QUATERNARY

Pleistocene

- Q_4 — Recent. Pebbles, sands, loams, clays
- $\beta_4 Q_4$ — Recent. Subalkaline basalts, anamesites
- $\beta_4 Q_4$ — Recent. Subalkaline basalts, ankaramites, anamesites, hyalobasalts, scoria, agglomerates, volcanic bombs
- $\beta_4 Q_4$ — Recent. Subalkaline basalts, anamesites
- $\beta_4 Q_4$ — Recent. Alkaline basalts, basalts, anamesites, hyalobasalts, scoria, agglomerates, volcanic bombs
- βQ_4 — Recent. Subalkaline basalts, anamesites, scoria, agglomerates
- Q_3 — Upper-Quaternary. Conglomerates, sandstones, sandy loams, loams, limestones, calcareous tuffs, marls
- $Q_2^{1} / Q_2^{2}\beta Q_2$ — Middle Quaternary. 1. Conglomerates, sandstones. 2. Subalkaline basalts, anamesites
- Q_1 — Lower Quaternary. Limestones, calcareous tuffs, pebbles
- βQ_1 — Lower Quaternary. Basalts, anamesites, dolerites, scoria, agglomerates

NEOGENE

- βN_2 — Pliocene. Basalts, alkaline basalts, dolerites, anamesites
- N_2^b / $N_2^{b\,1} / N_2^{b\,2}\beta N_2^b$ — Pliocene, upper part. 1. Marls, limestones, flinty beds. 2. Analcitites, teschenites, subalkaline basalts and anamesites, red clays
- N_2^a — Pliocene, lower part. Yellow-grey conglomerates, sandstones
- N_1^2 / $N_1^{2\,1} / N_1^{2\,2}\beta N_1^2$ — Middle Miocene. 1. Red-coloured sandstones, conglomerates, clays; variegated marls, limestones. 2. Basalts, plagiobasalts, ankaramites, picrites
- N_1^1 — Lower Miocene. Quartz sands, interbedded with limestones

PALEOGENE

- Pg_3 — Oligocene. Limestones, sandstones
- Pg_2^3 — Upper Eocene. Limestones
- Pg_2^{2+3} — Middle and Upper Eocene, undivided. Limestones, marls, flints*
- Pg_2^{2-3} — Middle - Upper Eocene, undifferentiated. Limestones
- Pg_2^2 — Middle Eocene. Chalky limestones, marls, flints, some beds of shelly-detrital algae limestones
- $Pg_1-Pg_2^1$ — Paleocene - Lower Eocene, undivided. Chalky limestones, marls and flints*
- $Pg_1-P_2^1$ — Lower Eocene (subzone Acarinina pentacamerata). Alternation of chalky limestones, marls and flints; phosphate interlayers
- $Pg_1-Pg_2^1$ gl — Paleocene-Lower Eocene, subzone Globorotalia aragonensis. Chalky limestones, marls

- Post-Paleogene subvolcanic small cutting bodies of basalts

CRETACEOUS

- Cr_2sn-d — Cenonian-Danian, undivided. Chalky limestones, marls, dolomites, flints, sandstones*
- Cr_2m-d — Maestrichtian-Danian, undifferentiated. Chalky limestones, marls, occasional beds of flints
- $Cr_2cn+st+cp$ — Coniacian, Santonian and Campanian, jointly. Chalky limestones, marls, flints, dolomites, sandstones, phosphates
- Cr_2cp — Campanian. Limestones, flints, phosphate interbeds
- Cr_2cn+st — Coniacian and Santonian, jointly. Chalky limestones, marls
- Cr_2cm — Cenomanian and Turonian, undivided. Dolomites, limestones, marls*
- Cr_2t — Turonian. Limestones, dolomites
- Cr_2cm_2 — Cenomanian. Dolomites, limestones, marls
- Cr_1 — Lower Cretaceous, undivided. Limestones, dolomites, quartz sandstones with brown ironstone, clays, marls and basalts*
- Cr_1al — Albian. Limestones, dolomites, marls
- Cr_1ab_2 — Lower Cretaceous (Pre-Albian). Quartz sandstones and clays with brown ironstone, limestones
- Cr_1ap_2 — Aptian. Upper substage. Limestones („Falaise de Blanche"), quartz sandstones with brown ironstone, some clays and marls
- Cr_1ap_1 / $Cr_1ap_1^{1} / Cr_1ap_1^{2}$ — Lower Cretaceous (Pre-Upper Aptian). 1. Quartz sandstones with brown ironstone, occasional beds of clays. 2. Basalts, anamesites, dolerites

JURASSIC

- J_3 — Upper Jurassic, undivided. Limestones, marls*
- J_3t — Tithonian. Limestones, marls
- J_3km — Kimmeridgian. Limestones
- J_3ox — Oxfordian. Marls, limestones
- J_3cl — Callovian. Limestones, marls
- J_2 — Middle Jurassic, undifferentiated. Dolomites, limestones
- J_2bt — Bathonian. Ochreous oolitic limestones
- J_2bj_2 — Bajocian, upper part. Limestones, dolomites
- $J_2bj_1^{b}$ / $J_2bj_1^{b\,1} / J_2bj_1^{b\,2}\beta$ — Bajocian, middle part. 1. Dolomites, limestones. 2. Spilites
- $J_2bj_1^{a}$ — Bajocian, lower part. Dolomites
- $J_1(?)$ — Lower Jurassic (?). Limestones

GENETIC TYPES OF QUATERNARY DEPOSITS

- Scoria, basalt agglomerates, volcanic bombs
- Shelly limestones horizon
- Sandstones horizon
- Lacustrine
- Eolian
- Alluvium
- Proluvium (rock debris)

- 1 / 2 / 3 — Geological boundaries: 1. Solid where fixed at place. 2. Dashed where uncertained. 3. Dashed-dotted where buried under Quaternary mantle
- Geological facies boundaries
- 1 / 2 — Faults: 1. Solid where certained, 2. Dashed where uncertained
- Faults concealed by Quaternary mantle
- Faults as channels bringing up lavas
- 25 — Inclined beds and dip
- Gently inclined beds (dip less than 5°)
- Vertical beds
- Horizontal beds
- Overturned beds
- Extinct volcano cones
- Lava flow direction, observed
- Lava flow direction, supposed
