APPENDIX-C

INVESTMENT AND TRADE PROMOTION

C.1 Promotion of Foreign Investment

1) Comparison of Investment Environments

In implementing industrial development policies, Vietnam has an advantage to learn how to manage the industrialization from the experiences of such economies as Asian industrializing countries. It will also be possible to introduce most advanced technologies in the process of catching up the industrialization. On the other hand, Vietnam is faced with a hard competition with these countries. Therefore, it will be effective to compare the investment environment of Vietnam with that of Thailand, Indonesia and China. In this section, the industrial environment of these countries will be compared with Vietnam, particularly with respect to the legal, institutional, organizational system, as outlined in Table C.01.

Vietnam has three notable advantages in the investment environment. The first one is the relatively large market. The population is the third largest in the East and Southeast Asian region (refer to Table C.02). The second advantage is the abundant natural resources. A wide variety of resources is an advantage for industrial development. The third advantage is a favorable condition for food production. Abundant rainfall and large delta zones make it possible not only to supply foodstuffs for a relatively large population but also to export surpluses. These conditions are favorable for the industrial development in Vietnam.

On the other hand, notable problems lie in the management of huge potentials for development. From the viewpoint of legal and administrative management systems, investment promotion of Vietnam can be compared with other Asian competitors in order to find out advantages and disadvantages of the investment environment of Vietnam.

The policy to promote foreign investments was adopted in Thailand, the Philippines, Indonesia and Malaysia in the 1960s, and in China in 1978. Although Vietnam is a late comer on this issue, it has established a strong position with the legal preferences for foreign investors, because the privileges are by no means inferior to incentives in other countries. The political and social governance of Vietnam appears to be stable and flexible under the fundamental principle of "Doi Moi". Tax incentives for foreign investors in Vietnam is superior than other countries. The most favorable

condition in Vietnam is the supply of labor force in better quality and at lower wages than other countries. The literacy rate in Vietnam was 88% in 1990, while it was 73% in China and 77% in Indonesia. This implies that labor intensive projects could possibly enjoy better competitiveness by producing commodities for export to the international market than other Asian countries.

The most notable disadvantage is a lack of experiences in the promotion of foreign investments. Slow process of licensing, opaque or unfair treatments by authorized officials at central and local levels, frequent changes of standards or rates, weak management ability of Vietnamese partners in Joint Venture projects have been caused mainly by little experience and weak knowledge of the market economy. These problems could be gradually overcome in the future.

At the end of July 1995, Vietnam became a member of ASEAN. It means that Vietnam will be able to enjoy cooperative schemes of ASEAN, and at the same time should get through hard economic competition not only with ASEAN countries, but also with Hong Kong, Taiwan, Republic of Korea, and China.

2) Overview of Direct Foreign Investments

Vietnam has got excellent results after enactment of the Direct Foreign Investment Law in 1987. Accumulated invested capital of licensed projects exceeded 10 billion US dollars except for canceled projects and oil & gas projects by the end of 1994. Direct Foreign Investment (DFI) has greatly contributed to the industrialization and modernization of the Vietnamese economy in its process of renovation. The accumulated number of licensed projects and amount of invested capital are summarized below.

a) Number of DFI projects and amount of invested capital

Licensed projects besides the oil & gas exploitation projects:

Total number of licensed projects	: 1,217 (US\$12,001 million)
Number of acting projects	: 1,028 (US\$10,901 million)
Number of canceled projects	: 189 (US\$1,100 million)
Number of oil & gas projects	: 26
Grand total of licensed projects	: 1,243

b) DFIs by country/economic region

Licensed projects from Hong Kong and Taiwan have been dominant in terms of both number and invested capital. These two countries accounted for more than 17% of accumulated invested capital. They are followed by South Korea, Australia and French in invested capital, and by South Korea, Singapore and Japan in number of projects. Details are shown in Table C.03.

c) DFIs by regions

The South Northeast Region, including Ho Chi Minh City, is dominantly enjoying more than half of DFI projects (569 of 1,028), followed by the Red River Delta, including Hanoi (241 of 1,028). The South Central Coast Region including Da Nang City is ranked third. It is observed that the number of licensed projects has notably increased in the northern regions, particularly in Hanoi City in the latest two years, 1993 and 1994. The accumulated number of licensed projects in Hanoi City is 178, accounting for 17.3% of the total accumulated number of DFIs. A trend of foreign investments by region is given in Table C.04.

d) DFIs by sectors

Valid DFIs are classified by sectors as summarized below.

Sector	Number of Projects	Invested Capital (million US\$)
Agriculture and Forestry	32	264
Fisheries	21	58
Mining Industry	52	1,298
Processing Industry	599	4,193
Electricity, Gas and Water	5	227
Construction	43	1,220
Trade and Repair	9	13
Hotels and Restaurants	118	2,404
Transport, Storage and Communication	53	497
Finance and Credit	12	170
Real Estates	71	533
Education and Training	1	1
Health and Social Services	2	1
Cultural and Sports Activities	5	19
Activities Serving Individuals	4	4
TOTAL	1,028	10,901

e) DFIs in Hanoi City

The total number of licensed foreign investment projects in Hanoi city reached 178 as of the end of 1994. They are classified by type of DFI as follows:

	Business Contract	Joint Venture	100% Foreign	Total
1989		4	1	5
1990	1	7	1	9
1991	2	13	0	15
1992	2	23	7	32
1993	3	42	3	48
1994	6	55	7	69
Total	14	145	19	178

Valid DFIs in Hanoi City (178 projects) can be classified by sector as follows:

Sector	Number of Project	Invested Capital (million US\$)
Agriculture and Forestry	4	6
Mining Industry	3	22
Processing Industry	63	561
Construction	12	338
Trade and Repair	3	7
Hotels and Restaurants	33	770
Transport, Storage and Communication	11	322
Finance and Credit	5	70
Real Estates	41	300
Cultural and Sports Activities	2	3
Others	1	115
TOTAL	178	2,516

Even though the processing industry is superior in term of number of projects (63 projects or equivalent to 35.4% of total number), the amount of invested capital of the processing industry (US\$561 million, 22.3%) is less than that of the hotels & restaurants sector (US\$700 million, 27.8%). Further, 63 projects of the processing industry sector can be classified into such branches as shown in the column "H" of Table C.05. Location coefficient of Hanoi is superior in such branches as "Publishing and Printing", "Other Electric Machinery", "Medical, Measuring and Optical Machinery" and "Metal Articles".

In term of number of projects, dominant countries are Hong Kong (36 projects), followed by Japan (21 projects), Singapore (14 projects), French (13 projects), Australia (11 projects) and Republic of Korea (9 projects), as shown in Table C.06.

3) Legal Framework for Promotion of Direct Foreign Investments

Since the Government recognized the importance of attracting foreign capital and technology, the Law on Foreign Investment has been adopted by the National Assembly in December 1987. In order to keep up with changing conditions and international practice, the law has been amended twice since 1987. The first amendment was made on June 30, 1990. The major points of amendment were:

- a) To authorize private economic organizations having a juridical status to make direct business cooperation with foreign parties,
- b) To broaden the form of "bilateral" joint venture into "multilateral" one to authorize several organizations and individuals to stand as an independent party in a joint venture; and
- c) To allow joint-venture enterprises producing substitutes for imports to enjoy privileges to the same extent as export-oriented enterprises.

The second amendment was promulgated on December 23, 1992. The 1990's Law authorizes Vietnamese economic organizations to cooperate with foreign partners. However, it defined only joint-stock companies and limited companies as the juridical persons and excluded private enterprises. The amended law allowed private enterprises to cooperate with foreign parties to formulate joint ventures. And it also added the development of Export Processing Zones to investment activity which would be licensed. At the same time, BOT contract have been privileged by the new law. These amendments seem to provide more opportunities for investors.

Direct foreign investment may be in three forms: business cooperation contract, joint venture enterprises, or a 100 per cent foreign owned company. Besides, there are such categories as: (i) product sharing contracts in oil and gas exploration and exploitation (26 contracts have been licensed); (ii) investment in Export Processing Zones (which include construction of infrastructure; 6 EPZs have got licenses); and (iii) BOT contract on infrastructure development. These three types of investment may be expected to be one of very important measures to improve the backward infrastructure of Vietnam and will contribute to the investment promotion and economic development of the country. The definitions and functions of EPZs and Industrial Zones are given below.

Export Processing Zones (EPZ)

- a) EPZs have been authorized by the "Decree on Special Export Processing Zones" (No.322-HDBT issued on 18 October 1991) and "Regulations on Special Export Processing Zones in Vietnam" by the Council of Ministers.
- b) "EPZs are industrial zones under central authority which are dedicated to the production of goods for export and the provision of services relating to the export of goods" (Article 1 of above regulations) and "EPZs shall be established by the Government at locations convenient for the production of goods for export and for their actual export" (Article 2). The Government guarantees equitable and appropriate treatment for foreigners who invest in EPZs.
- c) Investors who establish operations in EPZs are entitled to preferential treatment stipulated in Articles 21, 22 and 25 of the Law on Foreign Investment and are able to enjoy all the privileges stipulated in "Regulations on Special Export Processing Zones".
- d) In EPZs, investors may establish operations in the fields of (i) Production, processing and assembly of export products, and (ii) Providing such services in relation to exports as transport, loading and unloading, repairs, insurance, and banking.
- e) The management body of EPZs is the "Management Committee of Special Export Processing Zones" (Article 6). "The members of the Management Committee shall be appointed by the Chairman of the Council of Ministers in accordance with the proposals made by the Chairman of SCCI and the Chairman of the People's Committee of the province or city where EPZ is located." (Article 58). SCCI has responsibility for examining and approving projects, guiding and supervising the activities of the Management Committee. The revenue received by EPZs shall be paid to the State treasury, all expenses incurred by the zone shall be paid from the State budget (Article 60).
- f) Investors shall submit an application to the Management Committee to establish their enterprises in EPZs. Within three months, the Committee shall notify the investor of its decision. Although the duration of operation of an enterprise in EPZs shall not exceed fifty (50) years, it will be possible to apply for an extension of its operation.

g) The Regulations on EPZs stipulate financial incentives as follows:

- (a) Profit tax : In respect of Production enterprises shall pay 10 % of profit, and service enterprises 15 % of profit.
- (b) Exemption from payment of corporate profit tax : Production enterprises shall be exempted for a period of 4 years, and service enterprises shall be exempted for a period of 2 years.
- (c) Payback of profit tax : If investors reinvest profit earned back into an enterprise operating within the territory of Vietnam for a period of 3 years or more, the profit tax shall be refunded.
- (d) Exemption from payment of import duty and export duty : Enterprises operating within EPZs shall be exempted from payment of import duty for import of equipment, materials, and goods to EPZs, and shall be exempted from payment of export duty.
- (e) Tax on profit transfer abroad : Foreign investors shall pay tax on the transfer at a rate of 5% of the total amount of profits transferred abroad.
- (f) Other duties and fees : Enterprises in EPZs shall be required to pay customs duties, duty on registration, stamp duties on certification, fees for the management and organization of EPZs, and other related fees in accordance with the provisions in force at the locality where the Zone is located.

Regulations on Industrial Zones

- a) An idea to establish the Centralized Industrial Zones (CIZs) has been proposed in June 1994 in order to improve the development and management of EPZs. SCCI has been assigned the task of working on this idea in cooperation with SPC, MOF, Ministry of Commerce, the General Customs Bureau, and the Central Institute for Research & Management in drawing out the plans for CIZs. The "Decree on promulgation of regulations on Industrial Zones" (No.192/CP) and "Regulations on Industrial Zones" were promulgated on December 28, 1994.
- b) The "Industrial Zone" is defined as a concentrated Industrial Zone which is established under the decision of the Government and specialized in industrial production (Article 2). And, there may be Export Processing Zones and Export Processing Enterprises in the Industrial Zone (Article 3).
- c) Management Board of Industrial Zones : "The Industrial Zone and the Management Board of the Industrial Zone shall be under the control of the

State Ministries, ministerial level agencies and governmental agencies. Depending on the nature of each Industrial Zone, the Prime Minister shall determine the State agency to directly control the Industrial Zone. Ministries, ministerial level agencies and governmental agencies shall authorize the Management Board of the Industrial Zone to perform duties on State management in the Industrial Zone." (Article 18). All the budget revenue in the Industrial Zone must be paid to the State Budget. Expenses for the activities of the Management Board shall be covered by the State Budget."(Article 22).

- d) Rights and obligations of the Management Board are stipulated in Article 20, as follows:
 - (a) To work out the plan for the development of the Industrial Zone and the Charter of the Industrial Zone so as to have them submitted to the authorized State agency for approval;
 - (b) To promote investment into the Industrial Zone;
 - (c) To give guidance to and receive documents applying for investment into the Industrial Zone; pass those documents to the authorized agencies for construction of and decision on the issuance of the Investment License;
 - (d) To issue the construction permit on the basis of approved designs;
 - (e) To examine and inspect the implementation of the Investment License and Business License, contracts for processing, contracts for providing services and other stipulations of the laws on labor and wages;
 - (f) To implement the regulations on the management of security, safety and public order in the Industrial Zone;
 - (g) To control servicing activities in the Industrial Zone;
 - (h) To consider and approve land rentals, service charges defined by the infrastructure development companies and service companies;
 - (i) To reconcile labor disputes, economic disputes as required by the parties concerned.
- e) Responsibility of Local People's Committees are stipulated in Article 19, as follows:
 - (a) Perform the State management functions over the Industrial Zone within their territory.

- (b) Participate in the formulation of the plan for development of the Industrial Zone;
- (c) Supervise and examine the implementation of the rules and regulations on labor, safety, environmental hygiene, fire and explosion prevention, security and order in the Industrial Zone;
- (d) Create favorable conditions for the Management Board to fully accomplish their duties.

f) Profit tax rates for foreign enterprises (Article 15):

(i) With respect to manufacturing enterprises, the tax rate shall be eighteen per cent (18%) of the profit earned. With respect to enterprises who export at least eighty per cent (80%) of their products, the tax rate shall be twelve per cent (12%) of the profit earned. The above enterprises are entitled to an exemption from profit tax for two (2) years.

(ii) With respect to enterprises engaged in services, the tax rate shall be twenty two per cent (22%) of the profit earned. These enterprises are entitled to an exemption from profit tax for one (1) year.

4) Organizational Framework for Promotion of Foreign Direct Investments

a) Agencies Concerned

Chapter V of the Law on Foreign Investment and Article 6 of the Decree 18 stipulate that SCCI shall be the sole office to issue licenses for all forms of investments. SCCI is expected to coordinate with such organizations as SPC, Ministry of Commerce and Tourism, State Bank of Vietnam, Ministry of Science, Technology and Environment, State Committee for Science, and Ministry of Finance. It is noted that the World Bank's Foreign Investment Advisory Services (FIAS) has been assisting in streamlining foreign investment approval procedures and improving coordination among the agencies concerned.

It should be noted that the local government is also involved in the process of getting approval to invest in Vietnam. Investors have to submit feasibility study reports and required documents to the People's Committees of Provincial Governments before submitting these to SCCI. Once investors get permission from SCCI, they have to obtain land use right through the People's Committees. Therefore, local authorities play an important role in the licensing process. Approval process for foreign investment is shown in Figure C.3.

b) Tasks and powers of SCCI

SCCI is not only an organization which issues licenses to investors, but also it evaluates desirability of proposed projects from the viewpoint of the country. Article 2 of Decree No. 39 dated June 9, 1993 stipulates the function, powers, responsibilities and organization of SCCI, as follows:

- i) To build a strategy, orientation and priority structure for DFI, and to give guidance to Ministries and corresponding bodies on plans and programs for DFIs in local branches,
- ii) To prepare and submit to the Government draft bills, draft ordinances, and draft agreements on DFIs in Vietnam,
- iii) To give guidance to foreign and Vietnamese parties in making investment in Vietnam,
- iv) To organize and evaluate conditions for issuance of investment licenses to DFIs,
- v) To manage the scope of activities to attract DFIs in Vietnam,
- vi) To give guidance and supervise activities of various branches in their implementation of State policies and programs concerning DFIs in Vietnam,
- vii) To supervise and inspect operations of foreign invested enterprises and business cooperation contractors.

5) Remaining Problems to be Solved

While great improvements in the investment environment have been achieved in past years, constraints still remain for further promotion of DFIs. These constraints include:

- Many foreign investors state that licensing is still time-consuming and procedures are not transparent;
- The licensing fee, which is equivalent to 0.01% of the total invested capital, may be an obstacle;
- A good registration system for land titles is needed in order to prevent conflicts regarding the utilization and transfer of rented land;

- Prices of land right have rapidly escalated in major urban areas and expenses for compensation for former residents have been enormously increasing;
- The rent of plots in EPZs is high in comparison with other countries in the region;
- Labor hiring regulations are too complex;
- The country's financial and other support services for industry are still weak;
- Too many agencies and too many levels of government have been involved in the Vietnamese side;
- Too much information requested in the early stages of the approval process at a great cost of investors;
- Vietnamese officials do not always have the expertise or skills to evaluate projects;
- The absence of uniform interpretation of foreign investment rules and regulations is observed;
- Foreign investors must hire local consultants who are not always capable;
- It is difficult for foreign investors to find appropriate local partners;
- Illegal actions under various forms are presumed to be prevalent;
- Weak mortgage and collateral mechanism hamper private investors, particularly foreign investors;
- Frequent changes and amendments of laws, regulations, circulars, and ordinances applicable to foreign investors have been concerned by investors;
- New laws and regulations are not always clear or consistent with other legal frameworks;
- The rules requiring unanimity of board members of joint venture enterprises will affect the operation of joint venture businesses;
- The cumulative bureaucratic hardness involved in establishing investment projects have been one of the problems for investors because they have to get approval of the feasibility study report before submitting application to SCCI.

It is recommended that SCCI and the authorities concerned study these complains expressed by the potential foreign investors.

6) Recommendations on Foreign Investment Promotion

In order to further accelerate foreign investments, particularly in the manufacturing sector, it is recommended that the following issues be taken into serious consideration:

- (a) Legal structure concerning the promotion of foreign investment: The legal system has been established in a shorter period, including the Foreign Investment Law, Law on Business Bankruptcy (30 December), Circular 333 on BOT Contracts (28 February), Circular on Overseas Vietnamese Investment (24 March), Circular 28 on Transfer of Technology (22 January), Decree 100 on Insurance Business (18 December), Decree on Independent Auditing (29 January), Law on Domestic Investment Encouragement (22 June) and Regulations on Establishment and Operation of Representative Offices, all enacted in 1994. However, the Civil Code, Law on State Enterprise, and Law on Mortgage are still under preparation. It is hoped that the enactment of these laws, regulations, and detailed rules is finalized at the earliest.
- (b) Foreign investment in privatization (equitization) of SOEs: At present, shares of equitized SOEs cannot be held by foreign investors. Foreign investments would make up the shortage of capital and SOEs would acquire knowledge and technologies from foreign shareholders. It is desirable that the reinvestment in equitizing SOEs by Joint Venture Enterprises be allowed even though the upper limit of share holding could be imposed.
- (c) Acquisition of land use right: Many projects are facing difficulties in getting land use rights. In case of industrial projects, the implementation rates of the licensed projects at the end of 1993 was estimated to be around 25%. In particular, many investors have trouble of being claimed unexpected expenses for compensation. It is suggested that practical rules be worked out in deciding land use right and compensation. The regulation on the rents of land promulgated under Decision No. 1417 of December 31, 1994 would facilitate to some extent.
- (d) Skyrocketing price escalation for foreign investors: The rates of land use right, charges for accommodations and office floor rent, compensation for inhabitants and transportation charges have been enormously increased in recent years. Although prices of commodities and services needed for the people's ordinary life have become stable recently, prices for foreigners have risen surprisingly. It is desirable that prices be maintained within a reasonable range for foreign investors, particularly in the manufacturing sector, which would create employment opportunities for local workers.
- (e) Extra preferences for investors in the Hanoi Area: Investors in the northern areas would be handicapped in building and operating their businesses. Therefore, some extra privileges on tax incentives (in rates or effective period),

tariffs, rates of various services (electricity, water supply, transportation, etc.), price and charges for lease or rent of lands should be considered until the gap between the northern areas and southern region is mitigated.

- (f) Efficiency in licensing procedure: The SCCI has achieved a great deal in providing licenses for DFIs, and licensing procedures have been gradually improved. However, there still remains room for improvement in the following issues:

(i) A reform BOI is recommendable, because it will be required to manage domestic investments as well after enactment of the Law on Domestic Investment.

(ii) One-door services for both domestic and foreign investors should be strengthened. One-door services by BOI in Thailand and MIDA in Malaysia have been greatly appreciated by investors who want to make contact with a single authorized agency to submit application documents and to get investment licenses.

(iii) More efforts should be made to make the procedures transparent. It will be effective to publish a guide book for foreign investors, which will explain procedures and criteria for getting license, as well as information on available land and procedures to get land use rights.

(iv) Sales promotion for potential investors is desirable, by setting up an information gateway in the target countries for investment promotion.

- (g) Institutional organization to promote the technology transfer from foreign investors to SOEs: One of the major objectives of inducing foreign investments is to transfer advanced technologies to domestic enterprises. In many cases, foreign investors would like to procure some sorts of parts, materials and intermediate inputs domestically, but the capability of domestic producers is not sufficient to meet the required quality by foreign investors. In such a case, mediators could introduce such information to domestic enterprises, and encourage them to do efforts to produce the required items. Foreign investors would present their knowledge and technology to domestic enterprises in order to procure the items domestically. Therefore, the establishment of an institutional instrument called "Technology Mediator" could be effective to promote technology transfer.

- (h) Infrastructure improvement for industrial development: The level of infrastructure is still weak, and industrial development might be obstructed by such weakness. In this context, the development of industrial estates should be implemented at the earliest, together with the improvement of the transportation infrastructure.

C.2 Promotion of Domestic Investments

1) Contents of the "Domestic Investment Law"

In order to protect and encourage Vietnamese organizations, citizens, overseas Vietnamese, long-term foreign residents in Vietnam to make investments in various socio-economic fields in Vietnam's territory, the Law on Internal Investment Encouragement was promulgated on June 22, 1994, and it has been enacted at the beginning of 1995.

Economic activities to be promoted for domestic investments have been defined as follows:

- (a) Investment for establishment of production/business enterprises pertaining to all economic sectors;
- (b) Investment for expansion of production scale, enhancement of productivity, research on development and technological innovations of existing production/business enterprises; and
- (c) Purchase of stocks and shares of business enterprises, capital contribution to businesses including state-owned enterprises allowed to diversify forms of ownership.

Under the Law on Internal Investment Encouragement (Article 7), the domestic investments are promoted in the following manner:

- (a) Allocation of land in accordance with legal regulations on land;
- (b) Construction of floor space in the industrial areas;
- (c) Establishment and encouragement of investment promotion funds for medium and long-term investment loans.
- (d) Provision of investment capital by commercial banks and financial corporations to production/business enterprises.
- (e) Assistance in various investment promotion programs, including, (i) consultancy on management and business administration, (ii) legal consultancy, (iii) vocational and technical staff training, (iv) management know-how training and enhancing, and (v) provision of economic information;
- (f) Dissemination and transfer of technology

Under the Law, privileges are granted to the investments in the following areas (Article 9):

- (a) Investment areas :

- (i) Afforestation, perennial tree cultivation, breeding of aqua products, and off-shore fishing;
- (ii) Construction of infrastructure, development of urban public transport, development of educational, training, health, and ethnic minority cultural facilities; and scientific and technological research;
- (iii) Processing of crop and forestry products, and aqua products;
- (iv) Manufacturing of export products.
- (b) Investments in ethnic minority regions, highlands, islands and in other regions with harsh living conditions;
- (c) Investments in establishment of production enterprises using high-tech and/or extensive labor.

The Government shall stipulate the lists of branches and trades in each field of operations, as well as the limits of the regions, technological norms and the extent of labor employment, which are given preferential conditions.

Tax incentives and privileged financing are granted to encourage domestic investment, in the following manner:

- (a) Newly-established production/business enterprises: a 50% reduction of profit tax for a maximum period of two years.
- (b) Re-invest in production expansion and technology innovations shall be exempted from paying profit tax in a year following the year of re-investment.
- (c) Special encouragement projects shall be exempted from paying import duties with respect to equipment, machinery, and spare parts/accessories.

The Law on Internal Investment Encouragement specifies that the investing party shall be given priority in getting medium and long-term credits from various investment promotion funds. It also stipulates that the export manufacturing enterprises pertaining to the development priority list shall be granted export credits. However, it is uncertain whether such funds are practically made available to the investors.

2) Recommendations on Domestic Investment Promotion

- (a) The law has been promulgated. Detailed rules and provisions for implementation should be drawn up as soon as possible.

- (b) Since the promotion of domestic investments is closely related to the privatization program of SOEs, promotional preferences for SOEs under the Law on Domestic Investment Encouragement should be taken into account.
- (c) The Foreign Investment Law should be partially amended to approve reinvestments by the joint ventures and 100% foreign enterprises as domestic investments.
- (d) Transfer of technology by foreign investors will contribute to the efficient promotion of domestic investments. Therefore, some extra preferences (for instance, acceleration of application or additional tax incentives) should be given to the foreign investors who transfer their technologies to licensed domestic investors.
- (e) An authorized agency should be established to evaluate applications, to provide licenses, and to encourage domestic enterprises to get promotional preferences. It is desirable that SCCI be reorganized into BOI which would manage both foreign investments and domestic investments.
- (f) The most serious constraint for promotion of domestic investments is a shortage of investment capital to establish or expand productive enterprises. It is therefore recommended to promote a "Two-Step Loan" scheme under financial cooperation of international lending agencies.

C.3 Trade Promotion

1) Import and Export Control

Import and export control has been significantly relaxed in Vietnam. The country is moving in the right direction in the trade policy in line with the liberalization of the economy. This policy change would contribute to the trade promotion, however further improvement of the environment for foreign direct investment is needed, as the foreign direct investment is the key to promote exports of Vietnam.

(a) Certificates for foreign trade

Foreign trade of Vietnam has long been virtually monopolized by specified state-designated trading enterprises. Foreign trade was recently opened to manufacturers of export products. However, certificates for foreign trade were required for them to export their products and to import materials for production of the export products. To obtain certificates for foreign trade, the enterprises must the specified minimum invested capital and minimum annual production.

These conditions for obtaining certificates have been abolished for manufacturers. However, trading companies must still obtain certificates. The conditions for obtaining this certificate are to have a certified minimum working capital of 200,000 US\$ and a minimum level of turnover.

(b) Import permits

All products being imported into Vietnam are subject to import permits. However, except for the 15 products (in 1993) listed in Table C.07, only an import permit issued by the local department of the Ministry of Trade located in 6 major cities, is needed. This permit is mainly for the trade statistic purpose and is issued rather automatically.

For the specified 15 products, an import permit issued by the main office of the Ministry of Trade in Hanoi, as well as an import permit issued by the local department, was required for import. In other words, these 15 products were subject to a "dual permit system".

These 15 products were subject to the annual import quota determined by the Government. However, this quota has been reviewed from time to time and altered flexibly reflecting changes in demands and supplies of these products.

Since 1994, the products subject to the "dual permit system" have been reduced to 7 products.

(c) Export permits

Until June 30, 1994, all products were subject to export permits. However, since July 1, 1994 export permits have been abolished except for crude oil, rice and wood products. Export of these three products are subject to the "dual permit system", which is similar to the "dual permit system" for imports. These 3 products are subject to the annual export quota determined by the Government. The quota of these three products is flexibly reviewed in a way similar to the import quota.

2) Tariff Code

Import-export tax policies are managed by MOF. Based on proposals from the ministries and the economic development policy of the State, MOF prepares draft amendments of tax laws and ordinances including the Import-Export Law to submit to the Standing Committee of National Assembly. However, the responsibility of determining export and import tax as to be imposed on enterprises with foreign investment is assigned to the Ministry of Trade in order to realize "One-stop service" for foreign investors.

There are currently 28 different rates of custom duties ranging from 0% to 200% as shown in Table C.08. The average rate is approximately 12%, and almost four-fifth of products are subject to 20% or lower rates.

Consumer goods are generally subject to highest custom duties rates. Custom rates of certain categories of goods, together with examples of goods being subject to higher rates in a category, are shown in Table C.09 to provide a general idea on the level of custom rates in Vietnam. Custom rates of the goods subject to higher rates in Indonesia and Malaysia are also shown in the same table to make an international comparison. As seen in the table, custom rates of consumer products in Vietnam are ranging from 35% to 50%, except tobacco which is taxed at 120%. Custom duties of the selected goods are significantly higher than those of Malaysia, and slightly higher than those of Indonesia except household aluminum products.

An escalated custom rate system is adopted for motor vehicles. Under this system, custom duties are reduced according to value added. Custom duties on completed motor vehicles are high ranging from 50% to 200% as shown in Table C.10. The escalated custom rate system is also adopted in Indonesia and Malaysia, and the highest custom rate on completed motor vehicles is 200%.

In Vietnam, a duty drawback and exemption system is actually working well and contributing to export promotion. Under this system, importers are exempted from import duties when importing inputs, or alternatively can claim refund of duties already paid, if the products are exported after processing within 3 months.

3) Trade Policy and Vietnam Economy

In establishing trade policy in Vietnam, some characteristics of Vietnam economy should be taken into account. They are:

(a) Rampant smuggling

It is observed that a huge amount of goods is smuggled into Vietnam. The rampant smuggling would be attributable to various factors, including:

- Vietnam has long border lines in coastal areas and mountainous areas;
- Inadequate capability of the custom offices because of the limited number of officers and poor administration;
- Informal financial economy in Vietnam is large, and US dollars, gold and precious stones held by the people and not circulated in the official financial market are considerably large in amount. These unofficial money sources could be used for smuggling goods into Vietnam.

It is estimated that remittances from overseas Vietnamese amount to about 500 million US\$ a year, which is approximately one sixth of the monetary fund held in the official financial market.

(b) Limit of effectiveness of high custom duties policy

Effectiveness of high custom duties policy for protection of domestic industries is quite limited because of smuggling. High custom duties result in an increase in costs of goods officially imported and, consequently, domestically manufactured products are less competitive than smuggled goods. It should be noted that exemption or refund of custom duties can be applied to export goods but cannot be applied to domestic products competing smuggled goods in Vietnam.

(c) Import substitution and export promotion

Because of the prevailing smuggling, Vietnamese domestic products are competing with smuggled goods. In other words, Vietnamese products have to compete in both the export markets and domestic market. "Import substitution" is, in this respect, the same as "export promotion" in Vietnam, as goods

overcoming competition against smuggled goods can be exported to overseas markets.

(d) Trade policy in Vietnam (Import Substitution Policy vs. Export-Oriented Policy)

Most of the East Asian countries adopted the "Import Substitution Policy" at the initial economic development stage, then subsequently shifted to the "Export-Oriented Policy" in the course of economic development, though the length of the "Import Substitution Policy" period and the timing of shift to the "Export-Oriented Policy" vary among these countries.

However, it would not be practical to expect that Vietnam will adopt the same industrial development policies as the other East Asian countries, in view of the Vietnam economy as discussed above. Vietnam is obliged to pursue both the "Import Substitution Policy" and "Export-Oriented Policy" at the same time. The trade policy of Vietnam should be established in line with this target.

This policy is a fundamental policy not only for trade promotion but also for industrial development in Vietnam. It is suggestible that further in-depth discussions be made on this issue by higher authorities of the Government of Vietnam.

4) Recommendations for Trade Promotion

(a) Promotion of foreign investments

The key issue for the promotion of foreign trade of Vietnam, especially exports, is to produce products competitive in the international market. To produce internationally competitive products, enterprises should generally have the following factors in their organization:

- Production facilities (machinery and equipment)
- Products of international standards and quality
- Market information for developing internationally competitive new products
- Knowledge and skills for the management of enterprises
- Well trained working force for production of products, for development of new products, and for the administration of enterprises
- Funds, including foreign currency funds, to purchase production facilities, to develop products, and to market these products.

Enterprises in Vietnam are generally lacking most of these factors. As these factors are held by private sectors in the market-oriented economy, the only

solution to this problem would be to promote foreign private investments into Vietnam. Know-how of production, know-how of development of new products, and market information will initially be "imported" into Vietnam by direct investments, and all of this expertise will be transferred to the local economy through local management and workers. Foreign investments would be the "spring-board" for take-off of the Vietnam economy.

For promotion of foreign private investments, the investment environment should be further improved and become more favorable for foreign private investors, as discussed in Appendix-C.1.

EPZs provide relatively more favorable conditions for foreign investors. EPZs have a free trade condition and liberal regulatory environment including so-called "one window facilities" for various procedures needed for starting an operation. Enterprises operating in EPZs are also provided with favorable tax incentives. As current operation of EPZs is limited compared with the planned capacity, the current contribution of the enterprises in EPZs to the total export of Vietnam is still limited. However, it is expected that enterprises in EPZs will contribute to the export of Vietnam and to the national economy when they reach full operation.

The investment environment outside EPZs is to be also improved further. One window facilities, at least, are to be extended to other industrial estates (non-EPZ). It is desirable for trade promotion that provision of tax incentives and other incentives to the enterprises operating in non-EPZ industrial estates, should be considered by the Central Government and the local governments.

(b) Simplification of custom duties rates

The existing 28 different rates of custom duties should be reduced, say, to five or six. This will be one of the efforts to simplify the administration procedures. The highest rates should be reduced from 200% to less than 100% in a short term. The highest rates should be further reduced to less than 50% in a medium or long term to adjust to the level of custom duties in other countries.

(c) Taxation commensurate with industrial development policy

i) Lowering the rates of custom duties on consumer products and materials for processing:

The high import tariff policy will make import substitution industries more profitable, increase product costs, and result in an increase in smuggling.

The high tariff will also prevent improvement of productivity and efficiency of the domestic industry.

Considering the negative effects of the high tariff policy, the rates of custom duties on consumer products, materials and semi-products for input to production process should be significantly reduced. Even though the custom duties are one of the major sources of Government revenue, contributing nearly 20% of the total revenue, it is considered that Vietnam could generate a substantial amount of revenue by increasing indirect taxes. According to the explanation obtained from MOF, change in the custom duties system is now promoted in this direction, namely reduction of custom duties rates. In 1995, Vietnam joins AFTA of ASEAN (Association of South-East Asian Nations), and this will accelerate the movement of lowering rates of custom duties.

ii) Accelerated customs tariff rates on motor vehicles

Accelerated customs tariff rates are currently applied to motor vehicles in Vietnam. These rates should be maintained, at least for the time being, to develop the motor vehicle industry in Vietnam, for the following reasons:

- Motor vehicles are not easy to smuggle due to their physical size and weight, and
- Manufacturing of motor vehicles would be a key industry for industrial development of a country since it involves wide spread supporting industries.

iii) Tax incentives for export promotion

Tax concession measures, such as investment tax credit and tax concession for overseas market development costs, should be provided to qualified exporters meeting certain criteria in addition to exemption or refund of indirect taxes for exported goods.

iv) Abolishment of turnover tax and introduction of VAT

The Turnover Tax increases costs of domestic products and, accordingly, competitiveness of domestic products against smuggled goods deteriorates. Further, the Turnover Tax paid doubly in the preceding stages in the distribution channel can not be recouped by an exemption or refunding of the Turnover Tax when exporting. The Turnover tax also deteriorates the competitiveness of Vietnamese products in the international markets. For

these reasons, too, the turnover tax is to be abolished and VAT should be introduced, instead.

(d) Establishment of an institutional framework for trade promotion

i) Finance for foreign trade

Despite the financial reform, the majority of credits provided by the banks are still directed to the public sectors. A significant portion of finance for foreign trade is still being provided by Vietcombank, to which access by small and medium enterprise is rather limited. L/Cs issued by Vietcombank and other local banks often require endorsement by foreign banks. Local and foreign banks require a 100% of the L/C value to be deposited for the L/C to be issued, which in effect makes import on a cash basis. Further, borrowers do not have sufficient mortgages to raise funds from banks.

Under these circumstances, financing for foreign trade is quite tight in Vietnam. Improvement of the availability of bank loans including foreign currency funds is essential for promotion of foreign trade of Vietnam.

The Government credit policy, which is still oriented to finance the public sectors, should be modified, as the domestic funds in the official financial market are limited. One possible solution would be to establish a financial scheme for foreign trade. Under this scheme, finance for foreign trade is provided by a governmental agency to importers and exporters, including pre-shipment and post-shipment. This financial scheme facilitates foreign trade of Vietnam. Finance for export is relatively more important than for import, as it is limited to mainly well-established exporters and still the lending period is short, less than 6 months. Therefore, this scheme would make a significant contribution to export promotion of Vietnam.

ii) Trade insurance scheme

An export insurance scheme organized and funded by the Government should be considered to protect exporters from possible risks caused by unusual events such as restriction/prohibition of foreign exchange or import in the trading country, and natural disaster, which are usually not covered by private insurances.

iii) Export promotion agency

Vietnamese exporters are lacking information on export markets, as Vietnam's trading partners were mainly CMEA countries up to the mid-

1980s. Therefore, exports would be substantially promoted, if an export promotion agency is established by the Government to provide information on the western export markets to Vietnamese exporters.

A chart of inter-relationship of recommended points for trade promotion is illustrated in Figure C.2.

Table C.01 Comparison of Investment Environment in Selected Asian Countries (1/22)

	THAILAND	INDONESIA	CHINA	VIETNAM
1 INVESTMENT PROMOTION 1-1 Back ground and Policy Direction	<ul style="list-style-type: none"> - The government appreciates the great contribution of Foreign Investment to the growth of national economy, and decided to continue the promotion of Foreign Investment. - Rapid growth of national economy brought the expansion of income disparity, heavy concentration of economies into the Bangkok metropolis and environmental pollution. Therefore investment in rural regions and in knowledge intensive sectors will be given higher priority. - The 7th Economic Plan proposed the change of policy direction from expansion of economy to improve the quality of life and emphasized the stable 3.3.1 growth which realize the balance of economies. - The new guideline of investment promotion policy announced in April 1993 stated that the promotion of export oriented investment and improving of infrastructure should be continued and also proposed to provide more favorable privileges to the investment in rural regions than in major urban regions and also to encourage relocation of industries from urban to rural. - BOI expects the investment in supporting industries to strengthen the competitive ability of existing industries in particular. 	<ul style="list-style-type: none"> - Economic slump which affected by the low price of crude oil in the later half of 1980s made the policy direction change from the promotion of oil & gas production to encouraging of non-oil export and increase of job opportunities. - Major measures are on the deregulation for foreign investment. In April 1992, 100 % foreign investment was approved in conditions and in June 1994 these conditions were relaxed drastically. - A duty to increase gradually the Indonesian share of capital and management staff was eliminated. - Foreign investment was allowed in wider range of business than ever, even in Mass Media and Infrastructure Development including industrial estate. 	<ul style="list-style-type: none"> - The policy to induce foreign investment started in 1979 when China open its door to the world. - In 1986, Law on Foreign Enterprises was promulgated to promote export oriented and technology oriented investment. - The experimental renovation program to harmonize market economy with socialism has been adopted since 1984. The reform of state owned enterprises has gradually been encouraged. - Five Special Economic Zones (SEZ) and fourteen coastal port cities have been designated for inducing foreign investment. - Rapid economic growth in these years has brought two major problems, one of which is widening economic difference between coastal industrializing regions and inland agricultural regions, and another problem is the creeping inflation. - There still remain a problem in economic management system, because there is still working a centralized command regime which is facing challenges by local authorities. 	<ul style="list-style-type: none"> - After adopting "Doi Moi" in 1986, Vietnam has overcome the hyper inflation, and achieved a favorable economic growth in 1990s. - Foreign investment has been increased since the foreign investment law promulgated in 1987 and accumulated approved amount of capital exceeded 10 billion dollars in 1994. - Although the legislative system have been gradually established to encourage foreign investment, investors have still claimed more improvement of legal and administrative system and infrastructure. - "Doi Moi" is moving into a new stage to transform state owned enterprises end to increase the capacity of capital to accelerate industrialization and improvement of infrastructure.

	<p>benefit, accident and deaths.</p> <ul style="list-style-type: none"> • Rate of insurance: Each of government employer and employee shall pay 1.5 % of paid wages and salaries. The employer deducts insurance from paid wage & salary within the limit of 500 Bahts a day or 15000 Bahts a month and he shall pay it to the social insurance bureau. - By 1966, a pension for old age and a family allowance shall be established at a rate of 3 % of paid wages & salaries. - A Unemployment insurance shall be in effect after 1966. Rate shall be 5 % of paid wages & salaries. - The fund for worker's injury compensation • Every enterprise with more than 10 employee is forced to join the fund. • Rate: 0.2 ~ 4.5 % of paid wages & salaries, varied by the type of industry. 	<p>employs more than 10 workers or pays more than 1 million of wages and salaries shall be enforced to join this system.</p> <ul style="list-style-type: none"> • Workmen's compensation insurance: Rate of charge for enterprises varied by the kind of industry ranging from 0.24 % to 1.74 % of paid monthly wages and salaries. • Pension for old age: <ul style="list-style-type: none"> # When employees reach 55 years old or become impossible to work, it shall be paid. # Employees have to bear 3.7 % and employees have to bear 0.3 % of wages and salaries. • Life Insurance: Employers have to bear 0.3 % of paid wages and salaries. • Health Insurance: Employers have to bear 6.0 % and 3.0 % of paid wages & salaries for married employee and single employee respectively. 	<p>Retirement: 16-30 % of real wages should be paid to a insurance company.</p> <ul style="list-style-type: none"> • Unemployment Insurance: 1-2 % of real wages should be paid to a insurance company. • Fund for Housing Acquisition: 10-40 % of real wages should be reserved or paid to the Chinese partner (in case of JV) or the labor union (in case of 100 % foreign owned). • Fund for Medical Care: Although it should be reserved together with Housing Fund, the amount shall be decided by the employer, usually equivalent to 10-20 % of real wages. • Fund to Promote Welfare of Employee: Every enterprises ought to reserve it. The board of directors has to fix the rate, usually equivalent to 10 % of profits after taxes. - Local government forces enterprises to pay such expenses to the local authorities as charge on transferring of family register and charge on managing temporary workers, etc. 	<p>of labor for purpose of providing unemployment with benefits.</p> <ul style="list-style-type: none"> • 8 % is reserved in the social insurance fund of the company, and representative of union and employer decide how the fund has been spent. Usually the fund has been used for: <ul style="list-style-type: none"> # the expense to treat injuries or decease # allowances on occasion of pregnancy, childbirth and leaving to build up child. # condolence money - Employees have a duty to pay 10 % of received wages & salaries to the Social Insurance Fund.
5-12 Characteristics of Labor Market	<ul style="list-style-type: none"> - Number of workable population: 33.5 million in 1993 - Increasing number of working population: 700 thousand / year - Unemployment ratio: 3.1 % - Immigration of workers from North-eastern Region to Bangkok Metropolitan Region is dominant because of concentration of job opportunities in the Metropolis and its suburbs. Therefore, labor market in Bangkok is getting stringent and wage and salary is rising in these years. - In general engineers and managers have been in short supply. - Although strike of union spread in industrialized urban areas in early 1990s, it has been cooling down after 1993 because of economic recovery. 	<ul style="list-style-type: none"> - Number of workable population: 81 million in 1993 - Increasing number of working population: 2.5 million / year - Unemployment ratio: 3.0 % (estimated underemployment: 38 %) - Although supply capacity of workers is sufficient, shortage of managing stuffs and engineers brings raise of wages and salaries of these employees. - Strikes of union are spreading in these years (251 cases in 1992, 193 cases in 1993). Because many local employers don't keep even the regulated standard on the minimum wage except for foreign companies. 	<ul style="list-style-type: none"> - Number of workable population: 600 million at the end of 1992. 24.9 % of them are in urban areas and remaining majority are in rural areas. - Increasing number of working population in urban areas: 7.05 million / year - Unemployment ratio: 2.6 % - Rapid economic growth in coastal urban areas has brought relatively higher rise of price. Then, wages in major cities have enormously increased in these years, particularly wages in foreign enterprises. Although state owned enterprises have various facilities for their employees, foreign enterprises are lacking such facilities as serving the life of employees. Therefore, they have to pay various allowances besides wages and salaries. The real wages including social surcharges amount more (cont.) 	<ul style="list-style-type: none"> - Number of workable population: 30.97 million in 1992. - Increasing number of working population: estimated as 1 million / year - Unemployment ratio: estimated as more than 20 %. The overcoming of unemployment is, one of urgent problems in Vietnam. - The literacy rate is very high in Vietnam as of 87.6 %. Plenty supply of workers with better quality is one of favorable conditions to promote the industrial development. - It is said that the short supply of foreign language speakers bring a sudden rise of wages in specific occupations particularly in major urban areas.
