4-2-3. Demand Forecast for Flat Steel as Aggregation of Sectoral Forecast for Major Consuming Industries (Micro-Analysis)

Flat steel demand in 2005 and 2006 was estimated on the basis of 1995 demand by industrial sector and projected growth rate of each sector.

The coefficient for calculation of the demand of flat steel in 2005 and 2006 are as follows. Annual growth rate is converted to growth ratio (1 + "growth rate")

GROWTH RATIO OF EACH SECTOR FOR THREE CASES

	Construction	Industry	Others
Lowest	1.0576	1.0560	1.0400
Medium	1.0792	1.0770	1.0550
Highest	1.0936	1.0910	1.0650

Source: Table 4-2-1

2005 (10th power) (Growth ratio from 1995 to 2005 (10-year))

Lowest	1.750710842	1.724404637	1.480244285
Medium	2.142986162	2.099698959	1.708144458
Highest	2.446724189	2.389172492	1.877137465

2006 (11th power) (Growth ratio from 1995 to 2006 (11-year))

Lowest	1.851551787	1.820971296	1.539454056
Medium	2.312710666	2.261375779	1.802092404
Highest	2.675737573	2.606587189	1.999151401

Demand forecast in 2005 and 2006 is shown in Tables 4-2-2. Aggregate demand for each of the growth scenarios is summarized below.

DEMAND FORECAST FOR FLAT STEEL IN 2005 AND 2006

(Unit: Ton/Year)

	2005	2006
Lowest growth	1,426,846	1,505,772
Medium growth	1,779,625	1,865,584
Highest growth	1,969,969	2,147,473

The amount of flat steel with thickness of less than 3mm consists of hot rolled steel and cold rolled steel in 1995 as mentioned in Table 4-1-1 and classified as follows.

DISTRIBUTION OF SHEET OF THICKNESS OF LESS THAN 3MM IN 1995

<3mm	HR	CR	Total
Construction + Pipe	151,033		151,033
Other industries	8,995	128,418	137,413
Others	0	58,189	58,189
Total	160,028	186,607	346,635

4-2-4. Demand Forecast by GDP and Flat Steel Consumption in Egypt

The past GDP and apparent consumption of total steel in Egypt are shown in Figure 4-2-1.

Apparent consumption in 1987 and 1988 is extremely high. That is because ANSDK started the production of long steel in the middle of 1986. In 1989, the apparent consumption dropped because overproduction of long steel was ended when some existing long steel mills closed, and the Egyptian Government started to control product sale. The other important factor that effected the consumption of steel was the fall of the oil price in 1989, after which oil producing countries (not only Egypt) reduced steel consumption as shown in the Table 4-2-3.

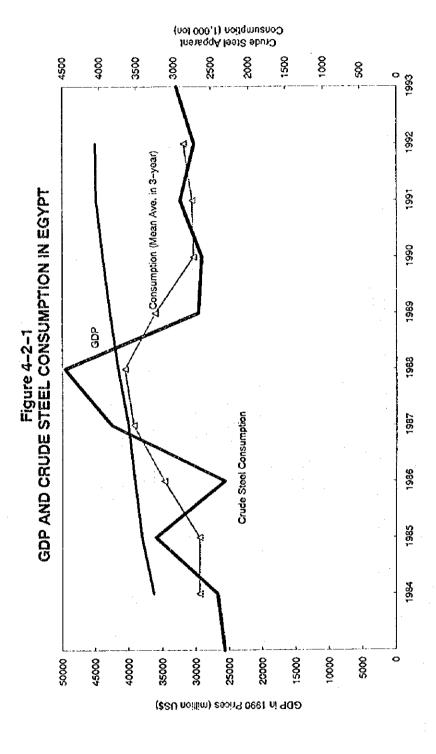

The apparent consumption after 1990 stagnated due to start of a transition period from a centrally planned economy to a market economy.

The following cases are studied.

- 1) Based on the time series analysis using steel demand between 1983 and 1993 (marked by sluggish demand) except for the 1987 and 1988 figures which apparent consumption were extremely high, demand in 2005 is estimated at 1,021,000 tons (See Table 4-2-4 and Figures 4-2-2 and 4-2-3).
- 2) Based on the correlation between GDP and steel demand between 1984 and 1993 (marked by sluggish demand) except for the 1987 and 1988 figures which apparent consumption were extremely high, demand in 2005 is estimated at 940,000 tons for the lowest case, 979,000 tons for the medium case, and 1,014,000 tons for the highest case (See Table 4-2-5, and Figures 4-2-4 and 4-2-5).
- 3) Based on linear extrapolation of flat steel demand trends between 1991 and 1995, demand in 2005 is estimated at 1,083,000 tons (see Table 4-2-6 and Figure 4-2-6).
- 4) Based on the correlation between GDP and nominal consumption of flat steel between 1991 and 1995, consumption in 2005 will be 1,230,000 tons under the lowest growth case, 1,440,000 tons under the medium growth case, and 1,628,000 tons under the highest growth case (see Table 4-2-7 and Figures 4-2-7 and 4-2-8).

From the above situation, correlation factors for these method are low.

.

GDP: Refer to Tables 1-1-1 Consumption: Tekkoh Tokei Yoran 1992 through 1995 (Refer to Table 4-2-3)

Figure 4-2-7
CORRELATION BETWEEN GDP AND FLAT STEEL CONSUMPTION

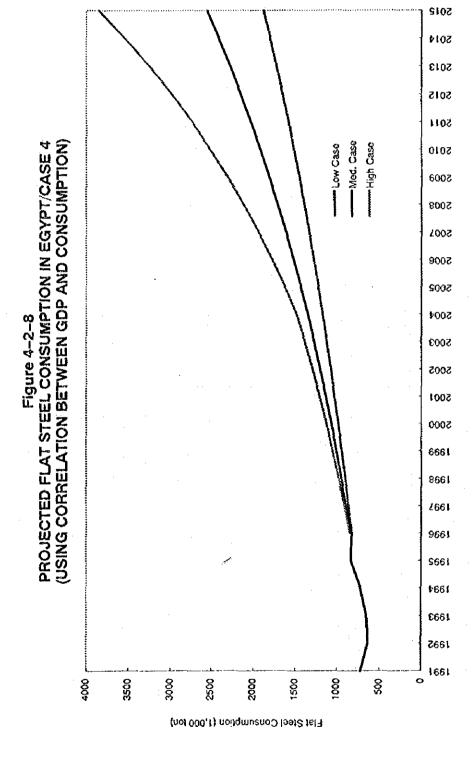

4-2-5. Correlation between GDP per Capita and Consumption of Steel per Capita in Various Countries (Cross-section Analysis)

Cross-section analysis based on Table 4-2-8 is used to forecast the future consumption of total steel.

For calculation of flat steel demand from total steel demand, the ratio of flat steel to total steel is used.

Usually, the ratio of flat steel increases when there is an increase of GDP, however, the Study Team estimated that the past ratio of flat steel of 30% will not be changed in Egypt because the GDP-base target growth rate of Construction in the third development plan is still higher than that of industry, and also the Egyptian Government has a big plan to development of area which is wide but not used effectively at present.

The exchange rate of Egyptian pound declined after 1988 due to increase of external debt and other factors. That is, exchange rate before 1988 was E£ 0.7 but in 1991, it was E£ 3.33. This devaluation is too high from the point of actual purchasing power.

Therefore per capita GDP of Egypt in US\$ based on the actual purchasing power is higher than the nominal one. Accordingly, the per capita steel consumption based on the nominal US\$ GDP in Egypt is higher than obtained by cross-section analysis calculated using nominal per capita GDP.

The team moved the GDP per capita of Egypt to the curve (Case 6-1) and the curve is moved to the consumption per capita of Egypt (Case 6-2).

Case 6-1 and Case 6-2 are cross-section analyses among countries consuming less than 150kg in the frame. Case 5 is based on the total for all countries.

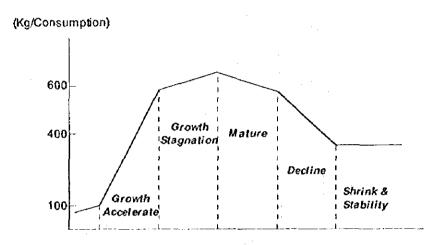

The regression formula and correlation coefficient of each cases and the estimated demand of total steel and flat steel consumption in 2005 are as below.

(Unit: 1.000 ton)

		Lowest	Medium	Highest
		case	case	case
Case 5 (Table 4-2-9, Figure 4-2-11), r2=0.5558	Total	3,914	4,247	4,433
$Y=(-0.0000002\times X^2 + 0.0186\times X + 77.957)-41$	Flat	1,174	1,274	1,330
Case 6-1 (Table 4-2-10, Figure 4-2-13), r2=0.5665	Total	4,205	4,676	5,085
Y=0.2482×X^0.7424	Flat	1,261	1,403	1,526
Case 6-2 (Table 4-2-11, Figure 4-2-14), r2=0.5665	Total	4,036	4,597	4,899
Y=(0.2482×X^0.7424)+16	Flat	1,211	1,379	1,470

Past experience in the world shows that consumption increases at a high growth rate after the level of 100kg of per capita consumption of the total steel is attained, as follows.

Figure 4-2-9 PER CAPITA CONSUMPTION AT THE DEVELOPMENT STAGE OF TOTAL STEEL

In the case of Egypt, around 2005 will be the turning-point year and after around 2005 the demand of steel is expected to increase at a high growth rate.

The demand forecast in case of the highest growth rate of GDP will meet this assumption.

4-2-6. Plans of Individual Companies to Increase Production

A few companies indicated the production plan in near future but there were wide differences among their expectation and no one mentioned their plans for as far ahead as 2005.

4-2-7. Demand Forecast of Flat Steel After 2005

The Study Team will use the demand forecast by accumulating the demand forecast of each section of consuming industry to obtain the demand in 2005.

Case 6-1 of cross-section analysis is used for further demand forecast shown in Table 4-2-12 and Figure 4-2-15. Demand of flat steel in 2010 and 2015 for lowest, medium and highest cases are summarized below.

(Unit: 1,000 ton)

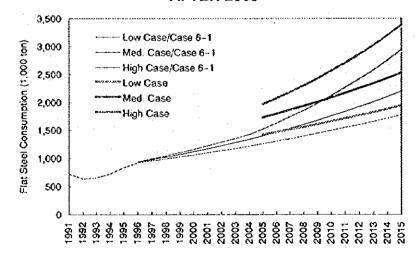

Year	Lowest	Medium	Highest
2005	1,427	1,734	1,970
2010	1,663	2,086	2,562
2015	1,942	2,528	3,386

4-3. Future Projection of Production (Volume, Product Mix)

4-3-1. Summary

Based on medium-term (2005 and 2006) demand forecast by applying the Micro-Analysis, the product mix for the proposed plant was considered. This should take into account various relevant factors ranging from demand forecast for flat steel excluding oversized products not produced by the new plant, yields of product at each stage and EISCO's production assumption.

Conditions for future projection, domestic demand excluding flat steel of over size, production amount in term of slab and production demand considered EISCO's production are mentioned in 4-3-2, 4-3-3, 4-3-4 and 4-3-5 respectively.

As the conclusion, product demands in 2005 and 2006 for the proposed plants are estimated as follows.

In the case EISCO continues production shown in 4-3-2 after 2005:

(Unit: ton)

	20	005	2006		
·]	CR	HR	CR	HR	
Lowest growth	181,894	821,493	205,187	898,509	
Medium growth	272,221	1,120,732	301,284	1,178,309	
Highest growth	341,280	1,351,319	392,702	1,524,358	

In the case EISCO shuts down the plate mill (cold and hot rolling mills will continue operation):

(Unit: ton)

	20	005	2006		
ľ	CR	HR	CR	HR	
Lowest growth	181,894	902,493	,493 205,187		
Medium growth	272,221	1,201,732	301,284	1,259,309	
Highest growth	341,280	1,432,319	392,702	1,605,358	

In the event EISCO does not manufacture the products:

(Unit: ton)

	20	005	2006		
ľ	CR	HR	CR	HR	
Lowest growth	454,204	1,398,393	477,497	1,475,409	
Medium growth	544,531	1,697,632	573,594	1,755,209	
Highest growth	613,590	1,928,219	665,012	2,101,258	

4-3-2. Conditions for Future Projection of Production of the New Plant

- (1) Width of roll of hot rolled and cold rolled mill is 1,500mm. Thickness of hot rolled product is less than 24mm.
- (2) Yield of product at each stage is assumed as 95%.
- (3) Supply from existing production facility

Case 1. Production based on the capacity and operation rate in 1994/95 will be continued after 2005.

	Capacity (ton/year)	Rate	Production (ton)
Plate mill	90,000	0.9	81,000
Hot mill	570,000	0.87	495,900
Cold mill	313,000	0.87	272,310

- Case 2. The plate mill will be shut down.
- Case 3. The entire plant will be shut down.

4-3-3. Domestic Demand Excluding Flat Steel of Over Size

The flat steel of width with more than 1,500mm is not produced by the new plant because the width of roll of HR and CR is estimated as 1,500mm due to the low ratio of flat steel with more than 1,500mm.

The flat steel of thickness with more than 24mm is not produced by the new plant because winding of such flat steel is difficult.

DOMESTIC DEMAND EXCLUDING FLAT STEEL OF OVER SIZE (width >1500mm, thickness >24mm)

(Unit: ton) 2005 Lowest Medium Highesu CR Total Cfl Total HR CR Total <u>≼</u>3mm 279,926 587,505 342,548 369,034 711,582 391,026 807,068 307,579 617,054 752,898 857,871 857,871 752,898 617,054 > 3mm 130,837 116,285 130,837 97,223 116,285 404,802 1,301,782 ,095,446 485,319 1,580,765 248,897 546,879 1,795,776

4-3-4. Production Amount in Term of Slab

The yield of product at each stage (from slab to HR, from HR to CR and from CR to coated steel) is estimated as 95%.

And the required production of HR includes the total demand of CR.

The total demand of CR includes the demand of coated sheet.

PRODUCTION AMOUNT IN TERM OF SLAB (yield of HR 0.95, of CR 0.95 x 0.95, of Coated 0.95 x 0.95 x 0.95)

Total	1,475,409	477,497		1,755,209	573,594		2,101,258	665,012		

Total CR = CR ≤ 3mm + coaled

Total HR = Total CR + HR ≤ 3mm + HR >3mm

4-3-5. Production Mix of the New Plant

EISCO's production of flat steel after 2005 is effected on the required production of the new plant.

The Study Team estimated for three cases as follows.

Case 1. Production based on the capacity and operation rate in 1994/95 will be continued.

Case 2. The plate mill will be shut down.

Case 3. The entire plant will be shut down.

PRODUCTION MIX OF THE NEW PLANT (In Consideration of EISCO's Production)

Chapter 5

EVALUATION OF NEED FOR A NEW FLAT PRODUCT PLANT CONSTRUCTION

5. EVALUATION OF NEED FOR A NEW FLAT PRODUCT PLANT CONSTRUCTION

5-1. Evaluation of the Need for the New Flat Product Plant

The need for the new flat steel plant is examined from domestic demand of 2005 and 2006 and the minimum scale of production required for each process of flat steel production. The minimum scale of production for each stage of the flat steel production processes to ensure economic operation is shown below.

Note that certain portions (20% at maximum) of flat steel to be produced at the new plant are exportable, although their prices may be lower than those for the domestic market.

Pre-Conditions of Evaluation

(1) Minimum economic scale of annual production is considered as follows.

Direct reduction steel making plant	400,000t
Electric furnace	200,0001
Continuous casting	200,0001
Hot rolling	800,0001
Cold rolling	300,0001
Continuous annealing	360,000t

Critical production is hot rolling and cold rolling.

- (2) Export will be less than 20% of total production.
- (3) Product demand of new plant for each case is shown below.

PRODUCTION MIX OF THE NEW PLANT (In Consideration of EISCO's Production)

(Unit: ton)

			2005				
	EISCO full opera	tion (Case 1)	ElSCO's Plate mill	stop (Case 2)	EISCO's plant stop (Case 3)		
	HR	CR	HR	CR	HR	CR	
Lowest	821,493	181,894	902,493	181,894	1,398,393	454,204	
Medium	1,120,732	272,221	1,201,732	272,221	1,697,632	544,531	
Highest	1,351,319	341,280	1,432,319	341,280	1,928,219	613,590	

			2006			
	EISCO full opera	tion (Case 1)	EISCO's Plate mill	stop (Case 2)	EISCO's plant s	top (Case 3)
	HR	CR	HR	CR	HR	CR
Lowest	898,509	205,187	979,509	205,187	1,475,409	477,497
Medium	1,178,309	301,284	1,259,309	301,284	1,755,209	573,594
Highest	1,524,358	392,702	1,605,358	392,702	2,101,258	665,012

Under the highest growth scenario, demand for HR and CR in 2005 will exceed the minimum economic scale.

HR demand in 2005 will exceed the minimum economic size for all the cases including the lowest growth scenario with continued production by EISCO.

Therefore, the construction of the HR mill can be justified from the demand side.

On the other hand, domestic demand for CR in 2005 under the medium growth scenario and EISCO's production to be continued after 2005 is 272,221 ton which is lower than 300,000 ton of minimum economic size but the construction of CR can be justified in consideration of export of small amount only in 2005. The domestic demand of CR increases to 301,284 ton in 2006.

Recommendation

The demand of HR and CR in 2005 meets to the economic size of plant.

2005 is the reasonable target year in consideration of the required schedule including feasibility study, government approval, basic design, tender and contract procedures, foundation work, installation of equipment, mechanical completion, start-up, and initial operation to boost the operating rate to the full capacity.

Also, it is reasonable to adopt the medium growth rate of 5.5% which is close to the average growth rate of GDP between 1983 and 1994, namely 5.7%.

After 2005, rapid growth of steel demand is expected as per capita consumption exceeds 100kg.

Therefore, the Study Team believes that construction of the flat steel mill can be justified from the demand perspectives.

In consideration to the time constraint to meet the target for full-scale operation in 2005, it is recommended to enter the second phase of feasibility study on the new flat steel plant.

MINISTRY OF INDUSTRY & MINIRAL WEALTH G.O.E.I

STRATEGY OF THE EGYPTIAN INDUSTRY (TARGETS - AXES - POLICIES)

արարանան արևանանան արևանան արևան արևան արևան արևան արևան արևան արևանան արևանան արևան արևան արևան արևան արևան ա

Target:

- 1 To maximize the role of Industry in the growth of the Gross National product.
- 2 To develop and upgrade the Egyptian Industry.
- 3 To limit the influence of Unemployment.

July 1994

Strategy Axes:-

- 1 Encouraging Investment in the Industrial Field.
- 2 Suitable Distribution of the Industrial Activities, among regions.
- 3 Increasing the competitive and exportation capabilities of Industrial Products.
- 4 Developing Human Resources.
- 5 Improving the Production Efficiency and upgrading the quality levels of Industrial commodities.
- 6 Maximum exploitation of production capacities of the existing factories
- 7 Achieving technological advancement for the Industrial Sector.
- 8 Rationalizing the use of energy in Industry.
- 9 Adapting the capability to quick response to varying circumstances.
- 10- Comprehensive development of small and mediun scale industries.
- 11 Stressing upon the local manufacture of capital machinery & equipment.
- 12 Concern towards the strategic Industries and diversing their products to lead other industries.
- 13 Concern towards the exploitation mineral resources.
- 14 Protection of the Environment from Industrial pollution .
- 15 Protection of the Industrial Products consumer.
- 16 Protection of the infant Industries and confronting dumping policies .

1 - First Axis:

Encouraging Investment in the Industrial Field:

Policies:

- 1/1 Study of the laws legislations and measures which limit the efficiency of industrial investment in view of cancelling or adjusting them.
- 1/2 Orienting industrialization towards real investment opportunities in the various industrial fields according to the financial and economic revenue in order to realise the best allocation of available resources.
- 1/3 Encouraging the establishment of investment tools (such as investment funds, stock capital market ... etc.) to attract savings towards industrial investment.
- 1/4 State concern over tarnishing and encouraging excelled human elements in view of building up a generation of entrepreneurs capable of making as industrial decision and implementing it.
- 1/5 Offering a publicized system of investment incentives varying according to the different activities and sites and according to the regional industrial development targets.

2 - Second Axis:

3

Suitable Distribution of the Industrial Activities among regions

Policies:

2/1 - Preparing a plan clarifying the zones into which it is required to increase their industrial development growth and defining the priorities for industrial development of such

zones taking into consideration the comparative advantages of each zone.

- 2/2 Laying the incentive bases for each zone and promotion thereof.
- 2/3 Coordination and integration between the various agencies of the Ministry of Industry, local government and other governmental agencies.

3 - Third Axis:

Increasing the Competitive and Exportation capabilities of Industrial Products:

Policies:

- 3/1 Concern towards the study of the foreign markets requirements for new commodities.
- 3/2 Concern towards the linkage between the tasks undertaken by the commercial representation agencies and the Egyptian exporters as regards information obout exporting industrial commodities.
- 3/3 Encouraging existing industries towards exporting through various incentives.
- 3/4 Availing marketing, promotion and financing agencies to serve export activities.
- 3/5 Attracting giant multinational firms towards direct investment in view of exportation
- 3/6 Benificiating of what avails to some Egyptian products of relative advantages towards inaugurating new markets for Egyptian industries.

- 3/7 Concern over the various means of transportation for industrial products exported overseas in view of confirming the continuity of their availability in the markets.
- 3/8 Concern over the packing and packaging operations for industrial products, taking into consideration the availability of the data and information in the form required by the importing country.
- 3/9 Concern over the services attributed with shipping and unloading in avoidance to the export process constraints.
- 3/10- Assisting the industrial products exporters towards fast receival of the incentives due to them in both the tax drawback and direct drawback systems as well as other incentives.

4 - Fourth Axis:

Developing Human Resources

Policies:

- 4/1 Developing the educational curricula and syllabuses for the universities and technical institutes.
- 4/2 Developing and updating training programs in the industrial fields.
- 4/3 Concentrating over training the overemployed labour in the industrial sector and transfering it to other industrial activities.
- 4/4 Concern over the enhancement of training areas in the fields of pioneering thought through the development of personal aptitudes in the production units.

4/5 - Concern over the continual training of the medium and executive administration cadres in the industrial sector.

5 - Fifth Axis:

Improving the Production Efficiency and Upgrading the Quality Levels of Industrial Commodities:

Policies:

- 5/1 Establishing the institutional and organizational framework to guarantee the continued productivity improvement and the broadening of its application scope such as establishing a High National council for production Development followed by sectoral centres and units within the factories.
- 5/2 Use of actual productivity scales for production factors in making use of the incentives or trophies presented by the state.
- 5/3 Concern towards the development and application of standard specifications over all industrial commodities.

6 - Sixth Axis:

<u>Maximum Exploitation of Production of the Existing Factories:</u>

Policies:

- 6/1 Encouraging the trend towards exploiting idle production capacities in the industrial sector.
- 6/2 Orienting industrialization towards non traditional production fields, particularly in new industrial fields paralleling the global industrial advancement.
- 6/3 Laying incentives for producers to allocate budgets for production research and development such as deducting same budget from the tax vessel.

6/4 - Laying incentives for factory owners to reinvest their activity profits in production extensions.

7 - Seventh Axis:

Achieving Technological Advancement for the Industrial sector:

Policies:

- 7/1 Concern over the establishment and development of specialized research centres for the various industries and linking them with the scientific research agencies and research centres.
- 7/2 Exchange of experiences in the field of technology research development and transfer in the industrial sector with international institutions and concentrating upon seeking assistance from expatriate Egyptian experiences.
- 7/3 Establishment of guidance units for technology transfered to industrial activities.
- 7/4 Pursuading the industrial concerns to benificiate from the interim period in the GATT agreement.

8 - Eighth Axis: Rationalizing the Use of Energy in Industry:

Policies:

- 8/1 Directing Industry towards the development of production technology systems in view of saving in the use of energy.
- 8/2 Directing concern towards periodical maintenance of production units , feeding networks and measurement and control devices in view of decreasing energy losses.

- 8/3 Directing towards the customization of use of thermal insulation and closed thermal circuits.
- 8/4 Use of new and renewable energies.

9 - Ninth Axis:

Adapting the Capability to quick Response to Varying circumstances:

Policies:

- 9/1 Directing the executive administration in the industrial sector towards adapting those skills which enables it to use the quick changing administration to respond to economic, technological and administrative changes.
- 9/2 Laying the flexible guidance plans for the private sector which enable the fast response to varying circumstances on the local and international levels.
- 9/3 Concern over the communication means with international organizations and the more advanced countries to become acquainted with global changes.
- 9/4 Establishing an agency for the forecast of global changes in the fields which influence industry.

10 - Tenth Axis

Comprehensive Development of small and Medium scale Industries:

Policies:

10/1 - Preparation of studies related to the guiding plans.

- 10/2 Extension in the establishment of different kinds of integrated industrial Estates.
- 10/3 Concern towards the interlinkage of small and mediums scale industries as well as linking them with major industries as feeding and complementary industries.
- 10/4 Offering technical, administrative and marketing assistances to small and medium scale factories.
- 10/5 Linking the assistances and incentives offered to small and medi um scale industries with the industrial devlopment targets.
- 10/6 Linking the activities of research centres of the Universities, specialized institutes and national research centres with the problems confronting small and medium scale factories together with their follow -up.

11 - Eleventh Axis: Stressing Upon the Local Manufacture of capital Machinery and Equipment:

Policies:

- 11/1 Developing and updating the information format which serves to deepen the local manufacture of capital machinery and equipment, particularly as to what concerns existing manufacturing capabilities and having them geographically distributed as well as the design capabilities and their feeding industries.
- 11/2 Encouraging the manufacture of the main components of major industrial projects.
- 11/3 Encouraging the establishment of firms which undertake the role of general contractor towards linking between local capabilities

and directing them towards deepening the local manufacture of capital machinery and equipment.

- 11/4 Developing the concerns undertaking engineering design and linking them with the first sample of the inanufacturing process, together with availing the finance necessary for this task from the research and development budgets.
- 11/5 Registering and compiling successful cases for the local manufacture of capital machinery and equipment and publishing them in pamphlets which serve to direct requirements to local capabilities on the one part and building up the confidence in the ability of such available capabilities on the other part.

12 - Twelfth Axis:

Concern towards the strategic Industries and Diversing their Products to Lead other industries:

Policies:

- 12/1 State concern towards the establishment of strategic industries.
- 12/2 Offering private strategic projects distinguished incentives.

13 - Thirteenth Axis:

Concern towards the Exploitation of Mineral Resources:

Policies:

- 13/1 Intensifying the prospecting processes for mineral wealths and conducting more analysis upon such resources as well as preparing an information format related to such processes.
- 13/2 Assisting and encouraging the private sector to embark upon the field of prospecting and exploiting all mineral ores together with organizing such operations in what does not lead to the drainage of national wealths.

14 - Fourteenth Axis: Protection of the Environment from Industrial Pollution:

Policies:

- 14/1 Concern towards the use of clean technologies.
- 14/2 Application of pollution prevention techniques in the existing and new factories.
- 14/3 Encouraging the establishment of projects to process industrial wastes to produce other new commodities.

15 - Fifteenth Axis: Protection of the Industrial Products Consumer:

Policies:

- 15/1 Assistance in the establishment activation and encouragement of consumer protection associations.
- 15/2 Binding the producers to place data, basic specifications and use instruction cards on the product.
- 15/3 Application of legal penalties upon factories violating standard specifications.

16 - Sixteenth Axis: Protection of the infant Industries and Confronting Dumping Policies:

Policies:

16/1 - Enhancing the efficacy of the concerns responsible for the control upon imported industrial products.

- 16/2 Continued revision of the customs tariff for industrial products and raw materials.
- 16/3 Protection of industrial activity from dumping operations on the basis of international trade agreements .

ANNEX 2 CONSUMPTION MIX OF EACH COMPANY/FACTORY

1. General Steel Structure

Table 1-9

Consumption mix of SteelCO Table 1-1 Table 1-2 Consumption mix of METALCO Table 1-3 Consumption mix of FERROMETALCO Table 1-4 Consumption mix of ERISCOM and other 3 companies (AOI, KAHA, PorSaidia) Table 1-5 Consumption mix of Petrojet Table 1-6 Consumption mix of Arab Contractors Table 1-7 Consumption mix of Agiba Table 1-8 Consumption mix of Port Said Engineering Company P.S.E.W. 10th Ramadon Works

Consumption mix of Petrojet, Arab Contractors, Agib and other 5 factories of Table 1-11 are assumed based on the company's products and scales informed by the \bigcirc marked companies/factories noted in item 1-2).

Consumption mix of HIMEC and other 5 factories

2. Boiler, Pressure Vessels and Heat Exchanger

Consumption figures are based on the information from Babcock \$ Wilcox Egypt S.A.E.
 The company's products, consumption of flat rolled sheet/plate and it's share of each products in Egypt are shown on Table 2-1.

Table 2-1 CONSUMPTION AND SHARE IN EGYPT OF FLAT ROLLED SHEET OF BABCOCK & WILCOX EGYPT

	Consumption of flat rolled sheet	share (%)	Assumed consumption of flat rolled sheet in Egypt
a) Pressure parts for utility boilers	-(only tubes)	100	
b) Industrial water tube boilers	550ton/year	80	690ton/year
c) Pressure vessels	200ton/year	30	660ton/year
d) Heat exchanger			
		Total	1,350ton/year

- 2) Consumption mix is shown on Table 2-2.
- 3) Import of flat rolled sheet/plates

Flat sheets/plates which are more than 1.5m wide and high grade steel for boilers and pressure vessels are imported.

Babcock \$ Wilcox Egypt S.A.E. imported 500 ton/year last year.

4) Production plan in future

The company is considering the production increase of 15 %/year.

3. Railway Vehicle

- 1) SEMAF (The General Egyptian Company For Railway Wagon & Coaches) is sole manufacturer of wagons, coaches and underground trains in Egypt.
- 2) Consumption mix is shown on Table 3-1.
- 3) Import of flat rolled sheets/plates

Atmospheric corrosion resisting rolled steel sheets/plates of 959ton are imported for underground trains.

The details are shown on Table 3-2.

4. Public Welfare (Gas Cylinder)

- 1) Fabricator list
 - (1) Union-Co. For Gas Bottles Manufacturing & Metal Processing.
 - (2) Government 99
- Consumption figures are based on the information from Union-Co. For Gas Bottles Manufacturing & Metal Processing.

The company's products, consumption of flat rolled sheet and it's share of each products in Egypt are shown on Table 4-1.

Table 4-1 CONSUMPTION OF FLAT ROLLED SHEET AND SHARE IN EGYPT OF UNION-CO.

	Production/month	Weight/ unit	Total net consumption	Yield	Consumption of sheet	Share	Total in Egypt
a) 30 l bottles	30,000units	18.5kg	555(ton/month)	0.75	740ton/month	1/3	2,220ton/month
b) 60 i bottles	15,000units	31 kg	465(ton/month)	0.75	620ton/month	1/3	1,860ton/month
						total	4,080ton/month
		-					= 48,960ton/year

3) Consumption mix is shown on Table 4-2.

The consumption figures are based on the information from Union-Co.For Gas Bottles Manufacturing & Metal Processing.

Table 4-2 CONSUMPTION MIX OF PUBLIC WELFARE (GAS BOTTLES)

ton/year 1000 < w 1220 < w Width(mm) 600 < w 1500 < w | 2000 < w | 2500 < w | 3150 < w w≤600 <000< Total Thick.(mm) ≦1000 ≤1220 ≨1500 ≦2000 ≨2500 ≨3150 ≦4000 3<t≦6 48,960 48,960 6<1≦8 8<t≦16 16<1≨24 24<1≤40 40<t≦63 63<1≦100 100 < t≦ 160 160<1 48,960 Total 48,960

- Import of flat rolled sheets/plates
 All sheets are imported because of high grade steel.
- 5) Production plan in future The company is now expanding the factory, after 1 years total production will reach to 2,000,000 units/year.

ANNEX 3 SHIPBUILDING

1. Memo of Visits to Shipyards

1) Alexandria Shipyard (A.S.)

- Date

7

: June 10 (Mon), 1996 at 10:00 - 12:00

- Interviewed : Eng. Ibrahim Mohamed Awad, Technical Director

- Information obtained:

(1) Ships built: As shown in Table 1

(2) Facilities:

Berths:

180 m x 28 m x 2

cranes 30 t x 3, 90 t x 3

Mechanical slipways: 60 m x 12 m x 4 (1,500DWT)

Graving docks:

 $158.5 \,\mathrm{m} \times 18.9 \,\mathrm{m} \times 1 \, (10,000 \,\mathrm{DWT})$

 $267.0 \,\mathrm{m} \,\mathrm{x} \, 39.6 \,\mathrm{m} \,\mathrm{x} \, 1 \, (85,000 \mathrm{DWT})$

Quays:

1,200 m with 40 t x 3 & 25 t x 1 cranes

- (3) Max.building capacity: 52,000 DWT/year
- (4) Fabrication capacity of steel: 2,000 tons/month
- (5) Actual steel fabrication for newbuilding:

500 tons/month (6,000 tons/year) because of not sufficient order

(6) Actual steel fabrication for shiprepairing:

6 tons/day (2,000 tons/year)

(7) Max. steel plate size to be handled:

12 m long x 3 m wide x 40 mm thick

(8) No. of employees:

Full productive (direct)

2,000

Semi-productive and service (indirect)

3,000

(9) Divided into 3 parts; Newbuilding, repairing & small boats

Share of newbuilding in A.S.: about 75%

(10) Steel materials:

Imported. Supplied by foreign country suppliers together with machinery/equipment and software (designs) even zine anodes obtainable in Egypt. Max. size of plate of Egyptian steel (6 m x 1.5 m x 12 mm) is too small to use. Shipowners require to use steel of the 1st class European standard.

(11) Max steel consumption in whole Egyptian shipyards:

Max. 8,000 tons/month, half in this shipyard.

(12) No future outlook because of privatization which might be done in half an year.

2) The Egyptian Shipbuilding & Shiprepairing Co.

Bulk C.

Bulk C.

: June 10 (Mon), 1996 at 12:30 - 14:30

- Interviewed : Eng. Ally El Deen Abou Samra, Chairman

4,200/6,500

4,200/6,500

6/1995

3/1997

- Information obtained:

(1) Ships built: Only small boats

(2) Facilities:

Floating dock

: Lifting capacity 6,000 t x 1

152 m x 23 m

A3 - 2

Mechanical slipway

: Lifting capacity 600 t x 1

Building & repair spaces on land: 8

107.95/103.00x18.20x 8.00/ 5.50

107.95/103.00x18.20x 8.00/ 5.50

(3) Steel consumption:

Ñ

Newbuilding : 500 tons/year

Shiprepairing: 1,000 tons/year (50 vessels/year)

Steel structure : 1,000 tons/year

(4) Steel plate size usually used:

6 m long x 2 m wide x 4-10 mm thick

(5) Steel material imported: 50 %

(6) No. of employees : 1,500

(7) No future outlook because of privatization which might be done in a few years.

3) The General Egyptian Workshops Co.

- Date : June 11 (Tue), 1996 at 12:00 - 14:00

- Interviewed : Eng.M. Afiff Khalifa, General Production Manager

- Information obtained:

(1) Ships built: Small ships like river cruises, tugs, etc.

(2) Facilities:

Slipway : Capacity 500 t x 1

Building berths : 75 m x 3, 50 m x 3

Outfitting quay : 170 m x 1

Floating dock : Lifting capacity 400 t x 1

(3) Steel consumption:

Newbuilding : 3,000 tons/year (3 - 5 ships/year)

Max.size of ship : 70 m long x 12 m wide

Shiprepairing :

Steel structure : 3,000 tons/year

(4) Steel plate size usually used:

6 - 12 m long x 1.5 m wide x 0.8 - 16 mm thick

(5) Steel material imported: 10%

(90 % imported from Romania, Russia, etc.)

(6) No. of employees : 1,300 (60 % direct workers)

(7) No future outlook because of privatization to be done in a few years

4) Port Said Shipyard (Directly belonged to Suez Canal Authority)

- Date

: June 15 (Sat), 1996 at 9:00 - 12:00

- Interviewed

: Eng. Ahmed Deghidy, President

Eng. El-Sayed Z. Elsaaty, Deputy Director

- Information obtained:
- (1) Ships built: As shown in Table 2

17 ships of 3,200 - 6,500 DWΓ cargo boats for Egyptian Navigation Co. Only 2 ferry boats will be built this year.

(2) Facilities:

Building berth

: 150 m x 43 m x 1

12,000DWT x 2 or 20,000DWT x 1

at the same time

60 t x 2, 40 t x 2 cranes

Floating docks

: L.C. 25,000 t (210 m x 35 m) x 1,

L.C. 10,000 t (170 m x 28 m) x 1,

L.C. 5,000 t (106 m x 21.8 m) x 1

Slipways

: 1,0001x2

Floating cranes

: 500 t, 200 t, 100 t & 40 t each 1

(3) Steel consumption:

Newbuilding

: 3,000 tons/year

Max size of ship

: 18,000 DWT ship

Shiprepairing

: 3,000 tons/year

Steel structure

: 3,000 tons/year

(4) Steel plate size usually used:

9 m long x 2.5 m wide x 8 - 10 mm thick

(5) Steel material imported: 100 %

: 3,200

(6) No. of employees

Port Said Shipyard is under the Shipyard Division of Suez Canal Authority.

(8) Future development:

CNC machines, yard crane increase, deep quay and new work shops.

N.

5) Port Tawfik Shipyard (Directly belonged to Suez Canal Authority)

Not visited. This yard is a small size yard.

One fifth production volume of Suez Shipyard.

(1) Ships built: Small floting units

(2) Facilities:

Slipway : L.C. $2,000 \text{ t} (70 \text{ m} \times 20 \text{ m})$

Floating crane: L.C. 500 tx 1

(3) No. of employees : 510

6) Suez Shipyard (Subsidiary of Suez Canal Authority)

- Date : June 14 (Fri), 1996 at 10:00 - 12:00

- Interviewed : Eng. Wael S. Kaddour, Chairman

- Information obtained:

(1) Ships built: Small boats only, mainly shiprepairing

(2) Facilities:

Floating/trimming dock : L.C. 17,000 t x 1

171 m x 78/62.3 m

dry docking up to 30,000DWT

trimming docking up to 300,000DWT

Graving dock : $144 \text{ m x } 22 \text{ m} \text{ x } 1 \text{ (G/}\Gamma \text{ 8,000 t)}$

1

Synchrolift (Mechanical lift): L.C. 900 t x 1

Building borths : 56 m x 16 m x 5

(3) Steel consumption:

Newbuilding : 1,100 tons/year Shiprepairing : 2,000 tons/year

Steel structure : 300 tons/year

(4) Steel plate size usually used:

Floating workshop

6 m long x 2 m wide x 8 - 20 mm thick

(5) Steel material imported : 40 % (From Romania and Poland)

(6) No. of employees : 800

- 7) Timsah Shipbuikling Co.(Subsidiary of Sucz Canal Authority)
 - Date

: June 13 (Thu), 1996 at 11:00 - 13:00

- Interviewed

: Eng.El-Sayed Ashour

Engineering & Sales General Manager

- Information obtained:
- (1) Ships built: Small boats only

No. of ships built: 61 tug boats (1962 - 1994)

12 patrol boats (1981 - 1987)

19 launches (1966 - 1993)

13 floating cranes (1977 - 1980)

12 dredgers (1967 - 1991)

66 barges (1963 - 1988)

(2) Facilities

Mechanical ship lift: L.C. 1,500 tx 1 (75 m x 20 m)

Building berths (parking ways): 100 m x 4, 60 m x 2

(3) Steel consumption:

Newbuilding

: 2,000 tons/year

Shiprepairing

: 1,000 tons/year

Steel structure

: 1,000 tons/year

(4) Steel plate size usually used:

6 m long x 2 m wide x 8 - 20 mm thick

- (5) Steel material imported: 100 %
- (6) No. of employees

: 2,500

8) Port Said Engineering Works S.A.E.(Subsidiary of Suez Canal Authority)

- Date

June 15 (Sat), 1996 at 12:00 - 13:30

- Interviewed :

Eng. El-Sayed Abrahim, General Manager

- Information obtained:
- (1) Ships built: Small boats only
- (2) Facilities:

Slipway: L.C. 1,500 t

(3) Steel consumption:

Newbuilding

: 3,000 tons/year

Shiprepairing

1,000 tons/year

Steel structure

1,000 tons/year

(4) Steel plate size usually used:

6 - 9 m long x 1 - 2.5 m wide x 6 - 20 mm thick

(5) Steel material imported: 100 %

(6) No. of employees : 1,000

(7) Branch offices & workshops in 10th of Ramadan, Aswan, Suez,

Alexandria and Port Said

9) Canal Naval Constructions Co.(Subsidiary of Suez Canal Authority)

- Date

: June 15 (Sat), 1996 at 13:30 - 15:00

- Interviewed

: Eng.M.Khallaf, Chief of Production Sector

Eng. Mohamed El-Mahdi, Project General Manager

- Information obtained:

(1) Ships built: Small boats only

Newbuilding

6 vessels/year

Repairing

15 vessels/year

Others

3 - 5 building/year

(2) Facilities:

Mechanical slipway: L.C. 750 tons

(3) Steel consumption:

Newbuilding

-2,000 tons/year

Shiprepairing

500 tons/year

Steel structure

1,000 tons/year

(4) Steel plate size usually used:

6 & 9 m long x 1.5 & 2 m wide x 5 - 12 mm thick

Steel material used

National plates

1,500 tons

Up to 1 m wide for

7 mm thick

Up to 1.5 m wide for

8 mm thick & over

Production is limited and does not cover all quantities needed.

Imported plates

1,000 tons

Sections

500 tons

No. of employees

: 750

Future development plan : Repair area 200 x 50 m instead of 120 x 50 m

10) Sucz Canal Authority (SCA)

- Date : June 13 (Thu), 1996 at 09:00 - 10:30

- Interviewed : Eng. Mohamed A. Negm

Director of Shipyard Department Dr.Eng.Isis Abdeltlalim Kamel

Director of Engineering Department

Member of Board of Directors

Eng. Nabir Ahmed Mohamed Elsaghir of GOFI accompanied a JICA member and confirmed the above memo.

Eng. Nabir Ahmed Mohamed Elsaghir

ISO R65 Heavy Series

 $6.0 \sim 150^{mm} \phi$

For Petroleum Use

Nominal Die 2"~8" \phi

Spiral Welding Process

Nominal Die 6 5/8" \sim 48" ϕ \sim 50%

Steel Grade API 5Ls standard

Grade A and B

Commercial Grade

x42, x46, x52

 $x56, x60, x65 \rightarrow High Grade$

Production Capacity

100,000 tons/y (Domestic Production Share ~80%)

Material Hot Rolled Coils 2.5~12.7mm thick x ~1.5m width x max 10t/coil

Tonnage consumed:

115,000 ton/y

Local 63,524 t/y

Import 34,037 t/y \(\triangle \) As of June '95 \(\simes \) May '96

Product Export Ratio

~15% Unchanged since 5 years ago

Production Capacity

100,000 tons/y on One (1) Shift operation

Size Mix, Main Customers and Steel Grade will be informed on 16th June (Sunday)

S. Yasunage/HCA Study Team

THE STEEL USED IN THE PRODUCTION THROUGH 1994/1995

1. Import Steel:

Width in mm → Thick in mm ↓	W ≤ 1,020	1,020 < W ≤ 1,250	W > 1,250
	Tons	Tons	Tons
$2.5 \le t < 3.75$	3,952	1,161	397
$3.75 \le t < 6.5$	8,440	3,338	<u>-</u>
$6.5 \le t < 12.7$	13,295	420	. 38

Total = 31,041 Tons

2. Local Steel:

Width in mm Thick in mm	W ≤ 500	500 < W ≤ 1,250	
	Tons	Tons	Tons
$2.5 \le t < 3.75$	22,666	5,665	. 11
3.75 ≤ t < 6.5	11,832	21,354	
$6.5 \le 1 < 12.7$	65	366	:

Total = 61,948 Tons

3. Total = 92,989 Tons

Starting from July 1 '94 to June 30 '95

Actual Production:

ITEM	Quantity in tons
- Longitudinally Welded Steel Pipes	
(From 1/2" to 4")	35,799
- Spiral Welded Steel Pipes	
(From 6" to 48")	23,908
- Longitudinally Welded Steel Pipes	
(From 2" to 8")	26,882
Total	86,589

	Ougutitu in tons	Price in L.E
	Quantity in tons	Price in L.E.
