since 1980. The chame cultivation is not so big factor for economic activities as a whole.

#### 2.5 Manufacture

Table A.18 shows the characteristics of the manufacture in the Manab\_ province, there is no other remarkable industry in the province except food industries and agro-industrial crops.

According to this data, the production of textiles, cloths and shoes was seriously decreased during these 8 years from 1981 to 1988. On the other hand, those of the industry on lumbering, wooden products and furnitures, the industry on paper, printing and editing, the chemical industry, and the industry on metal products and machinery were remarkably increased, such amount as S/.844,000 million, S/.383,000 million, 1,570,000 million, and S/.301,000 million in 1988.

- A.7 -

In Manabi Province, there are some small industry and handicraft industries. For example, Montecristi is known as a typical handicraft place, especially for montecristi hat known as panama hat in the world. But it is not so much contributed to the economic activities in Manabi Province because that the handicraft manufacturing is a quite small scale industry. In 1990, the export amount of montecristi hat was US\$3,570 thousand which was only 2.8 % to the total export amount at that time. Export amounts of major products in Manabi Province are shown in Table A.19.

Tourism activity contributes in small scale to the economic activities in Manabi Province. Table A.20 shows the tendency of number of hotels and beds during 10 years from 1981 to 1990. The number of beds both of hotels and hostels were rather more than the others, but these were gradually decreased in number since 1985. On the other hand, there are several beaches along the coastal line of Manabi Province, such as Crucita, San Jacinto, San Clemente, Manta, Bahia, San Vicente, Cayo, Puerto L\_pez y Pedernales. These areas, which actually receives local tourism, are expected to be developed in the future.

#### 2.6 Infrastructure and Services

Road is divided into two categories, i.e. (i) trunk road and (ii) secondary road. Total length of the trunk road was 1,174.3 km in 1990, and asphalt-paved road length was 856.3 km (72.9 % of the total length of trunk road). The other one was stone-paved or non-paved road. On the other hand, the total length of secondary road was 4,908.8 km in 1990, but asphalt-paved road length was only 80.1 km, this was a mere 1.6 % of the total length of the secondary road. The 50 % of the provincial area is covered by stoned and paved permanent roads; the non covered areas are located to the north and east of the province. The most serviced area is that of the project.

Number of customers of telephone was 17,750 in 1990 in Manabi Province. Its increasing rate was 6.99 % per annum. In electricity, the total distributed energy was 275,013 kwh and number of customers was 86,717 which their increasing rates were 8.7 % and 6.0 % respectively during the period from 1981 to 1990. On the condition of potable water supply, the popularization rates of water meters of Poza Honda System, La Estancilla System and Chone System were 6.5 %, 7.0 % and 5.2 % during last ten (10) years from 1981 to 1990 respectively. On the other hand, those of other rural supply system which consisting of 26 self-supporting small enterprises for supplying water were 22.6 % during the same period.

Corresponding to the popularization of water meters mentioned above, the number of served persons were also increased as Poza Honda System:6.3 %, La Estancilla System:3.7

%, Chone System: 5.2 %, and other rural supply system: 28.6 %. Therefore, the volume of paid water were also increased.

Water supply systems served 54 % of the population of Manabi province in 1989. There are four (4) regional water suply systems which served 64 % of the urban population in 1986. Sewage is treated by central sewage systems or individual septic tanks, atc. In 1988, about 350,000 people enjoyed the sewerage services, equivalent to 32 % of the population. The sewerage systems consist of sewage collection network and sewage treatment generally by stabilization lagoons.

Table A.21 indicates the statistics of those infra-structures.

In Ecuador, the education system consists of four (4) schools levels that are "preprimario" for pre-elementary school, "escuela" for elementary school, "colegio" for highschool, and "universidad" for university.

As a general rule, school ages for these schools are from 6 years old to 11 years for elementary school, 12 years old - 17 years old for high-school and 18 years old - 24 years old for university.

According to the statistics of education as shown in Table A.22, the entrance rate for elementary school, for high-school and for university were 85.2 %, 47.5 % and 9.1 % in 1990 respectively provided that total population of school age for pre-elementary school is included in the population of elementary school age.

Number of pupils for elementary school and high-school were gradually increased as 1.6 % and 3.6 % during last ten (10) years from 1981 to 1990. The rate of illiteracy decreased from 17.82 % to 13.6 % during the 1986-1990 period.

#### 2.7 Price and Monetary System

The monetary unit is the sucre (S/.). In Ecuador, there are three currency exchange markets, i.e. (i) official market, (ii) investment market and (iii) free market.

On August 31, 1988, the official exchange rate was set as S/.390.00 per US Dollar or its equivalent in other currencies for accounting purposes in the Central Bank of Ecuador.

The Monetary Board sets the exchange rate for the investment market. On March 5 1990, the buying rate was set as S/.629.50 per US Dollar. Up to August 1992 this rate was

adjusted upward weekly by S/.3.5 per US Dollar, and selling rate was also fixed at two percent above the buying rate. They became as S/.1,430.00 for buying rate and S/.1,458.60 for selling rate both per US Dollar as of July 31 1992.

The free foreign exchange market consists of banking institutions and foreign exchange offices duly authorized to operate in Ecuador by the Superintendency of Banks. The foreign exchange rate in the free market is set by the supply and demand for foreign exchange. The average of buying and selling rates was S/.1,550.00 and S/.1,555.00 per US Dollar respectively as of July 31 1992. Foreign exchange rates during these several years are shown in Table A.23.

Urban consumer prices in Ecuador rose to 19.0 times in house and household effects in the minimum and 65.4 times in food and drinks in the maximum during these ten years from January 1981 to June 1992 (see Table A.24). Especially it is remarkable that all prices both of food and drinks, house and household effects, cloth, and miscellaneous abruptly rose during last three years from 1988 to 1990.

Monthly increasing rate of urban consumer price was 2.83 % in general index as shown in Table A.24, and the annual one was 40.40 % as shown in Table A.25 during the same period mentioned above.

- A.10 -

#### **3.** EFFECTS OF THE PROJECT ON SOCIO-ECONOMY

The Project will bring a lot of effects such directly as 1) stable supply of potable water, 2) increase of the irrigated area, 3) increase of employment opportunity, 4) development of the economical activity ,and indirectly, 5) stabilization of regional human life , 6) improvement of the health conditions and so on.

#### 3.1 Effect on Labor

The stable supply of potable water and irrigation water are the most important effects of the Project, so this effect should be analysed in the feasibility study hereunder in the form of benefit-cost analysis.

On the socio-economical view point, the increase of employ-ment opportunity is a great expectation from the Project for regional people especially for agriculture sector.

According to the data (see Table A.15), natural growth rate of economic active population in whole industry in Manabi Province was around 4 % per annum during last 10 years from 1981 to 1990, and distribution ratio of the people who engaged in construction sector was aroud 5 % as of 1990. Therefore, the economic active population for construction sector was about 15,700 persons in 1990.

In case that the economic active population is increased by the same rate to the future, the people engaged in construction sector will be reached at around 23,700 persons in 2000. So the increased number of people engaged in construction sector will be about 8,000 persons in total during 10 years from 1991 to 2000 without the Project.

On the other hand, in case that a distribution rate of labor cost is assumed at 12 % of the total construction cost, the labor cost for the Project will be about US\$23 million.

From the labor cost mentioned above, number of labors can be estimated at 1,940 persons under the condition of average daily wage of labor:US\$10/day, working days in a month:25 days through a year, construction period:4 years.

According to the cost data collected shown in Table J.2 in the Iterim Report of this study, the average daily wage for labors was between US\$4 and US\$7 as of October 1991. So the assumed wage rate mentioned above is within safety side enough.

As a result of estimation mentioned above, the Project will be needed about 1,940 labors in total (equivalent to about 24 % of the economic active population in construction sector in natural increase) for execution of the Project.

The economic active population does not mean the people who all are given employment opportunities. Existing unemployment rate is not clear because of lack of data, however there are several data for assuming the employment condition. In 1988, the economic active population for manufacturing sector in Manabi Province had to be 17,680 persons based on the data shown in Table A.15, but actually it was only 5,360 persons for the same sector as shown in Table A.18. Unemployment rate can be estimated at 70 % in manufaturing sector in 1988 based on these figures.

The employment condition is different between manufacturing and construction sectors. But it seems that situation for employment in construction sector is not so far from that in manufacturing sector. In these employment situation, it can be said that the Project will be greatly contributed for increasing the employment opportunity.

#### **3.2** Effect on Regional Economy

In 1989, gross regional product (GRP) in Manabi Province indicated in Table A.14 was of 7.1% of the GDP in the whole country shown in Table A.4., that is lower than the percentages of participation of the province against the country in area and population.

The main purpose of the Project is to stable supply water for both potable, irrigation and aquaculture water use. From this viewpoint, it can be said that GRP will be increased due to economic activity of water supply.

From the main purpose of the Project, the Project will contribute the economic activity in agriculture and aquaculture. It means that GRP will also be increased in agricultural sector. And the farmers economy will be improved due to execution of the Project, too.

The Project will utilize a lot of electricity as mentioned above, so GRP will be increased by electricity during the execution period of the Project and after completion of it for maintenance and operation of the facilities.

- A.12 -

#### **3.3** Other Effects

As mentioned in previous item, the Project will contribute to improve the farmers's economy. And the economic active population in agriculture sector will become higher than that without the Project due to develop the arable area. Accordingly, the consumption will increase by farmers. So this activity will reflect to the activity of commerce. The stores or shops will prosper, and the activity of commerce will act as an incitement to trade and transportation.

These commercial activities will accelerate their increase beyond the hystorical tendency. This increase of the commercial activity will spur people on to improve their houses, improvement of village facilities and re-consolidation governmental systems of villages. So the activities of financial and real estate, and community and social services will accelerate more.

#### 4. INSTITUTIONAL ASPECTS

#### 4.1 General Features of CRM

The Manabi Rehabilitation Center (the CRM) was established on November 7, 1962 according to an official decree which was published on November 23 in the same year as a official issue (the Official Register No.314).

The first origin of establishment of the CRM comes from a provincial people's strike which broke out for provoking a drastic countermeasure against the economical stagnation in Manabi Province caused by a prolonged drought in 1962. According to the original legal instrument, the CRM was organized by juridical private persons with social and public purposes. And, its functions were concerned to supply irrigation and potable water and, to urbanize as making houses, paving roads and so on. When the CRM has prepared a development plan, it should be approved by the National Coordination Board for Economical Plan (the old body of CONADE).

On September 14, 1970, the CRM was entirely modified suppressing its autonomy. Since this reform, the CRM was subordinated to the MAG for making best coordination between its own works and nation-wide programs, provided that the same functions were kept.

The CRM was modified again on January 19, 1978 according to the executive decree No.2180, the Official Register No.516.

In this decree it was pointed out that the CRM has to play an important part of the economical and social development of the province, in the same way, it mentioned that the CRM's structure had to be changed in connection with regional organization, and it should be coordinated with other public services so that the population shall effectively get the benefits of development.

At the present time, the CRM is one of the legal authorities established according to public laws with proper funds belonging to the Ministry of Agriculture and Livestock (MAG) legally as shown in Fig.A.1.

- A.14 -

#### 4.2 Present Situation of CRM

#### 4.2.1 Organization and Function

i) General

On December 20th of 1991, the CRM has started with a new regulation and organization. Fig.A.2 shows this organization.

According to this new organization, there are several improved points comparing with the old one, as showed in Fig. A.3. First of all, a redefinition of duty for the Vice Executive Director. In the old organization, the Vice Executive Director had administrative and technnical functions.

The new organization explains that the responsibility of the Vice Executive Director has become technical matters only. It seems that the CRM will be able to promote the project operation and development more efficiently.

For second point, the new organization includes other unit. That is the Training Department. In case that this new section would be functioned well, it could be good contributed to strengthen technical level of engineers and/or staffs of the CRM.

For the third one, the Directorate of Human Resources and Administration in the old organization was separated into two directorates in the new organization, i.e. (i) the Directorate of Human Resources, and (ii) the Directorate of Administration.

For the fourth point, the Department of Furniture belonging to the Directorate for Finance in the old organization is changed its location to the Directorate for Administration in the new organization.

Details of organization of the CRM and its function are mentioned below.

#### Objectives of CRM

ii)

According to the regulations, the CRM has following main objectives;

- To prepare plans, programs and to formulate development projects for the Manabi province according to the national plans in coordination with public and private organizations in the province for development of resources.
- To execute the works according to those plans, programs and projects, especially for utilizing water resources for irrigation, potable water and sanitation.
- To advise the municipalities about urban development.
- To maintain and promote the plans, programs and projects and to give support for executing the works which will come from public and private sectors in the province.
- To tend for establishment of enterprises or associations for utilizing the resources, and to participate in them for management and maintenance of the works which will be performed and of the other works concerning development for the province.

In general, to conduct the studies which come from the plans, programs and projects mentioned above is the main objective of the CRM for realizing socio-economic development of the Manabi Province.

For realizing those objectives, the CRM has technical and engineering sections mentioned hereafter.

#### iii) Organization

The CRM is organized by several levels such as directive level, advisor level, auxiliar or supporting level, and operative levels.

The directive level is formed by the Directive Board, the Executive Director and Vice Executive Director.

The advisor level is formed by the Technical Council, the Internal Audit Unit, the Legal Advisor Unit, the Social Communication Unit, the Institutional Development Unit, the Directorate for Regional Planning and the committee for labor and boss relationship.

The Legal Advisor Unit has two departments such as i) the Department of Labor and Penalty and ii) the Department of Civil and Commercial Aspects. The Directorate for Regional Planning has three departments as i) the Department of Regional Study, ii) the Department of Programming and Planning, and iii) the Department of Monitoring and Evaluation of Regional Projects.

The auxiliar or supporting level is formed by the Directorate for Human Resources, the Directorate for Finance, the Directorate for Administration, the Department of Computation and the Unit of Secretary General.

The Directorate for Human Resources has three departments as i) the Department of Labor Relationships, ii) the Training Department and iii) the Department of Supporting Services.

The Directorate for Finance has also three departments as i) the Department of Budget, ii) the Department of Accountant and iii) the Department of Cash Administrationm.

Three departments belonging to the Directorate for Administration are i) the Department of Procurement and Delivery, ii) the Department of Stock Control and iii) the Department of General Affairs. The Documentation and Filing Section belongs to the Unit of Secretary General.

The operative level is formed by the Directorare for Physical Infrastructure and the Directorate for Socio Economic Development.

The Directorate for Physical Infrastructure consists of seven (7) departments as i) the Department of Study and Design, ii) the Construction Department, iii) the Department of supervision, iv) the Department of Poza Honda Project, v) the Department of Carrizal Chone Project, vi) the Department of Transbasin Project and vii) the Department of Water Plant Project. Among these departments, the departments concerning the specific project as iv), v), vi) and vii) are the temporary sections. When the projects concerned will be completed, the departments will end their existence.

The Directorate for Socio-Economic Development has also seven (7) departments as i) the Department of Programming, Information and Popularization, ii) the Department of Enterprise Development, iii) the Department of River Basin Management, iv) the Department of Study of Water and Soil, v) the Department of Rural Development for Poza Honda Area, vi) the Department of Rural Development for Carrizal Chone Area and vii) the Department of Rural Development for Marginal Area. These departments are correspond to the departments concerning to the specific projects in the Directorate for Physical Infrastructure.

#### iv) Functions of Directive level

The Directive Board consists of the Minister of Agriculture and Livestock, the Minister of Public Health, the Secretary of Planning of the National Council for Development (CONADE), the Executive Director of the Ecuadorian Institute of Hydraulic Resources (INERHI), the Governor of Manabi Province, the Chairman of the Manabi Development Council, a representative from the Municipal Government of Manabi Province, and a representative from the Private Enterprises Association and a representative from the Association of Labors Union.

The functions of the Directive Board are:

- To set strategies, policies and to make priorities to the proposed objectives for applying to actual cases.
- To approve plans, programs and projects for realizing socio-economic development for the specific region.
- To approve an annual budget of institution and to reform it, and to approve the balance of budget which is reported to the Internal Audit previously.
- To recognize, to approve and to reform the internal regulations, and to consult them to authorities concerned to take legal authentication.
- To authorize the contracts, agreements, loans or other legal acts so that those will represent institutional compromises.
- To evaluate executions of the existing plans, programs and projects.
- To nominate the Executive Director and Internal Auditor and to remove them according to the law.
- To recognaize the reports presented by the Executive Director and the Internal Auditor of the institution.
- To authorize procurement-sale of movable properties and real properties, and to be obligated to fulfill the legal precepts.

To have other rights and attributions according to the laws and regulations concerned.

The Executive Director has the following functions, tasks and attributions.

- To fulfill and to make fulfillment the provisions or regulations and resolutions of the Directive Board.
- To represent the institution of the CRM legally or extra-legally.
- To conduct, to organize and to control the plans, programs and projects which being executed by the institution according to the strategies, policies and priorities established by the Directive Board in coordination with the activities of other public or private offices in Manabi province.
  - To conduct, to organize and to control technical, administrative and economical activities of the institution of the CRM.
- To nominate and to accept resignation and removal of official staff, employees and labors from all departments, sections and administrative units according to the existing regulations.
- To elaborate annual working plans for the institution of the CRM together with the Technical Council and to submit them to the Directive Board to take its approval.
  - To submit reports requested by the Directive Board and the Government agencies concerned.
    - To formulate an annual budget for the institution of the CRM and to reform it, and to submit it to the Directive Board to take its approval.
  - To let the Directive Board know about projects which is executing in accordance with the internal regulations, and to submit them to the Board to take its approval.

- To authorize expenses for procurements upto the amount of two hundred times (200 times) of a minimum vital salary according to the existing law and its respective regulation.
- To present reports concerning progress and activities of the executing plans, programs and projects to the Directive Board.
- To act as the Secretary for the Directive Board.
- To have to fulfill the other functions stated in laws, regulations and statements which have been delivered by the Government and other authorities concerned.

The Vice Executive Director has following functions, tasks and attributions.

- To establish projects according to the plans and programs together with their policies, to make budget plan for the Departments for Physical Infrastucture and for Socio-Economic Development, and to apply and to execute them based on the approval of the Directive Board and the Executive Director.
- -- To supervise and to control the management of the potable water systems of Poza Honda, Chone and La Estancilla and their operative units.
- To propose policies related to studies, designs and construction, and to utilize them to the different projects.
- To conduct and to control the activities of construction works, management and maintenance works of the projects executing by the CRM.
- To supervise and to control staffing and labor who participate to the works in operative units, and to propose re-arranging them for rationalizing and optimizing.
- To subrogate the Executive Director with all his powers, rights, attributions and responsibilities by his order or in case of his absence for more than three (3) days with no justified reasons as well as the case of definite absence until the new nomination would take place by the Directive Board.

- To advise technical, administrative, financial and operative matters of the institution of the CRM to the Executive Director.
- To authorize expenses for procurements upto the amount of fifty times (50 times) of a minimum vital salary according to the existing law and its respective regulation.
- To coordinate with other directors for making development plans and operative plan of the institution of the CRM.
- To manage his staff according to the laws and regulations.
- To have to fulfill the other functions delivered by the Executive Director.

The Technical Council in the advisor level gives advises to the Directive Board and the Executive Director so that they will be able to make decisions concerning the technical and administrative conduct of the institution of the CRM in its respective aspects. The Technical Council also has a function to suggest rules concerned and policies for execution of the plans, programs and projects which should be conducted by technical units of the institution of the CRM. Also the Council suggest about financial sources for execution of the projects.

The Department of Labor and Penalty should deal with legal matters in the field of labor including contracts/agreements between the CRM and labors. It also acts police actions and assists to the judicial process for all legal case when the CRM request.

The Department of Civil and Commercial Affairs has the functions to participate in civil actions on behalf of the CRM including bidding, tendering and contracting that those amount is less than one thousand times (1,000 times) of the minimum vital wage and other functions concerned.

The Unit of Social Communication has to do communication services between each department of the CRM and between the institution of the CRM and organizations and habitants by making press reports or other publications. The services includes to sound of public opinion on the services which given by the institution of the CRM.

The Unit of Institutional Development has the function to study organizational and functional matters and set up coordination mechanism between all the management units so that the institution of the CRM can coordinate smoothly between each department and unit of the CRM. And it makes the annual report on the CRM's activities to the Executive Director.

The Directorate for Human Resources is an important unit for strengthening of the institution of the CRM, especially the Department of Labor Relationship and the Department of Traning belonging to it.

The Department of Labor Relationship is the section mainly for recruiting manpower, so its function is as follows.

- To solve contracting problems, administrative indictment and sanctions, and to inform pecuniary and administrative sanctions.
- To manage classification system of employees position, training and personnel selection.
- To evaluate the employees performance for deciding their salaries according to the existing laws and regulations concerned.

- To maintain and to watch over the discipline of the institution of the CRM.

- To manage the collective contract based on the regulations of the labor code and the other laws concerned.
- To coordinate with the Unit of Legal Advisor about legal actions of the employees of the institution of the CRM if any.

- To have the other functions due to the collective contract, the labor code, and others affairs given by the Executive Director and the Director of Human Resources.

The Department of Training is now planned to have following functions.

 To suggest policies and general outline of training matters for the employees of the institution of the CRM.

- To establish and to present an annual training plan based on requirement about training and according to the plans and programs which should be executed by the CRM.
- To manage schollarship programs according to needs of the institution of the CRM in coordination with departments and units of the CRM.
- To coordinate with national and international training organization concerning the schollarship or training courses for the employees of the CRM.
- To keep an actual level of inventory and convenience of employees of the CRM.

To keep actual information about training organizations, programs, instructors, assistants, materials, and financial resources for training that may be interesting to the CRM.

- To execute, to coordinate and to evaluate the training events.

To execute the other service directed by the Director for Human resources.

The Department of Assistant Services belonging to the Directorate for Human Resources is the unit in charge of the welfare for the employees of the CRM. A remarkable function included in this department is to plan, to program, to organize and to execute the plans and programs for social and cultural welfare when directed to the employees of the CRM.

The Operative Level consists of two directorates. One is the Directorate for Physical Infraestructure and the other one is the Directorate for Socio-Economic Development.

The functions of the former one are to study, to design, to execute construction works and to supervise them for projects which been executed by the CRM. The studies include a preliminary study, master plan study, pre-feasibility study, and feasibility study.

On the other hand, the functions of the latter one are to guide to establish enterprises and/or associations for irrigation water users, to execute river basin management including environmental monitoring, to study water and soil quality for irrigation, and to develop irrigation water users including measuring irrigation water volume used by farmers and reporting it to the Department of Cash Flow Administration.

#### v) Scale

Fig.A.2 shows the existing organization of the CRM. As of June 30, 1991, the total staff of the CRM were 1,320 persons consisting in (i) 33 persons of the directive level, (ii) professional staff, 123 persons, (iii) technical staff, 62 persons, (iv) administrative staff, 187 persons, (v) permanent labors, 626 persons and (vi) temporary labors, 289 persons classified by budgetary category. In case of classifying by type of employment, those staff were (i) appointed staff (formal permanent staff) of 298 persons, (ii) contracted staff, 107 persons, (iii) individual contracted labors, 289 persons and (iv) labors by collective contract, 626 persons.

#### 4.2.2 Collection System of Water Rate

According to the law, the management of water should be entrusted to water users. Therefore, water directories of users should be established. However, this kind of association is not established yet because of uncompletion of facilities for supplying water to end users. So that existing collection system of water rate is including in the institution of the CRM.

#### i) Collection System of Potable Water Rate

At the present time, the CRM establishes special sui-generis systems for management operation and maintenance of potable water services. These are;

– Poza Honda Regional System of Potable Water,

- La Estancilla Regional System of Potable Water, and,

- Chone Regional System of Potable Water.

The Poza Honda Regional System of Potable Water covers the area connecting to Poza Honda water supply system, La Estancilla Regional System covers the area connecting to La Estancilla water supply system and Chone Regional System covers the area connecting to Chone water supply system, respectively, and those systems belong to the institution of the CRM as mentioned above.

The Directive Board decides tariff of potable water to be collected from the customers, and the systems take the following procedure.

- Checking with their own personnel the amount of water consumed by each user.
- Calculating the water rate to be collected.
- Making bill of water rate.
- The customer pays to the accounting section of the enterprise the requested water rate.

These systems are right now directly controled by the Executive Director and the Vice Executive Director. Actually, they should be separeted from the institution of the CRM when they can finance themselves by own income due to water rate according to the national regulation. However, they can not finance themselves at the present time, so that the CRM still supports them financially.

The systems have a technical division and an administrative division, so they control and manage their funds by themselves, and execute maintenance works for facilitites of potable water by use their own income and subsidies from the CRM.

ii) Collection System of Irrigation Water Rate

The irrigation water rate is directly collected by the institution of the CRM. The collection system is as follows.

- The Department of Rural Development for Poza Honda Area and the Department of Rural Development for Carrizal Chone Area supervise and check the water used by farmers lived in the area connecting to each irrigation water supply system. The check works include cultivation area of each farmer and cultivation times of each plant as maize, beans and so on. Average cropping period in one cultivation time of these plants is usually 4 months, and it is necessary to irrigate once a week or ten (10) days. So it is necessary to irrigate ten (10) times in average in one cultivation.
- Then it is calculated the water rate to be collected.
  - Making bill of water rate, and sending it to the Department of Cash Flow Administration and its copy to each farmer.

 Coming the farmer to the Department of Cash Flow Administration of the institution of the CRM to pay the requested water rate mentioned in the bill of water rate.

As mentioned above, the CRM uses a very simple way to calculate the water rate of irrigation that the water volume is not measured but calculated cultivation area and irrigation times only.

# 4.2.3 Budgeting and Financing System

The budget making system is as follows;

- (1) Ministry of Finance guides to the CRM the amount level for next year.
- (2) The CRM organizes the next year's budget considering budget plan from each department.
- (3) The CRM makes a final budget plan for next year, and sends it to the Ministry of Finance.
- (4) The Ministry of Finance checks it, and sends it to the National Congress.
- (5) The National Congress approves it, and sends it to the Ministry of Finance.
- (6) The Ministry of Finance acknowledge the approval of budget to the CRM.
- (7) The CRM can use the budget through the Central Bank of Ecuador. And, the CRM has to report the monthly accounting of the budget to the Ministry of Finance.
- (8) In any way and any time, the Ministry of Finance can check the utilization of budget of the CRM.

The sources of budget are: (i) actual tributary revenues, (ii) actual non-tributary revenues, (iii) capital transfers, (iv) actual transfers.

The following Table represent a summary of the effective revenues and expenditures during the last four years.

|                       | ······ |       | (S/   | .million) |
|-----------------------|--------|-------|-------|-----------|
| Items                 | 1987   | 1988  | 1989  | 1990      |
| Effective revenue     | 2,939  | 2,817 | 5,368 | 5,096     |
| Effective expenditure | 2,962  | 2,835 | 5,289 | 4,874     |

- A.26 -

The total expenditures consist of (i) remuneration, (ii) services, (iii) consumables and materials, (iv) office furnitures, (v) construction and other investment, (vi) amortizations and loans, (vii) current transfers, and (viii) global budget.

In 1990, the main items of the expenditures were remuneration (20 %), construction and other investment (28 %), amortization and refund of loans (15 %) and current transfer cost for public sector (15 %).

#### 4.2.4 Recruiting

At the present time in Ecuador, there is a systematic recruitment rule, relatively applied. The present formal permanent staff of the CRM were appointed by the Executive Director directly or through some channels. It seems that this is an obstacle to the institution's growth and reinforcement.

## 4.2.5 Training

As mentioned in previous item, the new organization of the CRM has a training unit. And its functions and obligations are already settled as mentioned in previous item. But, upto the present time, there is no any training plan and program in the institution of the CRM. Therefore, establishment of the training plans and programs will be necessary for strengthening the institution of the CRM.

#### 4.2.6 Relationship with Other Authorities

There are several institutions concerning directly or indirectly to the CRM such as the National Development Council (CONADE), the Ministery of Agriculture and Livestock, the Ecuadorian Institute of Sanitary Works (IEOS), the Ecuadorian Institute of Water Resources (INERHI), the Committee for Guayas River Basin Development (CEDEGE), and the Board of Hydraulic Resources, Jipijapa and Pajan Board of Water Resources (JRH). Those relationship in location in the Governmental organization is shown in Fig.A.1. Besides there is the coordination with the Provincial Council, municipalties and others.

The CONADE is the institution for making national development plan, and it controls and guides to sub-structures on their own development plans as a council. Therefore, the CONADE is the super-structure of the CRM. The IEOS is the institution for the planning, executing and supervising the plans and projects of potable water and sewage for the country. It also has a right to control the quality of potable water. So some parts are overlapped with the CRM's territory.

The INERHI is the institution for water resources development in Ecuador and it can be named as the water owner. On a water resource for irrigation concerning this Project, the water from the Chone river and the Portoviejo river is also belongs to the INERHI at present. However, the competence of water management and utilization in Manabi province has been transfered to the CRM by means of concessions extended by INERHI.

The CEDEGE is a same kind institution as CRM, which is in charged of development of Guayas river basin, it controls water from the Daule-Peripa dam. At present, there is a coordination between the CEDEGE and the CRM. In this project, the study includes six (6) alternative plans for diverting water from Daule-Peripa to the Portoviejo and Chone river basins.

The JRH is a free-standing private agency with social and public functions with own fund and patrimonial properties, and its headquarters is located in Jipijapa which is southern part of Manabi Province. Its objects are to provide potable water to urban and rural areas of Jipijapa and Pajan, to construct sanitary sewerage and rain water sewerage, to pave the roads and sidewalks of the cities, to provide irrigation water, to develop the production and to promote the economical and social development of the sities of Jipijapa and Pajan. The Institution has a plan to supply potable water to Jipijapa area.

# 4.3 Recommendation

It seems that the new organization of the CRM is structured as a whole. There are several improved points as mentioned previously comparing with the old one. Especially the operative level was improved for promoting the basic functions of the CRM.

However, the CRM still has several points to be improved such as (1) recruitment system, (2) execution of training, (3) establishment of independent environmental monitoring section, (4) establishment of laboratory for water and soil quality and (5) incorporate the PHIMA unit to the organic and functional structure of the CRM.

#### 4.3.1 On Recruitment

It is regrettable that the institution of CRM has no a rule and procedure for staff recruitment in the Directorate for Human Resources. Basically, employment of permanent staff must not be entrusted to the Executive Director only, but should be made by selection system or merit system for recruiting. And, persons who want to enter into the CRM should be seleceted by an examination for services controled by an employment committee consisting of several members from each department.

According to the existing Employment Law for Civil Services and Administrative Career (Ley de Servicio Civil y Carrera Administrativa) and related regulation, persons who want to enter into any public organizations and/or institutions should be passed through an examination concerning their career and their professional level.

The CRM should follow this law and regulations. And, if necessary, the CRM should establish its own regulation for employing new staffs like CEDEGE.

In Ecuador, there is a pension system which applied to the employees and labors who are engaged as a formal permanent staff for enterprises or public organizations for 30 years continuously, but no any retirement age system. The annuity of pension is not enough to live, so a great number of the formal permanent staff do not want to retire.

#### 4.3.2 On Training

#### (1) General

As mentioned above, the training section is established in the new organization. Generally, these kind of training section is for internal staff, i.e. the formal permanent staff, for improvement their skills and empowering them to do their works by proper self-judgment but not by an arbitrary judgment. So that the staff will have a high ambition. For this purpose, it is necessary to have knowledge on not only their specified field of works but also relationships their own works and other fields of works.

Firstly, it will be necessary to give technical knowledge of specified field of works like river improvement, structural design, construction method, how to supervise a construction work, environmental assessment, ecology, water management, soil mechanics, urban and rural development, regional planning, and so on. For the senior training, economic evaluation of the project should also be included. Some knowledges of those fields may be given during the detailed design stage and construction stage. Furthermore, those training could be executed by use of training organization in and outside of the country and/or universities. In this case, the training unit of the CRM may contribute to make annual training program of the staff.

For making annual training program, the training section should research that what kind of training courses there are in and outside of the countries and universities, and what kind of training courses are necessary for the staff of the CRM at present.

To introduce an evaluation system may be one of ways for keeping specified professional level of the staffs. In this case, the result of evaluation should be reflected to their salaries.

On the other hand, the urgently needed knowledges at present are those after completion of the construction works. Those are:

- 1) how to manage, control and operate pumping stations, dams and other facilities related,
- 2) how to manage and guide farmers for better use of water for their cultivation, and
- 3) how to give a thinking of "water should be paid" to the farmers.

According to water requirement, the farmers should pay S/.5,320/ha for one irrigation time in average based on the cost for La Esperanza dam and for the Poza Honda dam. However, they usually pay only S/.90/ha in each irrigation time as the end price. And, this is an existing regulation of the CRM for irrigation water use. This means that the CRM does not employ a real water rate for irrigation.

Therefore, how to manage and guide farmers for better use of water for their cultivation, and how to give a thinking of "water should be paid" to the farmers are the most important knowledges for establishing a self-financing system in the CRM. For training for this purpose, a special training may urgently be necessary because that the situation in which those technical staff is necessary comes just after the completion of the construction works.

(2) Cost Estimation for Special Training

As mentioned above sub item (1), a special training may be necessary for giving knowledges about how to manage, control and operate pumping stations, dams and other facilities related, how to manage and guide farmers for better use of water for their cultivation, and how to give a thinking of "water should be paid" to the farmers.

It is recommned that this training will be executed during the construction stage of this Project of about five (5) years. The necessary cost is estimated as follows:

Conditions:

1) Number experts:

| Civil engineer:               | one (1) person  |
|-------------------------------|-----------------|
| On-farming-guidance Engineer: | one (1) person  |
| Total:                        | two (2) persons |

2) Remuneration for experts: US\$20,000/M (US\$10,000/M each)

3) Overseas allowance: between US\$100day and US\$ 150/day, so that US\$125/day in average.

4) Other cost: US\$5,000/round-trip as air fare and any other allowances.

5) Period: five(5) years

6) Number of returns of experts to their home country: two(2) times a year. When the same experts comes again, a period of stay in the home country should be one (1) month in maxsimum. Therefore, the period of one (1) training will be five (5) months in average.

- 7) Necessary experts may be changed by each time to come to the site.
- Trainees should be selected and managed by the Training Department of the CRM.
- 9) The experts should be able to speak Spanish language.
- 10) Necessary accommodation should be prepared by the CRM to the experts.

The necessary cost is calculated at:

| Remuneration:         | US\$20,000/M x 10 months x 5 years          | =  | US\$ | 1,000,000 |
|-----------------------|---|----|------|-----------|
| Overseas allowance:   | US\$125/day x 30 days x 10 months x 5 years | == | US\$ | 187,500   |
| Air fare and others:  | US\$5,000/time x 2 persons x 9 round-trips  | =  | US\$ | 90,000    |
| Miscellaneous cost:   | (20 % of the above)                         |    |      |           |
| (For preparation text | books, printing, copying etc.)              | •= | US\$ | 255,500   |
| Total cost:           |   | =  | US\$ | 1,533,000 |

This amount is less than 1 % of the total construction cost.

## 4.3.3 On Institution of CRM

The Unit of Integrated Water Resources Plan of Manabi (PHIMA) was established as a special technical group of the CRM with organization as shown in Fig.A.3 based on a request

stated in a technical cooperation agreement with the American States Organization on March 13, 1987. However, this unit is not organically defined in the CRM's structure.

The study team for the Feasibility Study on the Water Resources Development Project for Chone-Portoviejo River Basins executes the studies with this unit of PHIMA as a counterpart team since its Master Plan Study stage, so that the staff of the organization of PHIMA has well trained through the course of the studies.

The CRM must not scatter and lose these well trained staff of the unit of PHIMA. For this purpose, the existing Department of Study and Design within the Directorate for Physical Infraestructure, must be changed into a Directorate level, taking into account the technnical resources and functions being developed by PHIMA.

Furthermore, civil engineers as tunnel engineers and/or geotechnicians, soil mechanics engineers, road engineers and hydrologists will be necessary in the construction supervision section during detailed design and construction stages. And technical knowledges should be transferred for these profesionals by foreign experts or foreign technical advisors. This will be the most urgently matter for training.

Such institution as the CRM to execute plans, programs and projects which treat social infrastructures and/or natural resources should have an environmental management and/or a monitoring section in its own organization because of their character that those projects must take into account of keeping good environmental circumstances for beneficiaries who use these infrastructures and resources.

In the new organization of the CRM which started from December 1991, the works of environmental monitoring belong to the Department of River Basin Development under the Directorate of Socio-Economic Development.

On the other hand, the similar institution to the CRM like CEDEGE has the environmental monitoring sections in each project which they are executing at the present time. The system of CEDEGE may be good for each project, however this system has no technical information exchange channel with other projects, no connection channel with other sections concerned, so that no feed back systems of monitoring results for taking countermeasures for actual operation and maintenance of the projects as a whole. From the environmental viewpoint, an independent department of environment is necessary for the institution of the CRM, including an environmental management unit, an environmental monitoring unit and a laboratory. Necessary cost for establishment of the department of environment is recommended in the environmental sector in this report.

Fig.A.4 shows the recommended institution of the CRM in the Operative Level.

Furthermore, a new work office may be necessary to establish additionally for executing this transbasin scheme project. Fig.A.5 shows this new work office. This office should be under control of the headquarters of the CRM.

#### 4.3.4 On Collection System of Water Rate

As mentioned in previous item, the existing collection system of water rate is separated into two systems in potable water and in irrigation water.

According to the Law for Establishment of the Ecuadorian Institute of Hydraulic Resources (the INERHI), a competence of water management and utilization in whole Ecuador is empowered to the INERHI.

However, this competence was transferred to the CRM according to a concession between the INERHI and the CRM as mentioned in previous section. Therefore, the CRM should have a responsibility for establishing a collection system of water rates for selfsupporting in finance. And, the construction cost, and the operation and maintenance cost should be recovered by this system and the subsidy from the Government.

This is also an important factor for strengthening for the institution of the CRM.

As mentioned above, the farmers should pay at least S/.5,320/ha as an average (after completion of the Project, it will become S/.22,940/ha), according to the actual requirement of water. However, they usually pay only S/.90/ha in each irrigation time at present. And, this is an existing regulation of the CRM for irrigation water use. This means that the CRM does not use a real water tariff for irrigation.

So the CRM should establish reasonable tariff system for irrigation water, and make the farmers to understand and have willingness to pay the water rates. (Note 1)

Necessities of Training for Extension Workers of Agriculture

Generally, farmers behavior is not based on expectation of administrative autorities as the CRM.

They usually follow their time-honored customs. For example, a farmer who did not use the irrigated water because of use of rain water do not want to use the irrigated water with pay. Even if he has used the irrigated water upto this time, he do not want to use expensive irrigated water when he has used low price irrigated water upto this time. Because he is afraid of too much expenditure for harvesting.

They usually do not know efficient water use. They do not know too effective use of fertilizer harmonizing with water use. They also sometimes use water without end even no necessary so much use of water volume because that they think it is no necessary to pay for water use.

Therefore, it is necessary to guide or educate to farmers suitable water use with pay and suitable use of fertilizer harmonizing with water use, and this is the way to increase their productivity. Even if they use water and fertilizer with pay which are expensive a little bit comparing with their time-honored way, they should know that to keep and increase their productivity is economically feasible by this way.

For this purpose, extension workers who guide and educate the farmers will be necessary to train. This is the way to keep the project sustainability in the future. These kind of extension workers will usually be necessary several hundred persons. So that it is recommended that the training program would be planned in the detailed design stage.

(Note 2)

#### Water Rates in CEDEGE

Revenue from water rates is the most important financial factor for self-supporting of water resources development authorities like the institution of the CRM or CEDEGE.

For reference, the tariff system for irrigation water use in CEDEGE is introduced as follows.

 The irrigation area which belongs to Transbasin Project Upto June 1992: S/.12.00/m<sup>3</sup> From July 1992: S/.18.00/m<sup>3</sup> Annual average: US\$ 0.17/m<sup>3</sup> (scheduled)

If the same water requirement estimated in the transbasin project (this project) in Manabi province is applied to this, the price to be applied from July 1992, S/.18.00/m3, becomes S/.2,510/ha/irrigation time.

- 2. The irrigation area which belongs to Babahoyo Project Existing price: S/.28,000/ha/year
- 3. The irrigation area which belongs to Jaime Roldos Aguilera Project(17,000 ha)

Existing price: S/.86,400/ha/year

The irrigation water prices mentioned above are not reflected real construction cost for all facilities, so that the prices are not the true price because that CEDEGE has gotten subsidies for a part of the construction cost from the Government.

(From result of interview to CEDEGE on Aug.5, '92)
