RELEVANT PLANS AND PROJECTS

APPENDIX 1

RELEVANT PLANS AND PROJECTS

This appendix presents a review of the major plans and road projects, either on-going or committed, related to the Study.

1. MEDIUM TERM ECONOMIC STRATEGY PAPERS (MTSEP), 1996-1998

1.1 MTSEP COMPONENTS

The MTSEP is composed of the following parts:

- Introduction,
- Current Economic Situation,
- Public Sector Issues,
- Reforming the Public Service,
- Medium-Term Economic Prospects and Strategy,
- Sectorial Strategy,
- Public Sector Investment program and financing Plan 1996-1998, and
- Conclusion

In addition, it included the parts of: "Implementation of the 1994-96 Medium-Term Policy Matrix, Medium-Term Policy Matrix 1996-98, and statistical Appendix" which are attached as appendices.

1.2 Purpose and Strategy of MTESP

The Introduction defines the purpose of MTESP as "to identify policies which the Government intends to pursue and which it believes will ensure sustainable economic growth in the medium and longer term". Also, the Introduction defines the main objectives of the Government as "to promote the sustainable economic and social development of Grenada".

In order to achieve these objectives, the MTSEP emphasizes increase domestic savings and investment, modernization of administration and strengthening of the institutional structure of the public sector, economic diversification through improvement in the tax and incentives regimes and in the regulatory frameworks, and greater attention to environmental issues.

1.3 Understandings of the Present Situation

The economic growth of the country fell to an average below 2% per annum for the period 1991-1995 after booming at an average of 6.5% p.a. during the period 1986-1990. The paper concluded that the weak economic performance in the 1990s reflected a continued decline in the agricultural sector and stagnation in construction activities.

During the period 1991 to 1995 the Government attempted to stabilize its finance. The tax system was reviewed and the retrenchment programme was activated with the specific aims of reducing current expenditure and increasing revenue. As a result, the current expenditure fell from 24.6% to 23.4% and total revenue and grant increase from 25.9% between 1992 and 1995

1.4 Medium-Term Economic Prospects and Strategy

The Government is projecting a slight increase in the rate of economic growth from 2.6% in 1995 to 3.4% in 1998. The performance in 1998 is expected to include 7.0% in the tourism and in construction. Modest growth is expected from agriculture and manufacturing.

In the case of agriculture, the ratio of growth is expected to be 2.2% and the manufacturing sector is expected to grow by 2.0% both in 1998. Major issues to be addressed in the medium-term are summarized in Table 1.1. The targets and objectives shown in Table 1.2 have been identified for the period 1996-1998.

1.5 Public Sector Investment Program (PSIP) and Financing Plan 1996-1998

The PSIP for the period 1996-1998 emphasizes projects related to the provision of economic and social infrastructure (including road rehabilitation, water supply development and health), human resource development and solid waste management.

It also included projects for agriculture sector development and solid waste mealybug eradication and the establishment of the fish processing plant to act as a catalyst for the further development of the fishing industry.

Table 1.1 Major Issues to be address in the Medium-Term

Factors	Description
Structural factors	High level of unemployment, skill shortage, low productivity in agriculture and manufacturing, and inadequate economic infrastructure.
Institutional factors	Reducing staff numbers, introducing new grading and pay system, and the privatization of several State Owned Enterprises.
Social Factors	Inadequate supply of social services to the community environmental protection, assistance to socially disadvantaged groups.
Foreign Assistance	The creation of an Eastern Caribbean Call Exchange, and arrangements for and Eastern Caribbean Venture capital Fund and an Eastern Caribbean Unit Company.
Commodity Prices	Low prices of major agricultural products to be exported.
Preferential Markets	Phasing out of preferential market access for ACP bananas of the EU.

Note: ACP; African, Caribbean and Pacific states (under the LOME arrangements)

Table 1.2 Medium-Term Targets and Objectives

Objective	Target	
	1995	1998
Economic Growth	2.6%	3.4%
Government's Savings	1.8% of GDP	3.4% of GDP
PublicSector Investment	7.2% of GDP	Not less than 10% per annum. During 1996-1998
Taxation: • Income tax threshold • Property tax	 EC$ 18,000 -	 EC$ 60,000 To be restructured
Public Sector Debt	-	To eliminate arrears
Revenue	-	Introducing additional revenue raising measures

The structure of the PSIP is linked to the Government's overall development strategy, to its sectorial strategies, and to the role of the public sector as the facilitator of private sector development.

The Planned expenditure is estimated at estimated at EC$ 167.2mn. Of this total EC$ 112.9mn represent on-going projects, and EC$54.3mn new projects. Structure of the PSIP 1996-1998 is summarized in Table 1.3.

Table 1.3 Structure of PSIP 1996-1998

Items	Total Amount in million EC$
Economic Services:	42.3
- Agriculture	26.8
- Tourism	2.1
- Manufacturing	13.4
- Infrastructure	65.5
- Transport	65.7
- Water and sewage	2.8
Social Services:	55.1
- Education	28.6
- Health	23.3
- Housing	1.5
- Other	1.7
Other Public Investments	4.3
Grand Total	167.2

2. ROAD IMPROVEMENT AND MAINTENANCE PROJECT - GRENADA

2.1 Components of the Paper

This paper was issued from the Caribbean Development bank as an Appraisal Report. The paper is composed of the following parts:

- Introduction,
- The Transport Sector,
- The Project,
- The Borrower,
- Benefits,
- Justification and Economic Analysis, and
- Terms and Conditions.

2.2 The Project

The project consist of the improvement, reconstruction and surface renewal of two sections of the roads identified as being in urgent need of attention. These roads are the Airport Roads (from Burns Point in St. George's to Point Saline's International Airport) and the Eastern Main Roads from Bellevue to Hope.

2.3 The Borrower

Over the period of structural Adjustment Program, central Govemment's finances improved from a recurrent surplus of 0.7% GDP in 1992 to a surplus of 1% GDP in 1994 before grants. The capital revenues are expected to be augmented by EC$ 10mn in local loans in 1995 thus providing adequate counterpart funds for implementation of projects.

2.4 Benefits, Justification and Economic Analysis

Savings in vehicle operating costs (VOCs) will be the main economic benefit resulting from implementation of the project. Internal economic rates of return were calculated for each link of the project roads. The results are sections of Airport Road show more than 30% and of Eastern Main Roads show more than 16%.

2.5 Terms and Conditions

It is recommended that Caribbean Development Bank lend to Grenada Government an amount not excluding the equivalent of US$ 11,431,000 consisting of:

(1) International Development Association (IDA) Resource US$ 1, 266,000
(2) Other Special Fund Resource (SFR) US$ 1, 146,000
(3) Ordinary Capital resource (OCR) US$ 9,019,000

Conditions of loans are summarized as follows:

Loan	Grace Period	Repayment Period	Interest Rate
IDA	9 Years	25 years	1.25% for the first 10 years 2.50% for the rest 15 years
SFR	5 years	17 years	2%
OCR	5 years	17 years	7.75% (fluctuating interest system)

3. COASTAL EROSION, SEA DEFENSES AND ROAD REHABILITATION STUDIES

Final Report, Volume 3, April 1994 - Existing Road Condition assessment, Road Rehabilitation and Improvement Program, and Prioritization.

(1) Study Roads (28 Roads)
- Low level coastal roads near beaches or just above tide level
- High level coastal roads constructed at the top of sea cliffs

(2) Road Classification

Group	Traffic Range	Pavement Width (ft)	Description
1	<1000	10 - 12	Minor Roads
2	1000 < TR<2000	16 – 18	Class / Rural Roads
3	>2000	24 -30	Main Roads in St. George's

(3) Pavement Type

- New Pavement (Double Surface Treatment, Asphalt Concrete, Cement Concrete)
- Rehabilitation (Assume use of existing scarified and reshaped pavement as sub-base)
- Overlay (Double Surface Treatment, Asphalt Cement)

(4) Construction Options for Budget Estimate

- Do Minimum
  Relining the road to good condition on its present alignment without major improvement of any element.
- Rehabilitation
  Upgrading the road with minor improvements to drainage and if possible visibility and safety.
- Improvement
  Usually involves widening with consequential requirements for cutting wall etc. Major improvement on the existing alignment.

(5) Priority Ranking

Factors used for Priority Ranking are the following three:

- Road Classification ; 4 classes proposed by consultants
- Road Condition ; Pavement Condition Values (Carriage-way, Roadside Elements, Road Signs)
  - Subjective estimation of Roughness
  - Combined Pavement Index
- Per Capital Cost ; Construction per population based on traffic volume estimate (10,000 for classes/roads)

4. THE PHYSICAL PLANNING AND RELATED ENVIRONMENTAL MANAGEMENT PROJECT OF THE GOVERNMENT OF GRENADA (UNDP, 1996)

4.1 Table of Contents

This report by the project manager covering October 1994 to October 1995 comprises six parts as listed below:

- Part I - The Institutional Framework for Physical Planning and Related Environmental Management
- Part II - Development Planning Policy and Information Base
- Part III - The Development Control System
- Part IV - Environmental Impact Assessment
- Part V - Physical Planning Legislation
- Part VI - Administration, Organization, Staffing and Resources of the PPU.

4.2 Objectives of the Report

The report contains a description of the existing conditions found at the Physical Planning Unit (PPU) headquarters. It assesses the weakness in the system and makes recommendations for institutional strengthening. It also contains legal and planning material prepared for the use of the PPU and it reports on the status and makes recommendations of the future progress of the project.

The report concludes that the project should be funded for two additional years in order for the PPU to receive the necessary training and institutional strengthening required to prepare the PPU to fulfill its proper role in physical planning.

4.3 The Institutional Framework for Physical Planning and Related Environmental Management

This chapter provided a detailed review of the government agencies responsible for land use, development control and environmental management to determine the areas of overlapping functions and responsibilities. Recommendations were provided for the establishment of mechanisms to coordinate the related planning and environmental management functions of the various agencies. Non-governmental organizations were also reviewed.

The report states "The main recommendations of the Phase 1 Report which address the issue of integration for the planning function are:

(I) that each agency's mandate should set out clearly its role in the planning framework;

(II) that a revised reference book on project preparation, programming and implementation should be prepared, which will set out the formats of reports required and their timing;

(III) that the role and composition of various committees in the planning process need to be addressed;

(IV) that it should be decided which agencies should have planning units as part of an overall rationalization process."

(V) Additional recommendations for integration measures were also provided in the report.

4.4 Development Planning Policy and Information Base

One aim of the project was to help the PPU develop a National Physical Development Plan (NPDP). This concept has not been able to materialize due to several factors such as lack of a coordinating committee for all the responsible agencies, the CDB did not provide the required environmental specialists, the INDP/UNCHS did not procure the Gis Software, hardware and training required by the project and the PPU was not provided with staff who were committed and capable professionals.

Recommendations include increased staffing of the PPU, obtaining specific maps and aerial photography, obtaining specific equipment including GIS equipment, provision of an Inter-Sectorial Coordinating Committee and Technical Working Groups, and a Work Plan for preparation of the NPDP.

4.5 The Development Control System

The Physical Planning Unit's operation was detailed in this chapter and comments made regarding details of the operation. It was generally stated that the PPU lacked professional staff, adequate legislative direction and authority and adequate materials and equipment. The project intends to restructure, rebuild and strengthen the PPU.

Specific recommendations concerning the PPU's operations were made relating to processing of applications and other procedures, appeals, monitoring and enforcement, length of time to take to determine applications, statistics of development control and further work/implementation. Appendices of the report include several forms for the PPU's use.

4.6 Environmental Impact Assessment

Environmental Impact Assessment's (EIA) are not required by legislation for development projects in Grenada. The project provided assistance to build the capability within Grenada to properly review EIA's. The requirements are stated by the report as follows:

- "proposal for an institutional mechanisms to vet EIA's;
- assistance in the application of EIA guidelines and legislation;
- complementary assistance from NRMU and other agencies;
- provision of training in EIA's principles and procedures;
- incorporation of EIA provisions and regulations into broader legislation."

The report recommends that legislation be revised, to require an EIA for certain projects listed in schedule 1 (roads are not included), that the LDCA should be empowered to require an EIA for projects that fall outside of the schedule if they so decide, that an EIA Review Committee be established, and that the legislation include government projects. The report also detailed an EIA Terms of Reference format and recommended a EIA training program be implemented.

4.7 Physical Planning Legislation

The project attempted to provide assistance to the office of the Attorney General in updating the physical planning legislation. But the legislation could not commence because the Attorney General did not provide the necessary comments to the OECS Model Physical Planning Act. The chapter went on to outline the existing situation by reviewing the Land Development Control Act, Cap 160 and the Town and Country Planning Act, Cap 322.

The next section detailed problems with the legislation including concurrent jurisdiction between the LDCA and the T & CPA, section 3 of the Act is unsatisfactory, further definition of terms are needed, the Act makes no provision for development plans or policies, section 8 could be more clearly drafted, etc.

The report states "The regulations are not clearly drafted, there is insufficient definition of very technical terms, serious printing errors and the effect of the Regulations as a whole is not stated." Recommendations concerning the upgrading of the Legislation were detailed.

4.8 Administration, Organization, Staffing and Resources of the PPU

The report states "The focus of the Physical Planning and Related Environmental Management Project, when reactivated in October 1994 was shifted to institutional strengthening through restructuring, rebuilding, human resource development and management of the PPU . In this context, assistance in the management of the PPU was indicated as a priority requirement. This need was heightened by the departure on training of the Building Inspector/Head of Unit in September of 1997."

The project manager provided the above requested assistance. Recommendations include a proposed staffing of the PPU, a proposed organizational structure for the PPU, proposed refurbishing of the PPU and indication of work completed and recommendations concerning management and administration were made. Appendices include job descriptions.

5. GRENADA NATIONAL ENVIRONMENTAL ACTION PLAN (WB, 1995)

5.1 Components of the Action Plan

The plan comprises Section 1: Background which includes the overview of the State of the Environment; The Economy and Social Indicators, Economic Policies and the Environment, Population Policy and Private Sector Participation; Section 2: Environmental Priorities which includes Solid Waste Management, Water Supply and Liquid Waste Management, Land Use Management, Coastal Zone Management, Water Pollution, Forestry and Protected Areas and Natural Hazards; Section 3: Legal Instruments and Instrumentation's which include Legal Instruments, Institutions and Public Awareness; and Section 4 Strategy for Environmental Action which includes Project Profiles, Tables and Figures.

5.2 Purpose of the Action Plan

The preface states that "Grenada's small size, geographical location, economic structure, cultural and community development have played a major role in creating a certain stress on the environment which could result in the destruction of its natural resource, if mechanisms are not put I no place to ensure sustainable development." The action plan was written to identify environmental problem areas and determine solutions.

5.3 Current Situation, Indicators and Policies

The plan determined some of the environmental problems to be notable increases in soil and beach erosion, sedimentation of rivers and coastal areas, decrease in agricultural and fisheries productivity and loss of habitat. Inadequate solid waste disposal was considered as a serious pollution problem. Additionally the Government of Grenada has identified the following environmental issues as important policy action areas for sustainable growth land use management, coastal zone management, water pollution, forestry and protected areas and natural hazards.

Grenada may not have the financial capacity to address environmental issues adequately. While tourism is the fastest growing sector of the economy, the agricultural sector declined by 7% from 1981 to 1991. There was a growth in the agro-processing and light manufacturing. The focus, by the Government, on the environment is reflected by the combined infrastructure and water and sewer expenditure, which accounts for 46% of the total expenditures. According to the report, most available social indicators for Grenada compare reasonably well with countries of similar levels of development and physical characteristics.

The environment can be endangered when specific policies aimed at promoting the economy are not carefully designed and executed without considering the environmental consequences. The current environmental policy of the Government has a priority for the protection of sensitive terrestrial and marine space and disposal of solid and liquid waste. The Government is trying to use their limited resources to address environmental issues and is supporting environmental issues and is considering implementing policies aimed at supporting environmental concerns. Policies such as levying a fee for solid and liquid waste disposal, and entrance fees for forest and park areas are being reviewed and implemented. With regard to population, the Government will increase their efforts to educate the public in family planning in an effort to reduce family size.

The private sector is involved in environmental issues and has implemented several environmental projects. The plan states "The private sector in Grenada is able to influence environmental management decisions because of its influence, through consultation with Government agencies, in the planning process and the advocacy role it plays on environmental issues."

5.4 Environmental Priorities

The plan identifies seven issues that should receive priority attention as follows: 1. Solid Waste Management; 2. Water Supply and Liquid Waste Management; 3. Land Use Management; 4. Coastal Zone Management; 5. Water Pollution; 6. Forestry and Protected Areas and 7. Natural and Man made Hazards. Solid Waste Management in Grenada is inconsistent and lacking in disposal sites. Lack of a Solid Waste Management plan supported by legislation, financial and technical backing has created an unhealthy environment. A World Bank / OECS Solid Waste Management project will deal with the problems.

The water supply problems are system wide and stem from poor watershed management, a poor distribution network, inadequate storage capacity and inadequate maintenance of treatment plants. NAWASA plans to improve the water supply systems with the following: the construction of much larger dams and storage reservoirs in the catchment areas, improved management of the watershed areas, the replacement of distribution lines, island wide metering and institutional strengthening of NAWASA.

The problems relating to Land Use Management are based on a rapid decrease in the amount of available agricultural lands and the degradation of the quality of these lands. Also, lack of coordination between the many responsible Government Agencies is a contributing factor to Land Use Management problems. The Government is currently working on a National Land Use Policy to address the above problems.

The Fisheries Division of the Ministry of Agriculture is responsible for Coastal Zone Management. The primary problem in this area is coastal and reef fish species have been depleted due to over fishing and reefs that are dying or dead. The Fisheries Division intends to help resolve the problems by setting up a system of marine zones, extend their monitoring system, and manage marine resources through assessment and inventory.

With regard to Water Pollution (land based), the responsible agencies are the Ministry of Health and Ministry of Fisheries. The problems stem from polluted run-off and silt being discharged into Grenada's bays including Grand Anse Bay, Black Bay, the St. George's Harbour/Lagoon and the town of Gouyave. The Government is planning to help resolve the problems by relocation of solid waste disposal sites from coastal areas, improve the St. George's sewerage system and improve disposal of grey water and other forms of liquid and solid waste.

Grenada's main environmental problems with Forestry and Protected Areas are deforestation, top soil erosion, and reduction in water levels within watershed areas and destruction of wildlife habitats. To alleviate the problems, the Government of Grenada has implemented reforestation and conservation projects by establishing nurseries. Future projects include Land Use and Integrated Watershed Management, Carriacou Integrated Land Use and Forestry Development, Forestry Management and Institutional Strengthening, and Development of National Parks systems.

The final area included in the National Environmental Action plan is Natural Hazards. The plan lists natural hazards as hurricanes, storm surges, landslides and rock falls, floods, earthquakes and volcanic eruptions. Although Grenada has experienced various natural disasters including loss of life in the past, such as Hurricane Janet in 1955, recently Grenada has not had a serious disaster. The Government is aware of the potential danger however, and intends to intensify the disaster preparedness, public awareness campaign and establish an early warning system and facility to monitor Kick-em-Jenny volcano.

5.5 Legal Instruments and Institutions

Generally, legislation concerning environmental issues is either nonexistent or outdated and in need of serious improvement. The following acts provide some protection for their respective areas: The Grenada Fisheries Act, 1986, National Parks and Protected Areas, and The National Water and Sewerage Authority Act.

The available legislation is outdated, dispersed among a wide range of agencies and lacks enforcement power including the National Trust Act, 1967, Forestry Act, Public Health Ordinance, Abatement of Litter Act, Agricultural Act, Grenada Territorial Waters Act, and the Beach Protection Act, 1979. The report offers recommended changes for legislation in the areas of National Trust, Tourism, Forestry, Waste Management, Pollution Control, Agriculture, Land Development Control, Marine Pollution and Mining.

There are fifteen (15) Government Agencies responsible for environmental management in Grenada. Given the number, coordination among the agencies is poor and no organized or legislated proviso is in place to provide for any coordination. Additionally, as legislation is generally very weak, the coordination problem is exacerbated. Environmental Management responsibility has been moved from one ministerial portfolio to another, which has increased the lack of coordination.

The Action Plan states "The Government recognizes the need for an integrated approach to environmental planning and management. Moreover, it is well understood that effective management, policy and planning require capacity building, in particular sound institutional development."

The report proposed changes to the institutional framework such as designating the Ministry of Planning and Development to be responsible for environmental management, establishment of an environmental commission, strengthening several existing institutions and enhancing coordination. The Government is promoting public awareness concerning the environment and how to protect it. Information is disseminated at the Documentation Center and through the media. Proposed actions include promotion of community participation in environmental issues.

5.6 Strategy for Environmental Action

This section of the Grenada Environmental Action Plan includes a matrix of programs and actions as outlined in the main body of the report. It also contains an Appendix which includes a number of brief project profiles. The project profiles are listed as follows:

- Land Use and Integrated Watershed Management
- Carriacou Land Use and Forest Management
- Forest Management and Institutional Strengthening of Forestry
- Development of National Parks
- Capacity Building

The Appendix also contains Table 2.1. - National Resource Management Legislation in Grenada, which is a listing of legislative acts. It also contains Table .3.1 - Government Agencies with Resource Management Functions, which is a listing of key institutions with environmental responsibilities. Finally, the Appendix contains figures and maps of Grenada with various information on them.

6. ROAD REHABILITATION AND SEA DEFENSES

Draft Engineering Design Report, Volume 1, January 1995

(1) Scope of Services

Detailed Design for the rehabilitation of the following roads and coastal protection;

- East Coast Main Road between the Sugar Mill Round-a-bout and Redgate

- West Coast Main Road between Gouyave and Victoria
- Coastal Protection for Mabouya Headland south of Gouyave
- Coastal Protection for Waltham Estate

(2) Traffic Survey and Projection

- 6 - Vehicle classification for traffic survey
- Southern Section Design Flows

Year	Peak Hour Flow	12 Hour Flow	Design Flow AADT	% HGV'S	HGV'S (vpd)
1993	48 x 1.50	720	900	5	45
1996	N/A	N/A	1022	5	51
2010	N/A	N/A	2024	5	101
2015	N/A	N/A	2503	5	129

Note: HGV; Heavy Goods Vehicles (Tractor, large bus, etc.)
Growth Rate; 4% per annum (1993 - 1995)
5% per annum (up to 2000)

(3) Axle Loading Analysis

	Unloaded Vehicles		Normally Loaded Vehicles		Oversized Vehicles	
Axle	Front	Rear	Front	Rear	Front	Rear
Axle Load (kg)	2200	2000	3800	7500	3800	9500
ESA	0.003	0.002	0.032	0.684	0.032	1.982
Combined ESA	0.002		0.716		2.014	

Note: ESA; Equivalent Standard Axle

(4) Geological Survey and Laboratory Testing

- Trial Pits (51 points)
- Sub-grade, mostly A-2 type in AASHTO classification M145-82 CBR 4.5-23

(5) Topographical and Bathometric Surveys

- Survey Total Station System
- Global Positioning Satellite System

(6) Geometric Road Design

- Standard; Overseas Road Note 6 (ORN6)
  A guide to Geometric Design, Transport and Road Research Laboratory UK 1988.

- Design Speed

  Design speed appropriate to the terrain and road functions are given in ORN6 which range from 60 kph to 100 kph. However, the consultant will not therefore, adhere rigidly to these design speeds, but exercise discretion in introducing lower standards where necessary in the interest of the economy.

	Desirable	Minimum
Rural Selection	85 kph	60 kph
Urban Selection	32 kph	-

- Road Width

Design Class	Traffic Flow	Width	
		Carriage-way	Shoulders
A	5,000 - 5,000	6.5	2.5
B	1,000 - 5,000	6.5	6.0
C	400 - 1,000	5.5	1.0

Note: 1) Project roads fall into class B
2) Minimum Width 5.0m
3) 1.0 - 1.5m for foot paths

- Gradients

  Less than 8%

- Safety improvement such as overhanging cliffs

(7) Pavement Design

- Standard; Overseas Road Note 31 (ORN 31)

  A Guide to Structural Design of Bitumen - Surface Roads in Topical and Subtropical Countries, TRL, UK 1993.

- Pavement Layers
  - Surface Course : Asphalt concrete, Minimum thickness 50mm
  - Base Course : granular material, 125 mm
  - Sub-base : 125mm - 325 mm
  - Design Service Life : 15 years

(8) Drainage Design

- Rational Method
- 24 hour storm depth (128 mm for 2 years return period)
  (155 mm for 10 years return period)

Bridge Condition Survey (1)

Bridge No.: .....

Bridge Name: .....

Inventory Date .....

A GENERAL INFORMATION								
(1) Bridge No			(2) Bridge Name					
(3) Station			(4) River name					
(5) Bridge Type								
(6) Length (meter)								
(7) Width (meter)	Left Sidewalk =		Pavement =			Right Sidewalk =		
(8) Straight, Curved, Skew(deg.)			(9) Detour Distance (km)					
B SUPERSTRUCTURE								
Span No	1	2	3	4	5	6	7	
(10) Year Built								
(11) Design Load (ton)								
(12) Span Length (meter)								
(13) Type of Bridge								
RCS = Reinforced Concrete Slab, PCS = Pre-cast Slab, RCDG = Reinforced Concrete Deck Girder RCBG = Reinforced Concrete Box Girder, PCDG = Pre-stressed Concrete Deck Girder IB = Steel I Beam, Steel Plate Girder, PT = Steel Pony Truss, TT = Through Truss, LA = Steel Langer								
(14) No. of Main Girders								
(15) No. of Stringers								
(16) No. of Cross Beams								
(17) Girder Condition								
(Concrete) C = Cracking, R = Rebar Exposed, S = Spalling, X = Repaired (Steel) C = Cracking, R = Rusty, D = Deformation, X = Repaired								
Comment						Evaluation		
(18) Slab Type								
C = Cracking, R = Rebar Exposed, S = Spalling, P Potholes, X = Repaired, Y = Asphalt Patching								
(20) Slab Span (m)								
(21) Slab Condition Top								
C = Cracking, R = Rebar Exposed, S = Spalling, P Potholes, X = Repaired, Y = Asphalt Patching								
Comment						Evaluation		
Slab Condition Bottom								
C = Cracking, R = Rebar Exposed, S = Spalling, P = Pothole, X = Repaired, Y = Asphalt Patching								
Comment						Evaluation		
(22) Railing Type								
C = Concrete, S = Steel								
(23) Curb & Railing Condition								
C = Curb Damage, R = Railing Damage								
Comment						Evaluation		
(24) River Clearance - Below Superstructure to River Bed at Centerline Span								
Distance (meter)								

Bridge Condition Survey (2)

Bridge No: _____

Bridge Name: _____

Inventory Date: _____

C SUBSTRUCTURAL

Abutment / Pier No								
N = None, S = Study, D = Dummy								
(26) Expansion Joint Condition								
R = Rusty, L = Loose, U = Uneven, N = None, C = Concrete Spalled at End of Span, S = Proper Seal								
Comment							Evaluation	
(27) Bearing Type								
E = Elastomeric Pads, S = Steel Plate, B = Steel Mechanical Bearing, N = None, U = Unknown								
(28) Bearing Condition								
Comment							Evaluation	
C = Condition Below, R = Rebar Exposed, S = Spalling W = Insufficient Width for Support Existing Beam								
Comment							Evaluation	
M = Missing, N = Not Positioned properly, D = Defective, R = Rusty								
Comment							Evaluation	
(29) Bearing Support Condition								
C = Condition Below, R = Rebar Exposed, S = Spalling W = Insufficient Width for Support Existing Beam								
Comment							Evaluation	
(30) Abutment / Pier Type								
(Abutment) AC = Cantilever AP = Perched at Top of Slope, AB = Pile Bent Perched At Top of Slope (Pier) PW = Pier Wall, PT = Pier Tee Shaped, PC = Pier Column, PB = Pile Bent								
Comment							Evaluation	
(31) Abutment / Pier Condition								
C = Cracked, R = Rebar Exposed, T = Tilted, S = Spalled on Vertical Sides								
Comment							Evaluation	
(32) Foundation Type								
S = Spread, P = Piles, U = Unknown								
(33) Foundation Condition								
S = Settled, E = Pile Exposed - Height in Meters, F = Foundation Scoured								
Comment							Evaluation	
(34A) Wing Wall Type								
N = None, P = Parallel to Stream, S = Skewed Abutment								
(34B) Wing Wall Condition								
C = Cracked, S = Settled, E = Pile Exposed, W = Wing Wall Scoured								
Comment							Evaluation	
(35) River Clearance - Below Superstructure to River Bed at Pier								
Distance								

Bridge Condition Survey (3)

Bridge No: .....

Bridge Name: .....

APPENDIX 4

MAXIMUM ENTROPY TRIP MATRIX ESTIMATION

APPENDIX 4

MAXIMUM ENTROPY TRIP MATRIX ESTIMATION

1. INTRODUCTION

An OD Matrix (matrix table of traffic from origin zones to destination zones) is a basic information in order to analyze traffic. Basically an OD Table is tabulated from a Person Trip Interview Survey (Interview to 5-10 % of residents and ask their attributes and trips of the day before). However, a Person Trip Survey takes long time and a lot of cost. Therefore, it is not applicable in a short study period.

Several statistical most likely trip matrix estimation methods were developed. In these, the most practical method is "the maximum entropy trip matrix estimation". In the Feasibility Study on Road Rehabilitation and Improvement in Grenada, this method was applied to estimate the present Car OD matrix.

2. FORMULATION

To find X_{ij}, which minimizes the formula:

$$S(Xij) = X \log X - \Sigma_{ij} X_{ij} \log X_{ij} + \Sigma_{ij} X_{ij} \log p_{ij}$$
$$\text{under } \Sigma_{ij} X_{ij} p_{ija} = V_a$$

where,
- X_{ij} : Trip Matrix of i zone to j zone
- X : Summation of Xij with respect to i and j
- p_{ij} : Apriori Probability of OD from i zone to j zone
- p_{ija} : Apriori Fixed Probability to pass a link of traffic from I zone to j zone

The solution of this formulation is:

$$X_{ij} = X p_{ij} \exp (\Sigma_{ij} \lambda_a p_{ija})$$

where, λ_a : Lagrange Multiplier

The papers below shall be referred for more in-depth understanding of the methodology.

3. NETWORK AND OBSERVATION

A network to be used for this model shall be simple as much as possible. Requirement of a network is to connect any zone to all other zones. The network used in this Study is in Chapter 4.

Traffics of all links composed of the said network have to be counted. Traffics should be composed of inter zonal traffics. Location of observation stations should be carefully chosen not to count intra-zonal traffics. In case that there is doubt to count considerably large portion of intra-zonal traffics it is necessary to eliminate these traffic. A trial is presented in Chapter 4.
