EXECUTIVE SUMMARY

The study of water quality for boreholes from Baringo, Koibatek, Laikipia, and Samburu districts was carried out from 10/8/98 to 20/8/98. Analysis was done at the JKUAT laboratories. Sampling was done within this period with samples from Baringo and Samburu districts being received on 11/8/98 and from Koibatek and Laikipia districts on 18/8/98.

The maximum Temperature recorded was for sample from Molo river in Koibatek district. The temperature varied between 20° C and 20.4° C for all the samples.

The maximum pH recorded was 9.2 from Samburu district. The range in pH was between 9.2 and 6.8.

The turbidity varied between 17 NTU and 1 NTU units. The highest recorded turbidity in Baringo district was 14 NTU, 2NTU from Laikipia district, 17 NTU from Samburu district and 5 NTU from Koibatek district.

The fluoride levels were generally low, with a range of 0.2 to 3.5mg/l.The highest recorded fluoride content was from Baringo and Samburu districts. The minimum recorded fluoride content was obtained from Koibatek district.

The colour levels were varying between 4 and over 30. The highest recorded colour level content was from Koibatek district.

The carbonate levels were varying between 11 and 239 mg/l. The highest recorded carbonate content was from Baringo district.

The highest recorded hydrogencarbonate content was 465mg/l from Baringo district. The minimum recorded hydrogencarbonate content was obtained from Koibatek district. The range in hydrogencarbonate was between 48 and 465mg/l.

The Hardness levels were generally high, with a range of 47 to 503 mg/l. The highest recorded Hardness content was from Samburu district. The minimum recorded Hardness content was obtained from Laikipia district.

Calcium levels varied between 0.8 to 307.5 mg/l. The highest recorded Calcium content was from Samburu district. The minimum recorded Calcium content was obtained from Koibatek district.

Magnessium levels were varying between 2.3 to 325mg/l. The highest recorded Magnessium content was from Samburu district. The minimum recorded Magnessium content was obtained from Baringo district.

Manganese levels were generally low, with a range of 0 to 4.1mg/l. The highest recorded Manganese content was from Samburu district. The minimum recorded Manganese content was obtained from Baringo district.

The Chloride levels were generally low, with a range of 17.5 to 750 mg/l. The highest recorded Chloride content was from Samburu district. The minimum recorded Chloride content was obtained from Koibatek district.

Conductivity levels were generally high, with a range of 98 to 3760µs. The highest recorded Conductivity levels was from Samburu district. The minimum recorded Conductivity level was obtained from Koibatek district.

The Total Dissolved Solid levels varied between 10 to 1445 mg/l. The highest recorded Total Dissolved Solid levels was from Samburu district. The minimum recorded Total Dissolved Solid levels was obtained from Laikipia district.

The Iron levels were generally low, with a range of 0.1 to 8.8 mg/l. The highest recorded Iron content was from Baringo district. The minimum recorded Iron content was obtained from Laikipia district.

Potassium levels were generally low, with a range of 3.65 to 25 mg/l. The highest recorded Potassium content was from Laikipia district. The minimum recorded Potassium content was obtained from Samburu district.

The Sodium levels varied between 12.5 to 430mg/l. The highest recorded Sodium content was from Baringo district. The minimum recorded Sodium content was obtained from Koibatek district.

The Nitrates level varied between 0.1 to 19.36 mg/l. The highest recorded Nitrate content was from Samburu district. The minimum recorded Nitrite content was obtained from Samburu.

The Sulphate levels varied between 62 to 782 mg/l. The highest recorded Sulphate content was from Samburu district. The minimum recorded Sulphate content was obtained from Laikipia district.

The water from the four districts is expected to be hard. This is due to the presence of ions of magnesium, calcium carbonates, and hydrogenearbonates.

CHAPTER ONE

INTRODUCTION

1.1 GENERAL INTRODUCTION

The main objective of this monitoring exercise was to evaluate the quality of borehole water from the four districts so as to assess its general quality. The executive summary gives an overview of the accomplished consultancy work and the recommendations. This is followed in chapter one (1) with a general introduction of the scope and nature of the exercise, the outcome of the monitoring work and finally the contents of the report.

Chapter 2 gives details of both laboratory method and on-site measurements which were taken to determine the quality of the wastewater and the clean water.

The results and discussion are then presented in chapter 4.

Tables of the sampling points and their results and a list of the participants who concluded the study, and compiled the report are given in an Appendix A and B.

1.2 Terms of Reference

The department of Civil Engineering at Jomo Kenyatta of Agriculture and Technology(JKUAT) was sub-contracted by JICA Study Team to analyze ground water from Koibatek, Samburu, Baringo and Laikipia districts. The terms and conditions are contained in the main contract for consultancy provided by the JICA Study Team. The terms of reference are briefly reproduced below:-

The items to be analysed and monitored are water temperatures, pH, electrical conductivity, turbidity, hardness, colour, Sulphate, Nitrates, Total dissolved solids, Sodium, Potassium, Iron, Manganese, Hardness, Hydrogencarbonate, Carbonate, Calcium, Magnessium and fluoride.

CHAPTER TWO

METHODOLOGY

2.1 Sampling and Handling of the Samples
Sampling was done by the Engineer in-charge of the JICA study team water section.

2.2 Laboratory Tests

Laboratory analysis of the various parameters was carried out as explained.

Temperature:

This was measured in the laboratory using Celsius thermometer.

pH:

pH was determined on site using microcomputer pH meter, Palintest instruments.

Color:

This was determined in the Laboratory with Colimeter cylinders with plane -parallel base and sample observed in diffused light against a white background.

Turbidity:

Turbidity was determined by nephelometric turbidity meter in NTU

Electrical Conductivity:

Electrical conductivity was determined and measured by means of a conductivity meter, model, PT115 Palintest instruments.

Hardness:

Hardness was determined using titrametric method by EDTA titrant, prepared and standardized based on standard methods manual.

Total Dissolved Solids(TDS):

This was determined by filtration and oven-drying of the filtrate at $180^{\circ}C\pm2$ to a constant weight.

Metals:

All the metals were analysed by means of atomic absorption spectrophotometer

Flouride:

Fluoride concentration was determined using the palintest with a direct-reading photometer at 570nm wavelength and a calibration chart.

Nitrates:

Nitrates concentration was determined using the palintest with a direct-reading photometer at 570nm wavelength and a calibration chart

Chloride:

Chloride analysis was based on Argentometric method described in the Standard Methods Manual, 1989.

Sulphate:

Sulphate ions were determined by Gravimetric method as outlined in the Standard Methods Manual, 1989.

Carbonate ions and Hydrogen carbonate ions:

These were determined by titrimetric methods as per standard methods manual, 1989.

CHAPTER THREE

RESULTS AND DISCUSSION

3.1 Result ands Analysis

The tabulated results of the analysis are presented in appendix A in the following order

1) Samburu - Page 12 - 16

2) Baringo - Page 17 - 21

3) Koibatek - Page 22

4) Laikipia - Page 23 - 27

3.2 Discussion of Results.

i) Samburu District

pН

pH range was between 7.7 to 9.2. The pH of 9.2 was recorded at Kisima, Lorroki, while the pH of 7.7 was obtained from an existing well at Kiroriti, Baawa.

Conductivity

Conductivity range was from 1419 to 3760 µs. The conductivity of 1419µs was recorded at Tomiyoi, Maralal, while the one of 3760µs was recorded from an existing well at Wanba location.

Total Hardness

Total Hardness range was between 0 and 503 mg/l, CaCO₃. The value of 503 mg/l, CaCO₃ was recorded at Kiroriti, Baawa.

Chlorides

Chlorides range was between 750 to 130mg/l. The value of 750 was obtained from an existing well at Wanba location, while the value of 130 was obtained from an existing well (AIC) at Wanba location.

Total Dissolved solids

Total Dissolved solids range was between 1445 and 590mg/l. The value of 1445 was obtained from Wanba location. While the value of 590 was from an existing well at Kiroriti location.

Sulphates

Sulphates range was between 0 and 782mg/l. The value of 782mg/l was obtained from Wanba location. While an existing well at Kiroriti location had no sulphate content.

Carbonates

Carbonates range was between 34.5 and 11 mg/l. The value of 34.5 mg/l was obtained from an existing well at Kiroriti location. While the 11 mg/l was obtained from Existing well at Tomiyoi village, Maralal location.

Hydrogencarbonate

Hydrogencarbonate range was between 238 and 144mg/l. The value of 238mg/l was recorded from a well at Wanba location. While the value of 144mg/l was obtained from a existing well at Wanba location.

Turbidity and colour

The highest colour level was sampling point No. 4, Wanba location and that was 8 and turbidity was 17NTU. The lowest was sampling point No. 1 at an existing well, Kiloriti location.

Fluorides

The highest value was 3.5mg/l and was recorded from an existing well at Kisima location. While the lowest value was 0.7mg/l at an existing well at Wanba location sampling point 4.

Nitrates

Generally was of high range between 0.07 and 19.36 mg/l, NO₃.

Metals

Sodium and magnesium were the most dominant ion in most of the well waters ranging from 370mg/l to 45.5mg/l for sodium and 325 to 6.375mg/l for magnesium. Manganese and iron were the least dominant metal ions. The highest recorded iron content was 2.0mg/l at Wanba sampling point 4. While for manganese the highest was 4.05mg/l recorded from the same point as that of iron.

ii) Baringo

рH

pH range was between 7.4 to 9.1. The pH of 9.1 was recorded at Makutano river while the pH of 7.4 was obtained from an existing well at Chepturu village, Koloa location.

Conductivity

Conductivity range was from 1517 to 525 µs. The conductivity of 1517 was recorded at Mukutani river, Mukutani location, while the one of 525µs was recorded from an existing well at Chepturu village, Koloa location.

Total Hardness

Total Hardness range was between 301 and 41mg/l. The value of 301 was recorded at Chemoligot village, Kositet location, while the one of 41 was recorded at Makutani location.

Chlorides

Chlorides range was between 140 to 40mg/l. The value of 140 was obtained from an existing well (CDN) at Tangulubei location, while the value of 40 was obtained from an existing well (AIC) at Chepturu, Koloa location.

Total Dissolved solids

Total Dissolved solids range was between 1060 and 340mg/l. The value of 1060 was obtained from Makutani seasonal river, Makutani location. While the value of 340 was from an existing well (AIC) Chepturu village, Koloa location.

Sulphates

Sulphates range was between 350 and 137 mg/l. The value of 350mg/l was obtained from Makutani seasonal river, Makutani village. While the value of 137mg/l was obtained from an existing well(AIC) Chepturu village, Koloa location.

Carbonates

Carbonates range was between 62 and 6 mg/l. The value of 62mg/l was obatined from Makutani river. While the 6mg/l was obatined from Existing well(AIC), Chepturu village, Koloa location.

Hydrogencarbonate

Hydrogencarbonate range was between 465 and 99mg/l. The value of 465mg/l was recorded at Makutani river. While the value of 99mg/l was obstained from a dug well (CDN) at Sibiro location.

Turbidity and colour

The highest colour level was sampling point No. 6 Makutani river and that was 11 and turbidity was 14NTU. The lowest was 1 at Chemolingot village, Kositei location.

Fluorides

The highest value was 2.40mg/l and was recorded at Chemolingot village, Kositei location. While the lowest value was 1.20mg/l at a dug well in Sibilo village, Sibilo location

Nitrites

Generally was of low range between 1.1 and 0.05mg/lN

Metals

Sodium and magnessium were the most dorminant ion in most of the well waters ranging from 430mg/l to 20mg/l for sodium and 14.875 to 2.265mg/l for magnessium. Manganesse and iron were the least dorminant metal ions. The highest recorded iron content was 3.25mg/l at Makutani. While for manganesse was 0.35mg/l and recorded at Chepturu village, Koloa.

iii) Koibatek District

Compared with water from the other three districts the values obtained were relatively low.

iv) Laikipia District

pΗ

pH range was between 7.7 to 8.2. The pH of 8.2 was recorded from an existing well at Kinamba location. While the pH of 7.7 was obtained from an existing well at Ilindigiri location.

Conductivity

Conductivity range was from 1048 to 486 µs. The conductivity of 1048 was recorded from an existing well at Ilindigiri location, while the one of 486µs was recorded from an existing well at Kinamba location.

Total Hardness

Total Hardness range was between 0 and 434mg/l, CaCO₃. The value of 434mg/l, CaCO₃ was recorded from an existing well at Ilindigiri location.

Chlorides

Chlorides range was between 75 to 17.5mg/l. The value of 75 was obtained from an existing well at llindigiri location, while the value of 17.5 was obtained from an existing well at Kinamba location.

Total Dissolved solids

Total Dissolved solids range was between 700 and 10mg/l. The value of 700 was obtained from an existing well at Ilindigiri location. While the value of 10 was from a spring at Segera, Sirima location.

Sulphates

Sulphates range was between 308.7 and 61.74 mg/l. The value of 308.7 mg/l was obtained from an existing well at Ilindigiri location, while the value of 61.74 mg/l was obtained from an existing well at Kinamba location.

Carbonates

Carbonates range was between 171 and 26 mg/l. The value 171mg/l was obtained from a spring at Segera, Sirima location, while 26mg/l was obtained from Existing well at Kinamba location.

Hydrogencarbonate

Hydrogencarbonate range was between 208 and 170mg/l. The value of 208mg/l was recorded from a spring at Segera, Sirima location. While the value of 170mg/l was obtained from an existing well at Kinamba location.

Fluorides

The highest value was 1.50mg/l recorded from a spring at Segera, Sirima location. While the lowest value was 0.3mg/l at an existing well at Rugutu Sirima location.

Nitrates

Generally was of low range between 1.19 and 0.09mg/lN

Metals

Sodium and magnesium were the most dominant ion in most of the well waters ranging from 62.5 mg/l to 55 mg/l for sodium and 115 to 30 mg/l for magnesium. Manganese and iron were the least dominant metal ions. The highest recorded iron content was 0.30 mg/l from a spring at Segera, Sirima location. While for manganese it was not traced.

APPENDIX A: RESULTS

Date samples were received 11/8/98 Date of Analysis 11-14/8/98

Name of Testing Technician: R. Matano & F. Munyi

Name of Supervisor: Dr. G. Thumbi

Name of sampling site: Kiroriti, Baawa, Samburu District Sample No. 1

S/No	Parameter tested	Results obtained
1	Temperature(°C)	20.1
2	Conductivity(µs)	848
3	PH	7.7
4	Color	>30
5	Turbidity(NTU)	1

6	Carbonate (mg/l, CO ₃₎)	128
7	Hydrogen carbonate (mg/l, HCO ₃)	48
8	Manganese(mg/l,Mn)	0.1
9	Magnesium(mg/l, Mg)	5
10	Iron (mg/l, Fe)	8.8
11	Potassium (mg/l, K)	7.5
12	Sodium (mg/l, Na)	12.5
13	Calcium (mg/l, Ca)	0.8
14	Total Dissolved solids (mg/l,TDS)	285
15	Fluorides(mg/l, F)	0.20
16	Nitrite(mg/l.,NO ₃)	No trace
17	Sulphates(mg/l, SO ₄)	No trace
18	Chlorides(mg/l,Cl)	22.5
19	Total Hardness(mg/l, CaCO ₃)	No trace

Date samples were received: 18/8/98	Date of Analysis: 18-20/8/98	
Part sumpres mere received, 10/0/20	Date of 1 mary 515, 10 20, 0, 25	

Name of Supervisor: Dr. G. M. Thumbi

Name of sampling site: <u>Ilnoigiri, Mukogodo, Laikipia District</u> Sample No. 12

S/No	Parameter tested	Results obtained
1	Temperature(°C)	20
2	Conductivity(µs)	1048
3	pH	7.7
4	Color	>30
5	Turbidity(NTU)	2
6	Carbonate (mg/l, CO ₃₎)	107
7	Hydrogen carbonate (mg/l, HCO ₃)	194
8	Manganese(mg/l, Mn)	No trace
9	Magnesium(mg/l, Mg)	115
10	Iron (mg/l, Fe)	0.4
11	Potassium (mg/l, K)	15
12	Sodium (mg/l, Na)	62.5
13	Calcium (mg/l, Ca)	37.6
14	Total Dissolved solids (mg/l,TDS)	700
15	Fluorides(mg/l, F)	1.30
16	Nitrite(mg/l, NO ₃)	1.2
17	Sulphates(mg/l, SO ₄)	308.7
18	Chlorides(mg/l,Cl)	75
19	Total Hardness(mg/l, CaCO ₃)	434

Date of Analysis: 18 -- 20/8/98

Date samples were received: 18/8/98

Name of Testing Technician: R. Matano & F. Munyi

Name of Supervisor: Dr. G. M. Thumbi

Name of sampling site: Segera, Mohoria, Sirima, Lamuria, Laikipia District

Sample No. 13

S/No	Parameter tested	Results obtained
1	Temperature(°C)	20.3
2	Conductivity(µs)	730
3	pH	7.7
4	Color	>30
5	Turbidity(NTU)	1
6	Carbonate (mg/l, CO ₃₎)	171
7	Hydrogen carbonate (mg/l, HCO ₃)	208
8	Manganese(mg/l, Mn)	No trace
9	Magnesium(mg/l, Mg)	45
10	Iron (mg/l, Fe)	0.3
11	Potassium (mg/l, K)	12.5
12	Sodium (mg/l, Na)	62.5
13	Calcium (mg/l, Ca)	17
14	Total Dissolved solids (mg/l,TDS)	10
15	Fluorides(mg/l, F)	1.5
16	Nitrite(mg/l, NO ₃)	0.6
17	Sulphates(mg/l, SO ₄)	144.1
18	Chlorides(mg/l,Cl)	35
19	Total Hardness(mg/l, CaCO ₃)	197

Date samples were received: 18/8/98

Date of Analysis: 18 - 20/8/98

Name of Testing Technician: R. Matano & F. Munyi

Name of Supervisor : Dr. G. M. Thumbi

Name of sampling site: Rugutu, Segera, Central, Laikipia District Sample No. 14

S/No	Parameter tested	Results obtained
1	Temperature(°C)	20.1
2	Conductivity(µs)	696
3	pH	7.8
4	Color	>30
5	Turbidity(NTU)	2
6	Carbonate (mg/l, CO ₃₎)	33
7	Hydrogen carbonate (mg/l, HCO ₃)	187
8	Manganese(mg/l, Mn)	No trace
9	Magnesium(mg/l, Mg)	45
10	Iron (mg/l, Fe)	0.3
11	Potassium (mg/l, K)	25
12	Sodium (mg/l, Na)	60
13	Calcium (mg/l, Ca)	19.2
14	Total Dissolved solids (mg/1,TDS)	515
15	Fluorides(mg/l, F)	0.3
16	Nitrates(mg/l, NO ₃)	0.2
17	Sulphates(mg/l, SO ₄)	82.3
18	Chlorides(mg/l,Cl)	37.5
19	Total Hardness(mg/l, CaCO ₃)	47

Name of Testing Technician: R. Matano & F. Munyi

Name of Supervisor : Dr. G. M. Thumbi

Name of sampling site: Kinamba, Ngarua, Laikipia District

Sample No. 15

	ounder Sumpling Sites. Indianaed, Inguinea, Example 12101 (c)		
S/No	Parameter tested	Results obtained	
1	Temperature(°C)	20.2	
2	Conductivity(µs)	486	
3	рН	8.2	
4	Color	>30	
5	Turbidity(NTU)	1	
6	Carbonate (mg/l, CO ₃₎)	26	
7	Hydrogen carbonate (mg/l, HCO ₃)	170	
8	Manganese(mg/l, Mn)	No trace	
9	Magnesium(mg/l, Mg)	30	
10	Iron (mg/l, Fe)	0.1	
11	Potassium (mg/l, K)	25	
12	Sodium (mg/l, Na)	55	
13	Calcium (mg/l, Ca)	10.2	
14	Total Dissolved solids (mg/l,TDS)	175	
15	Fluorides(mg/l, F)	1.4	
16	Nitrates(mg/l, NO ₃)	0.1	
17	Sulphates(mg/l, SO ₄)	61.7	
18	Chlorides(mg/l,Cl)	17.5	
19	Total Hardness(mg/l, CaCO ₃)	No trace	

Name of Testing Technician: R. Matano & F. Munyi

Name of Supervisor: Dr. G. M. Thumbi

Name of sampling site Lake Baringo Lodge, Baringo District

Sample No. 16

S/No	Parameter tested	Results obtained
1	Temperature(°C)	20.3
2	Conductivity(µs)	645
3	pH	7.8
4	Color	7
5	Turbidity(NTU)	4
6	Carbonate (mg/l, CO ₃₁)	239
7	Hydrogen carbonate (mg/l, HCO ₃)	161
8	Manganese(mg/l, Mn)	0.1
9	Magnesium(mg/l, Mg)	15
10	Iron (mg/l, Fe)	8.8
11	Potassium (mg/l, K)	15
12	Sodium (mg/l, Na)	6.5
13	Calcium (mg/l, Ca)	5.2
14	Total Dissolved solids (mg/l, TDS)	410
15	Fluorides(mg/l, F)	3.5
16	Nitrates(mg/l, NO ₃)	4.18
17	Sulphates(mg/l, SO ₄)	102.9
18	Chlorides(mg/l,Cl)	50
19	Total Hardness(mg/l,CaCO ₃)	No trace

APPENDIX B: LIST OF PARTICIPANTS

Dr. E. Asano

Dr. G. M. Thumbi

Mr. A. O. Mayabi

Mr. F. Munyi

Mr. R. Matano

All from Department of Civil Engineering
