# (2) Implementation

The organization for implementation will have two main functions, a management and coordination function and an implementing function. Implementation will generally involve existing agencies. The proposed implementing organizations are shown in the zone by zone project summaries in section 6.3, and include MOP, INRENARE, IDAAN and IRHE. Projects will be coordinated by IPAT in order to assure effective implementation of the projects.

Coordination will be especially critical where a packaged project consists of groups of subprojects which can proceed at the same time, as a complete project system. In these cases the implementing agency which must be assigned to each sub-project may be different and careful coordination will be essential.

# 6.3 Summary List of Projects

# (1) National Programs

Table 6.3 provides a zone by zone summary of the projects proposed for the National Programs.

# (3) Project List of Long Term Development Plan

A full list of proposed projects and sub-projects for each of the six study zones is presented in the following tables. These tables rate the estimated duration of project construction, the estimated public and private sector budget required, the proposed implementing organization and the assigned rating of project potential according to the criteria presented in previous sections.

#### 7. Plan Evaluation

#### 7.1 Economic and Financial Evaluation

In the past, the service sector has been the leading sector in the country's economy, and it is recognized that the growth of the service sector will play an important role in order to achieve the goal of the Comprehensive Economic Recovery Program. In the socio-economic framework of this study the share of the service sector is estimated to amount to 80 % of the total GDP in 2010, the target year of this Long Term Development Plan. The tourism sector is expected to be a main source of growth in the service sector along with external trade and financial and insurance services.

The Comprehensive Economic Recovery Program and the "Políticas Públicas para el Desarrollo Integral" are aiming at promotion of efficiency and international competitiveness of the country's economy. Economic efficiency and international competitiveness are essential for the development of the tourism sector. On the other hand it is stated in the Plicas the necessity for the development of basic infrastructure for tourism in the selected potential areas has to be carried out by the Government.

This section explores the Long Term Development Plan from the national economic and financial points of view. The impact of the Plan is evaluated as a whole and then the efficiency of the Plan is examined by Zone.

The impact of tourism on the national economy is significant. Direct economic benefits of tourism include generation of employment, increase of foreign exchange earnings, income generation and contribution to government revenues, which lead the national and regional economic development and the improvement of the living standards of the people. Tourism also has an indirect economic impact on other economic sectors such as agriculture, fisheries, handicraft manufacturing and construction, which supply the goods and services used in the tourism sector. Furthermore, another evaluation of tourism is its impact on the development of regional areas. The improvement of transportation and other infrastructure facilities and services encourage the economic and cultural development of the community in regional area. Tourism will lead to establishment of new relations between domestic and foreign tourists in the area. For the conservation of cultural resources, tourism will stimulate the conservation of those resources as tourism resources.

The Tourism sector provides significant impact on the promotion of national and regional economies, however, it is difficult to define and measure the economic costs and benefits of tourism development on the national economy.

In this evaluation the impact of the Long Term Development Plan the national economy have been examined in the following contexts of the economic impact:

- Foreign Exchange Earnings
- Increase of Employment Opportunities
- Increase of Government Revenues, and
- Contribution to GDP

The investment efficiency of the Long Term Development Plan has been evaluated by using a technique of cost-benefit analysis by development zone.

#### 7.1.1 Tourism Revenue

(1) Tourist Expenditure per Night

The basic input for estimating the economic impact is tourist expenditures. Tourist expenditure per night in 2010 spent by foreign and domestic tourists for goods and services in Panama, are estimated by expenditure item for foreign tourists, domestic night stay tourists and domestic daytime tourists and by zone as shown in Table 7.1. The characteristics of tourism development and the tour patterns in each zone, which were discussed in the Long Term Development Plan in Chapter 5, have been taken into consideration to estimate the expenditure. Simultaneously, the past trend of tourist expenditure in Panama has also been considered in the estimation. The international airfare is not included in the estimation.

Table 7.1 Tourist Expenditure per Night by Zone in 2010

11	nit:	Ra	boas	1	000
		111	1171.06.5		wv

Expenditure				Zone			
Item	Bastimentos	Arco Seco	Farallon	Metropolitana	Portobelo	Las Perlas	Others

Shopping Transportation Others	8 10	10	10	10	10 -	10	10 44

Note:

Some share of domestic tourists stays at their own cottages or their friends' and relatives' houses and the share is estimated in each zone as follows:

- Bastimentos, Arco Seco, Farallon, Metropolitana and Portobelo Zones: 70 % of domestic tourists
- Las Perlas and other Zones: 30 % of domestic tourists

The figures for accommodation in the above table are the average expenditure per night spent by a domestic tourist who uses from for tourists' accommodations such as hotels and bungalows.

#### (2) Tourist Demand

Tourist demand in the target year of 2010 has been estimated in Chapter 3. In this Chapter, in order to evaluate the investment efficiency of the Long Term Development Plan, the revenue from incremental demand resulting from implementation of the Plan should be compared with the investment cost of the Plan including the operating and maintenance costs. The context of "with project" and "without project" is adopted in the economic evaluation of the Plan.

The future demands in case of "with project" and "without project" have been adopted as "Planning Demand" and "Opportunity Demand" in Demand Forecast respectively. The incremental tourist person-nights by zone are calculated for the foreign tourists, domestic night stay tourists and domestic daytime tourists as shown in Table 7.2 and Figure 7.1 illustrates the incremental demand of night stay tourists.

Table 7.2 Incremental Tourist Demand with Project

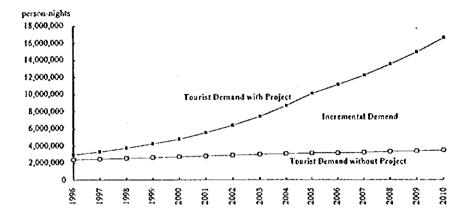

Figure 7.1 Incremental Demand (Foreign and Domestic Night-stay Tourists)

#### (3) Tourism Revenue

The revenues from tourism can be attained by multiplying the unit tourist expenditure per night estimated above by the numbers of person-nights of night stay tourists and the number of daytime tourists:

TRV=EPD x NPN

where,

TRV: tourism revenues

EPD:

unit tourist expenditure (expenditure per night)

NPN:

number of person-nights of night stay tourists and

number of daytime tourists

Table 7.3 shows the total tourism revenues from foreign tourists, domestic night stay tourists and domestic daytime tourist in 2000, 2005 and 2010 by zone. The total revenues generated from foreign tourists, domestic night stay tourists and domestic daytime tourists are estimated to amount to 1,564 million Balboas, 221 million Balboas, and 222 million Balboas in 2010, the target year of the Long Term Development Plan, respectively. The total tourism revenue in 2010 is estimated to be 2,007 million Balboas, of which the revenue from foreign tourists will amount to 78 % of the total revenue. Regarding the share by zone, Metropolitana Zone will be dominant in the total revenues, however, its share will decrease from 55 % in 2000 to 40 % in 2010.

Source: JICA Study

The incremental tourism revenues resulting from the implementation of the Long Term Tourism Development Plan is calculated by using the incremental number of night stay tourists and daytime tourists as shown in Table 7.4:

## dTRV=EPD x dNPN

where,

dTRV:

incremental tourism revenues

EPD:

unit tourist expenditure (expenditure per night)

dNPN:

incremental number of person-nights of night stay tourists

and incremental number of daytime tourists

The incremental revenues will amount to 1,598 million Balboas in 2010. In the cost-benefit analysis, which will be explained in the later section, it is not the total revenues but the incremental revenues that must be compared with the incremental cost of the Long Term Development Plan.

Table 7.5 shows the expenditure structure in the incremental revenues in 2010. Almost 30 % of the total incremental revenue comes from accommodation expenditure and the share of food, shopping and transportation expenditure is 20 %, 20 % and 13 % of the total respectively.

## 7.1.2 Project Cost

# (1) Investment Cost

All input and output are evaluated at economic price in the economic analysis to eliminate the distortions created by government interventions in the economy. Some payments are the transfer items in the country's economy, such as tax, import duty and subsidies. In order to convert the costs of the Long Term Development Plan calculated in the previous section, the following conversion factors have been estimated by examining the components of costs and those of import duties.

- conversion factor of the cost for infrastructure development: 0.85
- conversion factor of the cost for accommodation and tourist facility development: 0.90

The disbursement schedule of the investment cost by zone is presented in economic price up to 2010 in accordance with the implementation plan of the Long Term Tourism Development Plan in Table 7.6.

**Table 7.6 Economic Investment Cost**

2010	24,869	6,927	48,912	57,601	23,874	25,763	187,947
Total	321,175	150,165	536,071	905,464	279,899	347,291	2,540,065

Note: Land cost estimated below is included.

#### (2) Land cost

In order to estimate the economic cost of land, the opportunity cost of land has approximately been estimated based on the existing land use of development areas as shown in Table 7.7.

Table 7.7 Economic Cost of Land

		Zone									
	Bastimentos	Arco Seco	Faration	Metropolitana	Portobelo	Las Perlas	Total .				
Area (ha) Unit cost (B1/ha)	300 1,000	300 10,000	1,100 10,000		100 20,000	800 1,000	3,700				
Total cost (BL1,000)	300	3,000	11,000	110,000	2,000	800	127,100				

# (3) Operation and Maintenance cost

The operation and maintenance cost of the Long Term Development Plan consists of the maintenance cost of the infrastructure developed by the public sector and the operating cost of the tourism related sectors which derive revenue from tourists expenditure.

The maintenance cost of infrastructure invested by the public sector is estimated at 5 % of the total investment cost of the public sector.

In order to estimate the operating cost in tourism related sectors, the coefficient of operating cost of the incremental revenues of each tourism expenditure or the total input are calculated as shown in Table 7.8. In the estimation the coefficients of input-table of the related industries have been used (rf. section 7.1.6). The rate of operating cost excluding indirect tax is estimated at 24 % of the total incremental revenue.

Table 7.8 Coefficient of Operating Cost in Total Input

Expenditure item	Incremental tourism revenues in 2010 (Bl. 1,000)	(A)	Coefficient of total value added (B)	Coefficient of operating surplus (C) 2)	Coefficient of operating cost (D)=(B) - (C)	Coefficient of indirect tax (E)	Coefficient of operating cost excluding indirect tak ((D)-(E))x(A)
Accommodation	471,699	29.5%	0.4373	0.2256	0.2117	0.0618	(0.0443)
Food	314,514	19.7%	0.4373	0 2256	0.2117	0.0618	(0.0295)
Shopping	312,182	19.5%	0.6956	0.2893	0.4063	0.1047	(0.0589)
Transportation	199,752	12.5%	0.6956	0.2893	0.4063	0.1047	(0.0377)
Others	299,514	18.7%	0.8379	0.4634	0.3745	0.0226	(0.0660)
Total	1,597,660	100.0%					0.2361

Note:

1) refer to Table 7.5

2) refer to Table 7.14

# 7.1.3 Foreign Exchange Earnings

Tourism is the leading earner of foreign currency in Panama exceeding bananas and its revenues represent 46.9 % of the total F.O.B. value of exports in 1992.

As shown in Table 7.9, the foreign exchange earnings of tourism is estimated to increase with an average growth rate of 15.0 % p.a. and 13.1 % p.a. during the periods from 1992 to 2000 and from 2000 to 2010 respectively. Its share of the country's GDP will increase from 2.5 % in 1992 to 10.8 % in 2010.

However, it should be noted, that a loss or linkage of foreign exchange will be caused by the need to import goods and services such as foods and liquor required to satisfy the tourists' demands.

Table 7.9 GDP and Foreign Tourist Receipts

	1992	2000	2010
GDP (million Bl. at 1992 prices)  Average growth rate p.a.	6,001	9,782 6.3%	14,480 4.0%
<u> </u>		(1992-2000)	(2000-2010)
Foreign Exchange Earnings from Tourism  Number of foreign tourists	307,078	800,000	2,000,000
Foreign tourist revenue(million Bl.)  Average growth rate p.a.	150	458 15.0%	1,563 13.1%
Share of GDP	2.5%	4.7%	10.8%

# 7.1.4 Increase of Employment Opportunities

The unemployment rate in Panama amounted to 16.1 % in 1991. The principal argument for encouraging tourism development is that the tourism sector creates new opportunities for employment in the development zones.

The employment generated by tourism varies widely among the sectors: direct employment such as in hotels, restaurants, transport operations and souvenir shops. Indirect employment is also stimulated by tourist expenditures such as the manufacturing or primary sector which supplies goods and services to the tourism sector, and investment related employment such as for construction of hotels and infrastructure development.

The employment generated by tourism is usually measured based on the average number of employees per hotel room. According to the Study on Plan Maestro de Turismo by IPAT/OEA, the number of jobs created by tourist hotels and restaurants in Panama has been estimated as shown in Table 7.10.

Table 7.10 Employment in Tourist Hotels and Restaurants in 1990

Categories	Number of rooms	Employment Coefficient	Number of employed
1st Class Hotel	1,597 rooms	0.9	1,437
2nd Class Hotel 1)	7,134 rooms	0.5	3,567
Sub-total	8,731 rooms		5,004
Restaurant 2)	451	10.0	4,510

Source: Note: Plan Maestro de Turismo, IPAT/OEA

1) Second class rooms (1,389 rooms) are not considered as a part of the tourist sector.

2) 37 % of the total restaurants are considered as a part of the tourist sector and 10 employees per restaurant are hired.

The level and structure of direct and indirect employment related to tourism have also been estimated in IPAT/OEA Report. It is consequently stated that for each job in hotels two direct jobs in other tourist services (restaurants, transportation, shops, etc.) are created and that for each direct tourist job, 2.5 indirect jobs in other activities are generated due to the links between tourism and the rest of the economy.

Table 7.11 Number of New Jobs Generated by Each New Hotel Employee

		Number of new jobs
Direct Employment	Hotel	1.0
, ,	Other tourist services	2.0
	Total direct employment	3.0
Indirect Employment	(Direct Employment) x 2.5 times	7.5

Source:

Pian Maestro de Turismo, IPAT/OEA

Taking into consideration the above assumption, the new employment which will be created by the implementation of the Long Term Development Plan is calculated by zone as shown in Table 7.12. By 2010, 145,000 new jobs will be generated by the implementation of the Long Term Development Plan.

Table 7.12 Incremental Employment in Long Term Development Plan by Zone in 2010

Unit: employment

	Zone									
Year	Bastimentos	Arco Seco	Faralion	Metropolitana	Portobelo	Las Perlas	Others	Total		
Direct employment										
Hotel (H)	448	204	1,043	1,541	757	687	664]	5,344		
Hotel (M)	550	251	1,637	2,409	943	1,027	1,006	7,820		
Hotel (E)	20	61	67	o	80]	209	260	690		
Other services	2,036	1,031	5,492	7,899	3,559	3,845	3,860	27,721		
Sub-total	3,053	1,546	8,239	1	5,339	5,768	5,789	41,582		
Indirect	·						]			
employment	7,634	3,866	20,597	29,620	13,346	14,419	14,474	103,954		
Total	10,687	5,412	28,835	41,468	18,685	20,186	20,263	145,535		

Note:

Hotel (H)/ Number of room x 0.9

Hotel (MV Number of room x 0.5

Hotel (L)/ Number of room x 0.3

Other services/ Employment of Hotel x 2.0 Indirect employment/ Direct employment x 2.5

According to the Socio-Economic Framework examined in Chapter 3, the number of jobs in 2010 has been estimated at 1,315 thousand, of which the aggregate number of new employment in the period from 1991 to 2010 is estimated at 595,000. By adopting the above assumptions, tourism and tourism related industries will absorb about 145,000 new job up to 2010. Consequently, almost one fourth of additional employment opportunities in the period from 1991 to 2010 may be provided by tourism and related industries with the implementation of the Plan.

# 7.1.5 Increase of Government Revenues

The contribution to government revenues is another economic impact of tourism. Government receives revenues in the form of income tax on tourism enterprises and persons working in the tourism sector, property tax on tourism facilities, import duty on goods and services for the in tourism sector. IPAT, as well as the central government, derives income from several sources of tourism activities. The main revenues of IPAT through tourist activities are as follows:

- Air Ticket Tax (Tasa de Pasaje Aereo): the travel agencies retain an amount or tax paid 1) to IPAT for each ticket sold.(Rate: 4% of monthly sales or \$4.00 for each ticket)
- Accommodation Tax (Tasa de Hospedaje): This is an amount equivalent to 10% of the 2) total accommodation charge which the hotels collect from their clients.(Tax: 10% of Hotel Revenue)
- Rental (Arrendamiento): IPAT receives revenues from State assets that are rented 3) through IPAT for tourist activities.
- National Casino (Casinos Nacionales): 4)
- Tourism Card Sales (Tarjeta de Turismo): This is the revenue from the issue of cards 5) that the tourists purchased, (Rate:\$5.00 for each Tourism Card)

According to IPAT records, the total revenue from IPAT Taxes amounted to 10,506,000 Balboas in 1993, of which "Air Ticket Tax" and "Accommodation Tax" were 33.9 % (3,563,000 Balboas) and 42.0 % (4,410,000 Balboas) of the total revenue, respectively.

In 2010, the tourist revenue from accommodation will amount to 575,608,000 Balboas, of which 52,328,000 Balboas are calculated to be the IPAT Tax as a result of the implementation of the Long Term Development Plan. Regarding the Air Ticket Tax, it is difficult to project the future revenue to IPAT in this Study, because the proportion of international air tickets is very high.

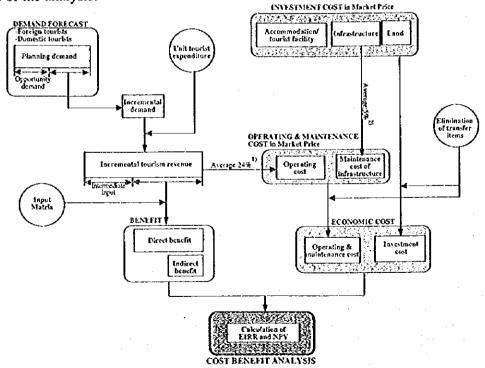

Table 7.13 Tourist Accommodation Revenue and Estimated IPAT Revenue of

	Accoming	uanon rax	Ont. Dr. 1,000			
Year	Tourist revenue from accommodation		Estimated IPAT Accommodation Tax			
	Total revenue	Incremental revenue	Total accommodation tax	Incremental accommodation tax		
1993	48,510		4,410			
2000	166,806	81,104	15,164	7,373		
2005	378,393	280,726	34,399	25,521		
2010	575,608	471,699	52,328	42,882		

# 7.1.6 Cost-Benefit Analysis

# (1) Methodology

In order to evaluate the investment efficiency of the Long Term Tourism Development Plan by zone, a technique of cost-benefit analysis has been adopted. Figure 7.2 shows the procedure of the analysis.

Note: 1) 24%: refer to Table 7.6 in Section 7.1.2 (3) of Phase II, Main Text 2) 5%: refer to Section 7.1.2 (3) of Phase II, Main Text

Figure 7.2 Procedure of Cost-Benefit Analysis

Economic benefits including the indirect benefits of each zone have been compared with the investment cost including the operating and maintenance costs of each zone.

The main assumptions adopted for the cost-benefit analysis are the following:

- 1) Project Life has been assumed to be 20 years after the target year of 2010.
- Discount Rate of 12 % has been used in the analysis. IPAT also uses 12 % for the evaluation of tourism projects which are submitted to IPAT in order to obtain the investment incentives.
- 3) Inflation has not been taken into account, neither in revenue, nor in expenditure projections.

# (2) Benefit

#### 1) Conversion of Tourist Revenue to Benefit

This section describes how the tourism revenue has been converted into economic benefit by using the input matrix in this evaluation.

The tourism industries generate income within the national economy as follows:

- Tourists make initial expenditures for accommodation, food, local transportation and shopping. This initial expenditure is received as income by hotel owners, local tour operators, taxi drivers and shop owners.
- In the first round of transactions, this income is used to purchase supplies, to pay wages and to retain as profits.
- 3) The money that is retained creates further economic activities (multiplier effect.)

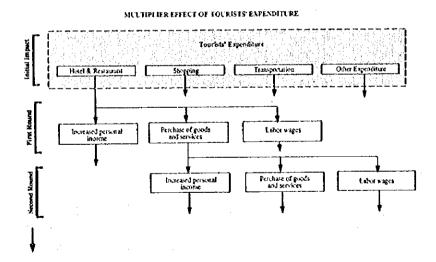

Figure 7.3 Multiplier Effect of Tourist Expenditure

The evaluation and quantification of tourism effects and its links with the rest of the economic activities in the country's economy is difficult. An "Input-Output Matrix" is the most effective and common tool to estimate the multiplier effect generated from tourism.

In this evaluation, the incremental tourist revenue resulting from the implementation of the Long term Development Plan has been converted into a direct and indirect contribution to the national economy.

However, one problem and tourism related industries such as hotel, restaurant and transport services are not always an independent sector in the input-output matrix. The Input-Output Matrix in Panama has been prepared for 15 sectors by CADESCA (El Comite de Accion al Desarrollo Economico y Social de Centroamerica). Tourism related industries are not independent sectors but included in the sector on Mercantile Services. In order to estimate the coefficient of input -table of tourist expenditure in Panama, the following studies have been reviewed for supplementing of the CADESCA Study. The input coefficients of tourism related sectors are estimated in Table 7.14:

# 1) IPAT/OEA Report

Besides the limitation of the input-output matrix in Panama, with the existing background, the sample survey of six first class hotels, fourteen second class hotels and some restaurants in Panama was carried out in the Study on "Plan Maestro de Turismo" by IPAT/OBA.

# 2) Asian International Input-Output Table by IDE IDE (Institute of Developing Economies, Japan) has prepared "Asian International Input-Output Table, 1985" for 9 countries in Asia, which provides the coefficients of more than 100 sectors in every country.

# Tourism Analysis by E.I.U. E.I.U. prepared a study on tourism in the Caribbean, in which the financial performance of accommodation services has been reviewed.

Table 7.14 Co.	efficient d	of Tourism	Related S	lectors in	Innut-Table
- 1ame 7.14 Co	enicient	DI LOUCISIII	Keiateu 5	eccors III	HIDUL- LADIC

	Trade & transport	Hotel & restaurant	Services
Total intermediate input	0.3044	0.5627	0.1621
Total value added	0.6956	0.4373	0.8379
Remuneration	0.3016	0.1500	0.3519
Operating surplus/depreciation	0.2893	0.2256	0.4634
Indirect taxes	0.1047	0.0618	0.0226
Total input	1.0000	1.0000	1.0000

#### 2) Elimination of transfer items

The incremental tourism revenue from foreign and domestic tourists includes the IPAT tax and 5% sales tax, which are transferred from tourists to the Government in the national economy. The IPAT tax and sales tax paid by foreign tourists are income to the Panamanian economy, while the same taxes paid by Panamanians are not regarded as national income, but only as transfer payments within the Panamanian economy. Therefore, the IPAT tax and sales tax paid by domestic tourists have been eliminated from the incremental tourism revenue.

#### 3) Conversion of tourism revenue to benefit

The incremental tourism revenue, after eliminaing the transfer items, has been converted into economic benefits as described below.

The incremental tourism revenue, after eliminaing the transfer items, has been converted into economic benefits as described below.

The direct economic benefit of the Long Term Development Plan can be measured by converting the incremental tourism revenues into the incremental Gross Domestic Product (GDP) of Panama (or the Total Value Added) by using the Input-matrix estimated above. The average conversion factor of the tourism revenue is calculated by using the following formula:

$$(K) = \frac{E}{J}(EXPj) \times (CVAj)$$

where,

K:

conversion factor from incremental tourism revenue to direct

benefit

EXPi:

share of tourist expenditure of j industrial sector in the total

incremental tourism revenue

CVAi:

coefficient of value added of j industrial sector

The value of the conversion factor (K) is estimated to be approximately 0.60 as shown in Table 7.15

**Table 7.15 Estimation of Conversion Factor (K)** 

Incremental		Coefficient of	K
tourism	-	total value added	
revenues in 2010		•	
(Bl. 1,000)	1)	2)	i) x 2)
471,699	29.5%	0.4373	(0.1291)

Source:

JiCA Study

1) refer to Table 7.5

2) refer to Table 7.14

The incremental tourism revenue by Zone is converted into the direct economic benefits of the Long Term Tourism Development Plan by using the conversion factor of 0.60.

The indirect benefits are estimated by taking into consideration the Input and Output Matrix in Panama and the related studies described above. The value of the conversion factor of indirect contribution to the GDP has been estimated at 30 % of the total revenue.

# (3) Cost-Benefit Analysis

# 1) Calculation and result

The economic benefit and cost of the Long Term Development Plan is calculated in Table 7.16. The results of analysis are represented by using the Economic Internal Rate of Return (EIRR) and Net present Value (NPV). The EIRR and NPV discounted by 12% are estimated at 23.9% and 1,261 million Balboas respectively. The Long Term Development Plan will be viable from the economic point of view as a whole.

The EIRR and NPV of six Zones are shown in Table 7.16. Every zone except Bastimentos shows a considerably high rate of EIRR. The EIRR of Bastimentos is estimated at 11.8 % which is almost the same as the discount rate and is the minimum level to reveal economic feasibility of the Plan.

Land cost is considerably high in the Metropolitana Zone. The EIRR and NPV without land cost have also been estimated in Table 7.16. In the Metropolitana Zone the EIRR will be 38.9% excluding the land cost.

The complete calculation for the six zones is compiled in the Appendix.

# 2) Sensitivity evaluation

Economic sensitivity is examined to ensure the economic efficiency of the Plan by considering the following assumptions:

- 1) 20% of cost increase including maintenance cost
- 2) 20% of benefit decrease
- 3) a combination of 1) and 2)

The results are also expressed by EIRR corresponding the above changes in Table 7.17. The EIRR remains within a level to reveal economic efficiency in all Zones except Bastimentos from the viewpoint of the national economy when costs increase by 20% and benefit decrease by 20%.

Table 7.16 EIRR and NPV by Zone

	With land cost		Witout land cost		
	EIRR	NPV (Bl. 1,000)	EIRR	NPV (Bl. 1,000)

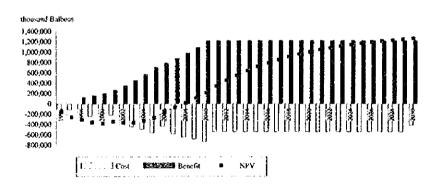

Figure 7.4 Plan Evaluation nof 6 Zones Total

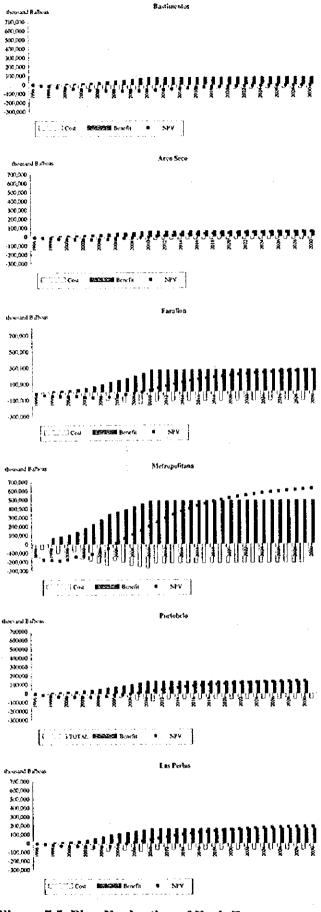

Figure 7.5 Plan Evaluation of Each Zone

#### 7.1.7 Evaluation

The results of economic and financial analysis for the Long Term Development Plan are summarized as follows:

- 1) The total tourist revenue has been estimated to amount to 2,007,027 thousand Balboas, of which 78% will be received from foreign tourists, in 2010, the target year of the Plan.
- 2) The foreign exchange earnings from tourism will be expected to increase to 1,563 million Balboas in 2010 and its share of the country's GDP will increase from 2.5% in 1992 to 10.8% in 2010.
- 3) In 2010, 145,000 new jobs will be generated by implementation of the Long Term Development Plan including indirect employment. This corresponds to one fourth of the additional job opportunities required in the country.
- 4) The EIRR and NPV have been estimated at 23.9% and 1,261 million Balboas respectively in the cost-benefit analysis. This result confirms the economic viability of the Plan.
- 5) The Long Term Development Plan have been evaluated by zone from the view point of the following economic aspects:
  - 1) Economic Internal Rate of Return (EIRR)
  - 2) Net Present Value (NPV) discounted by 12%
  - 3) Generated direct employment
  - 4) Investment cost per generated direct employment

# 7.2 Environmental Analysis

# 7.2.1 Objectives and Method

The objective of the environmental analysis in the long term development plan phase is to formulate environmental considerations to be taken into account in plan evaluation and further study.

In each zone, negative impact potentials are identified utilizing an experimental method based on the present condition of the area in consideration of project implementation of both construction and operation phases.

Finally, in order to avoid or mitigate identified negative environmental impacts associated with project implementation, environmental considerations are examined.

# 7.2.2 Present Feature of Long Term Development Plan Zones

Present environmental conditions are divided into three sections - natural environment, social environment and pollution in the six zones as compiled in the following table. In this section, the existing condition of all the environmental factors are described for analyzing negative impact potentials in the next section.

Description of the Social environment comprises economic activities, inhabitants, public health, cultural and historical heritage. Description of the Natural environment comprises geology, meteorology, river basin, land use, flora and fauna. Description of pollution comprises water, air, noise, vibration and offensive odours. These factors are considered to be affected by development projects.

## 7.2.3 Environmental Impacts and Environmental Considerations

The results of present conditions in association with the long term development plan are studied. Negative environmental impact and environmental considerations are examined in this section.

#### (1) Bastimentos Zone

The zone is located in the north-west part of Panama along the Caribbean sea. There is existing abundant rich fauna in association with virgin and matured secondary forest. Indigenous and endangered species which are of scientific interest can be seen in the archipelago area because this area is isolated from the Isthmus. In the field of marine fauna 4 of 8 species of marine turtle and manatee can be observed in this area. Also coral reef is found. The Principal inhabitants are Ngobe and afro-colonial.

In association with these environmental characteristics, most new development will cause the destruction of natural forests, wetlands and coral reef. Also the nesting area of sea turtles and the indigenous culture will be affected. To avoid or mitigate the impact, a zoning plan and the monitoring of affected fauna are required.

#### (2) Arco Seco Zone

There are a few remaining natural habitats along the coast and river side while other parts have been developed as crop and pasture lands. There is some potential for negative environmental impact, for example, water pollution in rivers nearby towns and adjacent areas of shrimp breeding activities.

Improvement of the existing infrastructure is emphasized in the long term development plan so that the impacts will not be large. However, care should be taken to preserve remaining secondary natural forest and magrove forest which provides habitats for wild animals. Only one thing that remaining secondary natural forest including mangrove forest where habitat space of wild animals should be preserved. Moreover in consideration of the eutrophic condition of water, the plan should include appropriate treatment facilities for discharge water. In addition monitoring is required for future study.

# (3) Farallon Zone

This area has been developed as villas since the 1970's and the remaining area has been developed as pasture land for cattle breeding. Recently, a mangrove forest area in Chame bay has began to be used for shrimp breeding. Along the coast of Punta Chame to San Carlos, marine turtles lay eggs. In the remaining mangrove forest and Cerro Chame, wild animals are seen. A major environmental issue is erosion in various parts of the zone.

In consideration of the environmental impact, monitoring of marine turtles and water quality are required.

# (4) Metropolitana Zone

The Metropolitana Zone consists of three distinct areas which are the Pacific side, the Panama Canal area with hilly land and the Atlantic side. The Pacific and Atlantic sides are already developed as urban areas. The Canal zone reserved area and adjacent National Parks have abundant rich flora and fauna while urbanized areas suffer some constraints like water quality, for example, the cutrophic condition of Panama Bay and Colon.

#### (5) Portobelo Zone

The zone lies along the Caribbean sea with hilly lands leading down to the shore line. Marine fauna including coral reef is a notable characteristic of the zone. Another is the historical nature of Portobelo town with remains of buildings, fort and churches of the colonial era none of which have been maintained. Critical points in this zone are erosion by destruction of natural forest which is related to destruction of marine fauna and water pollution by discharged water. Monitoring of water quality and marine fauna are required in order to identify appropriate countermeasures. Also any new accommodation has to be include onsite treatment system.

# (6) Las Perlas Zone

Only one island called Contadora in the Las Perlas archipelago is developed with villas and hotels while the other islands have only small fishing and agricultural villages. Secondary forest dominate in these islands while land degradation by slush-burn agriculture is common. Bird and marine fauna are abundant in this area. The Monitoring of fauna is required in order to create a zoning plan in to enable orderly development.

8. Tourism Promotion Plan

# 8. Tourism Promotion Plan

Because of an economic recession, the Panamanian government could not afford to make investments in establishing adequate infrastructure for many years in the past. The tourist facilities, especially in rural areas have therefore been insufficient.

On the other hand, because of the increased income generated by stable growth of the economy in recent years, it appears that young people are gradually becoming interested in outdoor leisure. It can be expected that day trips and short family trips will soon gain popularity.

The Master Plan made by IPAT and OEA is giving us food for thoughts about the present situation of tourism in Panama. It is reported that foreign visitors to Panama mostly consist of business and shopping travelers. Under these circumstances, it is quite clear that overseas tourism promotion has not been effectively undertaken.

No matter how splendid a tourist development is created, it will be of little use unless potential tourists are informed. Therefore, tourism marketing and promotion are essential to tourism development.

According to the announcement of the President last year, tourism development is now to be considered as one of the most vital issues in the country. It is a matter of great importance to attract private investment for establishing tourism facilities. Confidence in the quality of services related to tourism is crucial for effective implementation of tourism promotion.

#### 8.1 International Market

#### 8.1.1 First Target Countries

# (1) North America (The United States of America and Canada)

Because these are the largest of the target countries it is necessary to deal with this market accordingly. The following are the most recent statistics on international departures.

**Table 8.1 International Departures in North America** 

(Unit:1000)

	T	ne United State	es		Canada	
Year	1991	1992	1993	1991	1992	1993

Source:WTO

In the United States, the amount of paid vacation days is decided by negotiation between the employer and the employees. It is common practice to take all of the paid vacation allowable in one year. The majority of enterprises have adopted a paid vacation system that allows employees to take a full holiday. The average yearly amount of paid vacation for a white collar worker is 9.7 days. The amount of paid vacation varies in proportion to the length of employment. For example, the percentages of full-time white collar workers employed in the metropolitan areas that receive three weeks paid vacation are as follows:

Employed for 1 year : 2% Employed for 5 years : 56% Employed for 10 years : 95%

On average, the percentage of white collar workers receiving four weeks paid vacation is 38%, and the percentage receiving five weeks is 33%. The amount of paid vacation per capita in the United States is broken down as follows:

6 - 7 days 14% 8 - 9 days 32% 10 days 28% 11 days 15%

Overall, the number of people who can take a full eight to nine days is the largest. Including Saturday and Sunday this amounts to almost 132 days per year. In addition, 57.7% of workers use their paid leave with the aim of taking a vacation. With this background in mind, package tours have been created for all regions and industry publications are fulled with of these package tours.

In recent years, there has been rapid growth in the amount of cruise travel. Currently, cruise travel makes up 16% of all sales in the travel industry(1992 Travel Weekly). Thus it is vital to incorporate cruise travel in any proposed travel plan. There has been no slowdown in this rapid increase in the last few years.

In Canada, nearly 85% of overseas travelers have been visiting the USA. Because of severe winter, and one third of tourists take their vacation from July to September, and the third (about 22%) is from April to June. The length of stay is as follows:

7 nights to 13 nights 36.0% 14 nights to 20 nights 29.9% 21 nights or more 28.0%

# (2) Central and South America and the Caribbean

The main characteristic of foreign visitors to Panama is the large number of business people. This is the result of government policy implemented over a long period of time. According to statistics, the number of visitors from Central and South America and the Caribbean that visit Panama for shopping or business is very large. It will be necessary to make more effective use of this characteristic. According to the "2010 Two Million Plan", the number of business visitors should reach 30% of the total target number of visitors to Panama. It will become necessary to devise policies to entice these visitors to other tourism development zones. Cooperation with the approximately 1500 companies of the Colon Free Zone and more than 110 banks is important.

The improvement of public safety in Colon, needless to say, is an issue that needs to be considered. Specific target markets should include Colombia, Ecuador, Chile, Venezuela, Guatemala, Costa Rica and the Caribbean nations.

The market is not expected to grow rapidly, but, it will remain constant market and could prove to be a good resource for the creation of events in the future.

# 8.1.2 Second Target Countries (Europe)

Recent conditions in three representative countries have been considered below:

# (1) Germany

Nearly half of the population of Germany travel abroad once a year and together with the United Kingdom, the United States, and Japan, it is one of the four countries that has the most nationals traveling abroad(in 1991, 31,100,000 nationals traveled abroad, with 2,700,000 traveling outside Europe). In addition, it is a relatively mature market. Large numbers of charter flights and outbound travelers are characteristic of this market.

About 23% of vacationers use air services as their main means of traveling, 16.8% of which use charter flights. It is desirable to establish regular flights between Panama and Germany, though the package tours that use these flights would be expensive. Some form of dealing with LTU etc, a large charter flight company, may be the key. In the future, the market of the former East Germany is expected to expand, though not in the immediate future.

Paid vacation in Germany is about 30 days and the company must pay the staff in lieu of holidays that are not taken. Germany has a system where different states have holidays at different times. For tourism facilities, this is an extremely convenient system. The main vacation times in former West Germany are as follows:

June : 13.6% July : 27.8% August : 23.1%

Nearly two-thirds of the total holidays are in these months. Generally, the year's vacation is decided in March. Roughly one third take between 13 to 15 days vacation, and 25.1% take between 20 to 22 days as their main vacation.

The majority take on average 17.3 days which means they enjoy relatively long holidays in general. In former West Germany, the average amount spent for their main vacation is DM 1,370. The most popular tourist areas, according to the statistical report, are scenic beach resorts with a lot of sunshine and mountain resorts. Lying in the sun and relaxing is the usual way they prefer to spend their vacation.

#### (2) France

Accompanying the birth of the Mitterand Administration, statutory working hours were set at 39 hours per week, under a new law of January 1982. As of January 1990, white collar workers work 38.9 hours per week and blue collar workers 39.1 hours per week. This is one of the shortest working weeks in the developed world. Workers have five weeks paid vacation per year.

By law workers are entitled to take four weeks in a row and they are obliged to take at least two weeks in a row at any one time. As in Germany, school vacations differ from region to region and the holiday periods are announced at the beginning of each year.

Nearly all households use this vacation to travel somewhere. Divided largely into two categories, 27% travel during the winter vacation(October-April) and 55% travel during the summer vacation.

In 1991, the number of people traveling abroad on vacation was about 10,100,000, and there has been little change in that figure over the last few years. The average length of vacation is approximately 14.1 days. The most popular tourist areas are beach resorts (45%), followed by countryside (25%), and mountain resorts (16%).

# (3) England

In 1935, a law on paid vacation was enacted. In 1991, nearly all of the workers(99%) were receiving more than four weeks paid vacation per year and of those, 20,500,000 traveled abroad on vacation. However, the rapid pace in the growth of the overseas travel is not expected to continue. The total number of people traveling on vacation is about 31,000,000, which means that about two-thirds are traveling abroad on vacation.

According to the statistics from the British Tourism Authority, 65% or 11,5000,000 use package tours. A Majority of people take vacation in July(around 30%), and including June and August, 70% vacation during three month period. It is reported, according to the questionnaires to tourists, the most popular destinations are the places with sunshine and warm weather(nearly 50%) Recently, there has been a trend toward taking a second holiday, but generally this one is shorter in length. Though travel overseas for vacations has become more diverse, it appears unlikely that there will be growth as rapid as has been seen previously.

# 8.1.3 Third Target Countries (East Asia: Japan, Korea, Taiwan, Hong Kong etc.)

In recent years, the number of package tours to the Caribbean has been increasing rapidly as a result of campaigns by airline companies in Japan aiming at honeymoon trips. The East Asia region is also experiencing remarkable economic growth. The strategy of focusing on the honeymoon market has been quite successful.

#### Taiwan Market

Because of stable growth of economy for decade, 4,654 thousands people enjoyed overseas travel, increasing by almost three times as much as in much in compare with the year of 1992, 89% have visited South East Asia in 1993. New airline companies, such as EVA and Mandarin Airlines, have been established and expanding their networks.

#### Japan Market

In 1993, the number of Japanese overseas travelers reached a new record total of 11,933 thousands, representing only a small increase of 1.2% over previous year. The biggest market segment consists of the middle aged and the elderly group (26.6%).

#### Korean Market

In 1993, 2,430 thousands people enjoyed traveling abroad. 70.7% of them traveled in Asia, 18.4% in North and South America. 38.3% spent less than 5 days, 30.5% spent during from 6 days, 27% spent during from 10 days to 15 days. Honeymoon trips are rapidly increasing in recent years in Korea.

It is recommended for IPAT to educate the staff of Panamanian overseas diplomatic offices or to station the tourism experts for the purpose of tourism and investment promotion.

### 8.2 Domestic Market

In recent years, it seems that many Panamanians are becoming wealthier and living in comfort in urban areas, owing to the steadily rising national income accompanying economic growth.

The desire of the general population to travel is naturally increasing. Already there are signs of this phenomenon and there is no doubt that travel will slowly become an integral part of their lifestyle.

The young will be getting more and more active on weekends and holidays. The family market will follow them for day trips or short trips in the near future. Many developing countries have been experiencing the same phenomenon. People will be certainly looking for places to enjoy. There is a need to supply adequate facilities to meet this expected demand.

It is also necessary to begin with relatively simple development, if possible, that coincides with the overall development plan. According to the long term development plan, it is predicted that the number of domestic tourists will reach approximately 1,500,000 in 2010.

### 8.3 Overview of Tourism Marketing and Promotion

The marketing of tourism for the region is quite essential to inform tourists about developing areas, as well as to induce them to visit. The target markets must be determined in accordance with market analysis. Establishing the marketing strategy means specifying the timing and scheduling of promotional activities to target markets effectively. Careful analysis of market sectors will also help to determine the promotional activities to be undertaken.

Target markets will be decided by analyzing the data collected through questionnaires not only to tourists but also to travel agencies.

Basic data from tourists has been collected through embarkation/disembarkation cards on their arrival at Tocumen International Airport. In addition to the above, more detailed information is required for establishing a marketing policy. Questionnaires to tourists should be circulated and analyzed every three years. Also it is recommended that IPAT carry out activities confidence in the target markets.

The Following items should, at least, be included in the questionnaires.

- (1) Why did you choose Panama as a destination?
- (2) By regular flight or charter flight?
- (3) By package tour or other?
- (4) How did you travel and where did you spend time while in Panama?
- (5) What do you feel about Panamanian hospitality?
- (6) Any suggestions to Panamanian tourism authorities?

- (7) What did you buy for souvenirs in Panama?
- (8) How much money did you spend while in Panama?

In overseas markets, questionnaires to the public will be necessary at the same time. In this case, the main purpose is to find out how much they know about Panama as a tourism destination and what kind of image they have been of Panama. The public awareness of Panama as a tourist destination must be enhanced by advertising. It is important for IPAT to know if the advertising has been done effectively.

Questionnaires to travel agencies in each of the campaign countries listed in The Master Plan by IPAT/OEA, will be of assistance to IPAT for carrying out an effective approach.

Assessment and analysis of competitive neighboring tourist destinations are also indispensable for marketing.

Assessing support services, tourist facilities, and related infrastructure are also important.

# 8.4 Characteristics of Developing Areas

### 8.4.1 Type of Developing Areas

Development will be made in accordance with the characteristics of each zone, which can be divided into four types. These are the Island, Coastal, Lake, and Urban types. Some zones can be subdivided into two or more types. These characteristics will determine the direction of development and to a certain extent the construction concept. They will also suggest how to prepare advertising material. Details of each zone are shown in the following matrix.

**Table 8.2 Types of Developing Area** 

Study Zone	Island	Coastal	Lake	Urban
Bocas del Toro	0			0
Arco Seco	0	0		0
Farallon		0		
Metropolitana	0		0	0
Portobelo	0	0	· ·	
Las Perlas	0			

Note: O: PrimaryO: Secondary

### 8.4.2 Market Segmentation and Potential Markets

Market segmentation for effective promotion in target countries would be as follows.

### (1) The United States of America and Canada

- Aged peoples of over sixty
- Family groups focused on the thirties
- Eco-tourists

- Incentive tours
- Top four users: Insurance, Auto-parts, Electronics, Car
- Special interest tour such as fishing enthusiasts
- Convention tourists
- Long stay vacationers for hibernation

### (2) Central and South America and The Caribbean

- Business traveler
- Shopping traveler
- Family group
- Convention tourists

### (3) Europe

- · Aged peoples of more than fifty
- Middle and lower class
- Special interest tour
- Eco-tourists
- Family group
- Long stay vacationers for hibernation

Potential markets, for instance, will be as follows:

**Table 8.3 Markets by Developing Area** 

, ,	USA & Canada	C/S America & The Caribbean	Europe
(Island type) Bocas del Toro Las Perlas	Swimming Fishing Diving Adventure Eco-tourism Surfing Hibernation		Eco-tourism Fishing Swimming Adventure Hibernation
(Coastal type) Arco Seco Farallon Portobelo	History Ruins Culture Swimming Fishing Cruising Eco-tourism Surfing Diving Hibernation	Shopping Business Convention	History Ruins Diving Fishing Eco-tourism Hibernation
(Urban type) Metropolitana	Business Convention Eco-tourism Canal Touring Bird watching Culture	Shopping Business Convention	Business Eco-tourism Canal touring Bird watching Culture

### 8.5 Promotion Plan for International Market

### 8.5.1 Establishment of Overseas Promotion Offices

Promotion activities must be sustained continuously. Establishing overseas offices is one of the most important methods for overseas promotion. It is also necessary to educate Panamanian diplomats for tourism.

### (1) New York Office

At present, IPAT has one overseas office Panamanian Government Tourism Bureau in Los Angeles, California. Also IPAT has contracted with M. Silver Associates Inc. in New York for public relations and marketing communications. They report on the highlights of the public relations activities performed on behalf of IPAT, including press releases, media visits and promotions etc.

As mentioned before, the United States of America and Canada are the most important markets. It is recommended that a New York office be started in 1996 soon after the decision on tourism development is made by the government.

In the first stage, five staff members including one for investment promotion will be required for the office. Two can be added later as needed. The office must maintain contact with large wholesalers for promoting package tours to Panama. It will be very important to cooperate with the airlines to set up tours to Panama from major cities in North America. When seaside resort projects approach completion, aggressive promotion activities to cruise ship companies should be undertaken.

### (2) Bogota Office

As mentioned before, foreign visitors to Panama largely consist of business and shopping travelers. Mainly they come from Central and South America, and the Caribbean. Those kind of to Panama will contribute to Panama's main stream tourism continuously in the future. Business travelers generated by the nearly 1500 companies registered in the Colon Free Zone, and about 110 banks, would be the most appropriate target market. Therefore, establishment of a Bogota office in 1997 is recommended for the purpose of increasing the number of visitors to Panama. That office could cover the South American market.

It should also collaborate with authoritative organizations to provide useful information to the markets. At the same time, it should provide information on package tours and accommodation facilities in cooperation with COPA.

It should be possible to induce these tourists to visit newly developed areas. The market is not expected to grow rapidly. However, it will remain an important and constant market and could prove to be a good resource for the creation of events. The office could be established at an early stage because the related facilities are in operation now.

### (3) Frankfurt Office

According to statistical reports, the number of visitors to Panama from European countries is very small at present.

However, examining the present situation of Caribbean tourism, it is reasonable to expect an increase in tourists from Europe to Panama. Therefore, a Frankfurt office should be established to cover promotion European countries.

The office should be started in 1998. In the beginning, four staff members would be sufficient including one member for investment promotion. Large wholesalers will be the key target. Madrid will be suitable when establishing the second office in Europe.

# 8.5.2 Stationing of marketing and promotion specialists

Promotion must begin with marketing and IPAT must include experts among its staff. There should be feedback about the data received and reviews of activities according to the results.

### 8.5.3 Strengthening the Role of IPAT

Because of little awareness about Panama as a tourist destination among overseas markets, IPAT must strengthen its role in the ways suggested below:

- 1) assist travel agencies to create attractive tours for each area in Panama and construct retail systems.
- 2) request overseas travel agencies (wholesalers) to create package tours to Panama.
- 3) request airline companies to create tours to Panama.
- 4) try to combine overseas wholesalers with Panamanian travel agencies.
- 5) collaborate on promotion with neighboring countries, for example, Costa Rica, creating a new circuit tour of ecotours in Bocas del Toro.
- 6) train guides for special interest tours such as ecotours.
- 7) improve quality of tourism related facilities and services.
- 8) take countermeasures for the off-season.
- 9) maintain close consultative relations with tourism-related organizations.

### 8.5.4 Development of IPAT Tourism Information Systems

Tourists and investors must be provided relevant information to facilitate pleasant stays and effective investment, which has not yet been systematized by IPAT. This information must be centralized and maintained appropriately. Therefore, it is recommended to construct IPAT tourism information systems. Related data base management systems seem to be suitable for them. The concept, in brief, will be as follows:

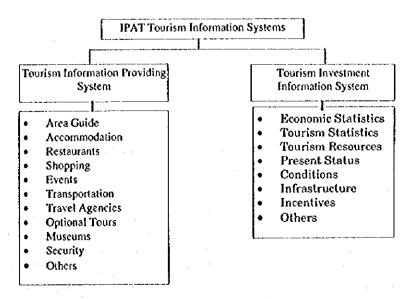

Figure 8.1 IPAT Tourism Information Systems

### 8.6 Promotion Plan for Domestic Market

Owing to economic growth in recent years, many people are beginning to engage in outdoor activities. They will, at first, purchase a car, and enjoy driving. But it seems there are no places for them to go and enjoy because of insufficient facilities. Therefore, in addition to development projects, it is strongly recommended that IPAT meet the desire of the public by developing adequate facilities such as youth travel villages and family travel villages equipped with comprehensive sports grounds and camping sites. Domestic tourism exhibitions are also effective for promotion.

It is also recommendable to use the school system to encourage the schoolchildren to know more about their country through outdoor activities, and to appreciate and natural sites. In accordance with the progress in tourism development, IPAT should encourage rural travel agencies to provide package tours to the tourist sites. For example, one day or two day trips to El Valle, or to Portobelo, or two day trips to Bocas del Toro might be useful. The same type of tour would also be applicable to foreign tourists. In any case, the domestic market should be expanded in the near future.

### 8.7 Implementation Plan for Overseas Tourism Promotion

### 8.7.1 Promotion Target

### (1) Target numbers of tourist by regions

The number of tourists by target market region in 2010 is predicted as follows.

North America : 800,000 (40%) C/S America : 600,000 (30%) Europe : 400,000 (20%) Others : 200,000 (10%)

### (2) Channels for promotion in major markets

In The United States of America, there are about 10 large scale tour operators(mega agencies) such as AMEX, Carlson Travel Group, Travel Network, Thomas Cook, US Travel systems etc., and more than 40 thousand retail agencies of small scale, and some middle scale agencies who have been handling special interest or regional markets. In addition a few consortiums have been organized in the late 1980's to compete with the mega-agencies. These are Woodside Travel Trust, GIANTS, Hickory Travel Systems, Corp-Net International etc. In any case, a majority of the travel agencies have been organized or franchised vertically. AMEX has about 1,700 franchisees, Carlson Travel about 1,400 and GIANTS about 1,900.

On the other hand, it is worth noticing that there are a few travel agencies specialized in handling incentive tours. These are Marritz and Business Incentive, Inc., etc. There are several cruise ship companies who have been supplying cruise tours to this market. A famous operator is Royal Caribbean Cruise line, who has been running nearly 45 tours a year with nine cruise ships. US Tour Operators Association estimated that ten leading operators have a 30% share of the tour market and the leading 50 operators have an 80% share.

To achieve the tourism objectives of Panama in The United States and Canada, promotional activities must be carried out among these channels. IPAT and Panamanian travel agencies must cooperate with these organizations to create inclusive tours to Panama from major cities. Both regular flights and charter flights from the US and Canada should be used.

In Central and South America, main target markets are no business and shopping travelers. It is necessary to attract them to Panama as many and as frequently as possible. To achieve this object, it is recommended to reach the customers in each country with the cooperation of the Colon Free Zone Authority. They must be provided with useful information like package tours, which could be produced by COPA and other airline companies. Mobilizing travel agencies in each country will be of help for promotional activities. Incentive schemes for bulk sales should be taken into consideration. Establishment of Duty Pree shops in Panama city and Farallon for the convenience of tourists is also recommended.

In Germany, there are about 8,600 retail agencies and 45 tour operators. Four large scale tour operators, TUI, NUR, LTU, and ITS, currently dominate the package tour market. Almost all retail agencies belong to one of these large scale operators. As an example, TUI alone handled about 3.44 million tourists in 1992 including domestic travel(10.6%). The tour price of international travel on average was DM1,200 per person. TUI has been producing promotional pamphlets twice a year, one December for summer vacationers, the other in August for winter vacationers. More than 60% of its package tours are by air. They charter from Hapag Lloyd and LTU. Recently, C/S America especially the Caribbean is becoming popular as a destination. Their strategy is to provide inexpensive tours for the family market. In conclusion, these large scale operators hold the key to promotion. IPAT should continuously solicit them for setting up tours to Panama by charter.

In England, as in Germany, five large scale operators are dominate the package tour market. They are Thomson, Owners Abroad, Air Tours, Cosmos and Best Travel. Thomson, the largest, had a share of 26.5% of total sales in 1991, and the five operators held nearly a two third share of the market. Retail agencies have been organized by those operators in accordance with the development of computerized reservation systems. Thomson has its own retail company(LUNN POLY) and air charter company(BRITANIA AIRWAYS). They targeted lower and middle classes offering excellent quality holidays at competitive prices as a strategy. 95% of the tours use beach resorts for staying of 12 days in average. On the whole, they have been using three-star hotels with excellent services for accommodation. Recently, they began operating package tours to East Asia, the Caribbean and Miami. It is necessary to cooperate with these large scale operators for tourism promotion to Panama.

There were 2,417 travel agencies in France in 1991. Almost all of them are small scale agencies. There are no mega-agencies as in Germany and England. Some have also been wholesaling package tours. These are Club Mediterranean (Club MED), Nouvelles Frontieres, MVM, ASIA, etc. They have been providing tours to the market with a particular concept. Middle class and aged people are the target markets for their package tours. Club MED, is famous for its exclusive club operations. They have been constructing bungalow villages at selected resort locations. They are now operating 106 village facilities with 68,754 beds all over the world.

### 8.7.2 Promotion Techniques

Promotion activities to be undertaken will be related to targets market and market strategy. It is recommended that a basic promotion plan be prepared every three years at least. As the results of promotion appear in room occupancy rate, adjustment should be required every year after the evaluation of results. For policy making, it is important for IPAT to integrate all information which has been acquired through worldwide promotion activities.

Preparation of additional promotional material should be made in accordance with images reflecting the characteristics of each zone. There are two ways of designing promotional material. One focuses on location, arranging information geographically. The other focuses on the purpose of trips, indicating the areas that appeal to special interest groups all over the country. Promotional materials should include comprehensive guidance to Panama, including maps, pamphlets, posters, videotapes, slide presentations etc. A special edition for travel agencies must also be created.

It is important, when preparing this material, to cover all the information which it is considered is required from the point of view of consumers.

Size of display racks and distribution methods must also be determined. Distortion of facts will result in lost customers. Common promotion techniques include the following:

- Advertising in travel publications used by travel agencies, and other organizations.
- Advertising in newspapers and magazines, which is an effective way of reaching special interest travel.
- Advertising in mass media such as TV and radio, which is effective but expensive.
- Attendance at international travel trade fairs, such as ASTA, Expo Vacation(New York) and Sea Trade(Miami)in the United States, FITUR in Madrid, ITB in Berlin, World Travel Mart in London, SMTV in France, ANATO in Colombia, Expotour in Costa Rica, Vitrina Turística in Venezuela and Focus Latin American Seminar, etc.
- Dispatching promotional caravans to the target countries and areas, and holding sales seminars. Target areas include Costa Rica, Colombia, Ecuador, Venezuela, Dominican Republic, Puerto Rico, New York, Miami, Houston, Toronto, Montreal, London, Paris, Rome, Milan, Frankfurt, Dusseldorf, Vienna and Madrid.
- Inviting and hosting tour operators for familiarization, travel writers and photographers for publicity.
- Releasing news for the travel publications.

### 8.7.3 Promotional Campaigns

Nation-wide promotion campaign for the international markets should, for instance, be held as follows:

# (1) Target numbers of tourists by regions by year

The Table below show the target numbers of tourist by campaigns based on the long term development plan.

# (2) Implementation of the campaigns

Proposed duration of campaigns

1st campaign: Jan. 2000 - Mar. 2000, 3 months 2nd campaign: Dec. 2005 - Mar. 2006, 4 months 3rd campaign: Dec. 2010 - Apr. 2011, 5 months

Table 8.4 Campaign Targets

(Unit:1000)

Year	1		N. Ai	merica	C/S America	Eur	ope
	By Regular		USA	90	180	England	10
			Canada	20		Germany	10

						Others	10
	Total	1000	<u> </u>	460	330		210

- Establishment of an executive committee by IPAT with related organizations
- Support of expense for tour operators when preparing brochures
- Offering promotional room charges and airfares, etc.
- Preparation of model tour plans including newly developed areas
- Involvement and cooperation with carriers, BA, LH, AF, IB, AA, UA, CM, etc.
- Advertising in tourism publications with special editions such as Travel Weekly.
- Advertising advertising in the mass media
- Dispatching promotional caravans to New York, Washington, Chicago, Houston, Toronto, Montreal, London, Paris, Frankfurt, Madrid, Central and South America, and the Caribbean countries, etc. and holding promotional seminars.
- Participation in travel fairs in the target countries

- Producing promotional materials such as audio-visual, pamphlets, posters, etc.
- Initiation and familiarization tours for travel planners and journalist, etc.
- Cooperation with Panamanian overseas offices
- Training of employees of travel industries in hospitality with manuals
- Producing domestic events

### 8.8 Tourism Investment Promotion

A Committee for promotion of foreign private investment has been established in Panama in 1994. The chairman is the Minister of Foreign Affairs. Promotion activities have been carried out by each sector separately until now. IPAT has contracted with M. Silver Associates Inc. in New York for that purpose. They organized an investment mission from the US to Panama. An incentive law for investment was enacted in 1994 and regulations pertaining to financing should be added to that law.

The table below show the amount of investment by the private sector to tourism. Compare with 1993, 1994 saw an increase of seven times because of economic growth and enactment of the law.

Table 8.5 Tourism Projects by Private Sectors

Years	N. of Project	Amount
1990	3	1.4
1991	3	8.3
1992	8	7.8
1993	4	12.8
1994	22	90.4

Source: IPAT (Unit: Million)

According to IPAT statistics, 22 projects have been raised by the private sector in 1994. 54 tourism projects were put forwarded the end of June in 1995. Among them 42 projects, have been or will be approved by the incentive law, and the amount of investment will be b/. 118.8 millions altogether. This includes 27 hotel projects and 38 projects in the Metropolitan area.

It is most important to attract investment to developing projects. The investment promotion flow chart follows:

After a detailed plan is fixed, investment promotion activities must be started without delay. IPAT should obtain preliminary information about investors, then dispatch promotional caravans to the targeted countries and hold presentations and seminars with descriptive booklets on the projects.

The United States of America, Canada, Mexico, Spain, Germany, England, France, Italy, Japan, Korea and Hong Kong etc. should be targeted for inviting investment. It is more effective to set up presentations and investment seminars in the respective countries in cooperation with their investment promotion organizations such as OPIC in USA, ICO in Spain, DEG in Germany, IMI in Italy and JOI in Japan.

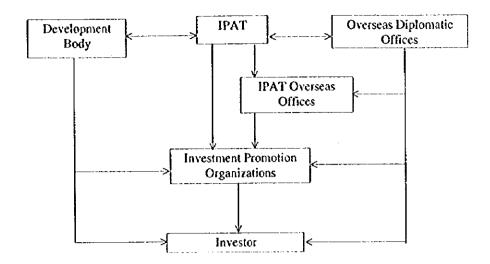

Figure 8.2. Investment Promotion Flowchart

Advertising in the newspapers and collecting information about investors through direct mail to hoteliers and other enterprises related to tourism are also useful for this purpose.

The overseas offices of IPAT must have the role of promoting investment. It is also necessary to educate Panamanian diplomats about getting information about investors. This information should be presented to the development body (TDC), which can follow it up and realize development contracts. For this purpose, they must have experts in evaluation of the hotel business.

It is also necessary to hold presentations for domestic investors. Investment procedures should be simplified as much as possible.

# 8.9 Maintaining of the quality of Panamanian tourism

Tourism is an industry that thrives on peace and security. Many countries have experienced decreasing inflows of tourists because of disorder. About two hundred tourist police have been stationed for the security of metropolitan tourist areas. Security in Panama seems have improved as a result. IPAT should maintain these systems.

Equally, the quality of products for tourists is important for the purpose of promotion, so IPAT should give this matter careful consideration. There is keen competition with the Caribbean and Mexico. In order to make improvements, IPAT and other related organizations should pay attention to the opinions and complaints of tourists.

Employees education must be provided continuously. Having experience of excellent services will be useful to them for this purpose.

The Flower and Green City Plan will contribute to forming the first impression of tourists.

# 9. Institutional Development Plan

### 9.1 Present Tourism Policy

In 1993 the Panamanian Government drafted a Master Plan for Tourism Development (Plan Maestro de Desarrollo Turistico -- P/M·Instituto Panameño de Turismo [IPAT]/OBA) in cooperation with the Organization of American States (Organización de los Estados Americanos [OEA]). Since then the Government has identified inadequacies in Panama's general preparedness for tourism promotion and made proposals regarding directions and policies to improve conditions over a ten-year target period ending in the year 2002. The Government of Panama itself is now working to implement the policies proposed by P/M·IPAT/OEA.

### 9.1.1 Policies

Previously, a policy tourism was apparently nonexistent in Panama. Normally, the state drafts long-term development plans in which the basic motivations, aims, and measures of development are spelled out for each specific area and based on this, development concepts and plans are established for each area. (See Figure 9.1.)

Panama, however, lacks item (2), a long-term national development plan and concepts. In addition, with regard specifically to the field of tourism, it also lacks item (3), basic laws for specific areas. Hence, it is not possible to identify a clear Panamanian policy on tourism. Presently, organizations to carry out specific policies and a few individual systems and measures are operating in the absence of on integrated plan. It is hoped, therefore, that the Panamanian Government will formulate a long-term plan for the country's national economic development.

### 9.1.2 Legal System

From our study of the laws and legal system of Panama in the area of tourism, we know that the highest law in Panama is the Constitution, in which Title 10, Article 278, Paragraph 4, cites commerce, agriculture, livestock raising, and tourism as the main pillars of the national economy. The next highest law is that establishing the Instituto Panameño de Turismo (IPAT), Decreto Ley No. 22 of September 15, 1960, which also defines IPAT's functions as one of the country's "instituciones descentralizadas." IPAT's administrative duties are defined by the specific scope of jurisdiction set forth by 19 items in Article 2 of the said Decreto Ley No. 22. Other laws contain provisions concerning a hotel tax, the classification of public facilities, and systems and measures for special tourism zones. What should be pointed out here is that there is no legislation upon which IPAT's administrative functions can be based, nor are there any higher laws to which the twenty individual laws, orders, and ordinances conform. Legislation is needed to express the nation's intent to promote and develop tourism, namely by stating clearly the need for, the aims of, and the measures related to tourism's promotion and development: in short, laws to show basic directions. The above points have been raised in the P/M-IPAT/OBA also.

It is praiseworthy that of the twenty types of systems and measures mentioned above, legislation related to tax incentives to encourage investment has been consolidated on the basis of improvements proposed in the P/M-/IPAT/OEA Chapter 34 (1) and (2), and has been

enacted as the Tourism Industry Promotion Law (No. 8 of June 14, 1994): "Why Tourism Activities Are To Be Promoted in the Republic of Panama."

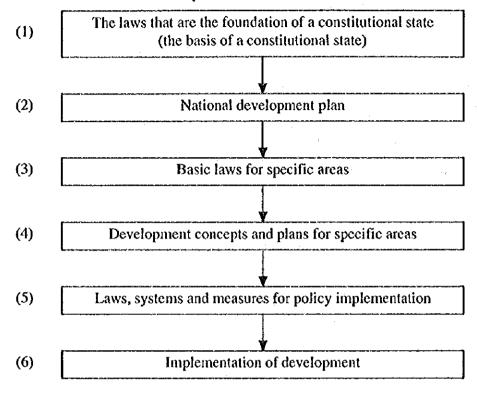

Figure 9.1. Correlation between laws and development plans

### 9.1.3 Administrative Organizations

Administration related to tourism in Panama is carried out by the IPAT, which was established (by Decreto Ley No.22, as described in 9.1.2) as one of the "decentralized administrative institutions" spun off from the Ministry of Commerce and Industry; that decree has been amended several times, reaching its present institutional form in May 1994 (Figure 9.2(1)). Since then, efforts have been made to improve IPAT's organization by making it more responsive in fields related to promotion of tourism, investment, and tourism consciousness as proposed in the P/M·IPAT/OEA, especially in Chapters 31, 32, and 33. In September 1994, with the inauguration of a new president, Dr. Ernesto Perez Balladares, and under the leadership of a new IPAT director, IPAT launched its new organization (Figure 9.3). (Confirmation-in January 1995.).

Major changes in the new organization are as follows:

- Establishment of a new Technical Directorate of the Master Plan (Dirección Técnica del Plan Maestro)
- Stress on compatibility with the entire Master Plan
- Establishment of a new Public Relations section (Relaciones Públicas)
- Stress on stimulating national interest in tourism
- Establishment of a new Marketing Directorate (Dirección de Mercadeo)
- Stepped up overseas publicity efforts to promote Panamanian tourism

 The previous organization, the Directorate of Tourism Promotion (Dirección de Fomento Turistico), is in charge of improving the domestic reception structures for tourists coming to Panama.

Improvement of ATLAPA (Conference Center): Creation of a financially independent system. There is still no office specifically in charge of active development of tourism, however. A study should be undertaken to prepare the establishment of such an office in order to promote development actively from a long-term perspective and to define and identify promoters.

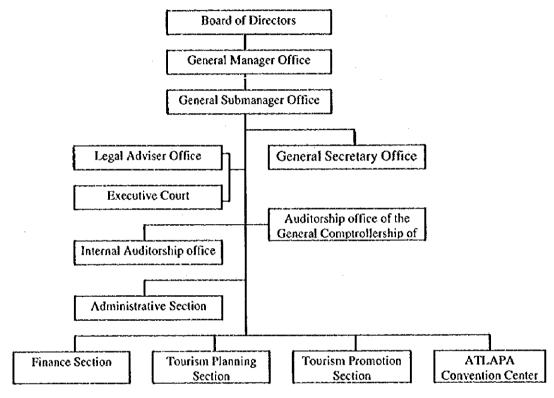

Figure 9.2 Panamanian Institute of Tourism, General Organization

Promotion of tourism clearly requires action by the nation as a whole. As we explain later, in 9.2. it is people who engage in tourism and it is also people who serve tourists. It is clear that foreign tourists' impressions of Panama depend greatly on the quality of their relationships with the people involved. Judging from studies at the present stage, these interpersonal relationships do not appear to be very good. Observation of officials' and service workers' attitudes toward tourists and customers (when visitors go through customs and immigration at the airport and when they are served in hotels or use taxis, for example) indicates that on-thejob training, as well as training and education at vocational schools could lead to direct improvements. Such training could also be assisted indirectly by raising the social standing of those who engage in this work: by fostering a greater awareness of tourism among citizens, employers running tourism businesses, tourism administration staff, and administrative officials. Fostering a greater awareness of tourism is very closely tied to other issues: prevention of political conflict, visitors' safety, and the nation's overall hospitality. It also greatly influences investment activities related to tourism. Both training and supplying staff to investments and the ability to supply personnel are factors that promote investment and are important requirements for promoting further development and related investment.

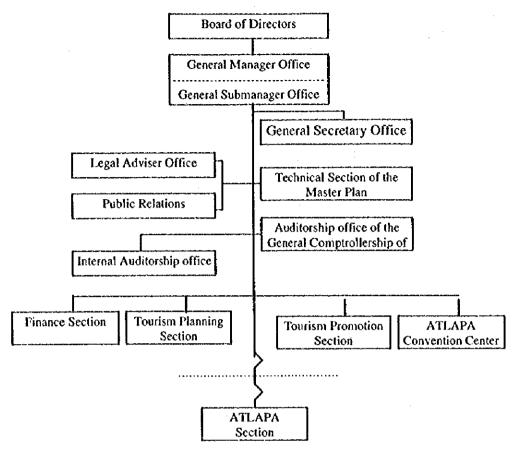

Figure 9.3 Panamanian Institute of Tourism, Proposed Structural Organization

# 9.1.4 Stimulation of Awareness of Tourism and the Education and Training of Personnel

IPAT is now carrying out activities designed to foster a greater awareness of tourism in Panama. These activities target school children and their parents when they visit the ATLAPA Conference Center and on other occasions, but their scope should be systematically broadened and concretely enhanced. The following organizations offer programs in the area of education and training in the field of tourism.

### Higher education:

- Universidad Santa Maria La Antigua, Licenciatura en administración de empresas turísticas
- Universidad Latinoamericana de Ciencia y Tecnología, Licenciatura en administración de empresas y hoteleria
- Universidad Interamericana de Educación a Distancia, Licenciatura en administración de empresas hoteleras y turísticas

### Higher technical schools

- Instituto Superior de Turismo
- Instituto Interamericano de Turismo y Hoteleria

### Basic vocational education

- Escuela Internacional de Nuevas Profesiones
- Instituto Nacional de Formación Profesional

### Other institutions

Instituto Fleming, Edecán en protocolo y turismo

These institutions are mentioned in the P/M-IPAT/OEA, Chapter 35, with reference to the content of the training and trends related to educational and training institutions, where a national strategy and guidelines are suggested for staff training and an action program. IPAT should attempt to harmonize private-sector needs with the administrative agencies that oversee education,—and to train and recruit personnel in accordance with the development program proposed by the survey mission. An order of priorities is to be put forth based on consideration of 9.3.3 and 9..3.4. The shortage of personnel is currently especially acute in the basic technology department. Accordingly, expansion of INAFORP and other facilities and personnel training must begin immediately.

### 9.1.5 Investment in Tourism

Investment in Panama's tourism industry has begun to become active around the canal zone, which is scheduled to be returned to Panama by the United States in 1999. Plans are being made for tourism development of the Amador district in Panama City, and talks on private sector investment are beginning to take shape. At the time of the study in preparation for private-sector-side hearings (the hotel association, etc.), Law No.8 (the Tourism Industry Promotion Law) was drafted, and it attracted great hopes from the private sector. This law's enactment and enforcement is expected to stimulate private investment.

The following points must be kept in mind, however:

- Even if a system of investment incentives is implemented, conditions must be modified to facilitate the supply of funds by investors. A company's funds on hand are usually insufficient, especially when it is attempting to promote major progress in development, and the shortfall must be made up by development fund loans or subsidies.
- The canal zone due to be returned is property of the State, and given that it is national policy to promote tourism, the use of areas suitable for tourism is subject to the approval of the administrative agency in charge of tourism or to direct decision of the President. The same is true of all State-owned land. The sale of or cession of long-term rights to use State property is temporary State revenue and does not lead to stable annual income. Instead, the value of this State land could be enhanced before it is leased to the private sector; this would be preferable because it would lead to stable annual income. Despite Resolution No. 46 of February 19, 1992, the agencies responsible for managing state land are selling land off in an uncoordinated way, perhaps because they did not receive a request for cooperation from IPAT. Based on Resolution No.46, IPAT must actively urge other administrative agencies to use land appropriate for tourism for that specific purpose. Administrative agencies and officials should be able to engage in dialogue with IPAT provided that they recognize tourism as a national policy. That this is not the case is due to the lack of an expressed desire by the State to promote and develop tourism, and the lack of a basic law on tourism that is binding on all administrative agencies.

The disposal of state land suitable for tourism by the administrative agencies that now
control it without a clear national objective would make it impossible to fully use the
tourism resources surrounding that land, prevent tourism's potential benefits to society
from being exploited, and render inaccessible tourist destinations that should be left open
to ordinary citizens. This, in turn, could lead to random and disorderly development.

### 9.2 Tourism Structure

In this section, based on the assumption that it is Panama's national policy to promote tourism, we list the items that the country's legislators and administrators should fundamentally recognize. It is important that administrative agencies and their officials, in particular, understand these items. At the same time, it is important that these items are understood by the private sector as well.

### 9.2.1 Structures of Tourism

In order to establish tourism, there must be both people who want to visit a country and people who want their country (or a part of it) to be visited. Countries that want to promote tourism or want to receive tourists must first make known their desire to promote tourism as a nation and then strive to satisfy the following requirements, or at least attain acceptable levels with respect to them (see Figure 9.3).

- (1) The country must be stable, the society safe and hospitable.
- (2) Employees of the tourism industry must be able to offer adequate services.
- (3) Means of transportation to tourism sites must be available.
- (4) Accommodation and other tourist facilities must be available.
- (5) Tourism resources and other motivations to travel to the country must exist.

Tourism travel is almost impossible if even one of these five conditions is not met. Travelers to a country must also have a feeling of satisfaction that a balance exists among these five conditions and that the degree of satisfaction is commensurate with the costs of traveling to the site. Accordingly,

(6) Travel costs must be appropriate.

Because travelers make their plans based on some type of information and motivation, adequate information must be provided via tourism promotion activities. In other words:

(7) Tourism information must be provided.

Travel to a place about which basic information is unavailable cannot be called tourism.

### 9.2.2 What Tourists Seek

What tourists seek is accommodation of the requirements set forth in paragraph 9..2.1; the response of the receiving side should entail the following types of action:

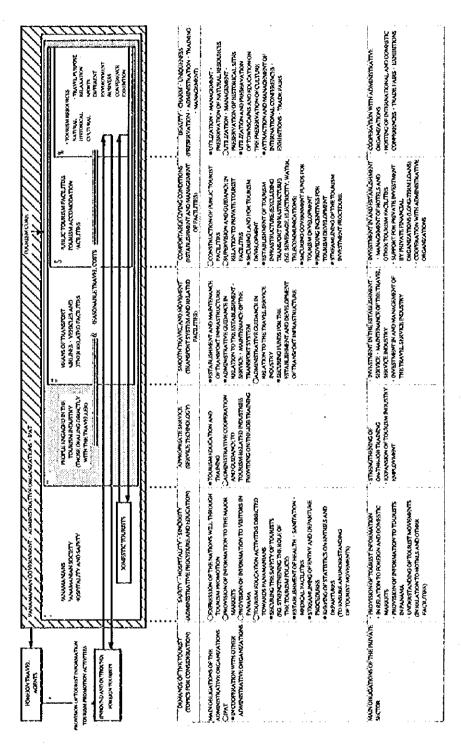

Figure 9.4 Tourism Structure and the Role of the Public and Private Sector

What the t	raveler wants	What the tourist service provider must offer	
(1)	Safety, courtesy, hospitality	Simplification of immigration and emigration procedures, stimulation of popular awareness of tourism, training of personnel	
(2)	Adequate services	Improvement of customer relations techniques	
(3)	Good transportation	Improvement of transportation infrastructure and facilities	
(4)	Pleasant accommodations and surroundings	Improvement of tourism-related facilities	
(5)	Beauty, fun, etc.	Conservation, management, cultivation, and operation of resources	
(6)	Reasonable travel costs	Assurance of reasonable prices	
(7)	Accurate basic information	Production of accurate advertising tools and implementation of advertising campaigns	

### 9.2.3 The Role of Administration

Figure 9.3 classifies and lists the responsibilities that are incumbent mainly on national administrative agencies. The issues that a tourist service provider confronts and the items that administrative agencies must address, listed in the previous paragraph 9.2.2, include items that are IPAT's responsibility and items that require coordination and collaboration between IPAT and other administrative agencies. According to this, IPAT is clearly responsible for a variety of items. Many others must be dealt with in conjunction with those that fall under the jurisdiction of other administrative agencies. IPAT will be called on in the future to perform especially remarkable feats of coordination when carrying out active tourism promotion and development activities. As the administrative agency responsible for tourism, IPAT must deal with the following areas:

- Conservation, protection, and cultivation of tourism resources (including the natural environment),
- Construction of tourist facilities and related social infrastructure
- Construction of transportation and related social infrastructure
- Education and vocational training related to tourism
- Ensuring the safety of tourists, controlling immigration and emigration, and providing health care and sanitation
- Supervision over the tourist industry and investment in tourism
- Providing information about tourism to potential overseas tourists

For IPAT to promote the administration of tourism in all of these fields, the following items must be addressed:

- Legislation must be drafted that IPAT should conform to in its administrative activities
  and that expresses Panama's desire to promote tourism (including tourism's significance,
  goals, and measures) in a manner compatible with regulations in other related fields.
- It must envisage and undertake reform if necessary -- transforming itself from a peripheral administrative agency into a ministry, for example -- in order to carry out its coordinating functions.

# 9.2.4 The Role of the Private Sector

Promotion of tourism clearly cannot be accomplished solely through administrative efforts: it requires the dynamism of private sector enterprises in the tourist industry. Therefore, in the determination of tourism goals and policies administrators must take the views of the private sector into account and make decisions in consultation with the private sector. A Tourism Promotion Association or similar consultative organ could be set up, for example. The private sector must actively take part, voice its opinions, and seek to reach a consensus with the government.

On the basis of policies drawn up through such consensus, the active investment activities described below and the following items can be organized as in Figure 9.3 classifying responsibilities that are incumbent mainly on the private sector.

- Improvements and investment in tourist facilities other than public facilities (infrastructure).
- Improvements and investment in the tourist industry other than facilities (infrastructure).
- On-the-job training of tourist industry workers and customization of individual facilities
- Active organization of and participation in tourism "events" (campaigns)
- Cooperation with tourism administration toward consensus building;
- Provision of information to travelers and identification of individual enterprises' distinctive characteristics

Our impressions thus far, judging from interview questionnaire surveys of private sector institutions, is that coordination has not been established between government and the private sector.

# 9.2.5 Requirements for Investment in the Tourist Industry

Private sector investment, especially in hotel facilities, is necessary for promotion and development of tourism. The following principles governing investment ensure adequate private sector investment. They are premised on the existence of a social environment that meets all these requirements.

- Profits must be foreseeable.
- Invested capital must be securely protected.
- Repatriation of earnings must be allowed.
- Businesses must be able to operate freely.
- Businesses must be free to discontinue their operations.
- Hirable staff must be easily available.

It is important for the government also to create a favorable environment for investment and desirable that the following points especially be kept in mind:

- Adopt incentive measures regarding investment-related imports, taxation, and hiring. (This has already been incorporated into Law No.8 of June 14, 1994.)
- Provide low-interest, long-term financing to facilitate the funding (excluding funds on hand) needed for the investment.
- Allow ownership of or the right to use real estate for as long as deemed necessary.
- Build the social infrastructure needed to build facilities for tourists, because the
  investment risks for private enterprises are too great if they must also assume the costs
  of building peripheral infrastructure, since the payback on investments in hotels and other
  accommodations is very long.
- Prepare sites with investment potential.

### 9.2.6 The economic effects accompanying tourism

To promote and develop tourism, it is necessary; to foster citizens' awareness of tourism; raise tourist industry business owners' and workers' social status, and help sustain their pride in their work; and stimulate domestic and foreign capital's will to invest and expand investments in tourism-related industries by establishing domestic legislation and related systems, upgrading the administrative capabilities of agencies in charge of tourism, and seeking cooperation between the government and the private sector. The effects of these efforts can be further heightened by fostering a recognition of the social and economic impact of tourism among not only people engaged in tourism but all other citizens as well. If officials and members of the business community who lead the promotion and expansion of tourism in Panama, at least at the present time, come to understand the structure of tourism and the roles of the government and the private sector, and act based on their recognition of even the basic concepts behind tourism's social and economic effects, this could give them an added stimulus and incentive to pursue promotion and development of Panama's tourism.

To describe the economic effects of tourism, we have cited some analogous examples of tourism in Japan's Okinawa Prefecture in the late 1980s to illustrate the possible effects of this report's scenario based on almost 2 million foreign visitors to Panama in the year 2010. The examples are drawn from a report on the economic impact of tourism revenues carried out by Rikkyo University Sociology Professor Yoshitaka Mizoo and commissioned by the Okinawa Bureau of Tourism and Culture. (The report does not include data for Okinawans traveling in Okinawa.)

According to Prof. Mizoo's report, tourism has the following economic and social effects:

- (1) Economic effects
  - Investment effects and consumption effects
  - Raw material ripple effects
  - Income effects
  - Employment effects
  - Foreign currency earning effects (from foreign visitors)
- (2) Characteristics of the economic effects of tourism
  - Affect many types of businesses
  - Have major internal impact on the region itself
  - Are dependent on other industries
  - Have major impact on employment

### (3) Social effects

- · Contributes to the fame of the region and the nation overseas
- Stimulates exchange with other regions and nations

The combined primary and secondary multiplier effects of \$194,300,000,000 in sales to tourists (taking the above-mentioned economic and social effects into account) amount to \$342,700,000,000. The effects on employment total 34,011 jobs (19,253 primary, 14,458 secondary multiplier effects).

Assuming that sales to tourists entering the region are 100 (Factor A); the resulting primary multiplier effect on sales of raw materials is assumed to range between 60 and 70; the primary multiplier effects on business and personal income are assumed to range between 30 and 40.

After subtracting the effect on locations outside the region (and outside the national economy) of the primary raw material multiplier effects, the remaining impact on the region (and country) ranges between 45 and 50 and affects industries in the region. Add to this the secondary and subsequent raw material multiplier effects of 45 to 55, and the combined multiplied effects range from 90 to 105.

The primary income multiplier effect ranging from 30 to 40 affects regional industries through household spending and corporate reinvestment; this generates secondary and subsequent multiplier effects on income ranging from 40 to 50, for a combined total ranging from 70 to 90. The combined raw material and income multiplier effects can be expected to range between 160 and 195. If we assume that the raw materials effects are confined to the region and that the bulk of the raw materials are likewise procured within the region, the economic multiplier effects may turn out to be even larger, ranging from 200 to 210 or more.

As for the effects on employment (Factor B), if we assume that employment by hotels and other accommodation facilities is 100, employment by transportation and other tourism-related industries will be 155 and the primary multiplier effects on employment 255. The secondary and subsequent multiplier effects on employment generated by the primary multiplier effects on raw materials sales and on income will be 195, which, combined with the primary effects on employment, may reach 450.

### 9.3 Way to Tourism Promotion

Preceding sections have dealt with "Tourism Policy and the Present Situation" and "Tourism Structures and the Role of the Government and Private Sector" in Panama. They have specified problems with the legal system and organizational problems, and touched on the economic and social effects of tourism.

Of importance here for the tourism industry is not that Panama should generate a sharp increase in the number of tourists. Rather, it is of critical importance that Panama should maintain the number of tourists currently visiting different parts of the country -- particularly overseas tourists -- and work toward a gradual increase in their total. A temporary increase in the number of tourists would impose inefficient costs on the tourism industry as it tried to respond to this increase. This effort would involve excessive risk from the standpoint of tourism's economic ripple effects.

Therefore, if the Republic of Panama now designates tourism as an important national industry for its future, we propose the provision and implementation of the following basic items to promote it. Our proposal will maintain at least the current level of domestic and international tourists while generating a steady increase in their numbers. It will also be an indispensable element of the basis of a plan for the rapid expansion of Panamanian tourism in the near future.

# 9.3.1 The Enactment of a Tourism Law

As a state government by the rule of law, if Panama is to attempt to promote international tourism in order to receive tourists in greater numbers and to enable the Panamanian people to make positive gains from tourism, it must state so clearly, by declaring tourism promotion to be a national policy. It also must enact a Tourism Law (provisional name) as a government policy to increase the citizens' awareness of tourism. This law would specify basic elements related to tourism. The content of this law should be presented according to the following categories.

### (1) Preamble

This section will state the reasons and the background for enacting a law for the political effects gained by Panama through its awareness and promotion of international tourism as a nation.

The following items are being considered for the content of the law:

	Political Effects	Effects Generated by International Tourism and Their Characteristics
-	Stabilizing the lives of Panamanians.	Increased income and the generation of employment through tourism
-	Promoting mutual understanding in international society (world peace)	Interaction with international tourists
-	Improving the international balance of payments	Obtaining foreign currency through international tourism
	Promoting regional development (Ameliorating differences in income levels)	The characteristics of tourism (Territoriality)
	Harmonization of Panamanian citizens (Peaceful co-existence of different races)	Equalization of income through tourism
	Improving the status of women in society	Expanding work opportunities for women through souvenir sales, and other tourist-related industries
-	Other political effects for the state likely to be promoted by the social and economic effects accompanying international tourism	

#### **Policy Objectives (2)**

This section will clearly establish the will and identify the objectives for the promotion of international tourism as a nation. These objectives will include the following elements that can be expected from the political, social, and economic effects of international tourism as noted in the preamble:

- Promoting international tourism
- Expanding citizens' travel for the purpose of tourism
- Cultivating higher, more congenial levels of mutual understanding and friendship in international society
- Improving harmony among the citizens and providing improved stability to their daily lives
- Improving the international balance of payments, and developing the national economy
- Minimizing regional disparities to the greatest extent possible

### Policy as a Nation **(3)**

To achieve these objectives, the law must denote those measures that should be taken by national and local governments to clearly shape the policies formulated by the state. The following items will be included in the content of these measures:

- **National Policy** 1)
- Promoting visits by international tourists
- Promoting travel by Panamanian citizens for their health and recreation
- Improving the service given to both foreigners and domestic travelers
- Insuring the safety of travel for tourism
- Providing convenient, easy methods of transportation for tourists
- Preserving and fostering tourism resources, and maintaining scenic areas
- Creating internationally-recognized tourist destinations
- Promoting the expansion of tourism to outlying areas, etc.
- Local Government Policy 2)

It will be clearly stated that local governmental bodies will cooperate with national policies.

Measures to be Taken by the Government 3)

This section will identify those measures that should be taken by the government to implement the policies identified in [1]. The fields for the measures to be taken are as follows:

- The legal system
- Public finance and taxation
- Finance
- Steps to be Taken by the Government

It will be mandatory for the government to hold hearings of the provisionally-named Tourism Council (to be described later) at the beginning of every fiscal year to allow opinions to be heard on specific measures and policies to be implemented for the promotion of international tourism. After these opinions are reconciled, the government shall present them to Parliament. It also shall be mandatory for the government to report after each fiscal year the policies and measures implemented, and their results. The reports shall be thoroughly examined, and used to create effective policies for future adoption.

### (4) Identifying Specific Policies

The preceding has addressed generalities. It is also necessary to identify all the specific items related to each of the aforementioned policies that are needed for promoting international tourism as a nation. For example, for "Promoting visits by international tourists", it is necessary to:

- Strengthen overseas advertising,
- · Improve immigration and emigration procedures,
- Provide an international transportation system network and facilities.

# (5) Establishing Public and Private Organizations for Tourism

On a national level, the central administrative agencies should cooperate among themselves and with the central and regional governments to implement the policies identified for promoting tourism. It should be clearly stated that organizations for the administration of tourism will be established and equipped. These organizations must cooperate with private-sector tourist organizations and give consideration to their opinions. Further, it will provide support enabling them to promote international tourism.

### (6) Tourism Council

It will be extremely difficult to promote international tourism without the cooperation of the private sector. Therefore, it will be necessary to fully incorporate private sector opinions into specific policies. To accomplish this, the following must be done:

- Establish a council within the administrative organization that oversees tourism
- Provide the council with a structure and functions

When establishing this council, its structure and functions should allow it to coordinate a relationship with the presidential advisory committee described in the president's inaugural address of September 1994, "Políticas Públicas para El Desarrollo Integral: Desarrollo Social Con Eficiencia Económica IV: Políticas Económicas y Sociales, Política Microeconómica 3".

One method for selecting the members of this council shall be nomination by the president on the recommendation of the person heading the administrative organization that oversees tourism, from among those people in the private sector with scholarship and experience.

The proposal envisioned for the structure of the functions of this council is as follows:

If this Tourism Council is created as an advisory committee directly accountable to the president, one plan would be to maintain complete contact with the administrative body controlling tourism by including the Council in the article establishing it.

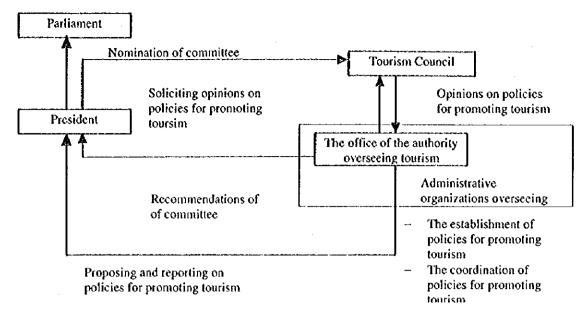

Fig. 9.5 Organization and Function Charts of the Tourism Council (Provisional Name)

In case of choosing an alternative to raise the general manager of IPAT to the rank of Minister as is mentioned in 9.3.2(1), it is necessary to insert a clause in the Tourism Law reading "the person heading the administrative organization that oversees tourism shall have the status of Minister".

### 9.3.2 Enhancing the Tourism Administrative Function

It will be important to establish and operate an administrative organization suitable for enforcing the provisionally-named Tourism Law. The following considerations would be required for establishing and improving a tourism administration organization from the standpoint of tourism industry characteristics.

### (1) Items Related to the Administrative Organization as a Whole

### 1) To integrate and coordinate the will of the people:

A Tourism Council will be established. As previously described in 9.3.1 (6), a tourism promotional policy will be established that fully incorporates private-sector opinions.

### 2) To enhance the coordination function:

IPAT will be elevated to a cabinet level agency. The promotion and development of tourism will mean a deeper involvement with the oversight of programs run by other government agencies and generate more issues that need to be reconciled. The elevation of IPAT, an autonomous administrative agency, to the level of cabinet department would enable it to deal with other departments on an equal basis and facilitate the coordination process.

The department would thus be able to express itself at cabinet meetings. Further, it would consolidate its function of opinion taking and strengthen the cooperative relationship among cabinet departments under presidential approval. It also would give greater force to its decisions. The organizational chart described above is as noted in Figure 9.6.

However, depending on the situation it may choose an alternative to raise the general manager of IPAT to the rank of Minister, attending the Cabinet Council.

# (2) Items Related to Individual Organizations

If IPAT is to be elevated to a Department of Tourism, in recognition of those functions that IPAT must currently supplement, we propose the strengthening and reinforcement of related divisions in the current organization.

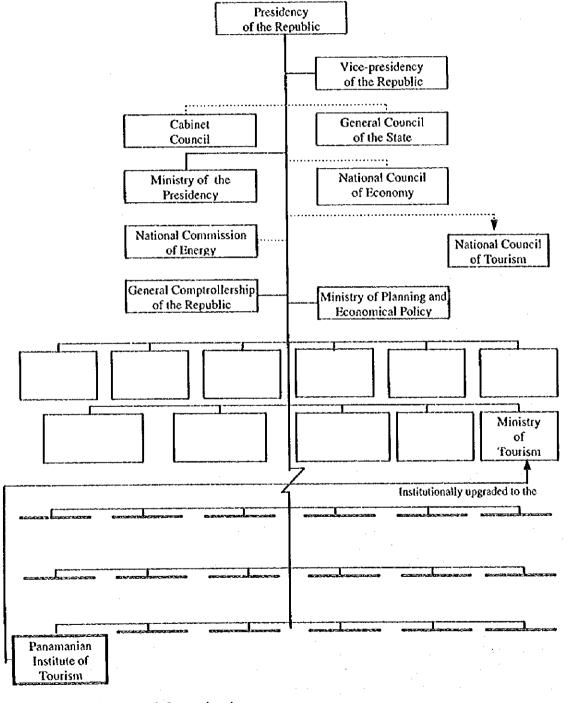

Figure 9.6 Proposed Organization

1) To enhance the public image of tourism:

Several officers whose duties would be to improve public awareness of tourism will be assigned either to Relaciones Públicas or to a division suitable for conducting these activities.

2) To reach an agreement among all the administrative organizations for promoting and developing tourism:

A liaison and coordinating council for each department will be established in the Dirección Técnica del Plan Maestro, the Dirección de Planificación, or a division that oversees all the functions for promoting or developing tourism.

3) To promote tourism investment:

An official responsible for each investment will be assigned to the Departmento de Evaluación y Ejecución or a division suitable for promoting investment. This official shall consistently follow up each specific investment plan, the implementation procedures, and the tax incentive benefits following the investment.

4) To carry out new tourism development:

Either a Departamento for the development of sites and new tourist resort areas will be established as a part of the Dirección de Planificación, or a separate Dirección will be established for that purpose. It will make and implement preparations for the legal groundwork for development, land acquisition, and the management and oversight of development of a public corporation, as described in 9.4.

# 9.3.3 Engendering and Fostering an Awareness of Tourism

To promote and develop tourism in Panama, important issues for the government will include, as discussed before, fostering Panamanian hospitality, improving the social standing of the people employed in the Panamanian tourist industry, promoting people's understanding of the social and economic effects of tourism, and promoting awareness of the importance of investments in tourism. This is also as noted in the P/M-IPAT/OEA Chapters 31.5.8 and 33.

Government ministers, public employees, public corporations, influential people, the general public, and people and groups engaged in public and private tourist businesses will be the subject of efforts to promote awareness of tourism via the P/M·IPAT/OBA, which describes the means and methods for engendering this awareness in each group. It is recommended that the following in particular be the subjects of activities for promoting awareness and that they should begin at once.

1) People Employed in Government

Public employees and local government officials engaged in administrative duties can generate greater effects for coordination and integration through a common awareness of the nature of tourism, namely that it is a general goods and services industry. Particular priority should be given to training those people who come in direct contact with tourists, such as public employees working in customs and immigration, and the tourist police, who are responsible for tourists' safety. Public employees involved with the administration of tourism naturally must share this awareness.

# 2) Operators of Businesses in the Tourist Industry and Leaders of Organizations

The operators of tourist businesses must, needless to say, improve services by striving to improve their techniques for serving tourists and to improve the quality of their products based on a thorough understanding of the significance of tourism for Panama. They must also make tourism more appealing through differentiation of individual businesses and diversification of services.

### 3) The Leaders of Economic Organizations

The leaders of economic organizations must be aware of the economic and social effects of tourism, and understand that tourism cannot be promoted unless private-sector investment is encouraged. Provided they realize this, however, we can expect operators to develop joint public/private cooperative arrangements and encourage private-sector investment.

### 4) Teachers at Tourism-Related Universities and Vocational Schools

The people who train those who will sustain the tourism industry in Panama in the near future should naturally carry out their instructional roles based on a full understanding of tourism's special requirements.

### 5) Teachers at the Elementary and Intermediate Levels

Because the promotion of tourism is one of Panama's national stated aims, educators of the people who will assume the responsibility for Panama's future should involve themselves in their educational roles based on a full understanding of tourism. This responsibility is particularly important with respect to the teachers of social studies, geography, history, and science at the elementary and intermediate levels.

This educational process will be important for instilling an awareness in Panamanian children of Panama's history: it is important that they know that their country is a wonderful country, one in which they can take pride, about which they can talk proudly with visitors, and one that knows how to welcome foreign guests. Three facets especially deserve mention:

### - Respect for other races:

There are people of many different cultures in Panama, and this is an appealing tourism resource.

### - The Panama Canal:

The canal is the culmination of several historical processes. It now links two oceans and two continents. It is a vital link in the global economy, offering dramatic scenic views, with ocean-going vessels set uniquely against mountain backdrops.

### - Appreciation for nature:

Panama's geographic location provides it with many unspoiled natural areas and an abundant, beautiful, and unusual flora and fauna that many of the world's people are eager to see.

It is important to make Panama's children feel that the country they live in is a wonderful place, a country they can take pride in internationally, a country they can speak of with their heads held high, a country to which they can welcome overseas visitors.

# 9.3.4 Training Personnel Involved in Tourism

To foster training of personnel involved in tourism and meet the industry's requirements, the P/M-IPAT/OEA Chapter 35 have performed analyses of current conditions for tourism industry employment, made hiring forecasts until the year 2000, and evaluated current educational levels. This involves identifying areas that need improvement at all educational levels and indicating a national strategy and basic policy for personnel training.

The tourism industry needs business people, managers, middle managers, and technical staff at all levels to meet the needs of and to serve tourists. Another vital element is the acquisition of guest service techniques (except for specific sectors that do not feature direct contact with tourists, such as food preparation) as well as basic techniques by field through the training process.

The golden rules of customer service are to respond to tourists' requests i) with a smile, ii) exactly as requested, iii) promptly, iv) quietly, and v) with cleanliness.

Therefore, in the implementation of the P/M·IPAT/OEA proposals, it is urgent to increase the time spent on acquiring customer service techniques at all levels of tourism personnel instruction, regardless of differences in total time spent on this training and the fields involved, or to allot time for customer service technique acquisition if none is presently scheduled.

### 1) Higher education:

Establish on-the-job, practical training sites for each new specialty, including hotel administration, and incorporate them into the regular curriculum (two-four units).

### 2) Higher vocational training:

Incorporate customer service techniques into the curriculum for each technical field and course, combined with repeated on-site training.

### 3) Basic vocational training:

Conduct actual training in each technical field, stressing repeated practice in customer service techniques.

Because guidance in customer service techniques is most effective when provided by people with experience in that field, those with actual experience must be given positions as training center instructors and teachers at all educational levels.

Regarding the Basic Objects of the National Policy for Human Resource Development (P/M-IPAT/OEA35.5.2), it is particularly desirable that the construction of restaurant schools indicated in Action Plan No. 4 commence immediately.

### 9.3.5 Tourism Investment and Financing

As previously noted, the promotion of tourism necessitates tourist facilities, particularly accommodations and sightseeing and recreational facilities. Much will depend on private sector investment to improve facilities in this area. As already noted in 9.2.5, some requirements for private sector investment, namely investment-related employment, taxation,

and import incentives, are viewed as met in institutional terms by the existing "Ley No. 8 de 14 de junio de 1994--Por la cual se Promueven las Actividades Turísticas en la República de Panamá." Other measures, however, namely long-term financing to provide investment funds other than funds on hand, have not been taken. We therefore propose that measures be taken to enable investors to receive long-term, low-interest financing, including funds from private-sector financial institutions, to promote private-sector investment in the tourism industry.

One such measure is the establishment of a Fondo Fiduciario de Desarrollo (FFD), proposed in the new president's inaugural address under the heading "Políticas Públicas para el Desarrollo Integral: Desarrollo Social Con Eficiencia IV. Política de Reestructuracion de las Empresas Públicas." Another would provide long-term (10-15 year) financing from private-sector financial institutions via FFD loan guarantees to investors in the tourist industry.

### 9.4 Way to Tourism Development

We can expect the number of tourists visiting Panama to remain steady and to rise gradually in the short term if the Panamanian government enacts a Tourism Law (provisional name) and begins to inform its citizens about tourism, to train personnel for jobs in tourism, and to lay the groundwork for investment by improving tourism administration. Private-sector investment in lodgings and other facilities can be increased to enable the industry to meet the needs generated by this gradual increase in the number of tourists.

If Panama decides to accelerate tourism promotion as a national policy and provide the infrastructure for tourism through increased public-sector investment, however, it will have to concurrently develop attractive tourist destinations. Private-sector investment and participation is indispensable for this.

Consequently, if the Panamanian government wishes to implement the development plan proposed in this report, it is vital to prepare and make available institutions, structures, and funds for development adapted to present conditions in Panama. These elements are shown in the following sections.

### 9.4.1 Enactment of a Tourism Development Promotion Law

The first step in the development of new tourist regions is the enactment of a Tourism Development Promotion Law (provisional name) in accordance with the terms of the previously described Tourism Law. This law must include the following:

- (1) Preamble: The background to and the reasons for the necessity of development in accordance with the terms of the Tourism Law.
- (2) Objectives: The development of new tourist regions
- (3) Measures:
  - [1] To designate development districts.
  - [2] To recognize the right of priority use of government-owned land in designated districts.
  - [3] To recognize the right of negotiation to acquire priority rights to private land or to use private land for these designated districts.
- (4) Establishment of a development council: The formation of consensus for development within the districts in question

(5) Establishment of a development authority: The establishment of a public corporation to carry out development (established separately under the Law Establishing a Public Tourism Development Corporation)

Next, the Law Establishing a Public Tourism Development Corporation (provisional name) will be enacted based on the Tourism Development Promotion Law to establish a development authority. This law will cover the following:

- (1) Objectives of its establishment
- (2) Capitalization (including the government's contribution)
- (3) Form of the public corporation (stock, etc.)
- (4) Officers and board of directors of the corporation
- (5) Limitations on areas of operation
- (6) Relationship with the development council
- (7) Definition of its activities
- (8) Role after its activities are completed: changes in its activities

N.B.: The areas of operation are assumed to be limited to the central part of Panama: Portobelo, the Canal Zone, Rio Chame, Metropolitana, Las Perlas, etc.

# 9.4.2 Organization and Functions of the Development Authority

An organization appropriate for conducting development operations will be set up based on the law establishing the development authority (public development corporation) noted in the previous section. It will conduct these operations based on the Tourism Development Promotion Law. This public development corporation's functions will be broadly divided into construction and post-construction investment recouping and loan repayment.

The structure of the public development corporation and the administrative organization providing management and oversight, as well as their functions, are as noted in Figure 9.7. This also describes the structure and the functions of the public development corporation after its development projects are completed.

The operations of the public development corporation will include procuring land for development districts and laying the groundwork for facilitating private-sector investment in that land by making loans to private-sector investors.

Because direct investment and operation of hotels and other facilities by the public development corporation, the administration of facilities under contract with private sector firms, participation in joint ventures with the private sector, and making loans and loan guarantees to the private sector will all be determined by capabilities, funds, and personnel, these issues should be examined separately.

In the course of planning and implementing projects, the public development corporation will set up within the tourism development council separate district subcommittees for Portobelo, Gamboa-Summit, and Rio Chame, as well as in other districts not noted in this report as necessary, in order to promote a consensus with and among district administrations at the city, town, or village level and with residents.

### 9.4.3 Procurement of Development Funds

When the Panamanian government establishes the Law Establishing a Public Tourism Development Corporation (provisional name) based on the Tourism Development Promotion Law, it must at the same time either establish a fund or provide the capital needed to establish a public development corporation and the funds needed to carry out development activities. The sums involved will vary depending on the type of project involved and the degree of involvement (e.g., granting credit for loans to the private sector).

In this section, we will examine three different cases of development in other countries. They were selected in terms of the requirements of land preparation for development by a public development corporation and construction of the types of buildings (excluding facilities for lodging) that will be operated under contract with private-sector firms and of facilities and buildings (public buildings, museums, etc.) that will be operated directly by the public development corporation.

### Case A: México

Self-financing (fund): 58%

Funds borrowed: 32% (74% domestic, 26% overseas)

Supplemental government financing: 10%

This case was described in La Modernización de Mexico a Través Turismo: Evolución de FONATUR, Diciembre 1988-Agosto 1994. Given the need to recoup funds invested, the self-financing ratio was slightly higher in the initial stages of development; with supplemental government financing added, the government's share of funding is estimated to have accounted for 70% to 80% of total project funds. The ratio of borrowed funds is believed to have been 20% to 30%.

### Case B: Indonesia

Self-financing (in the form of shares): 50%

Funds borrowed: 50%

A breakdown of the funds of the Bali Tourism Development Corporation (BTDC) shows that all shares were owned by the Indonesian government; the remaining funds (50%) needed for projects were borrowed from the World Bank.

### Case C: Malaysia

Self-financing (Government): 10%-25%

Domestic and overseas private sector funds: 25%-40% (Self-financing + domestic-overseas funding = 50%)

Funds borrowed (private sector, international financial institutions): 50%

In this case, the funding ratio differed in each project. The Langkawi Tourism Development Corporation, a government-affiliated public corporation, acquired land for development districts, provided it as an in-kind investment, and took part in development projects by organizing consortiums with the private sector through an investment-in-kind arrangement.

The flow of funds for these three cases, including the collection of tax revenues and development funds of the type of development considered for Panama, are shown in Figure 9.8 for Case A, Figure 9.9 for Case B, and Figure 9.10 for Case C.

Of the examples presented in these cases, the public corporation for tourism development for land investment as shown in Figure 9.10 in Case C would not be necessary if the Panamanian government could take a direct stake in the public-private joint venture company.

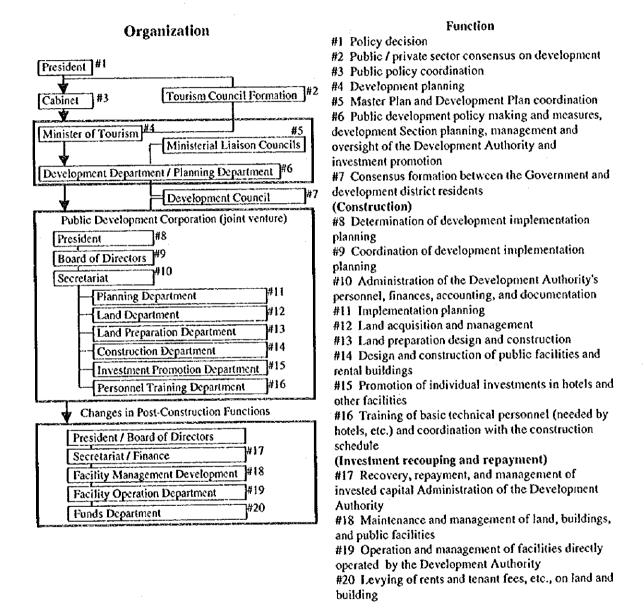

Figure 9.7 Development Organization and Functions

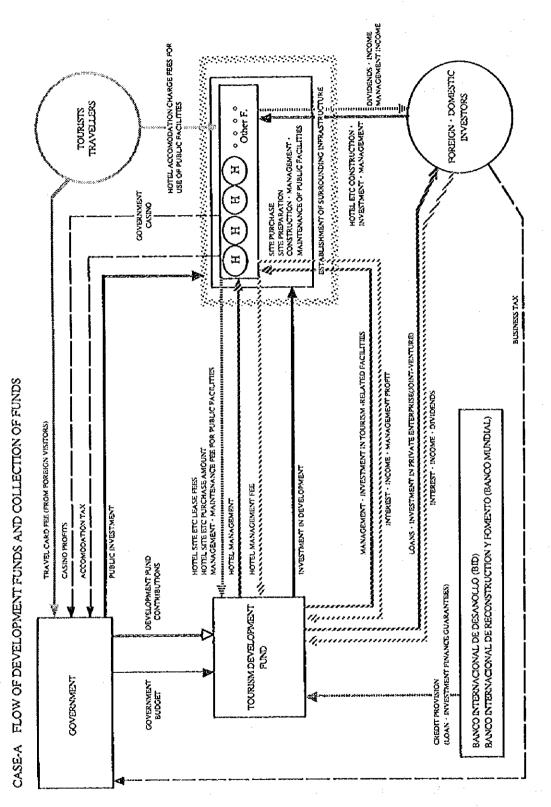

Figure 9.8 Case A Flow of Development and Collection of Funds

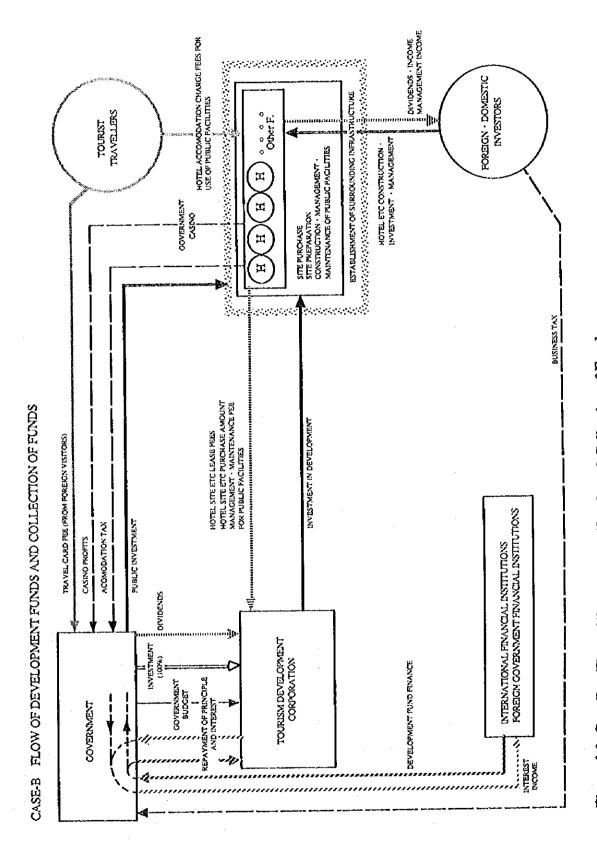

Figure 9.9 Case B Flow of Development Funds and Collection of Funds

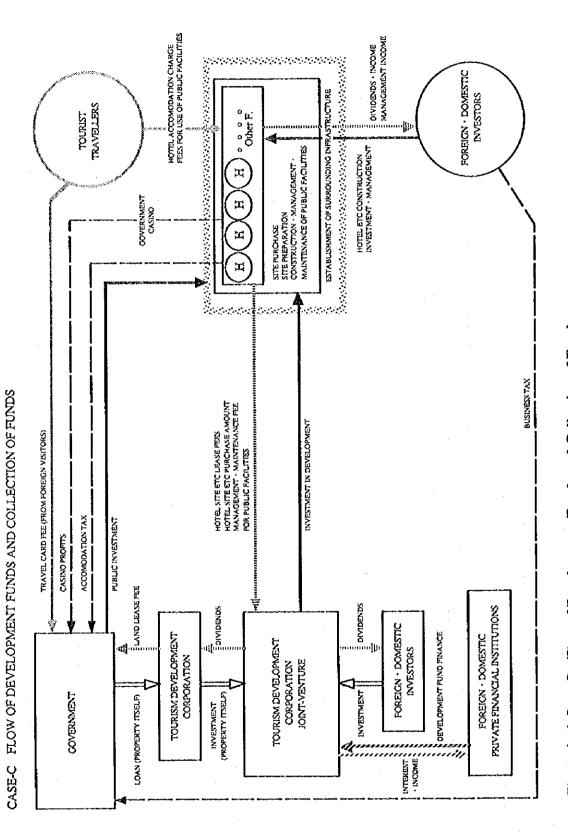

Figure 9.10 Case C Flow of Development Funds and Collection of Funds.

#### Case A

- 1. Large government fund outlays in the initial stages of development
- 2. Rapid recouping of investments due to the low level of borrowing
- 3. Recouped investment funds immediately available for reinvestment

#### Case B

- 1. Government funds account for about half the total
- 2. Recouping of investments (after payment of principal and interest on loans) foresceable about 10 years after completion of construction
- 3. Slow reinvestment of recouped investment
- 4. Many loan conditions imposed on construction by international financial institutions

#### Case C

- 1. Government funds accounting for about one-fourth of total project expenditures (investment in kind and land also possible)
- 2. Agreement on introducing private-sector funds
- 3. Delay in recouping of investments of at least 10 years forecast before principal and interest on loans are repaid and dividends on private-sector investments are paid
- 4. Tardy reinvestment of recouped investments
- 5. Borrowing from international financial institutions as in Case B

The above are the primary characteristics of each case. All, except the first, depend on whether the national treasury recovers the government funds it invested rapidly or more slowly. Much also depends on whether projects start immediately or in stages, the nature of the projects conducted by the public development corporation (whether or not it participates directly), and the lease terms.

The Panamanian government can select from among the three. Considering the financial situation of the Government it is desirable to make maximum use of private-sector funds. Therefore, Case C is recommended with the following provisos.

- 1. Priority should be given to using state-owned land suitable for tourism.
- 2. A consensus should be sought with the private sector about the private sector's level of investment in the public development corporation.
- 3. Loans should be procured from domestic Panamanian sources (private banks) N.B.: Items 2 and 3 call for the use of private-sector funds for development.
- 4. The FFD (development trust fund) resources should be used by the government to develop tourism.

These three cases have been studied and commented on by the Ministerio de Planificación y Política Económica, which also believes that Case C is the best course.

## 9.4.4. Investment Solicitation Activities and Training Hotels Employees

As the public development corporation starts preparing land for hotel construction and building hotels, it should at the same time make concerted efforts to attract both domestic and overseas investors for these and other facilities using this land and ensure their participation in these projects. The public development corporation's projects cannot take place without investors participating in tourism development and promotion. This need has already been

described in 9.2. It also has been explained that the availability of staffing for planned hotels and other facilities will be an important factor in attracting investors.

The following activities must therefore take place to ensure the success of the public development corporation and its operations.

## (1) Investment Solicitation Activities

As noted in the Tourism Investment Promotion Plan the public development corporation must be linked with IPAT or the cabinet-level ministry to which it has been elevated to carry out its activities for promoting investment in Panamanian tourism. Solicitation of individual investors will be carried out based on the investor information obtained from this linkage. Staff will be assigned to individual investors. PR tools must also be created for these solicitation activities.

Suggestions for the PR tools include:

- · Plans showing a bird's-eye-view conception of all the completed development districts
- Planning maps drawn to scale showing all the completed development districts (including lease districts)
- Plans of existing infrastructure (electricity, telephones, water) in all the development districts
- Sketches of tourist resources and scenic areas in the areas surrounding the development districts.
- Leasing fees for the districts
- Staffing requirement projections

#### (2) Training personnel for hotels

The public development corporation will train hotel staff as required by the stage of construction of development districts and investment solicitation. This will necessitate establishing temporary training facilities as well as bringing in instructors from existing hotels in Panama City and other locations.

Hotel staff should be recruited from among the people who live in the development districts. It is important to bear in mind the need to organize development so as to bring social and economic benefits to these areas.

The primary fields of training for hotel employees will be the jobs for which training is particularly required. We believe these will be:

- Front desk staff (including bellhops)
- Food and beverage (bar) services
- Guest room services

These will account for 55%-60% of a hotel's payroll.

Food service personnel should be supplied by the restaurant schools and other sources as mentioned in 9.3.4. Management staff should be supplied mainly by the institutions of higher education in Panama.

The number of people to be hired as hotel staff will be determined by the number of guest rooms in the hotels for which investment is planned. For a 300-unit hotel, calculations can be made from the following breakdown.

The allotment by section of employees in a regular 300-room four-star hotel Management (10%-15% of the total)

- Administration (general affairs, accounting)
- Facilities
- Procurement
- Transportation services, including vehicles

## Jobs (85%-90% of the total)

•	Front desk (including bellhops)	12-14%
•	Food and beverage services	25-27%
•	Cooking	25-27%
•	Guest rooms	17-20%

Personnel training should start one year before the hotel is completed. It would be desirable to have staff report to the hotel and begin on-site training one month before the hotel is completed. Decisions must therefore be made on the length of training and the number of people to be trained in accordance with the hotel construction schedule. This will determine the scale of the necessary training facilities.

## 9.5 Proposal for Institutional Development

In order for the Panamanian government to spur the promotion and development of tourism as a national policy, it is important to give priority to tourism in state economic development planning and to devise and implement feasible measures to bring these projects to fruition.

As stated before, several factors must be considered in conducting these tourism promotion and development activities: first, tourism is linked to many sectors, including education, labor, infrastructure development, the environment, and local government, and governmental administrative bodies oversee each of these areas; second, tourism is closely tied to the lives of the people of the country and the local community; third, the tourism industry requires massive

private-sector funds and cannot establish itself without the participation of both domestic and overseas private-sector funds.

Based on the awareness of these linkages with tourism, the study group proposes the following in relation to institutional development for the promotion and development of tourism.

## Basic Proposals:

- (1) Enactment of a Tourism Law
  - Setting of tourism policy targets
  - Cooperation among administrative bodies and central and regional government bodies
  - Forging of a public-private sector consensus
- (2) Elevation of IPAT or its General Manager to ministerial level
  - Strengthening of coordination based on public-private sector consensus
  - Improvement of tourism administration

## **Secondary Proposals**

- (3) Promoting activities to develop awareness of tourism
  - Promoting P/M·IPAT/OEA proposals
  - Better guidance for public employees in customs, immigration, and quarantine sections and the tourist police
  - Better guidance for society's leaders
  - Better guidance for educators and instructors at all levels
- (4) Promoting tourism staff training
  - Promoting P/M·IPAT/OEA proposals
  - Advising staff on service technique improvements
- (5) Providing advice about tourism investment and financing
  - FFD (development trust fund) activities

## **Proposals for Development**

- (6) Enactment of a Tourism Development Promotion Law
  - Designation of development districts
  - Granting of preferential rights to use government-owned land
  - Creation of consensus with people living near the development districts
  - Establishing a Development Authority
- (7) Enactment of the Law Establishing a Public Tourism Development Corporation
  - Objectives, officers, capitalization, and restrictions on areas of operation
- (8) Proposal regarding public development corporation organization and functions
  - Development, recouping of investment, and repayment
- (9) Advice and proposals for development funding
  - Case histories of development funding in multiple countries
  - Individual characteristics and fund flows in specific cases
  - Selections from among the cases
- (10) Advice regarding campaigns to attract hotels, etc.
  - Assignment of a separate staff member to cover each potential domestic or foreign investor
  - PR tools
  - Training staff for companies (or individuals) investing in projects

10. Conclusion and Recommendation of Long Term Tourism Development Plan

## 10. Conclusion and Recommendation of Long Term Tourism Development Plan

The long term Tourism development plan for tourism targets two million of foreign visitors visit to Panama annually by the year 2010 and 1.5 million domestic tourist by the year 2010. To fulfill the target six long term Tourism development plans were formulated.

The key point towards achievement of the target is to implement development plans. Realizing these development plans can only be achieved with the concerted efforts of the Panamanian government, such as cost sharing of investment in infrastructure and tourism facilities, legal system improvement to support the tourism development strategy, tax privileges for private investment in tourism facilities, etc.

Moreover, in order to achieve the target, an improvement of safety and security conditions for tourists in Panama, and increased promotion in principal markets (USA and Europe) are suggested.

Therefore, it is recommended that following items are proposed for realization of the long term tourism development plans.

## (1) Improvement of Tourism Institutional system and Organization

Especially the following three items are very important for achieving tourism development in Panama.

- Enactment of comprehensive tourism development policies and laws.
- Promoting IPAT to ministry level
- Establishment of institutional system and organization for tourism development.

#### (2) Commencement of the Projects Implementation

## 1) Establishment of Tourism Development Corporation (TDC)

In order to implement the comprehensive tourism development plan, it is necessary to have land for projects and infrastructure, and to establish a development entity which is responsible for construction of major facilities, leasing and selling the land or facilities, and moreover, for encouragement of private investment and tourist promotion to Panama.

## 2) Procurement of Investment Funds

Foreign funds especially lower interest funds are essential for encouragement of project implementation by the government, TDC and private sectors.

## 3) Procurement of Development Lands

When the comprehensive tourism development plan is implemented, the necessary public land should already have been transferred to the private sector and subdivided.

## (3) Execution of feasibility studies for priority projects

The importance of tourism development is high in Farallón, Metropolitana, and Portbelo selected as priority zones, which configure a reversed "Z" shaped zone, and early execution of the selected priority projects, which have a strategic importance in promoting tourism development in this area is proposed. Therefore, feasibility studies for these priority projects should be executed as the next step following the long term Tourism development plan study.

# III.PROJECT FEASIBILITY STUDY

## III. PROJECT FEASIBILITY STUDY

## 1. Priority Zones and Projects

## 1.1 Priority Zone

## 1.1.1 Development Potential

The development potential of each study zone must be studied to determine its development suitability according to the market. Thus, an assessment of the main areas of attraction in each zone is carried out in order to get an indication of their relative potential for tourism development, based on the following criteria:

## (1) Significance of the tourist destination

- Tourist arrivals: the number of existing tourists in the various places of attraction, classified into domestic and international tourists.
- Resource potential: the dominant character of the places of attraction including the beauty of natural attractions, fishing spots, national park, flora and fauna, the invaluable antiquity of historical, religious, and architectural monuments, and industrial places of attraction are subjects to be evaluated in this category.
- Facilities development: for this evaluation, tourism related facilities such as accommodation, restaurants, sports and recreation, souvenir shops, convention facilities, and services such as tourist agencies and guides, etc., are given a rating factor at each area of attraction according to the level of development.

## (2) Development opportunity

- Land availability: suitable land nearby coastal areas which may be available for tourism development is examined through photographic interpretation.
- Water supply resources: areas of attraction are assessed according to the availability of water resources, for example whether a water supply is already available, whether potential water resources such as a large reservoir is available nearby, or if utilization of underground water for consumption is possible.

# (3) Accessibility

- Land transport: a coefficient of relative accessibility for each province is formulated taking into account road surface condition (paved or unpaved).
- Sea transport: the two elements of sea transportation which are assessed are local ferry and cruise ship routes, and also port facilities, to give a measure of relative sea accessibility for each province.
- Air transport: seating capacity and the number of flights per week are considered in the evaluation.

# (4) Limitation of development by environmental conditions

The potential for tourism development in some areas will be limited by the existing environmental conditions and the need to conserve and protect valuable or sensitive areas of natural environment such as forests, flora and fauna, etc. from degradation.

## (5) Impact on tourism development

The likely impact that development of an area would have on further development of the same area and surrounding areas is considered. Development of some facilities can often have a flow-on effect, supporting existing facilities and promoting additional development.

Based on the above-mentioned criteria, a development assessment has been carried out for each zone focusing on the main areas of attraction in each zone. The main resource areas in each zone were divided into "Urban type", "Coastal type", and "Island type" for the comparison. Each place of attraction was allocated a rating of between  $\pm 5$  and  $\pm 5$  for each of the selection criteria listed above. The ratings and the aggregate resource evaluations are given in tables (Table  $1.1 \sim 1.3$ ) for each resource type. The areas with the most development potential according to the criteria have been rated as "High Potential" and are listed below:

## (1) "High Potential" rating for Urban type areas

- a. Panama City 42 points
- b. Colon City 38 points
- c. David City 28 points
- d. Chitré / Los Santos 26 points
- e. Bocas del Toro 24 points
- f. Las Tablas / Guararé 22 points
- g. Volcán, Bajo Boquete 21 points
- h. Changuinola 20 points
- i. Puerto Armuelles, La Concepción 18 points

## (2) "High Potential" rating for Coastal type areas

- a. Canal Zone 32 points
- b. Antón Chame 29 points
- c. Costas de Portobelo 22 points
- d. Guarare Las Tablas, Santa María Los Santos 21
- e. Pocrí Pedasí, Costas Tonosí, 17 points

## (3) "High Potential" rating for Island type areas

- a. Isla Colón 27 points
- b. Isla Taboga 25 points
- c. Isla Grande 23 points
- d. Isla Contadola 21 points
- e. Isla Bastimentos, Isla del Rey 19 points
- f. San Blas 17 points

## 1.1.2 Regional Development Orientation

Each study zone has its own natural and socioeconomic background, and there are differences of regional development level among the study zones. The development of tourism will have great impact on regional society and the economic future. Since the development of tourism should be coordinated with regional development, the orientation of regional development for each study zone should be examined carefully.

## (1) Bastimentos

Bocas del Toro Province is the least developed region with many social and economic problems to be solved. Therefore, a plan for an integrated regional development program is recommended, so that tourism development will take its place as one sector of the integrated program.

## (2) Arco Seco

The Arco Seco Zone which consists of Herrera and Los Santos has been developed as a cattle breeding area for many years, but with recent economic developments in the country, other kinds of industry should be developed. Tourism related industries, such as a souvenir craft industry, should be established.

#### (3) Farallon

The Farallon zone which extends along the Pan-American highway, provides scope only for transport related industries other than coastal tourism development. The shape of the zone is long and narrow, therefore some development poles should be created.

## (4) Metropolitana

The Metropolitana zone has not only many kinds of tourism resources, but also well developed infrastructure and tourism facilities. Beyond this, the large area of the old canal zone is being reclamed with the possibility of future land use. The reclaimed land can offer great opportunities for tourism development. However Panama City suffers from many kinds of urban problems, such as traffic congestion, pollution and so on, so the development of tourism should cope with such kinds of problems.

## (5) Portobelo

In the Portobelo zone, there exists an historical monument of a Spanish Colonial town, but it has been occupied by town inhabitants. The location of the zone is not far from the Panama Metropolitan area by land transportation, so that is has a high development potential. The development of this zone should be coordinated with the natural and social environment.

## (6) Las Perlas

Las Perlas has magnificent marine tourist resources. However its population is sparse and its infrastructure is poor. For the development of this zone, first of all, a development core should be prepared, then other parts can be developed.

#### 1.2 **Priority Project**

## 1.2.1 Selection of Feasibility Study Projects

#### Selection Criteria **(1)**

In the previous chapter Farallon, Metropolitana and Portobelo were selected as priority zones, therefore priority projects should be selected according to the level of significance indicated in the project list within priority zones.

There are many significant projects to be implemented urgently, however, according to the Scope of Work, six projects are to be examined for feasibility study, therefore we have made the selection according to the following criteria.

Select from each Priority Zone. 1)

At least one project should be selected from each of the Farallon, Metropolitana and Portobelo zones.

**Development Frame Considerations** 2)

Project should be selected from the short to medium term implementation plan and programmed which will satisfy multiple tourist demands - local residents, domestic and foreign tourists.

Select Optimum Scale 3)

Project costs are too high for existing resources, therefore, some of these projects are listed as national projects, which will be recommended for implementation under a nation wide consensus.

In principle, feasibility studies are not required for some of the small scale projects but, if these can be packaged with other projects to create an optimum scale, they will be selected.

Project Triggering for Tourism Development

For overall regional tourism development, projects which can foster other projects should be created. The nature of the projects should be a key to the development of future tourism demand.

Effects of the Regional Development

One of the principal objectives of tourism development is to serve for rural development, therefore, the selection should be integrated with multi-sectoral and/ or basic infrastructure development.

Land Priority 6)

Development site areas already owned by Government and/or immediate acquisition necessary to preserve tourist resource and/ or facilities/ qualities of the development site or to prevent non-tourist site development.

Using these criteria, six projects have been selected for feasibility study.

#### Selected Projects **(2)**

The market projections indicate the need for development of international resort complexes on a large scale in the priority zones. There are many small sites available, but their sizes are not with sufficient room for further expansion and also appropriate important tourism supporting projects.

Considering the above-mentioned criteria, the following six projects are selected for feasibility study in the next stage.

However, the existence of important and urgently required projects in other study zone, such as Bastimentos, Arco Seco, and Las Perlas should not be forgotten for further studies.

- 1) Chame Resort Development (Development Package)
- 2) Panama Canal Tourism Development (Development Package)
- 3) Flower and Green City Development (Packaged Project)
- 4) Portobelo Tourism Development (Packaged Project)
- 5) Caribbean Costa Arriba Road Development
- 6) Maritime Triangle Development

## (3) Character of Each Project

Development characteristics of the 6 selected projects are as follows:

- -- New tourist accommodation oriented development projects, such as Chame, Panama Canal and resort complex of Portobelo.
- -Reorganization and reutilization of present tourism resources both natural and cultural, such as flower and green beautification of Panama City and historical township project of Portobelo.
- -Development of tourist transportation network projects of Caribbean Costa Arriba road and maritime triangle of Gulf of Panama.

Table 1.4 Selected Priority Projects and Development Form
