APPENDIX 10 TECHNOLOGY TRANSFER

During the First Period of the Phase I Study, discussions were held with staff of the Department of Soil Conservation on technology transfer and the technology transfer plan incorporating the following issues was prepared.

- Contents, method and timing of technology transfer
- Persons responsible for conducting technology transfer and counterparts receiving the transferred technology
- Others (issues relating to technology transfer)

The technology transfer in question consists of (i) OJT for counterparts, (ii) exchange of opinions at meetings, (iii) participation in a technology transfer seminar in Nepal and (iv) training in Japan. The plan mainly focuses on OJT in Nepal and was submitted to the Department of Soil Conservation at the end of the First Period of Phase I. The planned contents of the technology transfer in each field of assignment are described below.

(1) General Management

The design and planning methods of the Study were explained and technology transfer were conducted on the preparation of an integrated watershed management plan and the relevant guidelines through field supervision and meetings.

(2) Watershed Management Plan

Technology transfer was conducted on the analytical method and procedure to prepare an integrated watershed management plan and the relevant guidelines based on the survey results on the natural conditions, socioeconomic conditions and conditions of devastated land.

(3) Socioeconomic/Plan Evaluation

Technology transfer was conducted on the sampling method, questionnaire preparation and preparation and operation of a database for a socioeconomic baseline survey. The planning and evaluation items and techniques relating to social analysis was also made clear.

(4) Land Use and Vegetation

Existing data on the land use and vegetation categories relating to the preparation of land use and vegetation maps was examined and technology transfer was conducted on aerial photograph interpretation and field surveys.

(5) Erosion Control and Infrastructure Improvement

Technology transfer was conducted on the survey method for erosion control and prediction of hazard areas, the method to examine existing erosion control works and techniques, the analytical method to predict hazard areas and the procedure to prepare a hazard prediction map. In regard to the improvement of infrastructure, technology transfer was conducted on methods to implement and evaluate a fact-finding survey.

(6) Soil Survey

In addition to examination of the FAO-UNESCO soil classification and discussions with organizations related to soil map preparation, technology transfer was conducted on the profile survey method, sample analysis techniques and soil map preparation using topographical maps and a land use and vegetation maps.

(7) Geology

Technology transfer was conducted on the reconnaissance method on geological characteristics and their assessment for the preparation of geological maps and also on recognition of geological features and materials and mapping techniques using aerial photographs.

(8) Environmental Impacts

Technology transfer was conducted on the process, items and evaluation method of an initial environmental survey using the relevant legislation and guidelines in Nepal.

(9) Aerial Photography

Technology transfer was conducted on the analysis of aerial photographs, topographical map preparation, planning of a photography programme and levelling surveying method.

(10) GIS System

Technology transfer was conducted on the key points of hardware and software selection, GIS operation techniques and the procedure to prepare hazard maps.

A list of the Study Team members and their counterparts in the Department of Soil Conservation is attached to the Technology Transfer Plan already submitted to the Department of Soil Conservation. The following training in Japan has so far been provided in connection with the Study.

<u>Name</u>	<u>Subject</u>	<u>Duration</u>
1. Mr. Puspa R. Thapa	Watershed management	from Aug., 1995 (45 days)
2. Mr. Rajkumar Chaudhary	GIS	from Jan., 1997 (30 days)
3. Mr. B.D. Shrestha	Watershed management	from Oct., 1997 (30 days)

Appendix Table 10-1 The Development Study on Integrated Watershed Management in the Western Hills of Nepal: Results of Technology Transfer

Technology Transfer Plan					Results	
Item	Contents	Method	Timing	CP	Team Member Responsible	
General Coordination	1. General coordination of the Study 2. Preparation of Integrated Watershed Management Plan and Guidelines	Supervision of field surveys	During field surveys	Mr. M.H. Wagley Mr. B.P. Kharel	Yasuyuki Suzuki	Although both CPs cannot participate in the field surveys full-time because of their posts, technology transfer on the study management and coordination methods and plan preparation method was attempted through the reports of the Study Team.
Watershed Management Plan	1. Preparation of Integrated Watershed Management Plan 2. Preparation of Guidelines for Integrated Watershed Management Plan Formulation	Through various field surveys	During field surveys	Mr. P.R. Thapa (predecessor) Mr. I.B. Malla	Atsushi Hisamichi	Mr. P.R. Thapa was actively involved in the field surveys to his credit but was replaced owing to circumstances on the Nepalese side. The successor has also been equally active
Socioeconomy/Plan Evaluation	1. Implementation of socioeconomic baseline survey and method to analyse survey 2. Method of plan evaluation findings	Design of the Study/data processing	During field surveys	Ms. M. Shrestha Mr. R. Sapkota	Akihiko Sasako	Ms. Shrestha participated in the field survey (albeit for a short period) and also experienced data analysis. No participation on the part of Mr. Sapkota
Land Use/Vegetation	1. Land use and vegetation classification method 2. Preparation of land use and vegetation maps	Existing data/aerial photo interpretation/mapping	During field surveys	Mr. H.M. Bhandari	Akira Nomura	As the CP is the chief of the DSCO, he did not participate in the relevant field surveys but participated as well as cooperated in administrative aspects
