				.					
				.					

Legend for the List

No. : Serial No. of IP data at each point
P1 : Name of a station of potential electrode
C1 : Name of a station of current electrode
N : N spread
Curr : Current value (mili ampere)
Voltage : Received voltage difference in mV between potential dipoles
Resis1 : Apparent resistivity value in ohm-m before terrain correction
Tcf : Terrain correction factor
Resis2 : Apparent resistivity value in ohm-m after terrain correction
Charge. : Chargeability value in mV/V between 820 and 1050 msec

IP data of Line-A in S. Imbak Sub-area (1)

Appendix 12

Drilling logs and assay results

Hole No. MJSI-1 (From 0.00 m to 50.00 m)

Depth (m)	Chart	Lithology and Alteration	Mineralization
		overburden light brown clayey soil with pebbles of mudstone.	
3.68		dark gray mudstone, brecciated and soft dark.	very weak Py, Ap dism, fracture filling Py film of 1-1mm wide rarely occurs, 1-few cm patches of Po, Py, Cp rarely occur.
7.85		gray mudstone with 0.5 - 5.0 cm wide sandstone layers, mudstone 80 %, lamina <10° - <20°	
10			11.30: Po,Py patch 2×7cm
		16.08-16.20: core crushed.	
		18.90-19.18: core crushed.	
20			19.65: Qz, Py, Cp vein 5mm wide, <70° .
		22.20 - 22.35: core crushed.	
			26.65: Qz vein with Py, Cp, 1cm wide, <70° .
30			30.95-31.00: network of 1- 2mm wide Py, Cpy veins.
31.35		alternation of mudstone and sandstone, mudstone dominates, dark gray mudstone(70 %) and gray fine sandstone(30%).	
			37.00: 3-4cm wide Po, Cp shapless patch.
40			43.95-44.32: Po, Cp patches in sandstone layer.
45.65		mudstone with 1cm to few mm sand lamina, <10° - <20° .	
50

Depth (m)	Chart	Lithology and Alteration	Mineralization	Depth (m)	D.L. (m)	Au (g/t)	Ag (g/t)	Cu (%)	Pb (%)	Zn (%)
		dark gray mudstone with sandstone lamina of 1mm to 10cm, lamina <10° -<20° .	very weak Po, Ap dism with rare occurrences of Po, Cp, (Ga) patches of few cm and fracture filling Py films of few mm wide.							
		54.30-54.60: core crushed.								
			57.70: Qz vein with Po, Py, Cp, Sp 2mm wide <80° .	56.95 57.30	0.35	<0.1	1.0	0.01	<0.01	<0.01
60			61.55: Po, Cp patch of 3×5 cm in sandstone layer.							
			64.25-64.50: few mm wide Po veinlets are slightly abundant.							
		69.70-69.80: core crushed.								
70			71.90: Po, Cp patch 3×10cm.							
			75.65: Po, Cp band-patch 1cm wide,<80° .							
			76.00-79.00: Po patch is abucent, only fracture filling film of less than 1mm.							
			79.30: Po, Cp band, ± 5mm wide, <60° .							
80			79.90: Po paych, shapless, 5×3cm.							
			88.55: Qz vein with Cp, Sp, 2 to 5mm wide, <85° .							
90			93.70: Sp, Py, Cp patch in sandstone layer, 3 to 5cm.							
		95.85-97.25: core crushed and brecciated.								
		99.35-99.75: core crushed and brecciated.								
100										

Hole No. MJSI-1 (From 100.00 m to 150.00 m)

Depth (m)	Chart	Lithology and Alteration	Mineralization
101.00		mudstone	very weak Py, Po, Ap dism, occationally Po, Py, Cp patch (nodule), veinlet and patch, 1 to 2 per meter. 102.10: Po, Py, Cp occur along reverse fault of few mm wide, dislocation 3cm, <80° . 105.30: Po, Cp, Py shaplee patch, 5×4cm.
		sandstone with mudstone lamina, sandstone(80%) and dark gray mudstone(30%) lamina of 1mm to 1cm wide, lamina <10° to <20° .	
110		112.20-112.50: core crushed Py films fill fractures. 113.10: reverse fault with dislocation of 5cm, <80° . 113.50- 113.70: core crushed. 114.40: 2cm wide fracture with Py. film, <70°	113.80: Po, Cp nodule, 4×5cm.
		118.50-118.90: core fractured.	117.20-117.50: Po, Cp, Py fracture filling film, few mm wide.
120		120.50: 5mm wide fracture Chl, Py, <85°	120.00-126.50: Py, Cp patch (nodule) is slightly abundant. 120.30: Po, Cp nodule, 4×5cm. 123.85: Po, Cp band 1 to 3cm. 126.00: Po, Cp band of 2cm wide, <10° , Cp occurs outside and srrounding Po.
130		135.10-135.80: sandstone layer.	131.00-149.00: Po patch abandunt, few per meter. 131.10: Cp, Py vein, 2 to 5 mm wide, <85° . 134.00-134.60: ±1mm wide Po, Cp film abandunt.
		137.90-138.15: core crushed.	137.80: Cp, Py vein, 0.5 to 1cm wide, <60° .
140			139.55: Py, Cp patch, 5×6cm.
140.70		mudstone(80%) with sandstone(20%) lamina and layer, few mm to 30cm 146.70-147.20: core crushed.	141.00: Py, Cp patch, 1.5 cm. 142.10- 142.30. Py, Po, Cp veinlet, few mm wide.

Hole No. MJSI-5 (From 150.00 m to 200.00 m)

Depth (m)	Chart	Lithology and Alteration	Mineralization
151.40		gray sandstone with dark gray mudstone lamina.	very weak PO, Py dism. fracture filling film of Po, Cp and Py, Cp, less than 1mm to few mm.
		dark gray mudstone with rare sandstone lamina and layer of 10 to 1 cm.	156.50-169.80: Po, (Cp) nodule and patch of few cm across, one or two per meter.
160			158.00: Qz, Po, Cp vein, 2cm wide, <80°.
			158.20: Qz, Po, Cp vein, 1cm wide, <70°.
			159.70-161.00: fracture filling film of Qz, Po and Po, Cp, few mm wide.
			165.10,165.30: ±5cm, Po, Cp nodule.
			165.15: Qz, Po, Cp, Py vein, 1cm wide, <70°.
			166.75: Po, Cp rich zone (patch), 3cm wide.
169.80			Po, Cp, (Py) dism. ±1%, fracture filling film of Po, Cp, Py.
170		gray diorite porphyry, phenocrysts are few mm to 5mm across plagioclase and hornblende, matrix consisits of plagioclase and biotite. intrusion angle <70°.	172.40: Po (oxidized), Cp vein, 1cm wide, <80°.
			175.90: Qz vein, 2cm wide, <80°.
		169.80-173.50: texture is not clear, gray color, silicified and slightly chloritized.	176.60-181.20: Po film rarely occurs, very weak Po dism.
		175.10-176.60: texture is not clear, gray color, silicified and slightly chloritized.	181.20-185.90: Po, Cp dism. (1%), fracture filling film of Po, Cp, ±1mm wide.
180			181.70: Qz, Po, Cp vein, 1cm wide, <80°.
		181.20-185.90: texture is not clear, silicified and chloritized.	183.05-183.60: Qz, Ba, Cp vein, 2 to 3cm.
			185.10-185.65: network of Qz, Po, Cp veins, ±1cm, <80°.
		185.90-189.80: relatively fresh diorite porphyry.	185.90-189.80: very weak Po, Cp dism., fracture filling film less and rare.
		189.80-192.30: silicified diorite porphyry.	189.80-192.30: Po, Cp dism.(±1%), fracture filling film of Po, Cp.
190			
		192.30-194.60: relatively fresh diorite porphyry.	
			190.40: Qz, Po, Cp vein, 1cm wide, <80°.
		194.60-200.20: silicified, slightly chloritized diorite porphyry.	194.60-200.20: Po, Cp dism.(±), fracture filling Po, Cp film and vein, ±1mm to 1cm wide.
			196.40-196.90: network of Qz, Po, Cp, (Py) veins, 1 cm wide.
