

II-2. Alternativa-2, Grupo Occidental

| Disminución de los Beneficios | Aumento del Costo | | |
|-------------------------------|-------------------|-------|-------|
| | 0% | 5% | 10% |
| 0% | 12,51 | 11,82 | 11,19 |
| 5% | 11,79 | 11,13 | 10,53 |
| 10% | 11,06 | 10,43 | 9,85 |

Como se muestra, el TIRE de la Alternativa-2 del grupo oriental y la Alternativa-1 del grupo occidental mantienen cifras de 11,17% y 10,62%, lo cual indica su factibilidad económica, incluso en casos desfavorables, en los cuales el incremento del costo y la disminución de beneficios es alrededor del 10%.

El TIRE de la Alternativa-2 del grupo occidental se mantiene sobre el 10%, lo cual muestra su factibilidad económica en condiciones combinadas de aumento del 10% de los costos y de disminución del 5% de los beneficios, o para el caso de 5% de aumento de costos y del 10% de disminución de beneficios. Sin embargo, el TIRE disminuye a 9,8% en una condición combinada de aumento del 10% de los costos y disminución del 10% de los beneficios.

El TIRE de la Alternativa-1 del grupo oriental disminuye a 9,6%, lo cual no le permite obtener un nivel de factibilidad económica, en el caso de aumento del 5% de los costos o de disminución del 5% de los beneficios. Esto se debe principalmente al TIRE negativo del proyecto del Río Chané.

5. Resumen de la Evaluación del Proyecto

5.1 Efectos Directos

A. Proyectos Individuales

De los siete proyectos individuales, sólo el proyecto de San Juan tiene dos planes; Alternativa-1 y -2. La evaluación económica de los proyectos individuales se resume de la manera siguiente:

- (1) Cinco proyectos, los del Río Pailón, Quebrada Chané, Chané Chacras, Drenaje de Okinawa y Antofagasta, son económicamente factibles. Especialmente, se espera que tres proyectos, los de Antofagasta, Chané Chacras y Río Pailón tengan un importante retorno económico mediante la implementación de estos proyectos.

- (2) El proyecto de San Juan se puede considerar que es factible, desde el punto de vista socio-económico, ya que es muy útil para mejorar el aspecto ambiental y puede esperarse un efecto económico indirecto relativamente elevado, debido a la significativa inversión. Este aspecto es aplicable tanto a la Alternativa-1 como a la -2.
- (3) El proyecto del Río Chané se considera económicamente no factible, ya que tiene TIRE y VPN negativos.

B. Proyectos Combinados

De acuerdo con las condiciones geográficas del área de estudio, los siete proyectos pueden dividirse en dos grupos, el grupo oriental y el grupo occidental. El grupo oriental está compuesto por cinco proyectos, los de Río Chané, Río Paifón, Quebrada Chané, Chané Chacras y Drenaje de Okinawa. El grupo occidental consiste de dos proyectos, los de San Juan y Antofagasta. El proyecto del Río Chané está excluido de la Alternativa-2. A continuación se hace un resumen de la evaluación económica de cada grupo:

- (1) Los proyectos combinados son económicamente factibles para la Alternativa-2 del grupo oriental y para la Alternativa-1 del grupo occidental.
- (2) De acuerdo con la prueba de sensibilidad, el TIRE de la Alternativa-1 del grupo oriental, disminuye a 9,6% en caso de incremento del costo en 5% o de disminución en 5% de los beneficios. También, en caso de la Alternativa-2 del grupo occidental, éste parámetro pasa a ser 9,8% en caso de presentarse en forma combinada los aumentos del costo del 10% y disminución de beneficios del 10%.
- (3) Sin embargo, a pesar de que los dos grupos no se atienen a la norma de factibilidad económica para ciertos casos especiales, se consideran a estos proyectos como factibles, desde el punto de vista socio-económico, tomando en consideración que son muy útiles para mejorar el ambiente y puede esperarse de ellos un retorno económico relativamente elevado debido a la significativa inversión.

5.2 Efectos Indirectos

Además de los efectos directos anteriores, se espera que los proyectos produzcan los siguientes efectos indirectos y/o intangibles:

- (1) Se espera que los proyectos contribuyan a una mejora de las condiciones sociales y económicas en el Area de Estudio a través de : 1) interrupción del tráfico y de las comunicaciones, 2) aumento de trabajadores con empleo, 3) reducción de enfermedades, 4) mejora de la calidad de las cosechas, 5) reducción de los costos de producción en fábricas y tierras agrícolas y 6) disminución de los precios al consumidor.
- (2) Se espera que los proyectos tengan un impacto estimulante en el desarrollo de la economía regional debido a la inversión de importantes fondos.

TABLAS

TABLA K.1.1.1 CALCULO DEL FACTOR ESTANDAR DE CONVERSION

| Items | 1990 | 1991 | 1992 | 1993 | 1994 | Average |

1. TERMS OF REFERENCE FOR AERIAL PHOTOGRAPHY

Chapter 1 *General*

Section 1 *Background*

In compliance with the Scope of Work for the The Master Plan Study on Flood Control in the Northern Rural Region of Santa Cruz in the Republic of Bolivia, which was agreed upon between the Santa Cruz Regional Development Corporation and the Japan International Cooperation Agency (JICA) on December 14th 1994, JICA has decided to carry out the Aerial Photography Works and assigned JICA Study Team for execution of the works.

The aerial photography shall be carried out in the Republic of Bolivia by (Agency) under supervision of the Study Team's Supervisor.

Section 2 *Specifications*

The flight for aerial photography shall be conducted by the photogrammetric method in accordance with the Specifications written hereunder.

Section 3 *Scope of Work*

The work to be done is to carry out flight for aerial photography in the proposed site of the Northern Rural Region of Santa Cruz in the Republic of Bolivia.

The quantity of the work is estimated as follows:

Aerial photography at a scale of 1/60,000 (see attached map) ; approx. 8,500 km²

Section 4 *Unit to be Used*

Unit of measurement provided for by Japanese Law of Measurement (Metric System) shall be used.

Section 5 *Language*

Language to be used shall be English.

Chapter 2 *Detail Specification*

Section 1 *Method of Work*

All the work to be done shall be executed in accordance with this Specification or where not specified therein, in accordance with such instruction and orders as the Supervisor of the Study Team may give.

Section 2 *Flight for Photo-taking.*

Flight for photo-taking shall be carried out based on the following items.

(Airplane)

Aerial photographing aircraft shall meet the following requirements:

1. to be stable with full load while in flight to required height
2. to have unobstructed vision in all directions
3. to be able to install aerial camera at a position where exhaust fumes will not effect the aerial photography
4. to have a navigation system suitable for local conditions
5. to have an undistorted and calibrated view-finder window-glass if necessary

(Flight Direction and Altitude)

Flight direction : East - West
Flight altitude : approx. 9,400m
Focal length : 153mm

(Flight Course)

6. Flight shall be carried out in accordance with the flight plan map attached hereto.

Total : 12 courses

7. There shall be adequate stereoscopic coverage in the photo-taking area.

The average overlap is 60% and sidelap 30%.

8. Overlap, sidelap, crab, tip and tilt shall be within the following tolerances:

Overlap : more than 55% and less than 65%

Sidelap : more than 10%

Crab : less than 10 degrees

Tip and tilt : less than 5 degrees

9. When a flight line is broken, that part shall be covered by an overlap of more than 2 models.

10. Photo images shall not be spoiled by cloud or mist. However, this may be permissible to the extent of 5% if they are covered by the photographs of adjacent strips.

(Re-flight)

11. Re-flight shall be carried out immediately in accordance with the guidance of supervisor, when film is rejected.

Chapter 3 Work Schedule

Completion date shall be by the ____th of July, 1995.

Priority area for aerial photography shall be the mapping area.

Chapter 4 Final Products to be delivered

The Agency shall deliver the following final products and flight record to the Study Team :

1. Aerial Photography

- (1) Negative film (8,500 km²) : 1 set
- (2) Positive film (8,500 km²) : 1 set
- (3) Contact print (8,500 km²) : 3 sets
- (4) Photo index map : 1 set

2. Flight Record

- (1) name of contract
- (2) name of photographing organization
- (3) beginning and end times of flight
- (4) date of flight
- (5) type of aircraft
- (6) flight altitude
- (7) calibration report of camera

2. TERMS OF REFERENCE FOR THE RIVER SURVEY

2.1 Phase 1

Chapter 1 *General*

Section 1 *Background*

In compliance with the Scope of Work for the Master Plan Study on Flood Control in the Northern Rural Region of Santa Cruz in the Republic of Bolivia, which was agreed upon between the Santa Cruz Regional Development Corporation and the Japan International Cooperation Agency (JICA) on December 14, 1994, JICA has decided to carry out the Topographic Survey Work and assigned JICA Study Team for execution of the works.

The Topographic Survey shall be carried out in the Republic of Bolivia, by the Agriconsult Santa Cruz Ltda.(Agency) under supervision of the Study Team's Supervisor.

Section 2 *Specifications*

The survey works shall be conducted by the topographic mapping method in accordance with the Specifications written hereunder.

Section 3 *Scope of Work*

The work to be done is to carry out the Longitudinal Profile and the Cross Section Survey in the proposed site of the Northern Rural Region of Santa Cruz in the Republic of Bolivia.

The quantity of the work is estimated as follows:

- Smaller rivers; Chane, Pailon, Jochie etc. : approx. 115 km & 60 sections.
- Larger rivers; Grande and Yapakani : approx. 150 km & 12 sections.

Section 4 *Unit to be Used*

Unit of measurement provided for by Japanese Law of Measurement (Metric System) shall be used.

Section 5 *Language*

Language to be used shall be English.

Chapter 2 *Detail Specification*

Section 1 *Method of Work*

All the work to be done shall be executed in accordance with this Specification or where not specified therein, in accordance with such instruction and orders as the Supervisor of the Study Team may give.

Section 2 *Quantity and Location of Work*

1. Pailón river (35km, 18 sections)
From confluence of Chané river to Colonia Okinawa No.2
2. Chané river (40km, 21 sections)
Downstream stretch from Estancia La Recohefa (near National Road No.9)
3. Around the Colonia San Juan (40km, 21 sections)
Yapacaniesto river; (15km, 8 sections)
Jochi river; (15km, 8 sections)
Tejeria river; (10km, 5 sections)
4. Grande and Yapacani Rivers (150 km, 12 sections)
Grande river; 100 km, 8 sections
Yapacani river; 50km, 4 sections

Section 3 *Longitudinal Profile and Cross Section Survey*

(Preparation)

The timber piles shall be established on one side of river in advance, located perpendicular to the river center line, as instructed by the Study Team and/or on the location maps.

(Leveling for the timber piles)

Elevation of the each timber pile shall be determined by direct leveling or GPS surveying from existing bench marks established on the national highway by IGM.

Accuracy : $6\text{cm} \sqrt{S}$, where "S" in kilometer

(Cross section survey)

Cross section survey shall be carried out by direct leveling, echo sounding or trigonometric leveling.

The cross sections shall be approximately 100m to 2,500m in width, and surveyed at approximately 2km intervals along the river center line.

Accuracy : $5\text{cm} + 3\text{cm} \sqrt{s}$, where "s" in meter

Drawing : $H = 1/100 \sim 1/4,000$

(Scale) $V = 1/100 \sim 1/200$

(Longitudinal profile survey)

Longitudinal profile shall be drawn according to the results of elevations, measured during the cross section survey of the river center.

Drawing : $H = 1/50,000 \sim 1/100,000$

(Scale) $V = 1/100 \sim 1/1,000$

Chapter 3 *Work Schedule*

The works shall be completed within 2.5 moths from commencement date, by the ___th of July 1995.

Chapter 4 *Final Products to be delivered*

The Agency shall deliver the following final result and products to the Study Team :

- | | | |
|--|---|--------|
| (1) Drawn sheets of Cross sections (72 sections) | : | 1 set |
| (2) Copy of Cross sections | : | 2 sets |
| (3) Drawn sheets of Longitudinal profile | : | 1 set |
| (4) Copy of Longitudinal profile | : | 2 sets |
| (5) Index map | : | 1 set |
| (6) Observation and Computation results | : | 1 set |

2.2 Phase 2

Chapter 1 *General*

Section 1 *Background*

In compliance with the Scope of Work for the Master Plan Study on Flood Control in the Northern Rural Region of Santa Cruz in the Republic of Bolivia, which was agreed upon between the Santa Cruz Regional Development Corporation and the Japan International Cooperation Agency (JICA) on December 14, 1994, JICA has decided to carry out the Topographic Survey Work (Second Stage) and assigned JICA Study Team for execution of the works.

The Topographic Survey (Second Stage) shall be carried out in the Republic of Bolivia, by the Agriconsult Santa Cruz Ltda.(Agency) under supervision of the Study Team's Supervisor.

Section 2 *Specifications*

The survey works shall be conducted by the topographic mapping method in accordance with the Specifications written hereunder.

Section 3 *Scope of Work*

The work to be done is to carry out the Longitudinal Profile and the Cross Section Survey in the proposed site of the Northern Rural Region of Santa Cruz in the Republic of Bolivia.

The quantity of the work is estimated as follows:

- Longitudinal Profile : approx. 60 km
- Cross Section : 30 sections

Section 4 *Unit to be Used*

Unit of measurement provided for by Japanese Law of Measurement (Metric System) shall be used.

Section 5 *Language*

Language to be used shall be English.

Chapter 2 *Detail Specification*

Section 1 *Method of Work*

All the work to be done shall be executed in accordance with this Specification or where not specified therein, in accordance with such Instruction and orders as the Supervisor of the Study Team may give.

Section 2 *Quantity and Location of Work*

A. Pailon River & Tributaries

1. Okinawa Drainage (5 km): 3 sections

B. Chane River & Tributaries

2. Chané river (7 km): 3 sections

3. El Toro river (16 km): 6 sections

4. Maras river (6 km): 3 sections

5. Chacras river (11 km): 3 sections

C. San Juan Rivers

6. Jochi river (9 km): 4 section

7. Tacuaral river (6 km): 3 section

8. Palacios river: 1 section

9. Quimori river : 1 section

10. Lupe rivers (2 km): 1 section

11. Asuvicito river (2 km): 1 section

D. Large River

12. Grande river (3 km): 1 section

(including Okinawa Drainage)

Total (73 km) 30 sections

Section 3 *Longitudinal Profile and Cross Section Survey*

(Preparation)

The timber piles shall be established on one side of river in advance, located perpendicular to the river center line, as instructed by the Study Team and/or on the location maps.

(Leveling for the timber piles)

Elevation of the each timber pile shall be determined by direct leveling or GPS surveying from existing bench marks established on the national highway by IGM.

Accuracy : $6\text{cm} \times \sqrt{S}$, where "S" in kilometer

(Cross section survey)

Cross section survey shall be carried out by direct leveling, echo sounding or trigonometric leveling. The cross sections shall be approximately 100m to 3,000m in width, and surveyed at approximately 2 km intervals along the river center line.

Accuracy : $5\text{cm} + 3\text{cm} \times \sqrt{s}$, where "s" in meter

Drawing : H = 1 / 100 ~ 1 / 4,000

(Scale) V = 1 / 100 ~ 1 / 200

(Longitudinal profile survey)

Longitudinal profile shall be drawn according to the results of elevations, measured during the cross section survey of the river center.

Drawing : H = 1 / 50,000 ~ 1 / 100,000

(Scale) V = 1 / 100 ~ 1 / 1,000

Chapter 3 *Work Schedule*

The works shall be completed within one (1) month from commencement date, by the _____ of _____, 1995.

Chapter 4 *Final Products to be delivered*

The Agency shall deliver the following final result and products to the Study Team :

- | | |
|--|----------|
| (1) Drawn sheets of Cross sections (30 sections) | : 1 set |
| (2) Copy of Cross sections | : 2 sets |
| (3) Drawn sheets of Longitudinal profile | : 1 set |
| (4) Copy of Longitudinal profile | : 2 sets |
| (5) Index map | : 1 set |
| (6) Observation and Computation results | : 1 set |

3. TERMS OF REFERENCE FOR WATER QUALITY ANALYSIS

3.1 Phase 1

1. GENERAL

1.1 The Consultant shall conduct the Water Quality Survey Works to find out the environmental conditions of river water in the rainy season within the objective area for the Master Plan Study on Flood Control in the Northern Rural Region of Santa Cruz in the Republic of Bolivia, with a view of studying the possibility of multipurpose use of the flood control project, such as river water for cultivation, retarding pond for sewage treatment, water surface for fish culture and so on. JICA Study Team shall examine all outcome of the survey before accepting final reports.

1.2 All measurement in the survey shall be recorded in metric units.

1.3 The Consultant is responsible for providing all required manpower and equipment relating to the survey works.

1.4 If there are any other Terms of Reference required for execution of the survey, they shall be discussed for consensus by JICA Study Team and the Consultant.

1.5 The Consultant shall submit an Inception Report, including following items, in English and Spanish before the commencement of the works.

- Methodology
- Work Schedule
- Staff Schedule

1.6 The size of reports and documents shall be A-4 size principally.

2. DESCRIPTION

2.1 Survey Area

The Survey Area shall be within the Northern Rural Region of Santa Cruz.

2.2 Description of Works

The aim of the works is to conduct a water quality survey as follows:

- Sampling locations : 5 locations in the survey area
 - 3 locations : at the outlet of the sewage of the Santa Cruz city and settlement areas
 - 2 locations : at the rivers polluted in the study area
- Sampling : 24 samplings in total at 5 locations
 - at 3 locations : 2-samplings/day during 3 selected days
 - at 2 locations : 1-samplings/day during 3 selected days
- Measurement and analysis items
 - Water temperature
 - Electric conductivity
 - pH
 - BOD
 - DO
 - SS
 - Number of coliform groups

The sampling locations and days are to be selected by the JICA Study Team, and the consultant shall prepare all staff and instruments required for sampling and laboratory analysis.

2.3 Work Schedule

The Survey works shall be completed within 3 weeks from commencement date, by the _____ of May 1995.

2.3 Submission of Documents

The Consultant shall submit the following documents in English and Spanish as follows:

- The Final Report (English) 5 copies
- The Final Report (Spanish) 5 copies

3.2 Phase 2

1. GENERAL

1.1 The Consultant shall conduct the Water Quality Survey Works to find out the environmental conditions of river water in the dry season within the objective area for the Master Plan Study on Flood Control in the Northern Rural Region of Santa Cruz in the Republic of Bolivia, with a view of studying the possibility of multipurpose use of the flood control project, such as river water for cultivation, retarding pond for sewage treatment, water surface for fish culture and so on. JICA Study Team shall examine all outcome of the survey before accepting final reports.

1.2 All measurement in the survey shall be recorded in metric units.

1.3 The Consultant is responsible for providing all required manpower and equipment relating to the survey works.

1.4 If there are any other Terms of Reference required for execution of the survey, they shall be discussed for consensus by JICA Study Team and the Consultant.

1.5 The Consultant shall submit an Inception Report, including following items, in English and Spanish before the commencement of the works.

- Methodology
- Work Schedule
- Staff Schedule

1.6 The size of reports and documents shall be A-4 size principally.
