Summary of Discharge Measuring

1. Outline of Measuring

Discharge measuring were carried out at El-max and Hares Pumping Stations by using current meter. Executed date, agencies and results are as follows.

Case	Date	Executed Agency	Location
1 st	14 Aug 1994	EPADP,ID and JICA	Delivery side
2 nd	17 Aug 1994	JICA	Suction side
3 rd	07 Mar 1995	ID,EPADP	Delivery side

Results of measuring show available capacity from 66.3 to 111.7 percent of nominal pump capacities in disregard of head fluctuations.

List of Discharge Measuring

Name of P. Station	Case	Location	Head (m) (Nominal)	Velocity (m/s)	P.Discharge (Nominal) cum/s	Ratio (%)
El-Max(Old)	2 nd	Suction	3.25(4.00)	0.657	11.03(12.50*1)	88.2
	3 rd	Delivery	3.40(4.00)	0.454	58.25(12.50*5)	93.2
El-Max(New)	2 nd	Suction	3.35(4.00)	0.850	13.96(12.50*1)	111.7
Hares	1 st	Delivery	3.15(3.20)	0.293	15.20(8.00*3)	63.3
	2 nd	Suction	3.00(3.20)	0.595	6.19(8.00*1)	77.3
	3 rd	Delivery	3.00(3.20)	0.289	13.88(8.00*2)	86.7

Note ; In first case of Hares,it will be neglected because running numbers of pumps were changed from three to two sets during measuring.

2. Actual Reduction Ratio

As results of study by applying pump curve, actual reduction ratios of each pump capacity are estimated as follows.

The capacity of El-max(old) and Hares pumps were declined about 17 and 19 percent,respectively. Though El-max(new) pumps seem to keep full capacity up to now at only one measuring, further measurement shall be requested.

Available Ratio of Pumps

Name of Station	Case	Head (m)			Discharge (cum/s)				Avail. Ratio
		Actual (Ha)	Nominal (H)	Ratio Ha/H	Ratio (Qo/Q)	Nominal (Q)	Esti. Qo	Actual	
El-Max(Old)	2 nd	3.25	4.00	0.81	1.10	12.50	13.75	11.03	0.80
	3 rd	3.40	4.00	0.85	1.08	12.50	13.50	11.65	0.86
El-Max(New)	2 nd	3.35	4.00	0.84	1.09	12.50	13.62	13.96	1.02
Hares	2 nd	3.00	3.20	0.94	1.01	8.00	8.08	6.19	0.77
	3 rd	3.00	3.20	0.94	1.01	8.00	8.08	6.94	0.86

Summary of Alternative Plans (El-Max)

New El-Max No.1 Pump capacity Q=150.00-62.5 =87.5 cu.m/s

Building	Pump Types	No.	Case	Pump Facility			Structure Size (m)	Cost	Running Eff.	Remarks
				cum/s	sets	Dia.mm	W * L * H	'1000LE		
A (New)	1 (One)	1	A-1-1	17.50	6	φ 2500	31.0*47.7*12.0	49400	0.95	
		2	A-1-2	14.60	7	φ 2300	32.5*47.1*11.6	52000	0.96	
		3	A-1-3	12.50	8	φ 2300	37.0*46.0*10.9	56400	0.91	
	2 (Two)	1	A-2-1	17.50 8.75	5 2	φ 2500 φ 1800	33.6*47.7*12.0	53400	0.98	
		2	A-2-2	14.60 7.30	6 2	φ 2300 φ 1650	35.0*47.1*11.6	55600	0.98	
		3	A-2-3	12.50 6.25	7 2	φ 2300 φ 1650	39.5*46.0*10.9	59600	0.96	
B (Existing)	1 (One)	1	B-1-1	17.50	6	φ 2500	--No space--	---	0.95	
		2	B-1-2	14.60	7	φ 2300	5.5*47.1*11.6	45300	0.96	
		3	B-1-3	12.50	8	φ 2300	10.0*46.0*10.9	50000	0.91	
	2 (Two)	1	B-2-1	17.50 8.85	5 2	φ 2500 φ 1800	--No space--	---	0.98	
		2	B-2-2	14.60 7.30	6 2	φ 2300 φ 1650	8.0*47.1*11.6	46600	0.98	
		3	B-2-3	12.5 6.25	7 2	φ 2300 φ 1650	12.5*46.0*10.9	51200	0.96	

Note ; 1) One standby pump is included in big size pump facilities.

2) Initial cost will be up in proportion to increase of pump numbers and low running efficiency takes high running cost.

3) Case B-1-1 and B-2-1 are not acceptable due to no replacement spaces.
Existing pump facility ------ φ 2300 * 6 sets.

4) Additional pump houses in Case B are needed.

5) Structural defects are progressive in existing pump house without any repairing works. Its life is impossible to be with new pump facilities.

6) Pump running efficiencies are not so different in any case due to many pumps provided in El-max pump stations(No.1 and No.2).
Same size pump plans are proposed for cost and maintenance(spare parts).

7) Pump diameter in Case A-1-2 and A-1-3 are same,Case A-1-2 is economical.

8) Conclusion Case A-1-2 is recommended.

Summary of Alternative Plans (Hares)

Hares P.S Pump capacity Q=30.0 cu.m/s

Pump Types	No	Case	Pump Facility			Structure Size (m)	Cost	Running Eff.	Remarks
			cum/s	sets	Dia.mm	W * L * H	'1000LE		
1 (One)	1	1-1	10.00	4	φ 2000	16.7*38.8* 9.9	32100	0.67	
	2	1-2	7.50	5	φ 1650	18.2*38.0* 9.4	32800	0.80	
	3	1-3	6.00	6	φ 1500	21.7*36.8* 8.8	34200	0.85	
2 (Two)	1	2-1	10.00 5.00	3 2	φ 2000 φ 1400	19.7*38.8* 9.9	34200	0.81	
	2	2-2	7.50 3.75	4 2	φ 1650 φ 1200	21.7*38.0* 9.4	35000	0.85	
	3	2-3	6.00 3.00	5 2	φ 1500 φ 1200	25.2*36.8* 8.7	37400	0.91	
	4	2-4	9.00 7.00	1 4	φ 1800 φ 1650	18.5*38.4* 9.4	31300	0.88	

Note ; 1) One standby pump is included in big size pump facilities except Case 2-4.

2) Initial cost will be up in proportion to increase of pump numbers and low running efficiency takes high running cost.

3) Pump running efficiency shows poor in Case 1-1 and Case 1-2 and Case 2-2 shows same value.

4) EPADP said existing pump capacity of one unit is too big for dichage control.
Existing pump capacity 8.0 cum/s * 4 sets

5) Case 2-4 shows a superiority in numbers of pumps and running efficiency but has no standby pump for big size pump.

6) Pump diameter in Case 2-2,Case 2-3 and Case 2-4 are almost same. Same size pump plans are proposed for maintenance cost(spare parts).

7) Conclusion Case 1-2 is recommended.

Calculation of Total Head and Output of New Hares Pumps

1) Total Head

Total Head Ht(m) = Actual Head (Ha) + Pipe loss about Pump(Hp)

Actual Head (Ha) = Delivery water level - Suction water level

= WL.(-)2.30 - WL.(-)5.85 = 3.55 m

Delivery Water Level= WL of Mariut Lake + Canal loss

= WL(-)2.40 +0.10 = WL.-2.30

Suction Water Level = WL of Canal - Trash rack loss

= WL.(-)5.75 - 0.10= WL.-5.85

Pipe loss about Pump(Hp); Friction ,Expansion and Bed loss of pipe ,Flap valve loss, Outlet loss etc.

= 0.45 m

Total Head Ht(m) = WL.3.55 + 0.45 = 4.00 m

2) Out put of Motor

Out put (Kw) = $0.1634 * Q * Ht * (1+\alpha) / (Ep * Et)$

Q = Design capacity = 7.50 * 60 = 450 cu.m/mim

Ht= Total Head = 4.00 m

α = Allowance = 10 to 15 %

Ep= Pump efficiency =82 %

Et= Transmission efficiency =95 %

Out put(Kw)=0.1634*450*4*(1+0.10)/(0.82*0.95) = 430 Kw

Calculation of Total Head and Output of New EL-Max Pumps

1) Total Head

Total Head Ht(m) = Actual Head (Ha) + Pipe loss about Pump(Hp)

Actual Head (Ha) = Delivery water level - Suction water level

= WL.(+)0.75 - WL.(-)3.35 = 4.10 m

Delivery Water Level= WL.of Delivery Canal

= WL(+)0.75

Suction Water Level = WL of Canal - Trash rack loss

= WL.(-)3.25 - 0.10= WL.-3.35

Pipe loss about Pump(Hp); Friction ,Expansion and Bed loss of pipe ,Flap valve loss, Outlet loss etc.

= 0.40 m

Total Head Ht(m) = WL.4.10 + 0.40 = 4.50 m

2) Out put of Motor

Out put (Kw) = $0.1634 * Q * Ht * (1+\alpha) / (Ep * Et)$

Q = Design capacity = 14.60 * 60 = 876 cu.m/mim

Ht= Total Head = 4.50 m

α = Allowance = 10 to 15 %

Ep= Pump efficiency =83 %

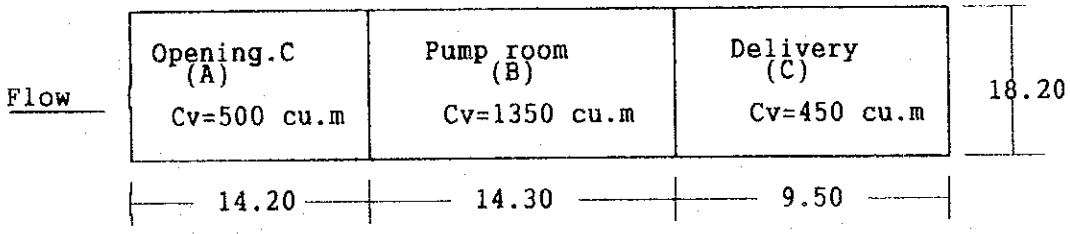
Et= Transmission efficiency =95 %

Out put(Kw)=0.1634*876*4.50*(1+0.10)/(0.83*0.95) = 900 Kw

Calculation of Piles

1) Out line of Structure

Cv ; Concrete Volume cu.m



2) Load

(A)	Dead Load	500 * 2.4	=	1200 ton
	Surcharge	0.3 t/sqm * 18.2 * 14.2	=	80
	Others		=	20
	Total	W1	=	1300 ton
(B)	Dead Load	1350 cum * 2.4	=	3240 ton
	Surcharge	0.5 t/sqm * 18.2 * 14.3	=	130
	Building	540 * 2.4	=	1300
	Machine	30 * 6	=	180
	Others		=	50
	Total	W2	=	5000 ton
(c)	Dead Load	450 * 2.4	=	1080 ton
	Surcharge	0.3 t/sqm * 18.2 * 9.5	=	50
	Others		=	20
	Total	W3	=	1150 ton

2) Bearing capacity of one pile

Pile Spec. R.C Pile D=0.5 m t=0.08 m L= 10,13 m

Strength of concrete Cc=210 kg/sq.cm

Bearing capacity of pile

$Ra = \pi * (D+t) * t * Cc / 3$

$= 3.14 * (0.50-0.08) * 0.08 * 210 * 10 / 3 = 73 \rightarrow 70$ton

Bearing capacity of foundation...Applied by Mayerhof'formula

$Ra = 43 * N * Ap / 3$

$Ap = \pi * D^{**}2 = 3.14*0.5^{**}2 = 0.196$ sqm

N = N value = 35

$Ra = 43 * 35 * 0.196 / 3 = 98$ ton

3) Numbers of pile

Nos = Load (ton) / Bearing capacity of pile

(A) Nos = 1300 / 70 = 19 → 20

(B) Nos = 5000 / 70 = 72 → 80

(B) Nos = 1150 / 60 = 17 → 20

Contents

List of Tables

List of Figures

List of Tables

List of Figures

ANNEX H. Project Costs

1.1 Conditions of Cost Estimation

The project costs are estimated under the following conditions;

i) The civil works are to be constructed on a contract basis, and the construction machinery and equipment required for the construction works will be provided by the contractors. Therefore, only depreciation costs of the machineries and equipment are included in the construction costs.

ii) The project costs consist of construction and associated costs. Components of the project costs are shown in Figure H-2-1 for priority development area and Figure H-2-3 for priority development project, respectively. Out of the associated costs, subsurface tile drain costs should be burden by farmers with a repayment period of 20 years.

iii) The exchange rate between Egyptian Pound (LE) and U.S. Dollar is fixed as follows;

U.S. Dollar = 3.374 Egyptian Pound (LE)

iv) The physical contingency related to the construction and associated costs is set at 10 percent of the direct costs. The price escalation for foreign currency is predicted applying the international inflation index established by the World Bank as shown below, and on the other hand, for local currency 19 percent of inflation index is applied making reference for index established by Central Agency for Public Mobilization and Statistics.

Year	Inflation Index (%)	Year	Inflation Index (%)
1994	100	2001	121
1995	103	2002	123
1996	106	2003	126
1997	109	2004	129
1998	112	2005	132
1999	114	2006	135
2000	118		

1.2 Construction Costs

1) Basic Rate

The basic rate of labor, material and construction equipment is estimated considering the prevailing rate in Egypt, as of July 1994.

2) Unit Costs

Unit costs of construction work are calculated, in accordance with the proposed items, which are classified by construction methods, since the construction of the project will be executed on a contract basis with the costs of overhead, profit and taxes used in current MPWWR projects.

3) Construction Costs

The construction costs are estimated based on the unit costs for individual working items. The construction costs will be divided into foreign and local currency portions. Local currency portion is to be estimated on the basis of current price in Egypt in 1994, while foreign portion is estimated on the CIF price in Egypt.

1.3 Associated Costs

Associated costs are composed of on-farm development and subsurface drain costs, land acquisition and compensation costs, engineering and administration costs, and operation and maintenance equipment costs. As for the land purchase price, prevailing land values in the vicinity of project area were used.

1.4 Project Costs

1) Project Costs

The project costs for priority development area and project are estimated and they are summarized as shown in Table H-2-1 and Table H-2-12, respectively.

2) Disbursement Schedule

The annual disbursement schedule for both the project costs as mentioned in the above is estimated on the basis of the implementation schedule, and their summaries are shown in Table H-2-10 and Table H-2-21.

1.5 Operation and Maintenance Costs

The operation and maintenance costs annually required for the projects are composed of the annual salaries and wages of O/M organization staff, administration and general expenditure, pump operation cost, equipment repair and maintenance costs, fuel cost and office maintenance costs.

The operation and maintenance costs for both the priority development area and project were estimated as shown in Table H-2-11 and Table H-2-22, respectively.

1.6 Replacement Costs

Some facilities, especially mechanical works have shorter useful life than the project life of 50 years, and require replacement of the facilities within the project life. The followings show the useful life of the mechanical works.

- Pumps and gates : 25 years
- O/M equipment : 10 year

5. Pump Engineer	18	-															
6. Structure Engineer	-	36															
7. Architect	-	24															
8. Mechanical Engineer	3	-															
9. Surveyor	-	18															
Sub-total	57	78															
Total	94	101															

Note: Foreign Consultants Local Consultants

Table H - 2 - 19 Administration Cost (Priority Development Area)

(unit: '000 LE)

1. Personnel Cost

a) Detailed Design Stage

EPADP Design Staff	1,200	LE/month	× 60 man-month	=	72
MED Design Staff	1,200	LE/month	× 60 man-month	=	72
Sub-total					144

b) Construction Stage

Project Management Dept.					
Project Manager	18,000	LE/year	× 1 person	=	18
Assistant Manager	14,400	LE/year	× 1 person	=	14
Secretary	9,600	LE/year	× 1 person	=	10
Administration Dept.					
Section Chief	12,000	LE/year	× 1 person	=	12
Accounting Clerk	6,000	LE/year	× 1 person	=	6
Assistant Accounting Clerk	4,800	LE/year	× 2 persons	=	10
Administration Clerk	4,800	LE/year	× 1 person	=	5
Typist	4,800	LE/year	× 2 persons	=	10
Land Acquisition Dept.					
Section Chief	12,000	LE/year	× 1 person	=	12
Clerk	4,800	LE/year	× 2 person	=	10
Assistant	4,800	LE/year	× 2 person	=	10
Typist	4,800	LE/year	× 2 person	=	10
Engineering Dept.					
Section Chief	12,000	LE/year	× 1 person	=	12
Civil Engineer	9,600	LE/year	× 2 persons	=	19
Technician	9,600	LE/year	× 4 persons	=	38
Topo-surveyor	8,400	LE/year	× 2 persons	=	17
Mechanical Dept.					
Driver (Vehicles)	9,600	LE/year	× 2 persons	=	19
Operator (Heavy equipment)	9,600	LE/year	× 2 persons	=	19
Security Guard	4,800	LE/year	× 3 persons	=	14
Janitor	4,800	LE/year	× 3 persons	=	14
Sub-total					279
279,000 LE × 4 years					= 1,116
Total					1,260

2. Equipment Costs for Construction Supervision

(unit: '000 LE)

Description	Q'ty	Unit Cost F/C	Unit Cost L/C	Amount F/C	Amount L/C	Amount Total
Station Wagon (4WD)	12	70	-	840	-	840

I. PROJECT ECONOMY

ANNEX I. PROJECT ECONOMY

List of Tables

Page

1. Priority Development Area

2. Priority Development Project

1. **Major Concepts Employed in Obtaining Net Income in Tables I-2-20 through I-2-29 in Hares Area and Tables I-2-37 through I-2-47 in Project Development Project Area(Omoum)**

Net Income Model --------> Net Income by Crop in Hares (Omoum) Area
Gross Income Model ------> Gross Income by Crop in Hares(Omoum) Area
Tables I-2-20 through I-2-29 [net income in Hares Area] Tables I-2-37 through I-2-47 [net income in Omoum Area]

Financial(Economic) Values of Major Crops and Inputs were taken from Ministry of Agriculture and the World Bank Report Tables I-2- through I-2-19

Net Income of Crop per feddan = (Crop Yield:ton/fed) x (F[E] Value) - (Input Qty) x (Price) n

Hares Area Net Income = Sum of Major Crops' Net Income in Hare
Omoum Area Net Income = Sum of Major Crops' Net Income in Omoum

Net Income by Crop without Project
Given current crop pattern(% crop share) multiplied by current yield per feddan multiplied by net income[gross income - production cost]

Net Income by Crop with Project
Crop pattern(% crop share with project) multiplied by the expected yield per feddan with drainage and/irrigation improvement under this JICA project multiplied by net income[gross income - production cost]

Reduction of Flood Damages
With project crop damages would be reduced. The expected valu of crop damages reduction was based on 1991 crop damages with the probability of 10% occurring. Table I-2-50.

Farm Cash Model ----> Representative farm household net income
Following the similar crop pattern prevailing in an area whe representative farm household is located.

Adjusting Factor
Last two columns of Tables I-2-49 was created in order to avoid over estimates of net financial(economic) incom 56.8 percent of Omoum Area (177,800 feddan) has no drainage improvement while the remaining 43.7 pecent (138,000 feddan) has drainage improvement.

Assume that 177,800 feddan is expected to increase at 48% (45%) of F(E) value while 138,000 feddan to increase at half of 48% (45%) of F(E) value. The weighted average turned out to be 0.79 for F and E value. Last column of Table I-2-49 indicate 0.79.

FIRR and EIRR and subsequent sensitivity analysis were based on adjusted net financial(economic) income in Omoum area. Tables I-2-58 and I-2-59 are a summary of FIRR and EIRR.

Allocation Factor

Net financial(economic) income in Omoum was allocated on the basis of allocation factor by area. Net financial(economic) income in Omoum minus that of Hares area was allocated by percentage crop share with project multiplied by 1.201, the correction factor. The result is indicated in the last column of Table I-2-51.

Allocation factor is used to obtain Table I-2-48, net financial and economic incremental crop value(income) by area.

2. Relations among Table I-2-20 and I-2-29

FINANCIAL(Table I-2-20)

Net Income(LE/fed)	-13.21 [1188.54+196.00 - 1397.75] Net Income without Project. This above figure goes to column 1 of Table I-2-2 [Wheat F Value in Hares]
	Net Income with Project. 151.52 [1366.82+225.40 - 1440.70] Economic net income with project goes to column 3 of Table I-2-29 [Wheat F Value in Hares]
Hares Area Net Income	-0.22 [-13.21 multiplied by 16,992 feddan crop area without project Hares] Net Income without Project. -0.22 goes to colum 1of Table I-2-29 [Wheat F Value in Hares]
	2.61 Net Income with Project goes to year 9 and thereafter, column 3 of Table I-2-19 [Wheat]

ECONOMIC(Table I-2-20)

Net Income(LE/fed)	252.21 This above figure goes to column 1 of Table I-2-29[Wheat E Values in Hares]
	469.11 This figure goes to column 4 of Table I-2-29 What E Value with project.
Hares Area Net Income	4.29 This figure goes to column 2 of Table I-2-29 [Wheat E Value in Hares]
	8.09 This figure goes to Year 9 and thereafter of column 4, Table I-2-2 [Wheat E Value]

The same method was applied to obtain Table I-2-47 from Table I-2-3 in Omoum Area.

Table I-2-1 Economic Price of Wheat and Maize (1994/1995 Price)

Item	Unit	Wheat	Maize
IBRD Project Prices For The Year 2005			
(1990 Constant Price)	US $	132	84
Adjusted to 1994/95 Price (+ 14%)	US $	150	96
Sea Freight and Insurance	US $	19	12
Cost C.I.F. Alexandria	US $	169	108
Converted to L.E ($1 = L.E 3.37)	L.E	570	364
Port charges, handling ,etc.	L.E	41	41
Wastage and losses (3% of C.I.F.)	L.E	17	11
Importer's margins, and other costs			
(5% of C.I.F.)	L.E	29	18
Cost ex - Alexandria	L.E	657	434
Delta price :			
Transport to Delta (150 Km)			
(L.E 0.13 / ton - Km)	L.E	20	20
Trader's margins and other costs.			
(10 percent of Alex. price)	L.E	66	44
Value at Delta market			
(50 Km) (0.13/ ton / Km)	L.E	7	7
Trader's margins etc.			
(10% of market Price)	L.E	76	51
Project farm - gate Price :			
(per ton)	L.E	**826**	**556**
Price per ardab			
Wheat=150kg, Maize=140kg	LE	**125**	**78**

Source: Tables 10-21 through 10-28 were taken from Irrigation Improvement Project,IPP,MPWWR,1994, Annex 3 Agricultural Aspect & Annexe 5 Economic Analysis.

Table I-2-2 Economic Price of Broad Beans (1994/1995 Price)

Item	Unit	LE
IBRD Project Prices For The Year 2005		
Of the Price of Canadian No. 1		
Western Red Spring Wheat (CW RRS)13.5%		
(1990 constant price)	US $	132
Adjust to US No.1 Soft Red Wenter FOB		
Atlantic Ports (132 x 0.85)	US $	112
Adjust to 1994 / 95 price (+ .14)	US $	128

Source: Hares Production Survey, 1995
Ton = Crop Area multiplied by Crop Share(%)multiplied by Yield/ton.
Net F(E) Value = Net Income(LE/Fed) without project taken from I-2-20(I-2-20A) to I-2-26(I-2-28A).
Net F(E) Value = Hares Area Net Income(Mill LE) with project taken from last columns, Table I-2-20(I-2-20A) to I-2-26(I-2_28A).

Table I-2-30 Irrigation System Improvement Costs for Priority Development Area

(unit : '000 LE)

Year	Project Cost 1/			Economic Cost 2/		
	F/C	L/C	Total	F/C	L/C	Total
1998	-	-	-	-	-	-
1999	-	-	-	-	-	-
2000	4,279	2,304	6,583	3,723	2,304	6,027
2001	4,280	2,305	6,585	3,724	2,305	6,029
2002	4,279	2,304	6,583	3,723	2,304	6,027
Total	12,838	6,913	19,751	11,170	6,913	18,083

Note: 1/ : Total project costs are estimated making reference to West Nubariya Agricultural Intensification Project, as shown below:
872 LE/ha(366 LE/fed.) x 22,600 ha = 19,751,000 LE
Foreign and local portions are estimated on the basis of 65 and 36 percent of total cost.

2/ : Economic costs = Project cost x 0.87

Table I-2-31 Estimation of Economic Project Costs for Priority Development Area

(unit : '000 LE)

Year	Hares Area Project Cost 1/ (1)		Priority Develop. Project Cost 2/ (2)		Total Allocation Cost (3)		Allocated Costs for Agric. Sector 3/ (4)=(3)x0.7		Allocated Priority Dev. Project Costs for Agric. Sector (5)=((2)-(3)+(4))x1.1	
	F/C	L/C	F/C	L/C	F/C	L/C	F/C	L/C	F/C	L/C
1998	9,546	5,556	6,356	2,748	-	-	-	-	6,992	3,023
1999	905	701	807	319	-	-	-	-	888	351
2000	37,849	25,357	23,387	7,666	10,345	1,843	7,242	1,290	22,312	7,824
2001	44,769	23,144	32,127	10,460	19,058	4,363	13,341	3,054	29,051	10,066
2002	37,537	16,676	41,516	12,617	27,814	6,892	19,470	4,824	36,489	11,604
Total	130,606	71,434	104,193	33,810	57,217	13,098	40,053	9,168	95,732	32,868

Note: 1/ : Project costs mentioned in the above do not include the price escalation cost (see Table H-2-11)
2/ : Project costs exclusive of contingency
3/ : Allocating share for Agricultural sector = Total allocation costs x sharing ratio 0.7
Hares and Abis pumping station discharge = 444 MCM
Omoumu main drain discharge = 843 MCM
Other discharge = 542 MCM
Total =1,829 MCM
Sharing ratio = (444 + 843)/1,829 = 0.70

Year	Allocated Priority Develop. Project Costs for Hares Area 4/ (6)=(5)x0.125			Total Hares Area Project Costs (7)=(1)+(6)			Economic Total Hares Area Project Costs 5/ (8)=F/C of (7) x0.87		
	F/C	L/C	Total	F/C	L/C	Total	F/C	L/C	Total
1998	874	378	1,252	10,420	5,934	16,354	9,065	5,934	14,999
1999	111	44	155	1,016	745	1,761	884	745	1,629
2000	2,789	978	3,767	40,638	26,335	66,973	35,355	26,335	61,690
2001	3,631	1,258	4,889	48,400	24,402	72,802	42,108	24,402	66,510
2002	4,561	1,451	6,012	42,098	18,127	60,225	36,625	18,127	54,752
Total	11,966	4,109	16,075	142,572	75,543	218,115	124,037	75,543	199,580

Note: 4/ : Allocated costs for Hares area = (5) x Hares area ratio of 0.125 (22,600 ha/180,710 ha)
5/ : Economic project costs = Project costs for foreign currency portions x Standard Conversion Factor (SCF) of 0.87

Table I-2-32 Operation and Maintenance Cost for Priority Development Area

(unit : '000 LE)

Description	Financial O & M Costs		Economic O & M Costs		
	Priority Dev. Area (Hares Area) (1)	Priority Dev. Project (2)	Priority Dev. Area (3)	Priority Dev. Project Allocat. Cost for Agri. Sector and Hares Area 2/ (4)	Total (5) = (3) + (4)
Salary and wage	451.2	230.8	451.2	20.2	471.4
Administration and general expenditure	45.1	23.1	45.1	2.0	47.1
Pump operation costs	291.9	779.3	291.9	68.2	360.1
Equipment repair and maintenance costs	611.5	368.0	532.0 1/	28.0	560.0
Fuel costs	28.7	9.6	9.6	0.8	10.4
Drain maintenance costs	420.6	402.2	365.9 1/	35.2	401.1
Office maintenance costs	20.1	20.1	20.1	1.8	21.9
Total	1,869.1	1,833.1	1,715.8	156.2	1,872.0

Note; 1/ : Economic O & M costs = equipment repair and maintenance costs x 0.87
2/ : Economic O & M costs = O & M costs for priority development project x 0.125 x 0.70

Table I-2-33 Replacement Costs for Priority Development Area

(unit: '000 LE)

Description	Financial Replacement Costs		Economic Replacement Costs		
	Priority Dev. Area (Hares Area) (1)	Priority Dev. Project (2)	Priority Dev. Area 1/ (3)	Priority Dev. Project Allocat. Cost for Agri. Sector and Hares Area 2/ (4)	Total (5) = (3) + (4)
Pump equipment	25,500 (year: 2022)	29,071 (year: 2008) 40,700 (year: 2022) 29,071 (year: 2033)	22,185 (year: 2022)	2,213 (year: 2008) 3,098 (year: 2022) 2,213 (year: 2033)	
Gate equipment		3,276 (year: 2022)		249 (year: 2022)	
Total	25,500	102,118	22,185	7,773	29,958

Note: 1/ : Economic replacement costs = Financial replacement costs x 0.87
2/ : Economic replacement costs = Replacement costs for priority development project x 0.125 x 0.70 x 0.87
