LEGEND

N — Speckled clay, clay with admixed pebbles, rock debris and gruss (in cross sections only)

Middle Devonian Post-ore Dike and Subvolcanic Complex

Dikes and Minor bodies of subalkaline diabase and trachybasalt (τB), subalkaline granite porphyry (εγπ), and granite porphyry (γπ)

Minor body of trachyandesite (τd)

KARAMENDIN INTRUSIVE COMPLEX

Intrusives and dikes additional to the second phase and associated metasomatic formations: granodiorite-porphyry ($\gamma\delta^1_2$), quartz-diorite-porphyry coarse impregnated and biotite-plagioclase-like ($q\delta\pi^2_2$), eruptive breccias of granodiorite-porphyry ($\gamma\delta\pi^3_2$), beresite (br_2), potassium feldspar facies (kl_2).

The first phase and associated metasomatic formations quartz diorite, medium grained, medium-fine grained ($q\delta_1$), microdiorite and quartz-diorite-porphyry of exocontact facies ($q\delta_1$), beresite (br_1), potassium feldspar facies (kl_1), secondary quartzite (vk_1), additional intrusive of quartz diorite porphyry ($q\delta\pi^1_1$).

Early Devonian Subvolcanic Complex

Natron andesitic basalt (αB)

Upper Subformation Sandstone, aleurolite, gravelite, polymictic conglomerate, mostly red coloured, with horizons of tuffite of acidic composition.

Lower Subformation:

- Upper Stratum. Tuff, lefroid and volcanomictic clastic rocks of andesitic composition, mostly red coloured
- Lower Stratum. Tuff, lefroid and volcanomictic clastic rocks of andesitic composition, mostly green coloured

Lower Subformation. Tuff and tephrite of andesite and andesitic basalt composition of different sizing (without defining rock types and stratum at ore zone)

Border of subdivisions with different age: confirmed (a), possible (б), steeply dipping faults defined by a combination of features (в), possible (г), borders of formations of the same age and different composition (д), borders of metasomatic facies (е), hornfels facies (ж).

Border of low-angle overthrust: confirmed (a), possible (б).

Border of depressions with Neogene sediments (a), shaft (б), open pit (в), sampling point for silicate analysis and its No. (г). Contour with hypergenic veinlet copper mineralization (д).

Inclination of rock laminations, as measured in drill cores (a), in the area (б); inclination of the contact, as measured by graphical method (в).

Drill and Drill No. : prospecting drill (a), mapping drill completed in 1994 (б), mapping drill completed before 1994 (в), hydrogeological drill (г).

Asphalt road.

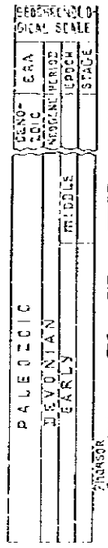
LEGEND



N — Speckled clay, clay with admixed pebbles, rock debris and gruss (in cross sections only)

Middle Devonian Post-ore Dike and Subvolcanic Complex

Dikes and Minor bodies of subalkaline diabase and trachybasalt (τδ),
subalkaline granite porphyry(σγ₂)
Minor body of trachyandesite (τd)

KARAMENDIN INTRUSIVE COMPLEX

Intrusives and dikes additional to the second phase and associated metasomatic formations: granodiorite-porphyry (γδ₂³), quartz-diorite-porphyry biotite-plagioclase-like (qδ₂³), eruptive breccias of granodiorite-porphyry (γδ₂³), beresite (br₂), potassium feldspar facies (kl₂).

The first phase and associated metasomatic formations: quartz diorite, medium-fine grained (qδ₁), microdiorite and quartz-diorite-porphyry of exocontact facies (mqδ₁), beresite (br₁), potassium feldspar facies (kl₁) propylite (P₁), secondary quartzite (vk₁).

KARAMENDIN FORMATION

Upper Subformation: Sandstone, aleurolite, gravelite, polymictic conglomerate with horizons of tuffite of acidic composition

Lower Subformation: Tuff and tefroid of andesite and andesitic basalt composition of different sizing

Tuffite of acidic composition aleurolite and aleuropelite-like (a), trachyandesite (δ).

Tuff of andesitic basalt (a), tuff of mixed composition with prevailing fragments of dacite and andesite (б), automagmatic breccia of granodiorite-porphyry : fragments located at fluidal cement of the same composition (в)

Diabase, gabbro-diabase (а), quartz diorite medium-fine grained, including quartz diorite porphyry in ore zone (б), quartz diorite fine grained (в), quartz diorite porphyry (г), granodiorite-porphyry (д), granite porphyry (е), beresite derived from quartz diorite, accompanied by unevenly distributed potassium feldspar (ж).

Beresite derived from quartz diorite (а) beresite derived from tuff and tefroid of andesitebasalt (б), beresite (в), (composition of initial rocks is shown by corresponding stripes), beresitized quartz diorite (г), quartz diorite with potassium feldspar (д), secondary quartzite (е), hematitization (и)

Eruptive (intrusion) breccia-breccia with different composition of fragments or with different composition of fragments and cementing rocks (а), tectonic pre-ore breccia: fragments of one type are cemented by powdered material of the same composition (б), tourmalinization (в), veinlet silicification, possible orientation of veinlets (г), quartz veins (д), limonitization (е), local silicification (ж).

Border of subdivisions with different age: confirmed (а), possible (б); faults defined by a combination of features (в), possible (г), borders of formations of the same age and different composition (д), borders of metasomatic facies (е), hornfels facies (ж).

Contour of hypergenic veinlet copper mineralization (а), impregnation and veinlets of minerals: pyrite (б), galena (в), sphalerite (г), chalcopyrite (д), bornite (е), carbonate (ж), (а- on geological columns only).

Border of depressions with Neogene sediments (а), shaft (б), open pit (в).

Inclination of rock laminations, as measured in drill cores (а), in the area (б), inclination of the contact, as measured by graphical method (в).

Drill and Drill No. : prospecting drill (а), mapping drill (б), hydrogeological drill (в), CPSE (previous expedition) prospecting drill (г), technological drill (д), CPSE drill completed by Karaganda expedition in 1993 (е)

C_2 category reserves contour (а) outlined by prospecting drilling, (б) addition (on cross sections)

P_1 resources contour (on geological map)

Oxidation zone border (on the cross sections)

Contour of magnetic dome of quartz diorite at the depth of approx. 300 m as per drilling and prospecting data (а)

Contour of copper ore, suitable for operations (cut-off 0.5% Cu) (б).

Contour of rich copper ore.

$D_3 sl$ Sultsfar Formation - Marl, limy aleurolite limestone (100 - 200m)

$D_3 ms$ Meystar Formation - Limestone, limy sandstone aleurolite conglomerate (50 - 200m)

$C_1 ps_2$, $D_3 ps_1$ — D_3-$C_1 ps$ Posidonian Formation

Lower Sub-Formation (ps_1) - Limy aleurolite, marl

sandstone (200m)

$D_3 cz$

$D_3 ms$

Orogenic Volcanic - Tectonic Structures

Shiderlin Depression

Devonian Volcanic Belt

$D_3 st$ Sophin Formation - Speckled aleurolite, sandstone, gravelite, conglomerate (400-800m)

$D_2 kn$ Konyz Formation - Interlayering of red-coloured, rarely grey-coloured tuffaceous, volcanogenic polymictic sandstone, gravelite aleurolite, conglomerate, rarely tuff of andesitic-dacite (>1200m)

Kokkuduktubin Complex

Middle Devonian Intrusive Formations

$\gamma\pi_4 D_2 kk$ Fourth Phase - Granite porphyry

$\epsilon_3 D_2 kk$ Third Phase - Dyke of diorite porphyry, lamprophyry

Second Phase - Quartz monzonite, quartz monzodiorite, propylite, beresite, silicified rock

First Phase - Monzodiorite, propylite, beresite, silicified and sericitized rock

Middle Devonian Sub-Volcanic Formations

$\lambda\pi D_2$ Rhyolite porphyries

$D_2 kz$ Kuzkizek Formation - Tuff, sandstone aleurolite, limestone, lava and tuff of red-stone volcanics rhyodacite composition, interlayers of andesite and andesitic tuff (600-700m)

Zhelandybulack Formation

$D_2 zb_2$ Upper Sub-Formation - Lava and tuff of trachyrhyolite rhyolite ingnimbrite (>300m)

$D_2 zb_1$ Lower Sub-Formation - Fine clastic and ash tuff of rhyolite composition (> 400m)

Karamendin Complex

Early Devonian Sub-Volcanic Formations

$\gamma\pi_3 D_1 km$ Third Phase - Dyke of granite porphyry, microdiorite, lamprophyry

Second Phase - Granodiorites, quartz monzodiorites, beresite, silicified and sericitized rock

$q\delta D_1 km$ First Phase - Quartz diorite, diorite, beresite, silicified rock

$\nu D_1 km$ Early Phase - Gabbro, leucogabbro norite

1 2 3 4

1 Andesitic Basalt 2 basalt

3 andesite-dacite 4 andesite

$\lambda\pi D_1$ Rhyolite porphyry

Zharsor Formation

$D_1 zr_3$ Upper Sub-Formation, tuff, sandstone, aleurolite, conglomerate, horizon of andesite, sandstone and gravelite (500-600m)

$D_1 zr_2$ Middle Sub-Formation, tuffite of moderately acid composition with interlayers of conglomerate, breccia, tuff of andesi dacite, sandstone, aleurolite, gravelite, conglomerate (500m)

$D_1 zr_1$ Lower Sub-Formation, agglomerate tuff, rarely lava of porphyritic andesitic basalts, bands of pelite tuffite, horizons of tuff of andesi-dacite (>500m)

$D_1 sm$ Semizbugin Formation - Lava and tuff of rhyolite ignimbrite of rhyolite composition, interlayers of tuffaceous sandstone, aleurolite, rarely andesite (1000-1400m)

Late Silurian Intrusive Formations

$\nu S_2 t$ Tuzdin Complex - Gabbro, gabbro-clinopyroxenite, labradorite Gabbro-norite

Geosyncline Structures

Early Caledonides

Late Caledonides

Outer Zone

$S_1 st$ Sumysar Formation - Spotted polymictic and tuffaceous sandstone conglomerate and aleurolite (1500m)

$S_1 kr$ Karaaygyr Formation - Grey-green polymictic sandstone, aleurolite, conglomerate, limy sandstone and aleurolite (> 2000m)

$S_1 st$ Satpayev Formation - Grey green rarely red coloured sandstone aleurolite and gravelite with interlayers of conglomerate

$O_3 tn$ Tyntuduk Formation - Sandstone conglomerate, graywacke sandstone, lenses of limestone, sedimentary breccia, aleurolite with olystolite of jasperoid, basalt limestone (>3000m)

$O_2 er$

$O_2 kr$ Karatal Formation - Sandstone, gravelite, sedimentary conglomerate-breccias, aleurolite with olystolite of flint, basalt and ultrabasite (> 200m)

$\epsilon_3 O_2 ak$ Akdym Group - Jasper, microquartzite, limy aleurolites, interlayers of phtanite, vanadium-bearing schist, basalt, conglomerates (> 2500m)

Astafnov - Sub-alkaline delaminated complex

Late Cambrian Plutonic Formation

$\nu\epsilon_3 ast$ Mica clinopyroxenite, dunite, titanium-magnetite clinopyroxenite

Early Cambrian Plutonic Formation

$\zeta\epsilon_3$ bir Protrusion of dunite, harzburgite, peridotite, pyroxenite and serpentinite, birbirite (bir)

V-$\epsilon_1 zt$ Zhelau Formation - Basalt with discontinuous bodies of quartzite limestone and flint (> 100m)

$PR_1 cs$ Osakarov Formation - Chlorite-sericite schist, quartzite, quartzite-schist, rare lenses of marble (> 400m)
