INTRODUCTION

The Groundwater Database System is an integrated database system consisting of the following databases: well inventory database, hydrology database, meteorology database, hydrological database, as well as a literature database. The databases and programs are written in FOXPRO 2.5. However, the databases can also be accessed through DBASE III, DBASE IV and other XBASE databases (DBASE III formatted databases). Users therefore can use other types of database programs to edit records or make reports from the databases. The program is menu driven and user friendly so users don't need to be experts in FOXPRO.

HARDWARE REQUIREMENTS

The minimum required hardware to use the program are as follows:

1. 386 processor (486 preferable) with 8 MB main memory
2. 100 MB hard disk space
3. color monitor (preferable)
4. mouse (preferable)

SOFTWARE REQUIREMENTS

The softwares required by the program to run the program are as follows:

1. DOS 5.0 or higher
2. Expanded Memory Manager (preferably QEMM)
3. Cache software (Smartdrv)
3. FOXPRO 2.5
4. SPSS statistical software

The number of files handles should be at least 100. In the CONFIG.SYS, insert the following line:

```
FILES =100
```

In the AUTOEXEC.BAT insert the following:

```
SMARTDRV 640  
SET SPSS=C:\SPSS
```

The first line set asides 640 kilobytes of memory as cache memory to speedup hard disk access. If more memory can be set aside, disk access would be faster.

The second line tells the SPSS program where to find its support files.

INSTALLATION

Although the initial installed files would be only 28 MB, when the program runs some of its utilities, it will require additional space for its index files and for its file manipulation. Together with the FOXPRO and SPSS programs, total required hard disk space would be 100 MB. The installation is contained in 4 diskettes. To install to a hard disk follow these steps:

1. Set the default drive to the drive where the installation diskettes will be used, i.e. C>A: for A drive.
2. Type INSTALL C: if you want to install to drive C. Change C to the drive you want to install to.
3. The installation would automatically create a subdirectory named GWS in the drive you will be installing to.
4. The installation will copy the installation programs and the GWS program in the \GWS subdirectory together with LHA.EXE, the program used to compress the files. The LHA would be used later to decompress the files to their proper subdirectories.
5. All the files with LZH extension will then be copied to the \GWS subdirectory. These files are compressed files of the databases files. LHA will then decompress all these LZH files to their proper subdirectories. DO NOT REMOVE the LZH files, they serve as the backup of the data files.
6. WELL.LZH, the compressed file of the \WINV\WELL.DBF file (originally more than 11 MB) is more than 1.44 MB so it can not be stored in only one diskette. SLICE.COM was used to divide this file into several diskettes. SLICE.COM divided the files into two diskettes so it can be transferred to another computer. Another program, SPLICE.COM would put together these two files into one file. LHA would then decompress the WELL.LZH.
7. The installation is now complete. To run the program type FOX GWS. This will run FOXPRO and automatically run the GWS program.

NOTE: The copying of the LZH files uses the REPLACE command instead of the copy command. This way if there are already installed files in the hard disk similar to the files to be installed, only the newer files would be copied and would not replace the files that would be more updated.

A batch file named, *BACKUP.BAT* is also installed in the hard disk. This batch file can be used to update the compress files (*.LZH) which serves as backup copies of the databases. To copy or move the databases into another computer, these files should replace the files in the installation diskettes to reflect the updates in the databases. Use the SLICE.COM program to divide the WELL.LZH file into smaller

sizes. Use blank formatted diskettes to store to. These diskettes would serve as installation diskettes 3 and 4.

GETTING STARTED

The program can be started in two ways:

A. Loading FOXPRO first, then starting the GWS program.

1. Go to the GWS subdirectory, C> CD \GWS
2. Load the FOXPRO program, C>FOX
3. From the FOXPRO program, activate GWS program, i.e., DO GWS

B. Loading FOXPRO and activating GWS program at the same time

1. Go to the GWS subdirectory, C> CD \GWS
2. Load FOXPRO and GWS programs, i.e., FOX GWS

Note: The directory where the FOXPRO program resides should be included in the PATH.

A batch file can be created to automatically perform these commands. GWS.BAT can contain the following commands:

```
C:  
CD \GWS  
FOX GWS
```

GWS MENU

After activating the GWS program by issuing DO GWS in the FOXPRO program, the following GWS main menu will be shown:

```
System Database Edit Record Window Report Query
```

The menu can be navigated through the use of the cursor keys. The highlighted option will be activated when the Enter key is pressed, in this case the System menu. The commands can also be activated by pressing the Hot keys associated with the commands, say, Alt-E for the Edit command. The Hot keys are highlighted by a different color.

The commands can also be activated by using a mouse. First, position the mouse pointer in the desired command, then press the left button of the mouse. The commands used by the mouse are the standard commands in the FOXPRO database. Similarly, the standard commands used in FOXPRO were retained in the GWS program to facilitate the learning of the GWS commands. Please refer to the FOXPRO manual for the complete mouse and cursor commands.

SYSTEM

System Database Edit Record Window Report Query

Changwat	
Calculator	
Calendar/Diary	
Conversions	
Environment	▶
Exit	ALT+X

The System menu consists of modules such as selecting the Changwat to work with, the Quit command and some utility programs that may be used to enhance the use of the program. The Calculator can be generally used for calculations. The Calendar/Diary may be used for keeping track of activity schedules and general date tracking activities. The Conversion program is used to convert from one unit to another. The Environment command lets you change the setup of the GWS program such as showing a clock and the number of lines on each screen.

SELECTING CHANGWAT

Selecting the Changwat is applicable only to two databases, well inventory database and groundwater monitoring. Selecting a Changwat merely opens the database and positions the record to the first well in that Changwat. It does not prevent you from getting the wells from other Changwats because the database contains all the wells in all the Changwats.

System Database Edit Record Window Report Query

01	BANGKOK
02	NONTHABURI
03	PATHUM THANI
04	SAMUT PRAKAN
05	SAMUT SAKHON
06	PHRA NAKHON SI AYUTTHAYA
07	NAKHON PATHOM
08	CHACHOENGSAO

The list of Changwats are listed in the \GWS\DBFS\CHANGWAT.DBF database.

GENERAL NOTE ON UNKNOWN VALUES

For values which are normally more than zero such as measurements of length, distance, diameter, etc. a ZERO value is absurd and only means an unknown measurement.

For cases where a ZERO value can be *measured* such as the absence of a chemical element in water, distinction between an unknown value because of non-measurement and an actual zero value should be made. A *NEGATIVE VALUE*, usually the least significant digit, i.e., -0.01 is used to denote an *UNKNOWN* value to distinguish it from an actual zero measurement.

DATABASES

System Database Edit Record Window Report Query

Well Inventory
Non-DMR Well Discharges
Groundwater Monitoring
Land Subsidence Monitoring
Meteorology
Hydrology
Literature Records

The Database menu lets you choose the database you want to work with. There are seven main databases to choose from. The main databases are further divided into several databases which contain the normalized database.

WELL INVENTORY

System Database Edit Record Window Report Query

Well Inventory	1. Location
Non-DMR Well Discharges	2. Permits
Groundwater Monitoring	3. Well Design
Land Subsidence Monitoring	4. Strata
Meteorology	5. Well Casing
Hydrology	6. Well Screens
Literature Records	7. Annular Seal
	8. Sand Collector
	9. Well Development
	10. Water Quality (Physical)
	11. Water Quality (Chemical)
	12. Toxic/Trace Elements
	Append From Well99, etc...

Well inventory is divided into several databases and data entry screens. To facilitate data entry, well inventory is divided into twelve screens as shown above.

The last option, Append from Well99, etc can be used to consolidate the databases into the main files if data inputting is done on different computers which are not

networked. For example instead of using only one computer to enter data, the databases can be partitioned based on their location in the Changwat, say Bangkok wells are stored in one computer and the rest in another computer.

To consolidate the files, the following well inventory databases should be copied to the \GWS\WINV\ subdirectory of the main computer that will consolidate the databases and should be named as the shown below:

WELL.DBF	to	WELL99.DBF
WQUAL.DBF	to	WQUAL99.DBF
TQUAL.DBF	to	TQUAL99.DBF
WSCRN.DBF	to	WSCRN99.DBF
WSTR.DBF	to	WSTR99.DBF
WCAS.DBF	to	WCAS99.DBF
WSEAL.DBF	to	WSEAL99.DBF

WELL INVENTORY SUB-MENU

A sub-menu for all twelve screens for the Well Inventory screen is shown on the bottom of each screen. It can be activated by moving the highlighted cursor on the command and pressing the Enter key or using the speedkey associated with the command or simply positioning the mouse cursor on the command and clicking the left button of the mouse. It shows the following sub-menu and the functions of each command:

<Next> <Prev> <Top > <Bot > <Edit> <Add> <Find> <+Scn> <-Scn> <Goto> <Quit>

- Next** moves to the next record in the database. The movement is based on the index key of the database, well code, and not on the physical arrangement of the record. That means the record number shown on the screen is simply not increased by one but shows the actual record number according to its position on the database. Speedkey is Control-N or N.
- Prev** moves to the previous record in the database. Speedkey is Control-R or R.
- Top** moves to the top record of the database. Speedkey is T.
- Bot** moves to the bottom of the database. Speedkey is B.
- Edit** edits the fields in the current screen. Edit mode is also activated when the mouse cursor is positioned on the main window and clicking the left button. Editable fields are shown in a highlighted color while non-editable fields are shown in dimmed colors. The mouse can also be used to position the cursor to the desired field to be selectively edited for faster editing. Speedkey is Control-E or E.

- Add** adds record to the database. Some screens do not allow the add command to be activated. This means that the addition of records should be done in the location screen. Say in the second screen, we do not want to add well codes in that screen without entering first its location and other administrative information in the location screen. Speedkey is E.
- Find** allows the user to find a particular record based on the entered criteria. The Find command can also be used not only in the currently edited database but also other opened databases. The resulting browse output can be edited or simply browsed at. Speedkey is Control F.
- +Scn** changes to the next screen. Instead of quitting the screen and manually opening the next screen this command lets you view all the screens just by pressing the + key. When in the last screen, the first screen is shown.
- Scn** changes to the previous screen. When in the first screen, the last screen is shown.
- Goto** allows the user to jump easily to the desired well code. If the entered value is not the complete well code, it jumps to the nearest occurrence of the well code. Say '0203' is just entered, then it jumps to the first occurrence of well code '0203'. If it does not find the record, the record remains in its present position. Speedkey is G.
- Quit** exits to the main menu. Speedkey is Q.

The location screen contains the most basic information on the well. It contains administrative information on the well such as its location, owner and address. The fields in this screen are explained below:

WELL CODE WELL.W_CODE

The Well Code is the basic identifier of the well. The well code identifies where the well is located and what type of well it is. As an example, in well code 010203-1001, it is represented as follows:

- 01 the first two digits, 01, represents the *Changwat Code* for Bangkok. The complete Changwat codes are listed in the \GWS\DBFS\CHANGWAT.DBF database.
- 02 second two digits, 02, represents the *Amphoe Code* for Chong Thong. The complete Amphoe codes are listed in the \GWS\DBFS\AMPHOE.DBF database.
- 03 the third two digits, 03, represents the *Tambon code* for Bang Khun Thian. The complete Tambon codes are listed in the \GWS\DBFS\TAMBON.DBF database.
- 1 the eight digit represents the *well type*. Code 1 represents a Private well, Code 2 represents a Public well and Code 3 represents an Observation well.
- 001 the last three digits represents the *well number*. It means 999 wells is the maximum number of wells that a Tambon can accommodate.

When entering or editing a well code, a popup menu appears to guide the user what Changwat Code, Amphoe Code, Tambon Code and Well Code to use. To accept a selection Code, go to the code and press the Enter key. The left and right arrows does not accept the codes.

When adding a new Well Code, the next available well number will be offered. If it is acceptable, merely press the Return key. Otherwise, change the well number.

The well type in the next field is also updated to reflect the current value in the well code.

TYPE WELL.W_TYPE

Well type can not be edited directly through this field. It should be edited through the well code in the previous field. Database \GWS\DBFS\TYPE.DBF list the valid options for this field. The following codes represents the well types:

- 1 Private
- 2 Public
- 3 Observation Well

STATUS WELL.W_STATUS

The current status of the well. Valid status are taken from the \GWS\DBFS\STATUS.DBF database and are listed below.

- 1 Active
- 2 Inactive
- 3 Abandoned
- 4 Others

WELL NAME WELL.W_NAME

The common name of the well.

AQUIFER WELL.AQUI_NAME

The aquifer where the well is predominantly tapped. The eight aquifers are listed below with their codes and their top and bottom depths in meters. To simplify, the aquifers are assumed not to intersect. The aquifer code is based on the depth of the top most screen or the bottom of the casing if there is no screen data.

AQUIFER	CODE	TOP	BOTTOM
Bangkok	BK	0	60
Phra Pradaeng	PD	60	120
Nakhon Luang	NK	120	180
Nonthaburi	NB	180	280
Sam Khok	SK	280	360
Phaya Thai	PT	360	430
Thon Buri	TB	430	480
Pak Nam	PN	480	600

SOURCE OF DATA WELL.DAT_SOURCE

Agency responsible for the well and the source of information for the well. List of agency codes and their assigned codes are listed below. List of agencies are contained in the \GWS\DBFS\AGENCY.DBF database.

- 1 DMR
- 2 PWD
- 3 MWA
- 4 PWA
- 5 DOH
- 6 ARDO
- 7 IEAT
- 8 Mun. Gov't
- 9 Others

WELL NO, NEW WELL.NEW_NO

A new number assigned to the well by the Agency responsible.

WELL NO, OLD WELL.OLD_NO

The old number assigned to the well by the Agency responsible.

WELL ADDRESS WELL.W_ADDR1, WELL.W_ADDR2

Complete address of the well for easy location of the well. Two fields are assigned to this information.

OWNER WELL.OWNER

Owner of the well.

ADDRESS WELL.OW_ADDR1, WELL.OW_ADDR2

Complete address of the owner.

GROUND ELEV. WELL.ELEVATION

Ground elevation of the well in Meters above Mean Sea Level.

MAP SHEET NO. WELL.MAP_NO

Map sheet no. in 1:50,000 where well is located.

BASE MAP, X WELL.X

Grid X in the map sheet where well is located. Related to the UTM East.

BASE MAP, Y WELL.Y

Grid Y in the map sheet where well is located. Related to the UTM North.

LATITUDE WELL.LAT_DEGR, WELL.LAT_MIN, WELL.LAT_SEC

Latitude location of the well. Three fields are needed to fill the information.

LONGITUDE WELL.LONG_DEGR, WELL.LONG_MIN, WELL.LONG_SEC

Longitude location of the well. Three fields are needed to fill the information.

UTM EAST WELL.UTM_E

Universal Transverse Mercator (UTM) X location of the well in meters.

UTM NORTH WELL.UTM_N

Universal Transverse Mercator (UTM) Y location of the well in meters. Usually reckoned from the equator.

ZONE WELL.GZD

Zone where well is located.

The complete Changwat Codes are listed in the \GWS\DBFS\CHANGWAT.DBF database and shown below:

The fields in this screen are explained below:

WELL CODE	WELL.W_CODE
TYPE	WELL.W_TYPE
STATUS	WELL.W_STATUS

WELL NAME WELL.W_NAME

The above fields cannot be edited in this screen. They can only be edited in the first screen, the location screen. They are only shown here as a guide.

DRILLER WELL.DRILLER

Company name of driller. If all the corresponding driller codes are inputted in the field WELL.DRIL_CODE and correspondingly in the \GWS\DBFS\DRILLER.DBF database, this field can be deleted in the WELL database to reduce its size and the program winv02.prg will then have to be edited.

DRILLING STARTED WELL.START_MM, WELL.START_DD, WELL.START_YY

Date drilling started.

DRILLING COMPLETED WELL.COMP_MM, WELL.COMP_DD, WELL.COMP_YY

Date drilling completed.

PERMIT NO. WELL.DRIL_NO

Drilling permit number.

ISSUANCE WELL.ISSUE_MM, WELL.ISSUE_DD, WELL.ISSUE_YY

Date permit was issued.

PURPOSE OF USE WELL.GW_USE

The major use for the well. A two letter code is used to denote the use of the well. The codes used are listed in the \GWS\DBFS\PURPOSE.DBF database and are listed below.

- 11 DOMESTIC : residences, dorms, courts, subd., condos
- 21 PUBLIC : Institutional (schools, public admin, hosp., etc.)
- 31 COMMERCIAL : Office buildings, malls, hotels, clubs, etc.)
- 41 INDUSTRIAL : Basic factory requirement for drinking and san.
- 42 INDUSTRIAL : Manufacture of soft drink
- 43 INDUSTRIAL : Food processing and ice-making
- 44 INDUSTRIAL : Textile industry, nylons
- 45 INDUSTRIAL : Wearing apparels, garments
- 46 INDUSTRIAL : Manufacture of leather products
- 47 INDUSTRIAL : Manufacture of wood products
- 48 INDUSTRIAL : Manufacture of paper and paper products
- 49 INDUSTRIAL : Printing
- 50 INDUSTRIAL : Chemical industry and chemical products
- 51 INDUSTRIAL : Rubber industry and rubber products

- 52 INDUSTRIAL : Plastic products, footwear, insulators, carpets
- 53 INDUSTRIAL : Manufacture of non-metal products, fibers, etc.
- 54 INDUSTRIAL : Manufacture of basic metal products, steel bars
- 55 INDUSTRIAL : Manufacture of metal products
- 56 INDUSTRIAL : Manufacture of mech., elect., and computer prod
- 57 INDUSTRIAL : Manufacture , assembly and rep. of vehicles
- 58 INDUSTRIAL : Manufacture of grain mill products
- 59 INDUSTRIAL : Agriculture and farm products
- 60 INDUSTRIAL : Industrial Estates
- 61 INDUSTRIAL : Tobacco
- 62 INDUSTRIAL : Power Plant
- 63 INDUSTRIAL : Others

PERMIT NO. WELL.GWUSE_NO

Permit number for use of well.

DATE ISSUED WELL.PISSUE_MM, WELL.PISSUE_DD, WELL.PISSUE_YY

Date permit was issued.

EXPIRATION WELL.EXPIRE_MM, WELL.EXPIRE_DD, WELL.PISSUE_YY

Date permit will expire.

EXTENSION WELL.EXTEND_MM, WELL.EXTEND_DD, WELL.EXTEND_YY

Date permit is extended.

VOLUME PERMITTED WELL.VOL_PER

Volume permitted in M3/day as stated in the permit.

VOLUME USED WELL.VOL_ACT

Actual volume used during operation in M3/day.

METERED? WELL.METER

Is it metered?

METER SIZE WELL.M_SIZE

If metered, what size in millimeter.

OPERATION, HOURS/DAY WELL.HRS_DAY

Number of hours per day well is operated.

DAYS/WEEK WELL.DAYS_WK

Number of days per week well is operated.

WEEKS/YEAR WELL.WKS_YR

Weeks per year well is operated.

3. WELL DESIGN

System Database Edit Record Window Report Query Print
GROUNDWATER DATABASE SYSTEM (SCREEN 3)

Location BANGKOK, CHATUCHAK, LAT YAO RECORD # 4/12896

WELL CODE 010101-1004 Type Status

Well Name GARMENT AND THREAD TEXTILE

WELL DESIGN

Drilling Depth	180.00	m	Well Depth	172.00	m
Casing Diameter, Top	300	mm	Bottom	250	mm
Riser Pipe Diameter	150	mm	Pump Setting	60.00	
Pump HP Rating	60.00		Rated Capacity		m3/hr
Total Dynamic Head		m	Motor HP Rating		

Pump Type Brand

Motor Brand

<Next> <Prev> <Top > <Bot > <Edit> <Add > <Find> <+Scn> <-Scn> <Goto> <Quit>

The fields in this screen are explained below:

WELL CODE WELL.W_CODE
TYPE WELL.W_TYPE
STATUS WELL.W_STATUS
WELL NAME WELL.W_NAME

The above fields cannot be edited in this screen. They can only be edited in the first screen, the location screen. They are only shown here as a guide.

DRILLING DEPTH WELL.D_DEPTH

Drilling depth in meters below ground.

WELL DEPTH WELL.W_DEPTH

Well depth in meters. Usually the depth of the bottom most casing.

CASING DIAMETER, TOP WELL.DIA_TOP

Diameter in millimeter of the top most casing.

BOTTOM WELL.DIA_BOTTOM

Diameter in millimeter of the bottom most casing.

RISER PIPE DIAMETER WELL.DIA_RISER

Riser pipe diameter in millimeter.

PUMP SETTING WELL.PSET

Depth in meters where the pump was set.

PUMP HP RATING WELL.P_HP

Horsepower (HP) rating of the pump installed in the well.

RATED CAPACITY WELL.P_RC

Rated capacity in M3/hr of the installed pump.

TOTAL DYNAMIC HEAD WELL.P_TDH

Rated total dynamic head capacity in meters.

MOTOR HP RATING WELL.M_HP

Horsepower rating of the motor installed for the pump.

PUMP TYPE WELL.P_TYPE

Type of pump installed in the well. The codes used for the different types of pumps are listed in the \GWS\DBFS\PUMPTYPE.DBF database and are listed below.

- 1 Air Compressor
- 2 Air Lift Pump
- 3 Hand Pump
- 4 Jet Pump
- 5 Submersible
- 6 Turbine
- 7 Rotary
- 8 Wind Mill
- 9 Centrifugal Pump

BRAND WELL.P_BRAND

Brand of the pump installed in the well. Instead of inputting directly the brand in the database, a list is opened for selection. The corresponding pump code is looked up in the \GWS\DBFS\PBRANDS.DBF database and is the one stored in the P_BRAND. If the pump brand is not among the selection list, an option to add a brand is offered. The corresponding brand and code is stored in the \GWS\DBFS\PBRANDS.DBF which updates the new list.

MOTOR BRAND WELL.MBRAND

Brand of the motor installed for the pump. The same as above, a list is offered for selection. The motor codes are listed in the \GWS\DBFS\MBRANDS.DBF database. This is automatically updated if a new brand with corresponding code is inputted.

The fields in this screen are explained below:

WELL CODE WELL.W_CODE
TYPE WELL.W_TYPE
STATUS WELL.W_STATUS
WELL NAME WELL.W_NAME

The above fields cannot be edited in this screen. They can only be edited in the first screen, the location screen. They are only shown here as a guide.

ELECTRIC LOGGING, RESISTIVITY LOG? WELL.ER_LOG

Was an electric logging or resistivity logging performed on the well? Answered by a Y or N for Yes or No, respectively. Blank means unknown.

SPONTANEOUS POTENTIAL (SP) LOG ? WELL.SP_LOG

Was an spontaneous potential (SP) log performed on the well. Answered by a Y or N for Yes or No, respectively. Blank means unknown.

RADIATION LOGGING, GAMMA RAY LOG? WELL_GR_LOG

Was a radiation logging or gamma ray log performed on the well. Answered by a Y or N for Yes or No, respectively. Blank means unknown.

STRATA LOG DATABASE

The bottom table is a separate database, \GWS\WINV\WSTR.DBF, from the WELL database. It contains the strata information encountered in drilling the well. The information on the corresponding well is shown automatically because the databases are linked. To edit or add data in this database, merely position the mouse cursor in this table and click the left button key. The strata table will become the active window ready for editing. To add a new record, press CONTROL N, the same command used by the standard Browse command of FOXPRO. To edit, position cursor in the field and modify data. Below are the explanations for the different fields:

WELL CODE WSTR.W_CODE

A well code which is the same as in WELL.W_CODE and automatically entered in this field when cursor is moved out of the field.

STR NO WSTR.STR_NO

A serial number starting from 1 denoting the nth position of the strata from the ground.

DEPTH FR WSTR.DEPTH_FR

Starting depth of the strata in meters.

DEPTH TO WSTR.DEPTH_TO

Ending depth of the strata in meters.

TYPE WSTR.TYPE

Type of soil encountered. A series of codes is used to represent the formation, i.e., C+S, for clay plus sand. A popup menu is activated when the cursor is positioned in this field. Choose the type and press the Enter key to encode the type. Press the right arrow to exit the popup list. Several types can be appended to come up with the right combination. A + sign is automatically appended to the selection. If the code is the final selection, press the backspace to erase the + symbol, otherwise the popup list will be shown again. The complete codes are listed in the \GWS\DBFS\LITHO.DBF database and are listed below:

C Clay
S Sand

B	Pebble
TS	Top soil
LS	Limestone
G	Gravel
GR	Granite
I	Silt
ST	Siltstone
QZ	Quartzite
IG	Igneous rock
GY	Gypsum
AN	Andesite
CH	Chert
MB	Marble
O	Cobble
PH	Phyllite
R	Rock
SH	Shale
SP	Soapstone
TR	Trachite
VO	Volcanic Rock
DB	Diabase
AR	Argilite
BA	Basalt
CG	Conglomerate
CL	Caliche
DI	Diorite
GN	Gneiss
GW	Graywacke
L	Lateritic sediments
M	Marl
MD	Mudstone
P	Granule
RH	Rhyolite
SC	Schist
SL	Slate
SS	Sandstone
SY	Slaty shale
X	Rock fragment

GRAIN

WSTR.GRAIN

The grain size of the soil. The same as above a popup menu is shown to guide the user. The same procedure as above should be performed. The complete list are listed in the \GWS\DBFS\GRAIN.DBF database and are shown below:

VF	Very Fine
F	Fine
M	Medium

C Coarse
 VC Very Coarse
 SA Sub-angular
 A Angular
 R Rounded
 WR Well-rounded
 SR Sub-rounded

COLOR WSTRCOLOR

The pedominant color of the soil. The same as above a popup menu is shown to guide the user. The same procedure as above should be performed. The complete list are listed in the \GWS\DBFS\COLOR.DBF database and are shown below:

B Brown
 K Black
 N Green
 P Pink
 R Red
 V Violet
 W White
 C Cream
 G Gray
 O Orange
 U Blue
 Y Yellow
 D Dark
 L Light

Index Key: W CODE+STR(STR NO, 3)

Structure for database: \GWS\WIN\WSTR.DBF

 STATUS WELL.W_STATUS
 WELL NAME WELL.W_NAME

The above fields cannot be edited in this screen. They can only be edited in the first screen, the location screen. They are only shown here as a guide.

TYPE OF CASING WELL.C_TYPE

Type of casing used in the well. The codes for the available casing types are listed in the \GWS\DBFS\CASING.DBF and are shown below.

- 1 ASTM A-53 Standard Steel
- 2 ASTM A-120 Standard Steel
- 3 API 5L Standard Steel
- 4 API 5A Standard Steel
- 5 ASTM A-409 Stainless Steel
- 6 BS (British Standards) 1387
- 7 Thermoplastic (ABS, PVC, etc)
- 8 Fiberglass-Reinforced Plastic

TOTAL LENGTH WELL.C_LENGTH

The total length in meters of the casing installed in the well.

CASING SCHEDULE DATABASE

The bottom table is a separate database, \GWS\WINV\WCAS.DBF, from the WELL database. It contains the casing schedule installed in the well. The information on the corresponding well is shown automatically because the databases are linked. To edit or add data in this database, merely position the mouse cursor in this table and click the left button key. The casing schedule table will become the active window, ready for editing. To add a new record, press CONTROL N, the same command used

by the standard Browse command of FOXPRO. To edit, position cursor in the field and modify data. Below are the explanations for the different fields:

WELL CODE WCAS.W_CODE

A well code which is the same as in WELL.W_CODE and automatically entered in this field when cursor is moved out of the field.

CASING NO WCAS.CINT_NO

A serial number starting from 1 denoting the nth position of the casing section starting from the ground.

DIAMETER WCAS.CDIA

Diameter in millimeter of the casing section.

DEPTH FROM WCAS.CDEPTH_FR

Depth of the top of casing section in meters below ground.

DEPTH TO WCAS.CDEPTH_TO

Depth of the bottom of casing section in meters below ground.

Index Key: W_CODE+STR(CINT_NO,2)

Structure for database: \GWS\WIN\WCAS.DBF

Field	Field Name	Type	Width	Dec
1	W_CODE	Character	11	
2	CINT_NO	Numeric	2	
3	C_DIA	Numeric	4	
4	CDEPTH_FR	Numeric	6	2
5	CDEPTH_TO	Numeric	6	2

Total length of the screen sections or perforations in meters.

SCREEN SECTIONS DATABASE

The bottom table is a separate database, \GWS\WINV\WSCRN.DBF, from the WELL database. It contains the screen sections installed in the well. The information on the corresponding well is shown automatically because the databases are linked. To edit or add data in this database, merely position the mouse cursor in this table and click the left button key. The screen schedule table will become the active window, ready for editing. To add a new record, press CONTROL N, the same command used by the standard Browse command of FOXPRO. To edit, position cursor in the field and modify data. Below are the explanations for the different fields:

WELL CODE	WSCRN.W_CODE
-----------	--------------

A well code which is the same as in WELL.W_CODE and automatically entered in this field when cursor is moved out of the field.

SCREEN NO	WSCRN.SINT_NO
-----------	---------------

A serial number starting from 1 denoting the nth position of the screen section starting from the ground.

TYPE	WSCRN.S_TYPE
------	--------------

Type of screen installed in the section. The codes are listed in the \GWS\DBFS\SCRNTYPE.DBF database and are listed below.

1 Slotted Perforation

- 2 Continuous-Slot
- 3 Wedge Wire Wound
- 4 Louvered and Bridge Slot

DIAMETER WSCRN.S_DIA

Diameter in millimeter of the screen section.

SLOT SIZE WSCRN.S_OPEN

Size of the opening or slots in millimeters.

GAUZENO WCSRN.S_NUMBER

Thickness of the screen in gauge no.

DEPTH FROM WSCRN.SDEPTH_FR

Depth of the top of screen section in meters below ground.

DEPTH TO WSCRN.SDEPTH_TO

Depth of the bottom of screen section in meters below ground.

Index Key: W_CODE+STR(SINT NO,2)

Structure for database: \GWS\WINV\WSCRN.DBF

Field	Field Name	Type	Width	Dec
1	W_CODE	Character	11

This screen contains the information on the well development and pumping test conducted on the well. The fields in this screen are explained below:

WELL CODE WELL.W_CODE
 TYPE WELL.W_TYPE
 STATUS WELL.W_STATUS
 WELL NAME WELL.W_NAME

The above fields cannot be edited in this screen. They can only be edited in the first screen, the location screen. They are only shown here as a guide.

METHOD WELL.W_DEV

Method used in the well development. The codes are taken from the \GWS\DBFS\DEVELOP.DBF database and are listed below.

- 1 Overpumping
- 2 Backwashing
- 3 Mechanical Surging
- 4 Air Developing by Surging and Pumping
- 5 Others

DATE STARTED WELL.WDSTART_MM, WDSTART_DD, WDSTART_YY

Date well development was started.

DATE COMPLETED WELL.WDCOMP_MM, WDCOMP_DD, WDCOMP_YY

Date well development was completed.

DURATION WELL.WDURATION

How many hours was well development done?

WELL DISCHARGE WELL.DISCHARGE

What was the well discharge then?

PUMP TYPE WELL.PMPTYPE

What type of pump was used in the pumping test? The codes are listed in the \GWS\DBFS\PUMPTYPE.DBF database and are listed below.

- 1 Air Compressor
- 2 Air Lift Pump
- 3 Hand Pump
- 4 Jet Pump
- 5 Submersible
- 6 Turbine
- 7 Rotary
- 8 Wind Mill
- 9 Centrifugal Pump

DATE WELL.PTEST_MM, PTEST_DD, PTEST_YY

Date when pumping test was conducted.

PUMP CAPACITY WELL.PUMPCPCT

What was the pump capacity in m³/hr?

PUMP SETTING WELL.PUMPSET

At what depth in meters below ground was the pump set?

STATIC WATER LEVEL WELL.SWL

What was the static water level in meters before the start of the pumping test?

DRAWDOWN WELL.DRAWDOWN

What was the drawdown in meters after the end of pumping test?

YIELD WELL.YLD

How much did the well yield in m³/hr?

SPECIFIC CAPACITY WELL.SPCF_CPCITY

What was the computed specific capacity in m³/hr/m?

FLOW MEASUREMENT WELL.FLOW

What method of flow measurement was used? The codes are listed in the \GWS\DBFS\FLOW.DBF database and are listed below.

- 1 Flowmeter
- 2 Orifice
- 3 Weir
- 4 Flume
- 5 Container
- 6 Others

TYPE OF TEST WELL.PTEST_TYPE

Type of pumping test conducted. The codes used are listed in the \GWS\DBFS\PUMPTTEST.DBF database and are listed below.

- 1 Step-Drawdown
- 2 Constant-Rate
- 3 Others

DURATION WELL.DURATION

Duration of the pumping test in hours.

TRANSMISSIVITY WELL.TRANSMISS

What was the computed well transmissivity in m²/day?

STORAGE COEFFICIENT WELL.ST_COEFF

What was the computed storage coefficient?

This screen contains the information on the physical characteristics of the water taken from the well. The fields in this screen are explained below:

WELL CODE	WQUAL.W_CODE
TYPE	WELL.W_TYPE
STATUS	WELL.W_STATUS
WELL NAME	WELL.W_NAME

The above fields cannot be edited in this screen. They can only be edited in the first screen, the location screen. They are only shown here as a guide.

SAMPLING METHOD WQUAL.METHOD

The sampling method used in getting the water from the well. The codes used are listed in the \GWS\DBFS\CHMETHOD.DBF database and are shown below:

- 1 Bailer
- 2 Air-lift samplers
- 3 Submersible pump
- 4 Suction-lift pump
- 5 Gas-operated pump
- 6 Hand pump

DATE OF SAMPLING WQUAL.SAMPLE_MM, SAMPLE_DD, SAMPLE_YY

Date of sampling in the format MM/DD/YY for month, day, year.

DATE OF ANALYSIS WQUAL.ANAL_MM, ANAL_DD, ANAL_YY

Date of analysis in the format MM/DD/YY for month, day, year.

PH WQUAL.PH

Acidity or basicity of the water in terms of PH. Range is 0 to 14. PH of acid water is 0 to 7. PH of basic water is 7 to 14. A PH of 7 is neutral.

SPECIFIC CONDUCTIVITY WQUAL.SPCOND

Specific conductivity of the water in mhos. This reflects the resistance of the water to conduct electricity.

TURBIDITY WQUAL.TURBIDITY

Turbidity or state of clearness of the water.

ODOR WQUAL.ODOR

Odor of the water. The codes used are listed in the \GWS\DBFS\ODOR.DBF database and are shown below:

- 1 Odorless
- 2 Slightly Smelly
- 3 Strong Smell

COLOR WQUAL.COLOR

Color of the water.

TEMPERATURE WQUAL.TEMP

Normal temperature of water.

ALKALINITY WQUAL.ALKALINITY

Alkalinity in mg/liter as CaCo3.

ACIDITY WQUAL.ACIDITY

Acidity in mg/liter.

RESIDUAL CHLORINE WQUAL.RCHLORINE

Residual chlorine.

 WELL NAME WELL.W_NAME

The above fields cannot be edited in this screen. They can only be edited in the first screen, the location screen. They are only shown here as a guide.

The following less measured chemical elements in mg/liter shows their corresponding fields in the \GWS\WINV\TQUAL.DBF database. They were separated from the main chemical database to minimize the main chemical database size because there are no measurements on them most of the time.

SAMPLING METHOD TQUAL.METHOD

The sampling method used in getting the water from the well. The codes used are listed in the \GWS\DBFS\CHMETHOD.DBF database and are shown below:

- 1 Bailer
- 2 Air-lift samplers

- 3 Submersible pump
- 4 Suction-lift pump
- 5 Gas-operated pump
- 6 Hand pump

DATE OF SAMPLING	TQUAL.SAMPLE_MM, SAMPLE_DD, SAMPLE_YY
DATE OF ANALYSIS	TQUAL.ANAL_MM, ANAL_DD, ANAL_YY
ARSENIC, As	TQUAL.ARSENIC
CYANIDE, CN	TQUAL.CYANIDE
LEAD, Pb	TQUAL.LEAD

NON-DMR WELLS

System Database Edit Record Window Report Query

The well discharge rates for the non-DMR monitored wells are listed in this database. A well is considered a non-DMR well if the source of well data (DAT_SOURCE field) in the WELL database is not equal to 1 (code for DMR wells). For the complete codes used for the source of well data, please refer to the well location screen (screen 1).

The \GWS\NDMR\NDMR.DBF database contains the list of all non-DMR well codes. This is linked with the WELL database to get the complete information on the well. Two databases are maintained to contain the non-DMR well discharges, \GWS\NDMR\DISC.DBF contains the complete monthly well discharges of all non-DMR wells while \GWS\NDMR\IEAT.DBF contains the monthly consumption in m3 of IEAT factories. The IEAT factories' monthly consumptions is the basis in getting the monthly discharge rates of wells in IEAT factories. The monthly consumption is merely divided into the number of wells supplying each water system network. The average monthly discharge rates of IEAT wells are then copied to the DISC.DBF. The well code of each well belonging to each network should therefore be ascertained.

The two tables can be shown by selecting the Table option as shown below: The default table is the Non-DMR well discharges.

<Next > <Prev > < Top > < Bot > <Edit > < Add > <Find > <Goto > <Quit >

The bottom table is a separate database, \GWS\NDMR\DISC.DBF. It contains the discharge rates in m3 per day of non-DMR wells. The user should enter the monthly discharge rates for each well code. The ANNUAL, M_AVERAGE, D_AVERAGE, MONTHS fields need not be entered because they are automatically computed once the december value is edited. The option UPDATE ANNUAL in the above menu can be used to compute the annual discharge rates for all the wells if you think the figures are not up to date.

ANNUAL the annual discharge rates in CUMD.
M_AVERAGE the computed monthly average in CUMD
D_AVERAGE the computed daily average in CUMD
MONTHS the number of months the well was operated based on the available data on monthly discharges.

GROUNDWATER MONITORING

The groundwater monitoring database consists of the ground water level database (GWS\WHGEO\GWL.DBF) and the ground water quality monitoring database (GWS\WHGEO\GWQUAL.DBF). The information on these ground water monitoring wells are stored in the GWS\WHGEO\HGEO.DBF database. The two monitored parameters, water level and water quality are activated by using the option Table as shown below.

System Database Edit Record Window Report Query Table

Ground Water Level in m Ground Water Quality

The ground water monitoring screen is shown below:

They are explained below: The fields listed in WELL.DBF can only be edited in the WELL inventory screen.

WELL CODE HGEO.W_CODE

The well code in the HGEO.DBF should already have been entered in the WELL.DBF database so that the other information on the well can also be accessed.

TYPE HGEO.OBS_TYPE

Type of observation. It can either be automatic or manual.

STATUS WELL.W_STATUS

Status of the well. It can be active, inactive, abandoned or others. This information can be edited only in the well inventory screen.

WELL NAME WELL.W_NAME

Common name for the well. Can only be edited in the well inventory screen.

WELL ADDRESS WELL.W_ADDR1

Address of the well.

AGENCY RESPONSIBLE HGEO.AGENCY

The responsible agency for the well.

AREA CODE HGEO.ACODE

The area code used by the agency responsible.

STATION NO. HGEO.STA_NO

The station number used by the agency responsible.

WELL NO WELL.NEW_NO

Well number used by the agency responsible.

GROUND ELEV. WELL.ELEVATION

Ground elevation in meters above mean sea level.

MAP SHEET NO WELL.MAP_NO

The 1:50,000 scale map sheet no. where the well is located.

BASE MAP, X WELL.X

Grid X in the map sheet where well is located. Related to the UTM East.

BASE MAP, Y WELL.Y

Grid Y in the map sheet where well is located. Related to the UTM North.

LATITUDE WELL.LAT_DEGR, WELL.LAT_MIN, WELL.LAT_SEC

Latitude location of the well.

LONGITUDE WELL.LONG_DEGR, WELL_LONG_MIN, WELL.LONG_SEC

Longitude location of the well.

UTM EAST WELL.UTM_E

Universal Transverse Mercator (UTM) X location of the well in meters.

UTM NORTH WELL.UTM_N

Universal Transverse Mercator (UTM) Y location of the well in meters. Usually reckoned from the equator.

ZONE WELL.GZD

Zone where well is located.

REMARKS HGEO.REMARKS

Free form remarks for the well.

BENCHMARK ELEVATION HGEO.BENCH_ELEV

The elevation of the benchmark station in meters above mean sea level.

Index Key: W_CODE

Structure for database: \GWS\WHGEO\HGEO.DBF

Field	Field Name	Type	Width	Dec

LAND SUBSIDENCE MONITORING DATABASE

The land subsidence monitoring database is composed of the soil layer compression database (\GWS\WLAND\COMPRESS.DBF) and the pore pressure database (\GWS\WLAND\POREPRES.DBF). The benchmark information are stored in \GWS\WLAND\BENCHMRK.DBF while the benchmark elevation are stored in the \GWS\WLAND\BMELEV.DBF database. The databases can be edited by using the option Table as shown below.

METEOROLOGY

The meteorology database is composed of ten monitored parameters. The data comes from the meteorology agency and are merely transferred to the database. The data on the meteorology station are listed in the \GWS\WMET\MSTATION.DBF. The following is the list of the monitored parameters and their corresponding database files.

Monthly rainfall

\GWS\WMET\RAIN_M.DBF

Number of rainfall days	\GWS\WMET\RAIN_DAY.DBF
Monthly mean temperature	\GWS\WMET\TMEAN_M.DBF
Monthly minimum temperature	\GWS\WMET\TMIN_M.DBF
Monthly maximum temperature	\GWS\WMET\TMAX_M.DBF
Monthly evapotranspiration	\GWS\WMET\EVAP_M.DBF
Monthly humidity	\GWS\WMET\HUMID_M.DBF
Monthly sunshine duration	\GWS\WMET\SUN_M.DBF
Monthly solar radiation	\GWS\WMET\SOLAR_M.DBF
Monthly wind velocity	\GWS\WMET\WIND_M.DBF

These monitored databases can be activated by using the option Table as shown below:

System Database Edit Record Window Report Query Table

Monthly Rainfall in mm Number of Rainfall Days Monthly Mean Temperature in °C Monthly Minimum Temperature in °C Monthly Maximum Temperature in °C Monthly Evapotranspiration in mm Monthly Humidity in percent Monthly Sunshine Duration in hours Monthly Solar Radiation Monthly Wind Velocity in m/sec

HYDROLOGY

The hydrology database monitors the discharge rates and gage heights of several river systems through the various gaging stations all over the country. The data on the gaging stations are stored in the \GWS\WHLOGHSTATION.DBF.

REPORTS

The generated reports are shown by activating the Report option in the main menu. The first four reports pertain to the well database while the Report... option gives the generalized report on the different databases. They are explained in the next sections.

System Database Edit Record Window **Report** Query

Inventory Report DMR registered wells NON-DMR registered wells ALL registered wells Report...
--

INVENTORY REPORT

The Inventory Report option prints the available data of each well on an A4 size report ready format. A minimum of three pages is printed for each well even if there is only a minimum information on the well. Additional pages are printed when more information are available for the well. Two methods of printing the Inventory Report can be used. The first is printing the Inventory Report in the Well Inventory database using the Print option in its menu as shown below. All the twelve screens has this option. The well that is currently shown in the screen will be printed.

GROUNDWATER DATABASE SYSTEM (SCREEN 1) RECORD # 4/12896

Location BANGKOK, CHATUCHAK, LAT YAO

WELL CODE 010101-1004 Type Status

Well Name GARMENT AND THREAD TEXTILE

Aquifer Source of Well Data

Well No., New 3204-0014 Old No.

Well Address 151 SENA NIKHOM 2, PHAHON YOTHIN, LAT YAO, CHATUCHAK, BANGKOK

OWNER PHA HOM THAI INDUSTRY FACTORY CO., LTD.

Address 151 SENA NIKHOM 2, PHAHON YOTHIN, LAD YAO CHATUCHAK, BANGKOK

Ground Elev. 2.00 m MSL

Map Sheet No 5136 IV Base Map, X 70 Base Map, Y 129

Latitude " Longitude "

UTM East 67085 UTM North 152995 Zone 47P

<Next> <Prev> <Top > <Bot > <Edit> <Add > <Find> <+Scn> <-Scn> <Goto> <Quit>

The second method is printing it in the Report option in the main menu and selecting the Inventory Report. Several options are available. The report can be printed using Laser printers or Dot Matrix printers. The user can select and print several wells in one go instead of selecting and printing them one at a time. The wells can be selected by selecting the Changwat option as shown below:

System Database Edit Record Window ~~Report~~ Query

GROUNDWATER DATABANK SYSTEM
INVENTORY REPORT

WELLS SELECTED Laser
 Dot Matrix

~~Changwat~~ < Print > < Quit >

After activating the Changwat option, the following screen will be shown: It will show a list of the Changwats with which to select the wells from.

System Database Edit Record Window ~~Report~~ Query

	01	BANGKOK
	02	NONHABURI
	03	PATHUM THANI
	04	SAMUT PRAKAN
	05	SAMUT SAKHON
GROUNDWATER DATABANK	06	PHRA NAKHON SI AYUTTHAYA

INVENTORY REP	07	NAKHON PATHOM
	08	CHACHOENGSAO
WELLS SELECTED	(
<Changwat> < Print > < Quit >		

After selecting the Changwat, the selection list will be positioned to the first well in the selected Changwat. The Space key toggles the wells to be selected/unselected. The selected well has a check mark on the left side of the well. The F2 key can first be used to unselect all the wells because the previous selections made are saved together with the database. The WELL.CHECK field gives the selection status of the well. A blank value is unselected, any other value is selected. The F1 key can also be used to select all the wells for printing, although printing might take all day.

System Database Edit Record Window Report Query

Space = Toggle check
 F1 = Select All
 F2 = Unselect All
 ESC = Done

GROUNDWATER DATABANK SYST INVENTORY REPORT		Well Code	
WELLS SELECTED	(*) Lase	✓ 010101-1001	▲
	() Dot	✓ 010101-1002	◆
		010101-1003	
		010101-1004	
		✓ 010101-1005	
		010101-1006	
		010101-1007

		010101-1011	
<Changwat> < Print > < Qu			

After the wells are selected, the number of wells selected will be shown. The Print option can then be used to print the wells. The selected wells are printed using the selected printer in the radio button, either a Laser or a Dot Matrix printer.

```

STATISTICAL REPORTS

Using an interface that calls the SPSS statistical software, several statistical reports can be generated. Statistical reports are categorized into DMR registered wells, NON-DMR registered wells and ALL registered wells using the Reports option as shown below:

System Database Edit Record Window **Report** Query

```
Inventory Report
DMR registered wells
NON-DMR registered wells
ALL registered wells
Report..
```

After choosing the any of the three choices of registered wells in the Report option, the following query will be shown: The first line asks for the statistical report year. Only wells that falls within the report year would be included in the statistical reports, by considering the well's year of issue, year of expiration and the year of extension, if any. The second line asks for the factor to be used as a multiplication factor for the volume permitted as given in the well's water permit. However, if there is a value for the actual volume used, this will be used instead.

System Database Edit Record Window **Report** Query

```
Enter report year           : 1992
Enter factor for volume permitted : 1.000
```

After entering the values above, the program will create an ASCII file that will be used by the SPSS statistical software to prepare its reports. The following ASCII files will be created for the following options:

```
WELLS_T1.TXT   DMR registered wells
WELLS_T2.TXT   NON-DMR registered wells
WELLS_T3.TXT   ALL registered wells
```

System Database Edit Record Window Report Query

```
Creating SPSS file for statistical reports...
```

DMR REGISTERED WELLS

The following statistical reports can be generated when the DMR registered wells is selected and the corresponding WELLS_T1.TXT file is created.

System Database Edit Record Window Report Query

1. Distribution of DMR-Registered Wells
 - > by changwat and aquifer
2. Distribution of DMR-Registered Wells in the Study Area
 - > by changwat and aquifer
 - > by changwat, aquifer and type of user
 - > by issuance, expiration and extension of well rights
3. Estimated Daily Groundwater Pumpage in the Study Area
 - > by changwat and type of user
 - > by aquifer and type of user
 - > by changwat, aquifer and type of user
 - > by amphoe

0. Exit

Enter report to generate : 0

NOTE: The reports would be printed directly to the printer so the printer should be always ready and online.

For option 1, the DMT1.SPS file would be used by the SPSS software to create the statistical report. The report would be written in the DTAB1.TAB file. Annex 1-1 shows the report generated.

For option 2, the DMT2.SPS file would be used by the SPSS software to create the statistical report. The report would be written in the DTAB2.TAB file. Annexes 1-2.1, 1-2.2, and 1-2.3 show the generated reports.

For option 3, the DMT3.SPS file would be used by the SPSS software to create the statistical report. The report would be written in the DTAB3.TAB file. Annexes 1-3.1, 1-3.2, 1-3.3 and 1-3.4 show the generated reports.

NON-DMR REGISTERED WELLS

The following statistical reports can be generated when the NON-DMR registered wells is selected and the corresponding WELLS_T2.TXT file is created.

System Database Edit Record Window ~~Report~~ Query

<pre>1. Distribution of NON-DMR-Registered Wells > by changwat, aquifer and agency 2. Distribution of NON-DMR-Registered Wells in the Study Area > by changwat, aquifer and agency > by changwat, aquifer, type of user and agency 3. Estimated Daily Groundwater Pumpage in the Study Area > by changwat and agency > by aquifer and agency > by changwat, aquifer and agency 0. Exit Enter report to generate : 0</pre>

NOTE: The reports would be printed directly to the printer so the printer should be always ready and online.

For option 1, the NDMT1.SPS file would be used by the SPSS software to create the statistical report. The report would be written in the NTAB1.TAB file. Annex 2-1 show the generated report.

For option 2, the NDMT2.SPS file would be used by the SPSS software to create the statistical report. The report would be written in the NTAB2.TAB file. Annexes 2-2.1, and 2-2.2 show the generated reports.

For option 3, the NDMT3.SPS file would be used by the SPSS software to create the statistical report. The report would be written in the NTAB3.TAB file. Annexes 2-3.1, 2-3.2, and 2-3.3 show the generated reports.

ALL REGISTERED WELLS

The following statistical reports can be generated when the ALL registered wells is selected and the corresponding WELLS_T3.TXT file is created.

System Database Edit Record Window Report Query

```
1. Distribution of All Registered Wells
  > by changwat, aquifer and agency
2. Distribution of All Registered Wells in the Study Area
  > by changwat, aquifer and agency
  > by changwat, aquifer, type of user and agency
3. Estimated Daily Groundwater Pumpage in the Study Area
  > by changwat and agency
  > by aquifer and agency
  > by changwat, agency and aquifer
  > by amphoe (centers of groundwater pumpage)
  > by x and y

0. Exit

Enter report to generate : 0
```

NOTE: The reports would be printed directly to the printer so the printer should be always ready and online.

For option 1, the ADMT1.SPS file would be used by the SPSS software to create the statistical report. The report would be written in the ATAB1.TAB file. Annex 3.1 show the generated report.

For option 2, the ADMT2.SPS file would be used by the SPSS software to create the statistical report. The report would be written in the ATAB2.TAB file. Annexes 3-2.1, and 3-2.2 show the generated reports.

For option 3, the ADMT3.SPS file would be used by the SPSS software to create the statistical report. The report would be written in the ATAB3.TAB file. Annexes 3-3.1, 3-3.2, 3-3.3 and 3-3.4 show the generated reports.

SPSS

After choosing the report to be generated as explained above, the SPSS would be called from within FOXPRO. If there is no problem with the data, the following screen would be shown. It would indicate the number of wells that will be considered
