#### d. Utility Plan

#### 1) Electric system

a) Receiving and substation system

Both in PAL-Central and PAL-Davao,  $3 \ \Phi \ 3 \ W \ 230 \ V$  power will be supplied from the electric line via a transformer on the electric pole.

b) Generator system

To deal with power failures, a generator system of 30 KVA will be provided for PAL-Central. The power will be supplied to the safety and security facilities including fire hydrant pumps, fire alarms, pressure pumps, telephone system, security lamps, refrigerators, etc.

c) Main feeder system

In PAL-Central, power will be supplied from the main switch board in the electric room to the lighting distribution panel and the power distribution panel on each floor. In PAL-Davao, power sill be supplied from the switch panel to the lighting panel and the power panel. The wiring will be installed in the ceiling cable racks.

Lighting panel	3	¢	3	¥	230	V	60	Hz
	1	ф	2	W	230	V	60	Hz
Power panel	3	φ	3	W	230	v	60	Hz

d) Lighting system

Fluorescent lamps will be used in principle. Lighting fixtures will be selected to ensure sufficient illumination. For the special purpose rooms, equipment appropriate to the purpose will be selected. The JIS illumination criteria will be applied in the design.

e) Receptacle system

Receptacle outlets of sufficient capacity for the specified usage will be provided where necessary.

f) Power control system

The pumps will be provided with automatic on-off functions. The power for the ventilation system will be regulated both at the switch panel and the remote switch. In case either the power system or tank system malfunctions, alarms will sound in the administrative office.

#### g) Telephone system

Approximately five circuits for PAL-Central's exclusive use will be led into the building. A telephone exchange system will be installed in the administrative office, from which the telephone wiring will be distributed to each set. One circuit will be for facsimile use. In PAL-Davao, two circuits will be provided. Push-button type telephone sets will be adopted. The exchange will be a type that allows both extension calls and public calls. One circuit will be for facsimile use.

#### h) Fire alarm system

Alarm terminals will be provided where necessary to activate fire alarms. An automatic fire detector will be installed where there is any particular danger of fire.

#### i) Lightning protection system

A lightning rod will be installed on the roof of the second floor of PAL-Central building.

#### 2) Plumbing system

a) Water intake

PAL-Central will take water from the water main embedded under the public road on the north of the site, and will lead into the water reservoir tank. PAL-Davao will take water from a water main embedded under the compound road, and will connect to its water supply system directly.

b) Water supply system

In PAL-Central, water will be distributed to each place through an auto pressure pump. PAL-Davao will be equipped with a direct water supply system.

c) Drainage system

As mentioned in CHAPTER 3. 6 Environmental Concerns, solvents and other thick laboratory wastes (including water for primary cleaning) will be stored within the PAL-Central building, and an expert agency will be asked for its disposal. Concentration of pesticides or organic solvents in water for rinsing glasswares is assumed low enough to be discharged into the drainage system.

- 109 -

Sewage will be drained separately from drainage water within the building, and combined outside after being treated in the septic tank. At PAL-Central, combined drainage water will be discharged into the sewage main along Visayas Avenue. At PAL-Davao, drainage water will be discharged into a creek that runs about 50 meter south of the building.

d) Hot water supply

The local hot water supply system will be adopted. An electric boiler will be installed to supply hot water.

e) Sanitary wares

Sanitary wares will be installed according to the architectural plan. Special provisions will be provided in the laboratories appropriate to their equipment.

3) Air conditioning and ventilation system

a) Air conditioning system

Air-cooled split type cooler or window type cooler will be provided in each room Fresh air will be taken into through the louvres. No heating system is assumed necessary.

b) Ventilation system

An individual fan will be provided in the rooms where ventilation is required. The sleeping rooms will be equipped with ceiling fans.

4) Other systems

a) Fire extinguishing system

A fire hydrant system will be installed in PAL-Central.

b) Prefabricated air-cooled freezer and refrigerator

A prefabricated type air-cooled freezer  $(-20^{\circ}C)$  and a refrigerator  $(5^{\circ}C)$  will be installed in the pesticide residue monitoring unit for sample storing.

#### e. Material Plan

Materials to be adopted in this project are as shown below. Local products and materials will be used as much as possible, unless they are disadvantageous as to quality, price or supply conditions, the aim being economy and easy construction and maintenance.

### 1) Structural materials (main elements)

Member	Material	RP/Japan	Remarks

#### (3) Equipment Plan

a. Current conditions

As referred to in the preceding section, GCs and HPLCs play principal roles in pesticide residue analysis. The table below summarizes the quantity of GCs and HPLCs that each PAL currently possesses, the year of their procurement and the number of those in operation. Rotary vacuum evaporators are also shown in the table, because their quantity determines the speed of extraction/clean-up process.

- 113 -

		PAL-0	Central	PAL	PAL	PAL	PAL	PAL
	r s. Z	Residue Monistoring	Formulation Analysis	Baguio	Cebu	CDO	Bicol	Davao
	ECD	4 (1976, 1979)	0	2 (1982)	2 (1983)	2 (1982)	0	1 (1989 FN MNL)
GCs	NPD	3	0	2 (1982)	1 (1983)	1 (1982)	0	1 (1990 FM MNL)
(Procure- ment Year)	FPD	1 (1981)	0	0	0	0	0	0

REs in operation		3	1	1	1	1	0	1

Table 4-21 Current Principal Instruments at Each PAL

Source: BPI data

PAL-Central and PAL-CDO are the two laboratories where GCs are being used. The remaining satellites are capable of sample processing, and entrust analysis with GC to these two. The fact that sample processing and GC analysis cannot be done in one place is obstructive to analysis efficiency. Thus, instruments as listed in the following pages will be required for intensifying PALs' capability. The GCs that each laboratory owns now are more than 10 years old. Except for the one with FPD at PAL-Central, their production has been terminated, and spare parts are scarce. It will be, therefore, hardly possible to re-use the present GCs.

HPLCs are currently installed at PAL-Central only. This instrument is indispensable for the analysis of non-evaporating pesticides and heatdecomposing ones, which cannot be detected by GC. As operation of HPLCs is technically simple and easy, they are considered to be supplied to all the laboratories.

There are four rotary vacuum evaporators at PAL-Central and one at each satellite. This quantity is insufficient for prompt processing work, and more evaporators are to be provided. The following paragraphs refer to inconvenience observed at each PAL now.

#### 1) PAL-Central

Several inconveniences were observed such as the instruments were mounted adjacent to the walls, so it is hard to walk around the rear side for repairs; it is dangerous where hydrogen gas cylinders are mounted on the corridor; or the electric fans need repairs, etc.

#### 2) PAL-Baguio

Much of the equipment is broken down due to the 1990 earthquake. Some usable machines have technical problems such as their motors becoming overheated, and are unable to operate for long periods.

#### 3) PAL-Cebu

The distilling apparatus has been incapacitated and distilled water is unavailable. A generator for use as standby power source has been installed, but it does not have enough capacity to run GCs. The staff use only sample processing equipment.

4) PAL-CDO

PAL-CDO is the only satellite that is capable of sample analysis with GC, and operates with relative activity, in spite of inadequate circumstances such as they have to ask the university for distilled water, or they do not have reference manuals like AOAC to study the correct analysis method, etc.

5) PAL-Davao

The cooling system of the rotary vacuum evaporator is not running at full capacity, and as a consequence it takes considerably longer hours to process collected samples.

#### b. Planning Principles

The following principles will be taken into consideration to prepare the equipment program.

1) To develop reliable data as the public scientific laboratory

- To observe the GAP guidelines by FAO/WHO

(in training of technical staff, their safety, sample contamination, freezing/cold storage of samples, etc.)

- 115 -

- To provide such equipment for each PAL as to be able to deal with various analysis methods. The procedures from sample processing to instrument analysis differ depending on sample crops and pesticides.
- To adopt the capillary column system to achieve reliable data
- To intensify PAL-Central in particular, as it is to function as the leading, teaching laboratory for the satellites, in addition to its routine analysis services (GC/MS is necessary for identifying pesticides in samples containing confusing ingredients.)
- 2) To achieve economy and efficiency in analysis
  - To provide one GC with one detector, to enable prompt analysis of large volume

(GC-ECD for organochrolines, GC-FPD for organophosphates, etc.)
To select such instruments that require the least amount of solvents or chemical gases, as they are usually expensive

- 3) To select equipment that is easy for operation and maintenance
  - The current PALs' staff have good engineering skills, and are well familiar to basic operation of GCs and other instruments. It will be kept in mind to avoid instruments that require special high-tech skills, but to select those that all the staff will be able to handle.
  - The supplied instruments are to be used continuously for long periods. Thus, factors like maintenance availability, technical service quality, supply of spare parts and consumable goods in the Philippines will be important conditions for equipment selection.
- 4) To specify the scope of building construction and equipment supply
   To shift some of the equipment included in the list of the requested equipment for PAL-Central and PAL-Davao to the scope of building work, following the discussions with the BPI during the Phase 1 and Phase 2 study.

PAL-Central : Cold rooms (-20°C, +5°C), AVR, Exhaust fan, Emergency shower, Air conditioner PAL-Davao : AVR, Exhaust fan, Emergency shower, Air conditioner

- 116 -

- 5) Equipment for administrative work will be under the responsibility of the Government of the Philippines. In principle, the equipment for analysis work will take precedence of that for training purpose.
  - To cancel the equipment not directly relevant to PALs' analysis work.
    - Coaster, Typewriter, Car for administration, Photocopier
  - To cancel the following equipment for training
    - Video movie camera, TV (34 inch), Video, Library tables and chairs
- 6) Other equipment to be canceled
  - The following equipment for analysis work will be canceled considering current situation of the Philippines and the implementing organization.
  - Motorcycle

Vehicles with refrigerator, to be provided for each laboratory, will be sufficient for collection of expected amount of samples. Motorcycles are not suitable for moving around in large areas.

- Vacuum manifold

They are useful for speedy processing of solid-phase extraction, but are difficult to handle.

- LC/MS

LC/MS requires high-tech skills.

- Atomic absorption photometer

GC can substitute this instrument in residue analysis.

- Data processing apparatus

As data processing units are mounted in GCs and HPLCs, individual data processing apparatus will not be necessary.

- UPS, generator

They require considerable maintenance costs. Electric service is becoming improved in the country. (Data processing units are equipped with protective system against power failure.)

- Fire extinguisher (powder type)

Powder type fire extinguisher is inappropriate for laboratory equipment.

- Movable rack

Substituted to steel rack or chemicals and utensils stock cabinet.

- Modem system

Analysis data can be dispersed by mailing floppy disks or other ways.

- Clean bench

PALs will not be concerned with biological efficacy testing. - Solar energy heater (Water heater)

Glassware can be cleaned with water.

- Incinerator

Laboratory waste water with high organic concentration will be disposed by outside experts.

- GPC column system

This system is useful for speedy clean-up process, but is difficult to handle.

c. Equipment to be Provided in the Project

Table 4-22 shows equipment to be supplied to each PAL. Figures on the top raw indicate quantities to be supplied, those on the middle raw are the number of potential instruments among the existing ones, and those on the bottom are requested amount. The designed quantities are determined with reference to the current operation of the equipment shown in the priority list of requested equipment (Annex 7) as well as the priority orders marked by the BPI (in A, B, C).

Potential instruments mean the ones that will not adversely affect to data reliability or analysis work efficiency, when they are used in PALs after the project completion.

Main Building, Second Floor Plan Main Building, Elevation and Section Main Building, Elevation and Section Annex, Green House

#### PAL-Davao

Plot Plan

Plan, Elevation, Section

#### 5. Construction Planning

#### 5-1 Basic Construction Policy

The consultant will provide the following services in accordance with the progress of the project.

- Collaboration in procedures of the construction contract
   To represent the BPI in carrying out the pre-tender meeting and carry out the tendering in the presence of a representative of the owner.
   To investigate and evaluate the details of construction to be submitted by the successful tenderer and provide necessary instructions.
- (2) Collaboration in applying approvals and permits relevant to the project

To assist the owner to obtain prompt approvals and permits from the authorities concerned, in cooperation with the local consultants.

(3) Procedure of payment approval
 To examine and approve requests for payment to be presented by the contractor at the end of each stage of the work.

(4) Work reports

To hold periodical meetings and present reports to the BPI. To compile monthly reports and submit them to the BPI, the Japanese Embassy, the JICA Office, etc.

(5) Direction of the work

To hold meetings regularly at the site to confirm workmanship and progress of the work, and to give necessary instructions to the contractor. To give instructions as to local construction method with the assistance of the local consultant.

(6) Examination and approval

To examine shop drawings, fabrication drawings for the equipment, and samples of construction materials, to give approval to the contractor, and to assist inspections at each work stage from commencement to completion.

The following are special concerns in the construction stage.

- (a) To create and keep close relations among the people concerned to this project in the Philippine and the Japanese authorities, people concerned to construction work, and all others relevant to the project, for the purpose of successful completion of the project upon schedule. In particular, close contact shall be kept between the two sites of PAL-Central and PAL-Davao, as the construction work at these two sites will proceed simultaneously for some periods.
- (b) To provide advice and instructions for the owners regarding maintenance and repairs of the facilities after the project handing-over.

The working design stage, the construction stage, and the operation stage after project completion are consecutive flow of the project, and the sections or people in charge should be consistent throughout these stages. It will be advisable to establish a project construction committee as shown below in the BPI, to clarify who will be responsible for what, during the construction stage.

- 127 --

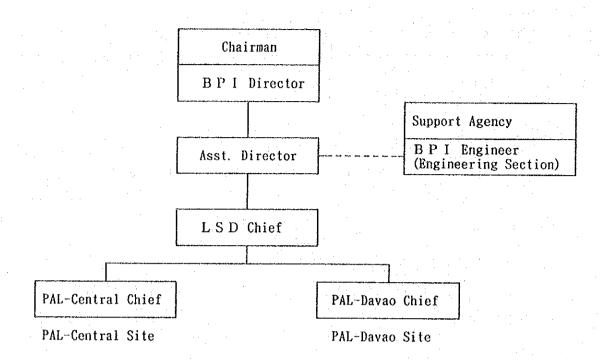

Figure 4-19 Project Construction Committee

The BPI Director will become the chairperson of the committee, who will make decisions and give instructions as necessary for smooth progress of the construction work. The BPI engineer will give technical advice. As was mentioned in the preceding section of this report, PALs will entrust their facility maintenance to the BPI engineering section, so it will be advisable to appoint the engineer in the project construction committee to serve as the maintenance engineer after the project. He should be able to participate in site meetings during the construction work, especially the operation and maintenance instruction sessions before the handing-over of the project. Through these experiences he will grasp the building components and systems, and will be able to deal with problems in the future.

(c) Philippines' middle to large general contractors are assumed to have ample experience and reliable engineering skills, though they may require improvement in terms of construction work schedule management or safety control, etc. In a Grant Aid project, Philippine general contractors join as subcontractors under the Japanese general contractor. The Japanese general contractor, therefore, should keep in mind the need to transfer their technology to the Philippine subcontractors during the grant aid project.

As there are no special technology required in this project, it does not seem necessary to send a special work force from Japan.

#### 5-2 Construction Situation and Implementation Methods

In general, post-tension prestressed concrete construction is popularly applied to middle-and high-rise buildings in the Philippines, because structural steel is expensive and seismic force is rather minor. Low buildings are usually of concrete blocks or wooden construction. Precast concrete panels are widely used for exterior walls.

In construction sites 2" x 4" lumber is commonly used as form support and 12 mm thick plywood for sheeting. Construction machinery is easily available in the cities from commercial construction machinery lease companies. The lease companies association establishes unified lease fees, which are listed in a guidebook issued every other year.

Compared to Japanese construction companies, those in the Philippines do not seem to have strong relations with subcontractors. Therefore, management and supervision of work progress and engineering will be important.

In the light of this situation in addition to specific site conditions, the following shall be reviewed and investigated for the construction purpose.

- (1) The PAL-Central construction site is located in the BPI's Nursery Compound, where some other buildings are being constructed or planned to be. The PAL-Davao site is located in the DNCRDC Compound, also surrounded with other laboratories and office buildings. Due care needs to be given at both sites for safety precautions such as erecting a temporary fence around the site so that unauthorized persons cannot enter.
- (2) Well planned temporary work and construction schedules shall be made taking into account rainfall during typhoons and the rainy season.
- (3) Purchase of local materials shall be scheduled at an early stage, due to insufficient supply. The transport system from Manila to Davao

- 129 -

shall be investigated for the purpose of construction materials delivery to the Davao site.

(4) Care shall be taken to protect structural concrete work from adverse effects of heavy rain in the rainy season and from high temperature.

(5) The construction periods are scheduled as 11 months for PAL-Central and 6 months for PAL-Davao. Their construction schedules will coincide for at least 6 months. A well planned whole work schedule shall be prepared, with special consideration for proper progress during these 6 months.

5-3 Supervisory Plan

The following are basic policies in the construction supervision stage:

- (1) Facilities
- a. To keep close contact with the authorities and people concerned and to coordinate their views;
- b. To communicate with the contractor frequently and give appropriate advice on the site as necessary for the smooth progress of construction work;
- c. To keep close communication between the two sites to cater for simultaneous construction progress;
- d. To grasp the material procurement period considering the distance from Manila to Davao so as not to cause unnecessary delay in the work schedule, because both local and imported materials are transported from Manila;
- e. To care for safety precautions, as there are various other buildings around the sites.

The size of the projects sites are approx. 2,640  $m^2$  for PAL-Central and 430  $m^2$  for PAL-Davao. Aware of the above principles for supervising services at this size of project, a field representative of the consultant

- 130 -

will be stationed at the PAL-Central site for management and supervision of the work, and he/she will visit the PAL-Davao site a few times a month. In addition, engineers concerned with structural, electrical, mechanical and plumbing design will be sent to both sites in accordance with the progress of construction, in order to discuss, inspect and provide instructions when necessary.

- (2) Equipment
- a. To deliver and install the equipment at two laboratories at once, to shorten the work period.

Equipment installation schedule

First year : Analytical equipment at PAL-Central

PAL-Davao

Second year: 1. Equipment for training and data management at PAL-Central

PAL-Cebu and PAL-CDO

2. PAL-Baguio, PAL-Bicol

- b. To check the progress of building restoration at the existing satellites during the first year. The restoration work will have to be completed before the equipment installation in the second year.
- c. To attend the equipment inspection in Japan before shipping as necessary, to ensure quality and performance.
- d. To conduct final inspections and trial run before handing-over, and to submit the certificate to the Government of the Philippines.

e. To instruct and assist training of the Filipino engineers during the installation, adjustment and trial run, as to skills for operation, spot-check and repairs.

Two representatives of the consultant will supervise the sites during the installation work, who will administer the work schedule, equipment delivery, installation and adjustment. Regular meetings will be held in Manila about once a month, where the progress of work, any problems encountered will be discussed.

#### 5-4 Procurement Plan for Materials

#### (1) Procurement of Materials

Construction materials are produced on the ASTM Standards. Basic materials such as concrete, reinforcing bars, lumber, stones and pipes are available in the Philippines. Some finishing materials are insufficient in color and design variety or quality. Those required with special performance are mostly imports from Japan or U.S.A. Electric wires sometimes cause fires due to their low product quality.

In principle, materials for constructing the buildings will be procured in the Philippines, together with some from Japan. Laboratory instruments for precision analysis and their peripheral devices to be supplied in grant are not manufactured in the Philippines.

a transmission and a second		
Materials		Reference (Selection reasons & notes)
<construction m<="" td=""><td></td><td>The quality varies a little, but does not present problems in compressive strength.</td></construction>		The quality varies a little, but does not present problems in compressive strength.
Sand, gravel	Philippines	The quality varies considerably depending ion the supply source.
Reinforcing bars	Philippines	Products of reliable plants will be used.
Concrete blocks	Philippines	A lot of products are available in wide variety.
Wooden frames	Philippines	Locally available, in god quality.
Plywood	Philippines	Locally available, in good quality.
Lumber	Philippines	Plenty of good cheap lumber is available. It is prohibited to cut certain species.
Stones	Philippines	Plenty of cheap marble is available in good quality.
Tiles	Philippines	Local products have a little variety of color and size, though are in rather poor quality in size precision. As areas to be tiled will not very large in this project, Philippine products will be sufficient.
Aluminum sash	Japan	Produced only for house use and are not very satisfactory in strength, finish, as well as water and air tightness

#### Table 4-23 Procurement of Materials

Doors and windows	Philippines	Locally available, with no problems in quality and quantity.
Glass	Philippines	Glass for the green house, requiring special quality, will be Japanese products.
Paint	Philippines	Local products of good quality are available in quantity. Japanese manufacturers own local companies.
Vinyl floor tiles	Japan	Chemical-proof vinyl floor tiles are not produced locally. Ordinary vinyl tiles are available, but inappropriate as to strength, precision and variety.
Decorative gypsum board	Japan	Locally unavailable.
Folded steel plate	Japan	Folded steel plate with special baked finish are imports from Japan.
<electrical mat<="" td=""><td>erials&gt;</td><td></td></electrical>	erials>	
Conduits accessories	Philippines	Manufactured locally, but there are problems in accessories.
Wires, cables	Japan	Some are manufactured locally but are not favorable in quality (insulation, vinyl covering) and quantity.
Lighting fixtures	Japan	Local products are inappropriate in quality and safety precautions. Fluorescent and incandescent lamps will be local products.
Lightning Rod	Philippines	Locally available in good quality.
<mechanical mat<="" td=""><td>erials&gt;</td><td></td></mechanical>	erials>	
Pipes, fittings	Philippines	Locally available in good quality.
Sanitary wares	Philippines	Locally available in good quality. Faucets and metal fittings are rather poor in quality and quantity.
Air conditioners	Japan	Local products are for house use, expensive and have a little variety.
Pumps	Japan	All imported; expensive and a little variety.
Equipment	Japan	Laboratory equipment for precision analysis and their peripheral devices are not produced in the Philippines. (Those available, such as PCs, will be purchased locally.)

#### (2) Transport from Japan

a. Construction Materials

Davao port is a large, well equipped port, capable for loading and unloading of export and import goods. It is possible to ship materials from Japan to Davao directly, but the shipping quantity will not be very large, as the PAL-Davao building is rather small. It will be more practical to ship all the materials to Manila, and divide them into those to the PAL-Central site and those to Davao. Materials to Davao will be transported in a regular freight ship. Transportation routes and periods are scheduled as follows:

1) PAL-Central

		• 1 1 1		Customs <u>Clearance</u>			· . · · ·
	Japan	7-10 →		Manila	1 day →	PAL-Central Site	13 to 18

b. Equipment

Most of the equipment will be shipped to Manila, unloaded, cleared the Customs, and transported to each satellite. Equipment to PAL-Bicol will be directly shipped to Cebu City, to which a direct ship goes from Japan. Equipment for each laboratory will be packed in separate cargoes in Japan to ensure collect shipping to each destination. Transportation routes and periods are scheduled as follows:

1) PAL-Central

#### 5-5 Tentative Schedule of the Project

The construction work will be carried out in two fiscal years. The work items and the construction periods are as shown below. After the notes are exchanged between the both governments (E/N), the BPI will enter into an agreement for consulting services with a Japanese consultant. The consultant will proceed with the verification of the agreement by the Government of Japan, while preparing working design documents in compliance with the agreement.

After completing the working design in about three months and having them approved by the BPI, the consultant will hold a pre-tender meeting and call for tenders from Japanese construction companies and trading corporations in the name of the BPI. The successful contractor will conclude a construction contract with the BPI, which shall be verified by the Government of Japan, and will start construction work. The BPI will complete the work in the area of its responsibilities during this period so as not to cause delay of the construction schedule.

Similar formalities will be repeated for the second year, after the E/N. The consultant will complete the working design in about 2.5 months, and will call for a tender from the trading corporations only.

	Table 4-24 Works in Each Year	
Phase	Work Items	Period
First Year	Construction of PAL-Central building and equipment installation (partly in the second year) Construction of PAL-Davao building and equipment installation	11 months
Second Year	Equipment installation at the four satellites (Baguio, Cebu, Cagayan de Oro, Bicol) Equipment (for training and data management) installation at PAL-Central	7.5 months

If the foundation work coincides with the rainy season, more costs will be needed for rain water discharge, safety precautions, etc. than that in the dry season. The foundation work period need be extended. It is therefore strongly recommended that the foundation work be scheduled during the dry season.

#### 5-6 Scope of Responsibilities

The scope of responsibilities in accordance with the Grant Aid system is as shown in table 4-25.

Site	Japan	Philippines
PAL-Central	Construction of	Securing the land
	the building	Site preparation work
	Equipment supply	Intake piping & connection of electric
		power and water supply
:		Sewage piping & connection

#### Table 4-25 Scope of Responsibilities

- 136 -

			Application for permits & approvals necessary for implementing the work Relocation of lab. equipment from the existing PAL-Central building
9	PAL-Davao	Construction of the building	Securing the land Site preparation work
		Equipment supply	Intake piping & connection of electric power and water supply Sewage piping & discharge (approx. 50 m)
			Relocation of electric line by Davao Lighting Corporation Application for permits & approvals
			necessary for implementing the work Relocation of lab. equipment from the existing PAL-Central building
• • •	PAL-Baguio Cebu CDO	Equipment supply	Restoration of electric and plumbing systems required for new equipment (Restoration of buildings as necessary)
	PAL-Bicol	Equipment supply	Restoration of the present building to use as PAL-Bicol

The cost to be borne by the Philippines is estimated at approximately 3,942,000 pesos. (Details of the estimation are shown in ANNEX 9.)

- 138 -

#### 6. Technical Cooperation and Programs of Other Donors

A request proposal for technical cooperation to PALs are jointly submitted by the BPI and FPA to the Government of Japan through the NEDA. The BPI plans construction of new PAL buildings and upgrading of equipment under Grant Aid as the first stage of improving the national monitoring network of pesticide residues. With the aid of technical cooperation in the second stage, the BPI intends improvement of analytical skills, utilization of data to pesticide control administration, and establishment of the Philippine's own NRL. And Grant Aid and technical cooperation are regarded indispensable for achieving their goals. PALs will receive assistance under the technical cooperation, after their facilities and equipment are intensified through Grant Aid, or in utilizing accumulated data for FPA's pesticide management. In other words, it is the objective of technical cooperation to let PALs take the maximum advantage of Grant Aid. The request proposal asked for three experts in pesticide residue monitoring, one in formulation analysis, and two in pesticide registration/legal regulations.

In accordance with the upgrading of laboratory equipment as well as considerable increase of amount of analysis, the improvement of analytical skills and work efficiency will become more important. JICA has dispatched an expert since 1991, who has been instructing extraction technique. As this project include some instruments that are new to PALs' staff, like GC/MS, technical assistance from the experts will be indispensable.

Pesticide residue monitoring is to identify minimum amount of agricultural chemicals from among mixtures of various confusing ingredients, and analysts have to be proficient in interpreting and evaluating analysis data. In order to develop such data to be internationally qualified ones, standardization of analysis at each PAL, and compliance to the internationally approved standards such as Good Laboratory Practice (GLP) remain as a challenge in the future. Expertized advice in these areas will also be anticipated.

PALs are eager to conduct examinations of pesticide residual levels in crops as the basis for establishment of MRL, however, it is only experienced in small scale examinations. Assistance from the experienced experts will be advantageous for creating effective and efficient examination schedules. The establishment of MRL suitable to the Philippines is a new trial of the government, therefore, expertized advice in terms of

- 139 -

strategy for how to develop the MRL, with reference to the procedures in Japan, will be needed.

As was detailed in Chapter 4.3. Implementation-Management Program, several committees are to be established for the project implementation. The JICA experts are to join the PAC and the PTC. Thus, the technical cooperation expected for this project is not merely to give instructions on how to operate the instruments, but to transfer integrated technical skills. The study team, therefore, anticipate that the technical cooperation be realized in order to intensify the effect of Grant Aid.

It is suggested that the necessity for LC/MS be examined again during the technical cooperation from the experts' view.

The request from the Government of the Philippines stated the technical cooperation period as five years starting October 1993 (renewable). As the technical cooperation is considered on the basis of the implementation of this project, the cooperation should start in the middle of 1996, after this project is completed.

Regarding assistance from other donations, most of the programs that the BPI is involved in are, as referred to in Chapter 3.3. Projects and/or Programs of Other Donors, interested in IPM or crop protection in agricultural production areas. There are no projects directly supporting PALs. Meanwhile, as shown in recommendations from the ADB for the development of Philippines' own MRL in 1987, the role of this project and the technical cooperation will become more significant in the future.

2. Evaluation of the Project

This project is expected to be particularly beneficial in the following fields:

- a. Safe food supply and good health of the Filipino nation as a result of intensive monitoring of pesticide residues in crops
- b. Improvement of life standards as a result of intensive monitoring of pesticide residues in the environment
- c. Safety of the farmers during pesticide diffusion

Beneficiaries of a. and b. will be the entire Filipino nation. With regard to farmers, beneficiaries of c., considerable numbers are assumed to be exposed to pesticides during diffusion, calculated as that people in agriculture, forestry and fisheries count for approximately 45% of the Filipino work force. In these circumstances, this project will be highly beneficial to the Filipino nation.

While international migration of agricultural products is expanding rapidly, the world becomes increasingly aware of international standardization in industrial products, food, environment and various other

- 142 -

sectors. The Philippines will have to comply with such international criteria. The Philippines is one of the world's leading export nations of bananas and mangos, and the monitoring of pesticide residues in these crops will have an important role in the expansion of exportation.

PALs have been conducting analysis of agricultural chemicals for approximately 18 years since its establishment, and the staff are well experienced in the operation of the laboratory instruments to be provided in this project. Some new instruments like GC/MS to be supplied to PAL-Central will require additional operational training. In view of the mainstream of pesticide analysis methodology, adoption of GC/MS in PALs is regarded as appropriate. PALs plan to expand their staff personnel in accordance with the development of operations through this project. Supplementary budgets from the FAPF are also to be availed concomitant to the expansion of operations. Therefore, the facilities and equipment intensified throughout this project will be managed and maintained by the Government of the Philippines utilizing their own budgets and personnel.

It is determined in this project that a new satellite will be established in Bicol by remodeling an existing building with laboratory equipment appropriate to the capability of PAL-Bicol. The BPI once founded PAL-Davao in the same manner. Newly employed staff are to take practical training for six months at PAL-Central before they are assigned to PAL-Bicol, and the chief of PAL-Central will assume the position of satellite chief for an initial period. The BPI's plan for PAL-Bicol appears specific and reasonable.

The Department of Agriculture is deeply concerned with the intensification of the monitoring system for safe food supply and establishment of the Philippines' own MRL. This project will assist the DA in achieving these objectives. Accordingly, it will contribute to the improvement of health and life standards of the Filipino nation. Past records show that management ability and operation programs of the BPI and PALs have no difficulties in implementation of the project and in general management of the programs afterwards. This project is therefore well worth realizing through Grant Aid from Japan, with considerable benefit thereby engendered.

- 143 -

#### 3. Recommendations

The following recommendations are presented for the implementation of the project as well as the smooth and effective operation of PALs to attain their ultimate goals.

(1) Adequate budget and personnel planning

A supplementary budge is to be appropriated to this project to manage expanded operation of PALs with proof that it is a foreign-assisted project. Past foreign assisted projects were all granted with the supplementary budgets from the FAPF without exception. What is also important is that the budget should be availed in time for operation programs. The application for the budget needs due consideration in terms of both amount and time.

With regard to personnel planning, 14 persons and 10 are to be employed at PAL-Central and PAL-Bicol respectively. These new staff should be employed well before the expansion or commencement of laboratory operation so that they can take enough training beforehand.

(2) Necessity for technical cooperation

As was stated in Chapter 4.6. Technical Cooperation and Programs of Other Donors, technical assistance of Japanese experts is expected for the improvement of work efficiency and operation of new equipment; for instance, sample processing speed-up, GC/MS operation method, data evaluation and data bank formulation strategy, together with many others. Technical assistance is also anticipated in utilizing analysis data into pesticide control administration, such as the development of the Philippines' MRL.

(3) Collaboration and coordination among authorities concerned with the development of MRL

Various factors need to be examined for the setting-up of MRL suitable to the Philippines, such as health and sanitation of the Filipinos, safety of the farmers, and environmental sanitation, as stated in Chapter 4.3. Implementation-Management Program.

For this examination, not only the DA and its affiliating agencies but other institutions like the Department of Health and the Department of Science and Technology will have interest in this matter. Therefore, it is recommended that a basic framework be formed in the early stages, clarifying which institution is responsible for what. It is suggested that this

- 144 -

will allow the smooth cooperation of these authorities to realize prompt establishment of MRL.

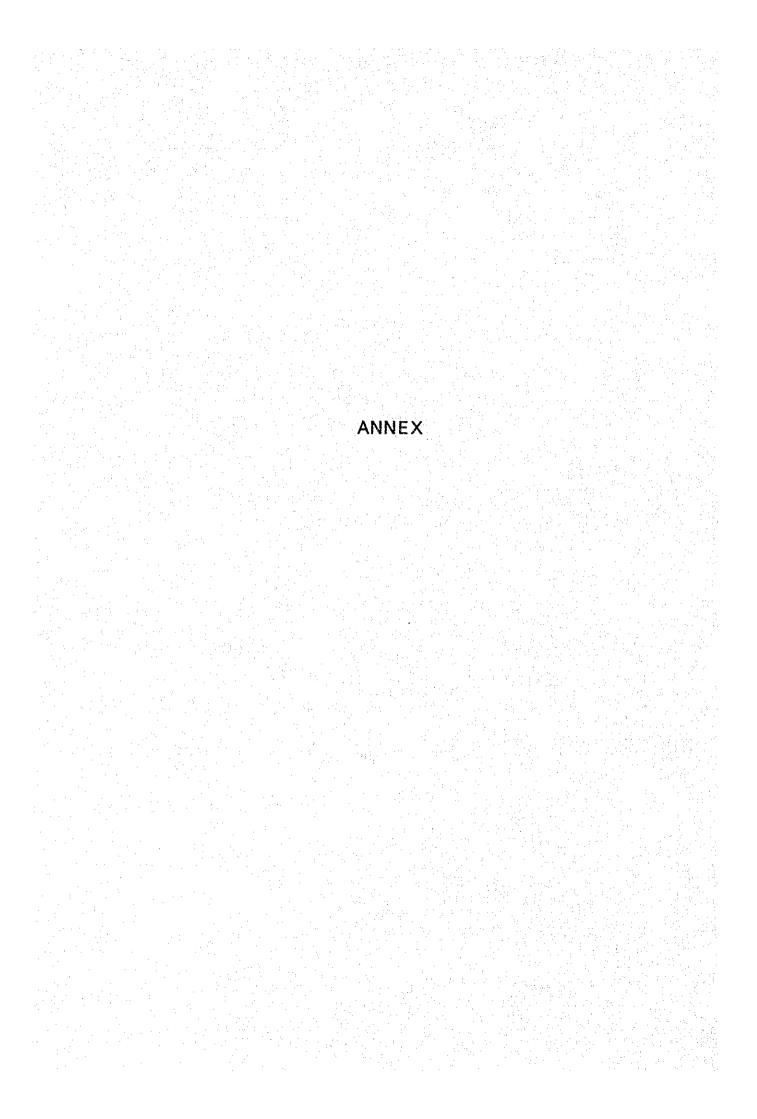

(4) Coordination with the DA's Regional Integrated Agricultural Research Centers in each region

PALs are to collect basic data for MRL through cultivating crops, applying pesticides and collecting crop samples with the cooperation of RIARC in each region. PALs are then to analyze crop samples and obtain data of pesticide in question. A well organized systematic examination schedule needs to be created for obtaining reliable data. For this purpose, close coordination between PALs and RIARCs is indispensable.

(5) Establishment of the project construction committee in the BPI, concerned with the project throughout the period, as referred to in Chapter 4.5-1 Basic Construction Policy (Figure 4-19.)

(6) Completion of the works under the responsibilities of the Government of the Philippines, as mentioned in Chapter 4.5-5 Tentative Schedule of the Project (Table 4-26), in time for building construction and equipment installation in Grant Aid

The existing satellites in Baguio, Cebu and Cagayan de Oro will be capable of operating new equipment after some restoration of their current utility systems. It is recommended that, taking advantage of this opportunity, these satellite buildings will have their interiors and exteriors reviewed thoroughly, so that they may function for a period of long standing, with no need of further restoration.

# MINUTES OF DISCUSSIONS BASIC DESIGN STUDY (I) ON THE PROJECT FOR IMPROVEMENT OF THE NATIONAL MONITORING PROGRAM ON PESTICIDE RESIDUE IN AGRICULTURE AND THE ENVIRONMENT AND PESTICIDE FORMULATION

IN

THE REPUBLIC OF THE PHILIPPINES

In response to a request from the Government of the Republic of the Philippines, the Government of Japan has decided to conduct a Basic Design Study on the Project for Improvement of the National Monitoring Program on Pesticide Residue in Agriculture and the Environment and Pesticide Formulation (herein after referred to as "the Project"), and has entrusted the study to the Japan International Cooperation Agency (JICA).

JICA sent to the Philippines a study team headed by Mr. Teizo Igarashi, Deputy Managing Director, Grant Aid Management Department, JICA, from 31st January to 22nd February, 1994.

The team has discussions with the officials concerned of the Government of the Philippines and conduct field surveys in the study areas.

In the course of discussions and the field survey, both parties have confirmed the main item described on the attached sheets. The team will proceed to further work and prepare an Interim Report.

Manila, 9th February, 1994

Mr. Teizo Igarashi Leader Basic Design Study Team JICA

Dr. Manuel M. Lantin Undersecretary Department of Agriculture Philippines

- 11 -

#### ATTACHMENT

#### 1. Objective

The objectives of the Project are to construct new buildings for central and satellite Pesticide Analytical Laboratories (PALs) and to upgrade their equipments, thus contributing to the establishment of an effective national network on pesticide residue monitoring to create awareness on the proper use of pesticides and their adverse effects to human life and the environment and to establish the Maximum Residue Limits (MRLs) in the Philippines.

#### 2. Project sites

The sites of the Project are listed in Annex I in a priority order. The map is shown in Annex II.

#### 3. Responsible and Executing Agencies

The Department of Agriculture is the responsible agency and the Bureau of Plant Industry is the implementing agency of the Project.

#### 4. Items requested by the Government of the Philippines

1) After discussions with the Basic Design Study Team, the items .

- described in Annex III were finally requested by the Philippines side as the Project components.
- 2) However, the final components, both specifications and quantity, will be decided after a further study in Japan and a Basic Design Study (2) to be dispatched in the near future.

# 5. Japan's Grant Aid system

1) The Philippine side has understood the system of Japan's Grant Aid explained by the team.

12 -

2) The Philippine side will take necessary measures, as described in Annex IV, for the smooth implementation of the Project on condition that the Grant Aid by the Government of Japan is extended to the Project.

fm fm fm

6. Other relevant issues

In case that Japan's Grant Aid is extended to the Project, the following condition will be applied:

- 1) the Government of the Philippines will allocate the necessary budget for the operation and maintenance of the facilities and equipment provided for the Project.
- 2) the Department of Agriculture will provide the necessary personnel for operation and maintenance of the facilities and equipment provided for the Project.

7. Tentative Schedule of the Study

- 1) The consultants will proceed to further studies in the Philippines until 22nd February, 1994.
- 2) Based on the Minutes of Discussions and the results of the study, JICA will compile an interim report and explain its contents during the Basic Design Study (2) to be dispatched around May 1994.

## Annex IV

# Undertakings by the Government of Republic of the Philippines

- 1. To secure the land necessary for the construction the Project facilities.
- 2. To clear, level and reclaim for the construction site prior to commencement of the Project.
- 3. To provide facilities for distribution of electricity, water supply and drainage and other incidental facilities outside the site, if necessary.
- 4. To ensure speedy unloading, tax exemption, custom clearance of the products under the grant at the port of disembarkation.
- 5. To accord Japanese nationals whose services may be required in connection with the supply of the products and the services under the Verified Contracts such facilities as may be necessary for their entry into the Philippines and stay therein for the performance of their work.
- 6. To exempt Japanese national involved in the Project from customs duties, internal taxes and other fiscal levies which may be imposed in Philippines with respect to the supply of equipment /machines and services under the Verified Contracts.
- 7. To bear commissions to the Japanese foreign exchange bank for the banking services based upon the Banking Arrangement.
- 8. To bear all expenses, other than those to be covered by the Grant Aid necessary for the execution of the Project.
- 9. To assign exclusive counterpart technicians/engineers, and etc. for the Project.
- 10. To use and maintain properly and effectively the facilities constructed and equipment purchased under the Grant.

#### 4. MINUTES OF DISCUSSIONS

#### (2) Basic Design Study Phase 2

# MINUTES OF DISCUSSIONS BASIC DESIGN STUDY (II) ON THE PROJECT FOR IMPROVEMENT OF THE NATIONAL MONITORING PROGRAM ON PESTICIDE RESIDUE IN AGRICULTURE AND THE ENVIRONMENT AND PESTICIDE FORMULATION IN

THE REPUBLIC OF THE PHILIPPINES

In response to a request from the Government of the Republic of the Philippines, the Government of Japan has decided to conduct a basic design study on the Project for Improvement of the National Monitoring Program on Pesticide Residue in Agriculture and the Environment and Pesticide Formulation (hereinafter referred to as "the Project"), and has entrusted the study to the Japan International Cooperation Agency (JICA).

JICA sent to the Philippines a study team (I) from 31st January to 22nd February, 1994. An interim report has been prepared based on the results of discussions, field surveys and technical examination in Japan. In order to explain the contents of the report to the Philippine side and to conduct a further study, JICA sent a study team (II) headed by Mr. Shigetaka Saburi, Director, Second Inspection Division, Agricultural Chemicals Inspection Station, Ministry of Agriculture, Forestry and Fisheries from 11th May to 4th June, 1994.

In the course of discussions, both parties have confirmed the main items described on the attached sheets. The team will proceed to further work and prepare the Basic Design Study Report.

#### ATTACHMENT

#### 1. Objective

The objectives of the Project are to construct new buildings for central and satellite Pesticide Analytical Laboratories (PALs) and to. upgrade their equipment, thus contributing to the establishment of an effective national network on pesticide residue monitoring to create awareness on the proper use of pesticides and their adverse effects to human health and the environment and to establish the Maximum Residue Limits (MRLs) in the Philippines.

# 2. Components of the Interim Report

The Government of the Philippines has agreed and accepted in principle the components of the Interim Report proposed by the Team.

#### 3. Project Sites

The sites of the Project are listed in Annex I. The proposed construction site for the PAL-Central is shown in Annex II.

#### 4. Executing Agency

The Department of Agriculture is the responsible agency and the Bureau of Plant Industry is the implementing agency of the Project.

# 5. Items requested by the Government of the Philippines

1) The items requested are shown in a priority order in Annex III.

2) However, the final component, both specifications and quantity, will be decided after a further study in Japan.

# 6. Japan's Grant Aid system

1) The Philippine side has understood the system of Japan's Grant Aid explained by the team.  $\oint$ 

- 21 -

A. S

2) The Philippine side will take necessary measures, as described in Annex IV, for the smooth implementation of the Project on condition that the Grant Aid by the Government of Japan is extended to the Project.

# 7. Other relevant issues

1) In case that Japan's Grant Aid is extended to the Project, the following conditions will be applied:

- i) the Government of the Philippines will allocate the necessary budget for the operation and maintenance of the facilities and equipment provided by the Project.
- ii) the Department of Agriculture will provide the necessary personnel for operation and maintenance of the facilities and equipment provided by the Project.

2) Apart from the requested items shown in Annex III, the Philippine side has expressed the need for a dormitory for trainees and a staff canteen at PAL-Central. The Japanese side, however, has suggested that a different funding source, such as the KR-II counterpart fund be sought for.

3) In order that the Project be sustainable, the Japanese side has strongly suggested that:

- i) the Philippine side establish a system where a certain category of analyses are to be charged for;
- ii) and that BPI retain a certain portion of the above income for operation and maintenance.

## 8. Tentative Schedule of the Study

1) The consultants will proceed to further studies in the Philippines until 4th June, 1994.

 2) The Philippine side will send further comments, if any, to JICA, Manila not later than 3rd June, 1994.
 3) Based on the Minutes of Discussions and the results of

the study, JICA will compile a draft final report and

- 22 -

dispatch a mission around July to explain the contents of the report.

#### 4. MINUTES OF DISCUSSIONS

#### (3) Draft Mission

#### MINUTES OF DISCUSSIONS BASIC DESIGN STUDY ON THE PROJECT FOR IMPROVEMENT OF THE NATIONAL MONITORING PROGRAM ON PESTICIDE RESIDUE IN AGRICULTURE AND THE ENVIRONMENT AND PESTICIDE FORMULATION IN THE REFURING OF THE ENHLIPPINES

THE REPUBLIC OF THE PHILIPPINES (CONSULTATION ON DRAFT REPORT)

The Japan International Cooperation Agency (JICA) sent a study team (I) from 31st January to 22nd February, 1994 and a study team (II) from 11th May to 4th June, 1994, on the Project for Improvement of the National Monitoring Program on Pesticide Residue in Agriculture and the Environment and pesticide Formulation (hereinafter referred to as "the Project") to the Republic of the Fhilippines.

Through discussions, field surveys, and technical examination of the results in Japan, the team has prepared the draft report of the study.

In order to explain and to consult the Philippine side on the components of the draft report, JICA sent to the Philippines a Study Team (hereinafter referred to as "the Team"), headed by Mr. Shigetaka Saburi, Ex-Director, second Inspection Division, Agricultural Chemicals Inspection Station, Ministry of Agriculture, Forestry and Fisheries from 31st July to 6th August, 1994.

A: a result of discussions, both parties have confirmed the main items described on the attached sheets.

- 30 --

Manila, 4th August 1994

Dr. Manuel M. Lantin Undersecretary Department of Agriculture Fhilippines

#### [Annex I]

#### ATTACHMENT

#### 1. Components of Draft Report

The Government of the Philippines has agreed and accepted in principle the components of the Draft Report proposed by the Team.

#### 2. Responsible and Executing Agencies

The Department of Agriculture is the responsible agency and the Bureau of Flant Industry is the Implementing agency of the Project.

- 3. Grant Aid Program extended by Japan
  - The Philippine side has understood the system of Japan's Grant Aid explained by the Team.

2) The Government of the Philippines will take necessary measures described in Annex II for smooth implementation of the Project, on the condition that the Grant Aid Assistance by the Government of Japan is extended to the Funject.

#### 4. Further Schedule

AA

- 1) The Philippine side will send further comments on the Draft Report, if any, to JICA, not later than 15th August, 1994
- 2) The Team will prepare the final report in accordance with the confirmed items, considering comments and suggestions by the Philippine side on the Draft Final Report. The Final Report will be sent to the Government of the F% lippines around October, 1994.

- 31 -

#### 5. Other Important Issues Related to the Project

- Both side have confirmed all the items appearing in the Minutes of Discussions signed on 19th May, 1994, a copy of which has been reproduced in the Draft Final Report.
- 2) The Government of the Philippines will make internal arrangements, such as securing clearance from the ln estment Coordination Committe (ICC), which are essential to facilitate the prompt implementation of the Filipet.
- 3) The Philippine side will take necessary measures to satisfy the internal criteria concerning environment assessment proposed by the Department of Environment and Natural Resources.
- 4) The Government of the Philippines will allocate the necessary budget for the operation and maintenance of the facilities and equipment provided by the Project.
- 5) The Department of Agriculture will provide the necessary qualified personnel for operation and maintenance of the facilities and equipment provided by the project.
- 6) The Philippine side has requested the following equipment to be included in the project. The team will convey the request to the Government of Japan. However, the final components of the project will be decided after further consultation within the Government of Japan.

	Item	Unit	Site
1.	Atomic Absorption Spectrophotometer	1	Central
2.	Laboratories oven Grinder Top loading balance vacuum pump air compressor	1 1 1 1 1	Cagayan de Oro

#### 5. TECHNICAL NOTES

(1) Basic Design Study Phase 1

### **TECHNICAL NOTES**

#### ON

## THE PROJECT FOR IMPROVEMENT OF THE NATIONAL MONITORING PROGRAM ON PESTICIDE RESIDUE IN AGRICULTURE AND THE ENVIRONMENT AND PESTICIDE FORMULATION

#### IN

#### THE REPUBLIC OF THE PHILIPPINES

The minutes of Discussion on the Basic Study (hereinafter referred as "the Study") (I) on the Project for Improvement of the National Monitoring Program on Pesticide Residue in Agriculture and the Environment and Pesticide Formulation (hereinafter referred as "the Project") was concluded between JICA Basic Design Study Team (hereinafter referred as "the JICA Team") and the Department of Agriculture (hereinafter referred as "the DA") of the Government of the Republic of the Philippines on February 9, 1994

Following the conclusion of Minutes of Discussion of the Project, the JICA Team continued technical discussions and field survey in the Philippines up to February 22, 1994.

The JICA Team and Bureau of Plant Industry (hereinafter referred as "the BPI") of the DA made several discussions as described hereinafter. These contents of the discussions will be examined and described in the Interim Report of Basic Design Study.

1. Projected site for construction of Central Pesticide Analysis Laboratory (hereinafter referred as "PAL-Central")

The JICA Team discussed with the BPI about the projected site for construction of PAL-Central, based on the following conditions (see the site map herein attached);

(1) The original proposed site suggested by the BPI for the Project is site "B".

(2) The BPI constructs National Seed Quality Control Services building at site "A"

(3) The BPI has a plan to construct a building of their administration section at site "C" or "D" Therefore, the JICA Team concluded to nominate "B", "C", "D" or "E" as the projected site of PAL-Central. Selection of the site will be discussed with suggestion of the Basic Design during the second stage of the Study which will be started after the Government of Japan decide to implement the Project with the examination of the results of the first stage of the Study.

- 34 -

2. Positioning of Pesticide Analysis Laboratory (hereinafter referred as "PAL")

The BPI is a component of the DA. At present, the BPI provide technical support for all the existing PALs. With respect to the budget allocation, although some of these PALs are managed by the Regional Office of the DA, the BPI has a plan to manage all the PALs directly in both the technical support and the budget allocation, as mentioned below (see the present organizational situation of PALs herein attached).

- (1) PAL-Central and PAL-Baguio are now managed directly by the BPI including their budget allocation.
- (2) PAL-Cebu, PAL-Cagayan de Oro and PAL-Davao are now managed by the Regional Office of the DA to which they are geographically located, but the BPI will reiterate the request for the direct management of these PALs to the DA.
- (3) As for PAL-Bicol, the construction of which is requested in the Project, the BPI will request the direct management of it to the DA.

Therefore, the BPI will manage all the PALs directly in future.

## THE PROJECT FOR IMPROVEMENT OF THE NATIONAL MONITORING PROGRAM ON PESTICIDE RESIDUE IN AGRICULTURE AND THE ENVIRONMENT AND PESTICIDE FORMULATION

#### IN

#### THE REPUBLIC OF THE PHILIPPINES

The Minutes of Discussion on the Basic Study (hereinafter referred as "the Study") (II) on the Project for Improvement of the National Monitoring Program on Pesticide Residue in Agriculture and the Environment and Pesticide Formulation (hereinafter referred as "the Project") was concluded between JICA Basic Design Study Team (hereinafter referred as "the JICA Team") and the Department of Agriculture (hereinafter referred as "the DA") of the Government of the Republic of the Philippines on May 19, 1994.

Following the conclusion of Minutes of Discussion of the Project, the JICA Team continued technical discussions and field survey in the Philippines up to May 27, 1994.

The JICA Team and Bureau of Plant Industry (hereinafter referred as "the BPI") of the DA made several discussions as described hereinafter. These contents of the discussions will be examined and described in the Draft Final Report of Basic Design Study.

The concerned DA-BPI officials have emphasized the importance of establishing a satellite PAL in Bicol of the same scale as the other satellites for the following reasons:

a) There is a projected increase in vegetable production

- 38 -

in the region considering the vast targetted production area of 43,320 hectares under the Departments Key Commercial Crop Development Program.

b) The medium term plan of the DA includes the development of Region 5 (Bicol) as the vegetable bowl in Luzon.

2. With this, Mr. Ide of the JICA Team and Mrs. Paz Austria of BPI visited the proposed PAL building in Bicol on May 24-25, 1994. Said building was found appropriate provided that it is renovated to suit the laboratory requirements.

3. However, the JICA Team suggested that the volume of operations and activities of PAL-Bicol be scaled down using lesser number of equipment or to a sampling station level because PAL-Bicol will be a new satellite that will be manned mostly by new staff. In addition, the scaling down will likewise reduce the budgetary requirements of the project.

4. The DA-BPI concerned officials maintained their position to establish a full scale Pesticide Analytical Laboratory Satellite in Region 5 (Bicol), with the assurance of providing the needed analytical staff requirement. Additional budget will be included in General Appropriations Act (GAA) in 1996.

8. MEMORANDUM OF THE DA'S REGIONAL OFFICE CHIEF (REGION 5)

Republic of the Philippines DEMARTMENT OF AGRICULTURE Office of the Secretary Elliptical Road, Diliman, Quezon City

#### MEMORANDUM -

:

To

Director Nerius I. Roperos Bureau of Plant Industry Manila

FROM

Dr/Fe Layka Department of Agriculture Region V

SUBJECT

Building of Bicol PAL

Relative to the Bureau of Plant Industry project proposal entitled "Improvement of the National Monitoring Program on Pesticide Residue in Agriculture and the Environment and Pesticide Formulation", please be informed that I agree to the use and renovation of the building visited by the JICA 2nd Basic Design Mission as a PAL satellite station as long as the equipment and vehicles requested are provided by the project. It will be recalled that this is the same building that was earmarked during the conceptualization of this project.

We look forward to the inclusion of Bicol PAL to the final scope of the project.

9. LETTER FROM THE BPI'S DIRECTOR TO THE PHASE 2 STUDY TEAM LEADER

Republic of the Philippines Department of Agriculture BUREAU OF PLANT INDUSTRY Manila

692 San Andres St. Malate, Manila Philippines Tel. Nos. 57-17-26 58-62-01 57-17-76

Mr. Shigetaka Saburi Team Leader 2nd Basic Design Mission

Dear Mr. Saburi:

This is to request your consideration for our proposal to include a two (2) room dormitory with 10 beds for ladies and 10 beds for men, a canteen with a capacity of 10 tables with 4 seats each.

The need for these facilities stem from:

- 1. A projected increase of training activities and education/ awareness campaign for the National Capital Region and nearby Regions 3, 4 and 5 from 1 to 2 trainings per month with an average of 5 days period per session.
- With the recent bilateral agreements between four (4) member countries of the Technical Cooperation of Developing Countries (TCDC), the Philippines through the Central Pesticide Analytical Laboratory will conduct trainings on pesticide residue to an average of 3-4 participants/country.
- 3. To provide temporary shelter to an average of four (4) staff of the Central PAL who often times render overtime services to complete the activities that need continuous operation.
- 4. The dormitory and canteen facilities will cater to approximately 40-60 trainees/month.

The annual training program and schedule is attached for your ready reference.

We trust that this merits your favorable evaluation and acceptance of our request.

Thank you and regards.

Very truly yours,

NERIUS I. ROPEROS

Director

Encl.: a/s May 27, 1994

## TRAININGS TO BE CONDUCTED BY PESTICIDE ANALYTICAL LABORATORY (PAL)

A. Under the Technical Cooperation of Developing Countries (TCDC)
Philippines to:

1. China - OJT Training on Pesticide Residue and Formulation Analysis

- 2. Ivory Coast Training on Pesticide Residue Monitoring and Pesticide Use
- 3. Pakistan Training on Pesticide Residue Monitoring and Use
- 4. Thailand Toxicity and Impact of Pesticide on Non-Target Agricultural Site
- B. Other Agencies Requesting Training on Pesticide Analysis
  - 1. Environmental Management Bureau (EMB)
  - 2. Bureau of Fisheries and Aquatic Resources (BFAR)
  - 3. Bureau of Animal Industry (BAI)
  - 4. Central Luzon State University (CLSU)
  - 5. National Pollution Control Commission (NCPC)

- 53 -

C. PAL In-House Review

#### **10. REFERENCE MATERIALS**

#### Bureau of Plant Industry

- 1. Pesticide Administration in the Philippines
  - a. P.D. 1144, May 30, 1977
  - b. FPA Rules and Regulation No.1, Series of 1977
  - c. The Fertilizer and Pesticide Authority, Chapter 5 of Pesticide Management
  - d. Number of pesticides and their ingredients according to types (Agricultural and Household use)
  - e. List of registered pesticides according to their active ingredients
  - f. List of registered pesticide products according to companies (Agricultural and Household use)
  - g. Guidelines on FPA Board Resolution No.01 (1993) on Organotin, Azinophos Ethyl, Methyl Parathion, Endosulfan and Monocrotohos
- 2. Statistics of Pesticide in the Philippines
  - a. Sales amount of pesticides as in kgs of active ingredient (1988-1992)
  - b. Philippine Annual Pesticide Information, 1984-1992
  - c. Pesticide importation (in detail according to types) for the calendar years 1980-1991
- 3. National Pest and Disease Profile
  - a. National pest and disease profile cited from BPI Annual Report 1991
  - b. Brief profile about the Crop Protection Division and the Crop Production Division

4. Budget for the BPI

a. Budget ceiling of the BPI for 1993

b. Budget allocation in the Department of Agriculture and BPI's budget specification

- c. Financial Plan 1994 for the Pesticide Analytical Section (for Manila and Baguio only)
- d. 1995 Budget of the Pesticide Analytical Laboratory
- e. 1995 Work Plan of the Pesticide Analytical Section, Laboratory Services Division
- f. PAL-Baguio's Work Plan for 1994 and 1995
- 5. KR-2 (Pesticide Management)
  - a. Brief history
  - b. List of agricultural chemicals (insecticides, herbicides and fungicides) provided under Japanese Commodity Grant with KR-2, 1990-1993
- 6. Consumption of Crops
  - a. Statistics of selected crops 1989-1992 (in calendar year) on Abaca, Banana, Cabbage, Cacao, Calamansi, Cassava, Coconut, Coffee, Eggplant, Garlic, Mango, Mongo, Onion, Peanut, Pineapple, Rubber, Sugarcane, Tobacco and Tomato
  - b. Export of major commodities (for agricultural products) 1991-1993, with statistic sheets
  - c. Imported fruits and vegetables in 1993, with statistics sheets
  - d. Supply and utilization accounts (1878-1991) on Ampalaya, Bell pepper, Cabbage, Chayote, Cucumber, Eggplant, Garlic, Ginger, Habitchuelas, Onion, Patola, Pechay, Radish, Squash, Tomato, Upo, Soybeans, Mongo and Peanut
