## PREFACE

In response to a request from the Government of the Republic of Ecuador, the Government of Japan decided to conduct a Study on the Master Plan for the Port of Guayaquil and entrusted the study to the Japan International Cooperation Agency (JICA).

JICA sent to Ecuador a study team headed by Mr. Hajime Kawate, Executive Director of the Overseas Coastal Area Development Institute of Japan and composed of members from this institute and the company, Nippon Koei Co., Ltd, three times between July 1994 and November 1995.

The team held discussions with the officials concerned of the Government of Ecuador, and conducted field surveys at the study area. After the team returned to Japan, further studies were made and the present report was prepared.

I hope that this report will contribute to the promotion of the project and to the enhancement of friendly relations between our two countries.

I wish to express my sincere appreciation to the officials concerned of the Government of the Republic of Ecuador for the close cooperation they extended to the team.

Kimio FUJITA

President

Japan International Cooperation Agency

## LETTER OF TRANSMITTAL

November 1995

Mr. Kimio FUJITA  
President  
Japan International Cooperation Agency

Sir,

It is my great pleasure to submit the Final Report for the Study on the Master Plan for the Port of Guayaquil in the Republic of Ecuador.

This report is the outcome of works between July 1994 and November 1995 including three field surveys during the period. The work was undertaken by the Overseas Coastal Area Development Institute of Japan (OCDI) and Nippon Koei Co., Ltd as per the contract with the Japan International Cooperation Agency (JICA).

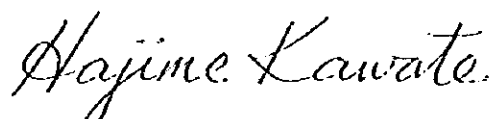

Based on the findings of these surveys and utilizing data and information collected, and along the line of the scope of work which was agreed upon by both governments, the report is formulated to cover the following subjects;

- (1) To formulate a mater plan for the Port of Guayaquil up to the year 2010,
- (2) To conduct a feasibility study of a short-term improvement plan for the Port of Guayaquil for the period up to the year 2003.

On behalf of the study team, I would like to express my deep appreciation to the Government of Ecuador, the Port Authority of Guayaquil and other authorities concerned for their thoughtful cooperation and assistance and for the heartfelt hospitality which they extended to the study team during our stay in Ecuador.

I am also greatly indebted to the Japan International Cooperation Agency, the Ministry of Foreign Affairs, the Ministry of Transport and the Embassy of Japan in Ecuador for giving us valuable advice and assistance at every step in the whole course of the study.

Yours faithfully,

Hajime Kawate  
Leader, Team for the Study on the  
Master Plan for the Port of Guayaquil  
in Republic of Ecuador

## CONTENTS

### EXECUTIVE SUMMARY

### PART I PRESENT SITUATION OF THE PORT OF GUAYAQUIL

Chapter 1	GENERAL DESCRIPTION .....	I- 1- 1
A.	History .....	I- 1- 1
B.	Natural Condition .....	I- 1- 2
C.	Socio-Economic Activity .....	I- 1- 7
Chapter 2	REGIONAL DEVELOPMENT RELATED TO THE PORT OF GUAYAQUIL .....	I- 2- 1
A.	National Development Policy .....	I- 2- 1
B.	New Institutional Scheme on Foreign Trade .....	I- 2- 4
C.	Regional Development Plan Related to the Development Port Activities .....	I- 2-17
Chapter 3	OVERVIEW OF THE PORTS IN ECUADOR .....	I- 3- 1
A.	Ports in Ecuador .....	I- 3- 1
B.	Port Activities in Major Ports .....	I- 3-10
C.	Administration and Operation .....	I- 3-20
Chapter 4	NATURAL CONDITION .....	I- 4- 1
A.	Meteorological Condition .....	I- 4- 1
B.	Geographical Condition .....	I- 4- 7
C.	Oceanographic Condition .....	I- 4- 8
D.	Soil Condition .....	I- 4-19
E.	Earthquake .....	I- 4-24
F.	Characteristics of Estuary and River .....	I- 4-27
Chapter 5	PRESENT SITUATION ON ENVIRONMENT .....	I- 5- 1
A.	General .....	I- 5- 1
B.	Environmental Component .....	I- 5- 4
Chapter 6	PORT FACILITIES AND LAYOUT .....	I- 6- 1
A.	General .....	I- 6- 1
B.	Layout of Port Facilities at Terminal .....	I- 6- 5
C.	Channel and Basin .....	I- 6-14
D.	Improvement Work under Planning by APG .....	I- 6-17
Chapter 7	ENGINEERING ASPECT .....	I- 7- 1
A.	Structure of Existing Port Facilities .....	I- 7- 1
B.	Construction Work of Existing Facilities .....	I- 7- 7
Chapter 8	PORT ACTIVITIES OF THE PORT OF GUAYAQUIL .....	I- 8- 1
A.	Handling Cargo .....	I- 8- 1
B.	Calling Vessel .....	I- 8- 8
Chapter 9	UTILIZATION OF PORT FACILITIES .....	I- 9- 1
A.	Utilization of Berth .....	I- 9- 1
B.	Warehouse and Open Shed .....	I- 9- 9
C.	Navigation Operation in Channel .....	I- 9-10
D.	Utilization of Quarantine and Basin .....	I- 9-12
E.	Access Road and Land/Water Area in the Vicinity .....	I- 9-13

Chapter 10	CARGO HANDLING SYSTEM .....	I-10- 1
A.	General .....	I-10- 1
B.	Labor Formation .....	I-10- 1
C.	Cargo Handling .....	I-10- 2
D.	Container Handling Equipment .....	I-10- 7
E.	Breakbulk Cargo Handling Equipment .....	I-10-10
F.	Maintenance of the Equipment .....	I-10-12
Chapter 11	MANAGEMENT AND OPERATION .....	I-11- 1
A.	Organization of APG .....	I-11- 1
B.	Personal Management .....	I-11- 4
C.	Tariff System .....	I-11- 7
D.	Financial Situation .....	I-11-11
E.	Port Operation .....	I-11-14
<b>PART II MASTER PLAN OF THE PORT OF GUAYAQUIL</b>		
Chapter 1	DEVELOPMENT CONCEPT OF THE PORT OF GUAYAQUIL .....	II- 1- 1
A.	Modernization Policy .....	II- 1- 1
B.	Function of Each Commercial Port .....	II- 1- 5
C.	Relationship between Regional Development and Port Development .....	II- 1- 9
D.	Basic Concept of the Development Plan of the Port of Guayaquil .....	II- 1-17
Chapter 2	DEMAND FORECAST FOR 2010 .....	II- 2- 1
A.	Socio-economic Frame for the Target Year .....	II- 2- 1
B.	Methodology for Demand Forecast .....	II- 2- 5
C.	Cargo Volume Forecast .....	II- 2- 5
D.	Estimation of Containerization .....	II- 2-32
E.	Forecast by Cargo Type .....	II- 2-40
F.	Vessel in 2010 .....	II- 2-42
Chapter 3	LONG TERM DEVELOPMENT PLAN .....	II- 3- 1
A.	Precondition of Calculation of Physical Requirement .....	II- 3- 1
B.	Efficiency of Cargo Handling .....	II- 3- 5
C.	Physical Requirement .....	II- 3- 8
D.	Layout Plan .....	II- 3-19
E.	Port Related Industry and Commercial Activities .....	II- 3-31
Chapter 4	ROUGH STRUCTURAL DESIGN OF MAJOR FACILITIES .....	II- 4- 1
A.	General .....	II- 4- 1
B.	Design Conditions .....	II- 4- 1
C.	Structural Type of Berth .....	II- 4- 6
Chapter 5	CONSTRUCTION WORK AND ROUGH COST ESTIMATE .....	II- 5- 1
A.	Conditions for Implementation of Construction Work .....	II- 5- 1
B.	Conditions of Cost Estimate .....	II- 5- 5
C.	Construction Cost for the Master Plan .....	II- 5-12
Chapter 6	PORT MANAGEMENT .....	II- 6- 1
A.	Principles of Management .....	II- 6- 1
B.	Identification of Problems .....	II- 6- 5
C.	Port Management of APG in Future .....	II- 6-11
D.	Privatization of Port .....	II- 6-17

Chapter 7	CARGO HANDLING SYSTEM .....	II- 7- 1
A.	General Conditions .....	II- 7- 1
B.	Proposed Cargo Handling System .....	II- 7- 4
C.	Proposed Container Handling System .....	II- 7- 5
D.	Proposed Breakbulk Cargo Handling System .....	II- 7- 9
E.	Proposed Bulk Cargo Handling System .....	II- 7-11
F.	Maintenance of the Cargo/Container Handling Equipment .....	II- 7-11
Chapter 8	INITIAL ENVIRONMENTAL EXAMINATION .....	II- 8- 1
A.	Policy on Environment in Ecuador .....	II- 8- 1
B.	Strategy for Environmental Consideration .....	II- 8- 7
C.	Initial Environmental Examination .....	II- 8- 8

### **PART III FEASIBILITY STUDY OF THE PORT OF GUAYAQUIL**

Chapter 1	BASIC POLICY FOR SHORT TERM PLAN .....	III- 1- 1
A.	Short Term Prospect of the Circumstance of Ports in Ecuador .....	III- 1- 1
B.	Objective of the Short Term Plan .....	III- 1- 1
Chapter 2	DEMAND FORECAST FOR SHORT TERM PLAN .....	III- 2- 1
A.	Condition .....	III- 2- 1
B.	Cargo Volume in 2003 .....	III- 2- 1
Chapter 3	PHYSICAL PLAN OF PORT FACILITIES .....	III- 3- 1
A.	Physical Requirement in 2003 .....	III- 3- 1
B.	Short Term Plan .....	III- 3- 6
Chapter 4	PRELIMINARY DESIGN .....	III- 4- 1
A.	General .....	III- 4- 1
B.	Design Conditions .....	III- 4- 1
C.	Preliminary Design .....	III- 4- 1
Chapter 5	CONSTRUCTION WORK PLAN .....	III- 5- 1
A.	Premise of Construction Work Plan .....	III- 5- 1
B.	Construction Work Method .....	III- 5- 4
C.	Construction Schedule .....	III- 5- 8
Chapter 6	COST ESTIMATE .....	III- 6- 1
A.	Conditions of Cost Estimate .....	III- 6- 1
B.	Construction Cost of Short-Term Plan .....	III- 6- 2
Chapter 7	PORT MANAGEMENT AND OPERATION PLAN .....	III- 7- 1
A.	Background of Short Term Plan .....	III- 7- 1
B.	Role of Port Authority in Short Term Plan .....	III- 7- 3
Chapter 8	CARGO HANDLING SYSTEM .....	III- 8- 1
A.	General Conditions .....	III- 8- 1
B.	Proposed Container Handling System .....	III- 8- 2
C.	Proposed Breakbulk Cargo Handling System .....	III- 8- 7
Chapter 9	ECONOMIC ANALYSIS .....	III- 9- 1
A.	Purpose of the Economic Analysis .....	III- 9- 1
B.	Prerequisites of the Economic Analysis .....	III- 9- 2
C.	Economic Prices .....	III- 9- 5
D.	Costs .....	III- 9- 7
E.	Benefits of the Project .....	III- 9-12
F.	Evaluation .....	III- 9-21

Chapter 10 FINANCIAL ANALYSIS .....	III-10- 1
A. Methodology of the Financial Analysis .....	III-10- 1
B. Presuppositions of Financial Analysis .....	III-10- 3
C. Financial Internal Rate of Return (FIRR) .....	III-10- 7
D. Evaluation .....	III-10-10
Chapter 11 ENVIRONMENT IMPACT ASSESSMENT .....	III-11- 1
A. Basic Concept .....	III-11- 1
B. Environmental Impact by the components selected through Initial Environmental Examination .....	III-11- 4
C. Overall Evaluation of Environmental Impact and Conclusion .....	III-11- 6
Chapter 12 OVERALL EVALUATION .....	III-12- 1

## PART IV CONCLUSION AND RECOMMENDATION ..... IV-1

## **EXECUTIVE SUMMARY**

## EXECUTIVE SUMMARY

The Study on the Master Plan for the Port of Guayaquil in the Republic of Ecuador

July 1994 - November 1995

Counterpart: Port Authority of Guayaquil

### Background and Objectives of the Study

1. The port of Guayaquil is located in the most inner part of the Gulf of Guayaquil, the mouth of which opens on the southern coast facing the Pacific Ocean with a very vast extension. The city of Guayaquil which contains the port area of Guayaquil is the most populated in the Republic of Ecuador and is situated about 300 km southwest of Quito, the capital of the Republic of Ecuador.
2. Thanks to the economic activities of this adjacent big city and the very blessed natural conditions of the port, the port of Guayaquil thrives as the biggest and most active port in the Republic of Ecuador.
3. In recent years, the volume of cargoes handled at the port of Guayaquil has shown a strong tendency to increase. By the latest figure obtained, the cargo volume through the port is about 3 million tons per year and this represents 70% of the total cargo volume through four commercial ports in the country.
4. The present container terminal of the port was rather newly developed in the beginning of the 1980's. But the cargo volume through the ports in the Republic of Ecuador is rapidly increasing.
5. With such a rapid growth in the cargo volume, it is estimated that the cargo volume at the port of Guayaquil will exceed the capacity of the port in the near future.
6. Under these conditions, the Government of the Republic of Ecuador requested the Government of Japan to carry out the Study. For the preliminary study and the arrangement of the scope of the Study, JICA has sent a preparatory study team to the Republic of Ecuador and both sides have agreed on the Scope of Work for the Study.
7. Based on the Scope of Work agreed on between both sides, the study aims to formulate a master plan for the Port of Guayaquil up to the year 2010, and to conduct a feasibility study of a Short Term plan for the Port of Guayaquil for the period up to the year 2003.

### Method of the Study

8. For the Master Plan, cargo volume in 2010 are forecasted in the two cases relating the increase ratio of GDP, an actual rate base and a planning rate base. On the other hand, two different levels in cargo handling efficiency are selected as basis for calculation of required number of berths in these two cases. With such conditions the two layout plans are prepared through examination on some varied cases in future cargo volume, cargo handling efficiency and location of each terminal.
9. The Short Term Plan with a target year of 2003 is formulated under the framework of the Master Plan, with actual growth rate of GDP and assuming container terminal to

be located at the existing area of the Master Plan considering the policy of APG. The Short Term Plan is evaluated from various viewpoints including important factors such as of the national economy, financial situation of APG and environment.

## Outline of the Projects

10. The basic target of the development of the port of Guayaquil up to the target year of the Master Plan is identified as follows.

- (1) the core of distribution of international trading cargo
- (2) the core of regional and economic development

11. In order to accomplish the target, the development and planning of the port of Guayaquil should be based on the following eight subjects.

- (1) to realize the modernization of port activity
- (2) to cope with the increasing trend of foreign trade and growing trend of containerization
- (3) to assist the promotion of exports
- (4) to support industrial development in Guayas Province and in Ecuador
- (5) to maintain efficiency with regard to port management
- (6) to offer good service to port users
- (7) to consider the environment surrounding the port including mangrove area
- (8) to obtain economic and financial soundness including appropriate investment

12. Under the framework of the Master Plan considering the policy of APG, the Short Term Plan with a target year of 2003 is proposed as summarized in the table below.

Target Year	Master Plan		Short Term Plan	
	2010		2003	
Cargo Handling Efficiency	High	Medium	Gradually progress	Rapid Progress
Required Number of Berth				
Container terminal	3	3	2	2
Multi-Purpose terminal	9	10	8	7
Bulk terminal	1	1	1	1
Main Facilities to be Developed	Container berth (185 m × 1) Multi-purpose berth (185 m × 4)  Related work road and pavement	Container berth (230 m × 3) Multi-purpose berth (185 m × 2)  Related work road and pavement	Container berth (185 m × 1) Multi-purpose berth (185 m × 1)  Related work road and pavement	Container berth (185 m × 1)   Related work road and pavement
Project Cost (Million sures)	200,214	240,631	78,119	55,784

## **Evaluation**

13. The Economic Internal Return Rate (EIRR) calculated based on the countable benefit is 24.7 per cent and the Financial Internal Return Rate (FIRR) is 25.4 per cent. So, the project is judged as being feasible, both economically and financially.

14. Some technical problems are found in the water area in front of the berths on maintaining the navigable depth, but these are of no importance. Soil conditions of the area concerned present no problem. Furthermore, the EIA revealed no unfavorable impact, thus the execution of this project will cause no problems for the environment.

15. When considering important factors which would affect this project, it can be duly said that this proposed project should be implemented in a deliberate and well harmonized way with the general movement of modernization.

## **Recommendation**

16. To ensure the smooth implementation of this proposed plan of the port of Guayaquil, the Study Team recommends the following items. The measures which have been already implemented or planned according to the modernization program by APG may be included. However, these items are mentioned for further promotion of them.

- (1) Proper application of privatization
- (2) Establishment and utilization of information system
- (3) Upgrading of APG's technical function
- (4) Establishment of environmental policy
- (5) Reinforcement of personnel policy and training system
- (6) Systematic and flexible planning and project implementation
- (7) Establishment of effective maintenance system
- (8) Reinforcement of port promotion
- (9) Regional development

## Chapter 1 GENERAL DESCRIPTION

### A. History

1. In ancient times, the present territory of Ecuador was occupied by different tribes scattered in the region. In the first half of the 15th century, the old Kingdom of Quito settled its directorship over these small states. Later, the Kingdom of Inca which originated from Cuzco absorbed these tiny states using its overwhelming military force (circa 1460).

2. The Kingdom was ruined by the Spanish invaders (Conquistadores) in 1532, after which the territory of Ecuador became a Spanish colony. This colonial status continued to the 1820's leaving an enormous trace upon every aspect of Ecuadorian life that is still felt today. Belonged to the Domain on the Viceroy (a division of the Spanish colony in the South and Central America) of Peru; it entered under the control of the Domain of Nueva Granada later.

3. However, by reason of the difference in custom of natives and its geographically-isolated location, Ecuador had made itself gradually into a self-governing community since 1563 and established an autonomous legal and legislative organization named the Audencia in Quito. Today's boundary of the Republic of Ecuador was decided in consideration of the territory of this Audencia de Quito.

4. From the early 19th century, independence movements began emerge all over the Spanish colonies in Latin America. Simon Bolivar of Venezuela assumed leadership of these movements in the northern and western parts of South America. Under his leadership, General Antonio Jose de Sucre defeated the Spanish army still dominating the area of Ecuador in Pichincha on May 24, 1822 and Quito had accomplished its long cherished hope of independence as a part of the Gran Colombia built by Simon Bolivar, together with Azuay and Guayaquil. After the death of Bolivar, Ecuador separated itself from the Gran Colombia and these three parts united into an independent country named the Republic of Ecuador in 1830.

5. Ecuador experienced a succession of political conflicts between the politic sects in order to consolidate its democratic structure. But, as a result those long struggles and disputes, a democratic government and civilian control of the nation finally prevailed in 1979. Since then the Republic of Ecuador has made efforts to become more prosperous and modernized, and to maintain a political environment.

6. Since the down of the modern age, Guayaquil has been noted as an important port city situated in the middle of the passage way in the Pacific Ocean, along with the western coast of South America. Ship routes connect Guayaquil with Panama and Nicaragua to the north, and Callao and Santiago de Chile to the south. In the 18th century, it played an important role as the supply depot for the shipyard in Callao. At the end of the 19th century, it strengthened its position as the number one port of the country with the boom in cacao exports. The port of Guayaquil has continued to thrive under the striking growth in the seaborne trade of Ecuador in the last decades.

## B. Natural Condition

7. Ecuador is located in the northern part of South America facing the Pacific Ocean and crossing the equator where the country gets its name. It borders on the Republic of Columbia in the north, on the Republic of Peru in the south and the east. The Galapagos Islands, which have become famous by Darwin's theory "The Evolution Species", also belong to Ecuador and are situated some 1,000 km away from the Ecuadorian Coast.

8. From the geographic points of view, Ecuador is divided into three zones; the coastal or littoral zone, the highlands, and the Amazon, the jungle plains at the west of the country. These three zones have their own characteristics in the topographical and environmental aspects. The coastal zone is a plain area with the ground elevations under 800 m. This zone shows climate variations according to a combination of the marine current movement, the river characteristics and the speed and direction of the continental winds. The average annual temperature of Guayaquil, the largest city in Ecuador with 1.8 million inhabitants, located almost in the center of the coastal zone is 25.0 degree centigrade. Due to the influence of the cold current of "Humboldt" the temperature of Guayaquil is not so high as other coastal regions of the world located on the equator.

9. The Highlands consist of the mountain ranges with ground elevations between 1,500 and 5,000 m. Quito, the capital of Ecuador with 1 million population, is located in the center of the inter Andes Alley at an elevation of 2,800 m. The temperature of the highlands vary according to ground heights. Quito, though located right on the equator, has an average annual temperature of 14.0 degree centigrade. The Amazon or Oriental Region constitutes a vast plain covered by virgin forests, and is the origin of the Amazon River. It is scarcely populated.

10. The coastal zone including the study area is defined as a plain area extended from the north end to the south end of the country with some 530 km length having the 20-200 km width. There are four provinces within this zone, that is, Esmeraldas, Manabi, Guayas and El Oro from the north to south. (See, Figure I-1-1) The coastal area facing the Pacific Ocean is featured with beaches, dunes, rocks, cliffs, mangroves etc. and the land use patterns in the area are categorized largely as shown in Table I-1-1. According to this table, Guayas province occupies large shares by each item, especially in Mangrove. Mangroves in the Gulf of Guayaquil are predominant.

11. The topographical characteristics of the coastal line in Guayas Province are summarized as follows.

(1) From the end of the Province to Salinas (84 km):  
Coastal alignment in this area is divided into the two categories of sandy littoral string and cliff. The sandy littoral strings have many hyper-saline lagoons behind them. Usually, the sandy littoral barriers or dunes are developed and the lagoons are enclosed by barriers or dunes. The strings are also dotted with rocky points. While, the cliff has rocky headlands at someplace and are eroded by the wave attacks of the Pacific Ocean. In this area, there is a estuary which supplies the sea water for the shrimp factories located there.

(2) Salinas-Playas (90 km):  
In this area, the above mentioned strings and cliffs appear alternately. At the strings, the shore is suffered by intense altered erosion and accretion process.

(3) Playas-Posolja (22 km):

The said string continues. Around the lagoons, some thin magroves are developed. The coastal environment is of clear accretion supposedly due to the discharge from the Gulf of Guayaquil. Near Posorja, the coast is sheltered from the open sea, and the mangrove of the Gulf begins. While the riverbed of the Canal Del Morro suffers the effect of sedimentation, the shore is eroded at someplace due to wave action.

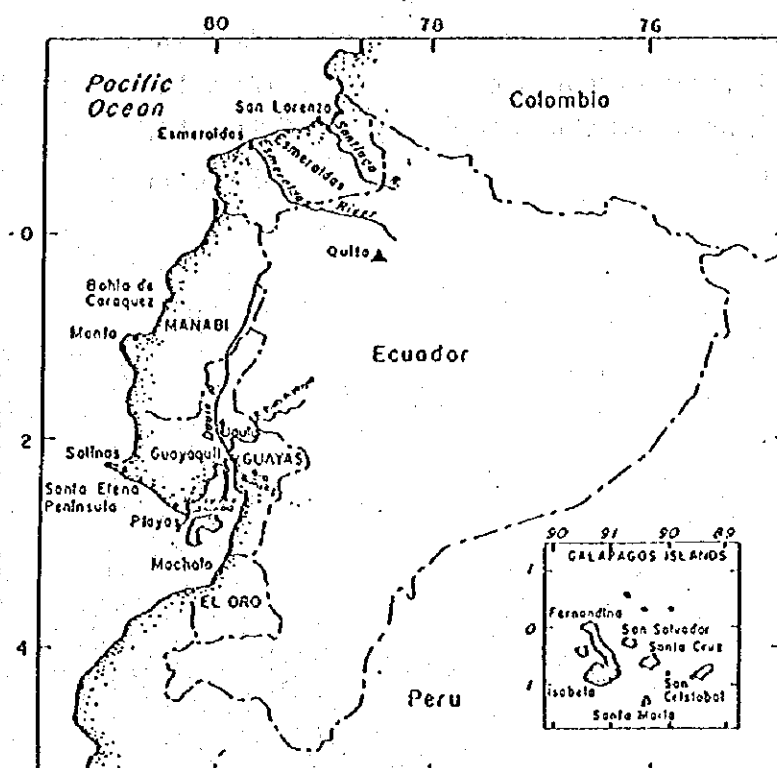

Figure I-1-1 Coastal Provinces of Ecuador

Table I-1-1 Land Use Patterns along the Coast of Ecuador

Land Use					(Unit: ha)
	Guayas	El Oro	Manabi	Esmeraldas	Total
Mangroves	121,464 (69.4)	24,489 (24.0)	7,973 (4.4)	21,293 (12.2)	175,219 (100.0%)
Shrimp Ponds	52,912 (59.2)	26,484 (29.6)	8,377 (9.4)	2,596 (1.8)	89,368 (100.0%)
Beaches	17,340 (86.6)	2,520 (12.6)	164 (0.8)	4 (0)	20,028 (100.0%)
Total	191,715 (67.4)	53,493 (28.8)	16,514 (5.8)	22,893 (8.0)	284,615 (100.0%)

Source: Centro de Levatamientos Integrados de Recursos Naturales por Sensores remotos

12. The Guayas River flows into the Gulf of Guayaquil. (See, Figure I-1-2) This river is one of the few rivers in the country having permanent flow throughout the year as well as the Esmeraldas River. Average discharge is estimated to be some 1,100 m<sup>3</sup>/sec. and decreases to one tenth of the average in the dry season. (May-November) (See, Figure I-1-3) But, the water level changes corresponding to the tidal change. The fluvial system of the Guayas River consists basically of the Daule and Babahoyo Rivers and their tributaries. (See, Figure I-1-4) It drains an area of approximately 33,700 km<sup>2</sup> and is distributed as follows:

Daule River Basin	13,800 km <sup>2</sup>
Babahoyo-Vinces River Basin	17,900 km <sup>2</sup>
Taura River and Others (10)	2,000 km <sup>2</sup>
Total	33,700 km <sup>2</sup>

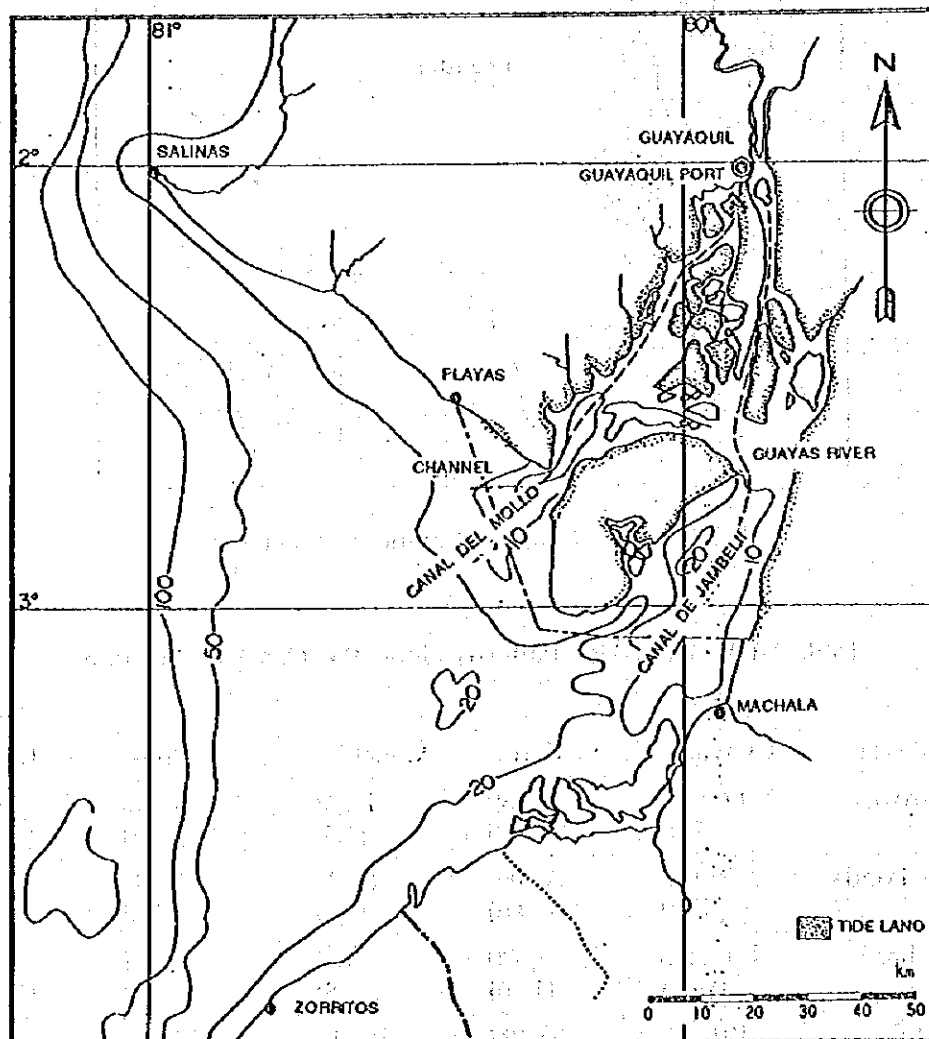

Figure I-1-2 The Gulf of Guayaquil

13. The Guayas River, from the junction of the Daule and Babahoyo Rivers to its mouth opposite Isla Verde Island, is approximately 56 km long. Parallel to its course lies an extensive body of salt water called Estero Salado, with many inlets and an ample mangrove ecosystem. Tidal influence is present as far as 100 km upriver. The Guayas River and the Estero Salado are connected at one point by the Estero Cobina, a man-made canal with locks, which permits the transit of small vessels. More open communication exists in the area called the interior Guayas River Estuary, between the islands of Escalante and Puna. The amount of fresh water entering the Estero Salado is difficult to determine, but constitutes a factor of major importance in the ecological characteristics and processes of the entire area.

14. The Guayaquil Port is located at the Estero Cobina connecting to the ocean through the Estero Salado and the Canal Del Morro. The Port is not affected by the waves due to its deepest location, but there are some water current caused by the tidal change. The velocity of the current seems to be around 2-3 knot at the Estero Salado, and it does not affect the navigation. The meteorological and the oceanographic conditions in the coastal zones are summarized in the following tables. The oceanographic conditions such as deep sea wave directions and heights of Ecuadorian coast, were observed by ship liner between Guayaquil and Galapagos Islands and also by US Navy. (Table I-1-2) According to these data, predominant deep sea wave direction is S-SW. The distributions of the wave heights show 16% for 0.5 m, 74% for 0.6 to 2.0 m and 10% for over 2 m. The deep sea waves are not so high, but it is noted that the waves are characterized with their long wave period and have big energy potentially judging from the preceding wave observation data at the Manta Port in the coastal zone. This long period waves are generated by the swells coming from the Antarctic.

Table I-1-2 Deep Sea Wave Height and Direction

(Unit:%)

## C. Socio-Economic Activity

### 1) Population

15. Table I-1-3 shows the general trend of the population in Ecuador by province. As shown in the table, the population of Ecuador has increased and reached 9.6 million in 1990. The population growth rate from 1982 to 1990 is about 2.3% per year.

16. Among the provinces, Guayas province has the largest population. The population in 1990 was 2.5 million or 26% of the total population of Ecuador. Pichincha province has the second largest population (1.7 million) followed by the provinces of Manabi (1.03 million) and Azuay (506,000).

17. The population share of urban areas in Ecuador was 41% in 1974, 49% in 1982 and 55% in 1990, which clearly describes an urbanization trend. Guayas province is the most highly urbanized with the urban areas comprising 76% of the total land area, Pichincha follows with a rate of 73%.

### 2) Gross Domestic Products

18. Gross Domestic Product (GDP) increased from s/. 147.6 billion in 1980 to s/. 201.4 billion in 1993 at 1975 prices. Annual growth rate between 1980 and 1993 is 2.4%. The general trend of GDP by industrial sectors in Ecuador is shown in Table I-1-4 and Figure I-1-5. As shown in the Table and Figure, the GDP at 1975 constant prices steadily increased from 1980 to 1993 except in 1983 and 1987. The negative growth of GDP in 1983 was attributable to non-oil sectors. In 1987 growth of petroleum was negative due to the destruction of oil pipeline by earthquakes.

19. Among the industrial sectors, Agriculture, Manufacture, Commerce, Service and Petroleum have large shares, 17%, 15%, 15%, 14% and 14% respectively. The total share of these five sectors accounts for more than 70% of the total.

20. From 1980 to 1993 at 1975 prices, shares of Agriculture, Petroleum, Electricity and Transport increased. On the other hand, share of Construction fell by about 40%.

21. Figure I-1-6 shows Gross Product by each sector and province. Share of Gross Product of Guayas province is the largest (29%). Second province is Pichincha (21%), followed by provinces of Sucumbios, Manabi and Azuay with shares of 8%, 7% and 5%. Share of these five provinces accounts for about 70% of the total.

22. The sector of Agriculture, hunting & fishery is concentrated in Guayas (19%), Manabi (18%) and Pichincha (9%) provinces. Petroleum and Mining sector is popular with Sucumbios (48%), Napo (29%) and Esmeraldas(14%) provinces. Main provinces of Manufacturing, Electricity gas & water and Financial service are Guayas, Pichincha and Azuay. The other sectors are mainly in Guayas, Pichincha and Manabi province.

### 3) Andean Group

23. Ecuador has many tariff preferences which are being negotiated in the different economic integration schemes in which Ecuador is participating. One of the integration schemes is "Andean Group". This is a Free Trade Zone with Bolivia, Colombia, Venezuela and Peru (Bilateral Agreement with Peru).

24. Economics of Andean Group Countries are compared in Figure I-1-8. Venezuela holds the highest position followed by Colombia and Ecuador. GNP, GNI and GDI per Capita of Ecuador have been increasing since 1990.

Figure I-1-8 Trend of Economic Activity in Andean Group

#### 4) Employment

25. Table I-1-5 shows the number of people employed by the industrial sector. It can be seen that the Petroleum sector has a low share in comparison with GDP, employing only 0.6% of the population. On the other hand, shares of Agriculture and Service sector seem to be high at 31% and 25%.

26. Table I-1-6 and Figure I-1-9 show the unemployment rate. The unemployment ratio increased from 1990 to 1992. In 1992 unemployment in the Mountain zone was particularly high compared other years. Because unemployment New sector substantially increased. The unemployment rate in the Coastal zone (11%) is higher than the other zones of the country.

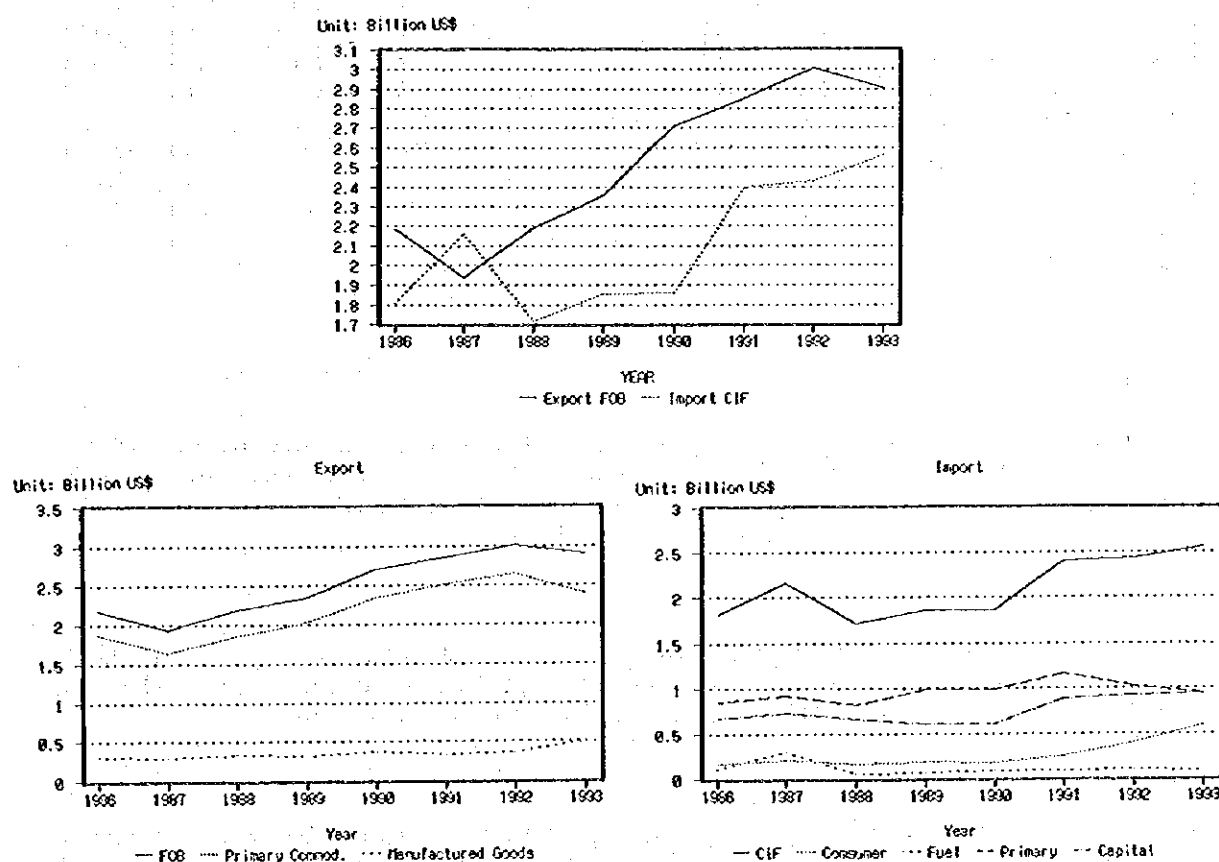

Figure I-1-9 Trend of External Trade in Ecuador

## 5) External Trade

27. Figure I-1-10 shows recent export and import of major goods from 1986 to 1993. Total exports declined in 1987 but has been gradually recovering in recent years. Primary commodities have been a major component of export. The share of primary commodities in export is more than 80% in 1993. Major commodities in primary goods are Crude Petroleum (40% in export), Banana (17%) and Shrimp (16%).

28. On the other hand, exports of manufactured goods were stagnant between 1986 and 1992. But manufactured goods in 1993 increased by 40% from in 1992. The major commodities in manufactured goods are Petroleum derivative (4%), Metal manufacture (3%) and Sea product (2%).

29. Imports declined from 1988 to 1990 but rapidly recovered in 1991. Major commodities are Primary material (37% in import), Capital goods (37%) and Consumer goods (23%) in 1993.

Figure I-1-10 Trend of External Trade in Ecuador

## 6) Industrial Activity

### (a) Agriculture

30. The major agricultural products of Ecuador are banana, sugar cane, rice and palm as shown in Table I-1-7. Production increased 1.4-2 times from 1986 to 1993. The major products of export in Ecuador are banana, cacao and coffee.

Table I-1-7 Agriculture Product in Ecuador

	Unit: thousand ton

Source: INEC-SEAN

#### a) Banana

31. Banana is the most important export commodity and is exported mainly to USA, Germany and Italy. The share of banana was about 80% of the total agriculture product of export in 1991. Main banana producing are El Oro (32%), Guayas (23%) and Los Rios (22%). Total share of three provinces is 77% in 1993.

#### b) Coffee

32. Coffee is also a major export commodity, most of which is exported to USA, Germany and Chile. Coffee is mainly produced in Manabi province (34% share in Ecuador), Los Rios province (11%) and Sucumbios province (11%) in 1993.

#### c) Cacao

33. Los Rios province is the major producing district of cacao, accounting for 32% of the total production, followed by Manabi (20%) and Guayas (20%) provinces in 1993. Cacao is also a major export commodity; more than 50% is exported to USA.

#### (b) Fishery

34. Fishing is another important industry. Figure I-1-11 shows export of Fishing Product (ton & US\$). From 1992 to 1993, volume of fishery export increased 1.9 times. Total product decreased from 1985 to 1992. This main reason is fish meal production. The other production increased steadily.

35. Refrigerated shrimp and tuna are the main export products having respective shares of 63% and 8%. The other major products are canned goods (13%) and perishables (8%). Shrimp is exported mainly to the USA, Spain and France.

(c) Manufacturing

36. GDP by constant price of the manufacturing sector slightly increased from 1980 to 1993 are represent 15% of GDP. [Refer to Table I-1-5].

37. Table I-1-8 shows GDP at constant price of manufacturing industry. Manufacturing sector in Ecuador comprises light-industry such as food products, textiles/ garments and wood & furniture. Share of these sub-sectors accounted for 63% of total manufacturing sector GDP in 1990. But growth rate to these sub-sectors remained at the same level from 1986 to 1990.

38. In the other sub-sectors such as Paper & printing, Machinery/Equipment and Other Manufacturing, GDP increased by 26%, 36% and 33% during the period from 1986 to 1990.

Figure I-1-11 Export of Fishery Product in Ecuador

## 7) Transportation

### (a) Registered vehicles

39. In 1992, 427,228 vehicles were registered in the country, 40,071 units more than in 1991. Pichincha province had the highest number of registered vehicles with 142,868 units; Guayas province followed with 130,423 units registered. These two provinces hold 64% of total existing vehicles in Ecuador. Manabi is in third place with 22,340 units and Azuay fourth place with 21,175 vehicles.

40. Of the total vehicles circulating in the country, 88% are classified as private units; taxis represent 10%; Government units stand for 2% and Municipal vehicles about 0.3%. In 1991, the distribution by usage was 87%, 11%, 2%, and 9%, respectively.

41. It is also observed from the total vehicles registered in 1992 that pick-up trucks comprise the greatest number of units with 36% of the total, followed by automobiles with 32% and jeeps with 9%.

### (b) Railway

42. Government railroads (Guayaquil, Quito, Cuenca) transported 1,028,154 passengers in 1992. Northbound share was 51% and the Southbound share was 49%.

43. During October and September, a large number of passengers moved northbound, while October and August constituted the months of greater southbound movement.

### (c) International air traffic

44. In 1992, 406,559 people entered the country through Quito and Guayaquil airport; most of them arrived in Quito (61%) and the remaining through the Guayaquil airport. Main cities of origin for the arriving passengers in Quito were Miami, Bogota and New York; 61% of the total passenger volume originated from these cities. Miami, Panama city and New York constituted the most important cities of origin for Guayaquil. These three cities represent together 72% of the total passengers who arrived through Guayaquil airport.

45. During the year under reference, 403,312 passengers flew from the country, 59% of which used Quito airport and 41% Guayaquil airport. The most frequent cities of destination for the Quito passengers were Miami, Bogota and New York, respectively, while for the Guayaquil passengers the main cities of destination were Miami, New York and Panama.

### (d) International marine traffic

46. In 1992, 2,990 vessels arrived in the country through the different domestic ports: Guayaquil (52%), Puerto Bolivar (20%) and Manta (10%) being the most representative of Ecuador; together they constitute 28% of the total number of ships which arrived in the country ports; ships under Panamanian and Liberian flags entered in greater number to the Guayaquil port while Liberian and Panamanian ships arrived in greater number at Manta and Puerto Bolivar Port.
