

**III. DATA FOR SECTORAL REPORT VOL. II, FLOOD CONTROL**

## 1. INTRODUCTION

This data book presents the river cross section data and the calculation results of flood water surface profile of the Iguaçu river from Foz do Areia to São Mateus do Sul by non-uniform flow which were used for the flood inundation analysis and flood control planning of União da Vitoria. The calculation was executed by the computer program, WATER SURFACE PROFILE CALCULATION (T.DAN) developed by Nippon Koei Co., Ltd. by the use of UNIX computer system

## 2. OUTPUT OF NON-UNIFORM FLOW CALCULATION

The outputs of selected calculation cases are compiled with the following sections:

- 2.1 Without Excavation: Cases A1 to A5
- 2.2 Case With Excavation - 1: Cases B1 to B3
- 2.3 Case With Excavation - 2: Cases C1 to C3

The summary of the outputs is presented as follows:

| Case | flood model | CN011   | CN153   | JT141   | CF271   | JS251   |
|------|-------------|---------|---------|---------|---------|---------|
| A1   | 1983year    | 744.000 | 746.743 | 750.072 | 758.979 | 764.334 |
| A2   | 1983year    | 742.000 | 746.255 | 749.954 | 758.981 | 764.334 |
| A3   | 1983year    | 739.000 | 746.141 | 749.930 | 758.979 | 764.334 |
| A4   | 1992year    | 742.000 | 745.447 | 748.700 | 757.671 | 763.385 |
| A5   | 1992year    | 739.000 | 745.314 | 748.673 | 757.670 | 763.285 |
