5.7.2 Institutional Aspect

Table 5.7.2 Offices/Agencies Involved in WATSAN Project

Office/Agencies	Nature of Involvement
Provincial Planning & Development Office	Formulates comprehensive development plans and policies for the PDC
	Integrates and coordinates sectoral plans by functional groups and monitor and evaluate programs(s)/project(s) implementation.
Provincial Engineering Office (Provincial Waterworks Task Force Division)	Assists in the construction, operation and maintenance of the WATSAN facilities
Provincial Health Office	Conducts water quality examination
DILG, Provincial Office and Municipal	Conducts/assists training especially on topics related to human resource development
	Assists organization and registration of RWSA/BWSA
Barangay/Municipal governments	Identifies projects
thru MPDO	Provides counterpart support during implementation
District Engineering Offices I & II, DPWH	Provides pipesImplements central govt. funded projects
Water Districts	Provides water supply coverage in urban areas
CIDA-PMO Regional Office	Provides technical and financial assistance through its Local Govt. Support Program
Provincial General Services Office	Responsible in procurement of materials
Provincial Accounting and Audit Office, Provincial Budget Office & Provincial Treasury Office	Responsible in financial releases and maintain adequate financial records
NGOs	Provides consultancy services especially in CO/CD works
Sangguniang Panlalawigan	Approves priority programs and projects and appropriates funds

5.8 Community Development

5.8.1 General

(1) RESULTS OF THE BARANGAY KEY INFORMANT SURVEY FOR BUKIDNON

I. BARANGAY

A. General

The barangay is the smallest political unit in the Philippines. A Punong barangay who is elected for a five year term heads it. Together with the barangay council, the barangay captain is responsible for running the affairs of the barangay. Water supply and sanitation sector projects are important to the barangay. Benefits are directly related to health and productivity, as well as to improved economic activities in the community.

The key informant surveys were conducted in five selected barangays representing three municipalities in Bukidnon. The purpose of the survey was to find the degree and type of government assistance on the sector that cascades from the national government down to the barangay level. Six key informants were chosen from each of the participating barangays. They are either a barangay official, a youth leader, a teacher, a community worker, a tribal leader, or a prominent resident. The barangays surveyed were: Kisolon and San Vicente (Sumilao); McArthur and Kianggat (Dangcagan); and, La Fortuna (Impasugong).

B. Community Organization

1. Manner of Participation in Sector Development

The need for water supply and sanitation facilities is discussed and prioritized by the Barangay Development Council (BDC). If the barangay is not able to finance the WATSAN project from its own funds, the BDC then endorses the project to the municipality. Again, the prioritization and funding of the endorsed project is discussed in the municipal development council (MDC). If the municipality can finance said project, then it does so, usually by providing technical and material support. The barangay is asked to contribute its share, which is usually in the form of free labor. If, however, the municipality cannot fund the barangay request, the project is once again endorsed, but this time to the province. The project is then

considered for funding by the provincial development council. If implemented by the province, a counterpart is asked of the barangay and sector participation is in the form of free labor and/or donations in cash or in kind.

2. Existing Community Organization Serving /Acting as the Water Association

There were no BWSAs in all barangays surveyed. Water systems and facilities were either maintained by the local government and and/or private users. At the same time, none of the respondents was able to identify any existing community-based organization that could act as a water association. As indicated by the key informants, the BWSA can be the most ideal organization that can be formed and provide water and sanitation service in all barangays.

3. Role of the Barangay Council in O&M Assistance in the Form of Funds/Manpower/Materials

The majority of the key informants said that the barangays councils maintained or did necessary repair works in case of breakdown of the existing water supply facilities. The councils manifested willingness to facilitate the training of community members/volunteers on the operation and maintenance of WATSAN facilities.

II. COMMUNITY PARTICIPATION

A. General

The beneficiaries participation is recognized as one of the determining factors in the success of the WATSAN sector plans on the community level. Participation by the barangay people is measured by their willingness to organize themselves into a water association and to contribute their share towards the operationalization of such association. Contributions may come in the form of free labor, donations in kind or in cash, or their active involvement in the management, operation and maintenance of the WATSAN facilities.

B. Socio-Economic Conditions

1. Average Monthly Income in the Rural Area

The average monthly income of the households in the five barangays ranges from P500 to P1,000. The list of economic activities shows the following: livestock/poultry raising, broom making, vegetable gardening, and sari-sari-store.

Based on the information gathered, both genders are equally involved in these economic activities.

2. Waterborne/Water Related Diseases

Incidences of water borne and water-related diseases were reported in all the barangays surveyed. Most prevalent diseases are diarrhea, intestinal disorder, dengue fever and amoebaiasis. These apparent health problems could be attributed to lack of drainage facilities and garbage disposal systems in the areas.

C. Willingness to Participate

1. Initiating the Organization of a WATSAN Association

Each of the five barangays surveyed has a committee on water and sanitation within its barangay council. The respondents indicated that all the barangay councils are willing to participate in sector projects by initiating the formation of a water and sanitation association. At the same time, the interviewees reported that the barangay councils are willing to pay for and/or facilitate the training of the user-beneficiary volunteers on operation and maintenance skill. In the area of health education, the majority of the participants believe that the barangay council has the capability to implement information dissemination activities.

D. Status of BWSAs/NGOs/CBOs/POs

1. Number of Barangay with Functional BWSAs

As indicated by almost all of the key informants, there is no existing Barangay Water and Sanitation Association (BWSA) in all five barangays. Only one respondent, from Barangay McArthur (Dangcagan), reported the existence of a BWSA.

2. Status of NGOs/CBOs/POs

Majority of the informants reported having NGOs/CBOs that do work in their communities which can assist in community organizing (specially tribal groups) in preparation for the establishment of BWSAs. The areas of concern of these organizations include community organizing, indigenous people, labor, enterprise and cooperative. The NGO-CBOs which can be identified with the sector needs include: KIN (Kitanglad Integrated NGOs) headed by Isidro Cayoran; La Fortuna Tribal Association (Carmelino Mahayao); Tribal Datus of Bae (Lilia Eclay); RIC (Adelaida Winisit); and KIMVA which specializes in economic enterprise (headed

E. O&M Practices by Beneficiaries

1. Facility Conditions

Surface water is widely used as source of water in most barangays that were surveyed although ground water is also being utilized in some areas. Several springs in Brgy. La Fortuna in Impasugong were developed for community water supply systems. There are also shallow and deep wells, especially in Brgy. McArthur in Dangcagan. Almost all of the systems/facilities are functional but occasionally have problems. The majority of the respondents indicated that the water they drink is fit for drinking.

2. Common Difficulties and O&M Problems Encountered

The most common problem cited by the respondents was the absence of maintenance work for these facilities. However, the residents have not acted on this problem. This is a manifestation that the users/beneficiaries still have the thinking that the O&M work is a task that belongs to the barangay council or the LGU.

F. Water Charges Adopted and Collection Efficiency

1. Sufficiency of Collected Charges for O&M

Majority of the respondents in all barangays indicated that the residents do not pay for the use of the water facilities. However, there are few key informants, along with some residents in Barangay San Vicente in Sumilao who shoulder some expenses just to have drinking water. These people pay an average monthly fee of P50.00.

2. Current Practices with Affordability by Users and Manner of Fee Collection

Most of the respondents who pay for the water said the local government units, specifically the municipal government through the MTO was handling the collection of water fees from the residents.

G. Requests by the Beneficiaries on O&M of the Facilities from LGUs and other Sources

1. Government Subsidies Requested by End Users

The respondents indicated that the barangays have received for their water and sanitation projects various technical and financial assistance from the provincial and

municipal government. In Barangays Kisolon (Sumilao) and La Fortuna (Impasugong), the provincial government provided financial assistance to procure materials for the development of a spring for the community's water system. For the same project, the municipal government shouldered the labor cost. In Barangays San Vicente (Sumilao), and Kianggat (Dangcagan), the provincial and municipal governments extended assistance for the barangay's health program (construction of barangay health stations and immunization of children.

III. GENDER

A. General

The province has been promotive of gender responsive programs. Although most of the survey results do not point to a severe lack of responsiveness to sector projects, the awareness as to why there must be gender equality was not yet fully comprehended by most of the key informants.

B. Gender in the Composition of the Barangay Council

The barangay councils are still male-dominated. Of the 34 members comprising the barangay councils in five barangays, 24 are males and 10 are females. Four of the barangay captains are male.

C. Gender in the Composition of the BWSA

There are no BWSAs organized in the barangay surveyed. However, all respondents expressed willingness to form their respective BWSAs.

D. Gender in Participation in the O&M of the Water Facilities

The majority of the key informants indicated that women are not given enough responsibilities in the operation and maintenance of the water facilities. However, many agreed that women can undertake simple repair and maintenance or handle water bill collection.

E. Gender in Knowledge or Awareness of Sector Related Information

There is no gender bias when it came to awareness of sector related information. Both women and men were knowledgeable as seen from the answers to questions such as assistance extended by LGUs, facility conditions, and O&M practices.

(2) RESULT OF GROUP INTERVIEWS (BUKIDNON)

A. General

Group interviews were conducted in five selected barangays representing three municipalities in the province of Bukidnon. The objectives of the group survey/interviews were to identify potential service population and service level desired by the community, to assess the degree of involvement of both men and women in planning, managing, operating and maintaining WATSAN projects, and the willingness and capacity to pay of potential users.

The Project Team conducted the interviews on two sets of interviewees: an all female group and an all male group each consisting of a minimum of 10 and a maximum of 20 participants. None of the respondents belonged to the same household. Answers to interview questionnaires were made by raising of hands. The group interviews were conducted in the following barangays: Cawayan (Impasugong); Kisolon (Sumilao); Miaray (Dangcagan); San Vicente (Sumilao); and. Impalutao (Impasugong).

B. Demographic Profile

1. Population

The aggregate population in the five barangays was 17,333, breakdown of which is as follows: Cawayan (Impasugong): 1,335 (703 males, 632 females); Kisolon (Sumilao): 6,552 (3,407 males, 3,145 females); Miaray (Dangcagan) 4,874 (2,568 males, 2,306 females); San Vicente (Sumilao) 1,155 (599 males, 553 females); and, Impalutao (Impasugong) 3,417 (1,800 males, 1,617 females).

2. Households

As indicated by the respondents, there were 2,754 households in the five barangays. Breakdown per barangay is as follows: Cawayan, 168; Brgy. Kisolon, 1092; Brgy.

Miaray, 586; Brgy. San Vicente, 228; and, Brgy. Impalutao, 680. The figure represents an average of six (6) members per household.

BARANGAY (MUNICIPALITY)	M	F	Т	NO. OF HH
Cawayan (Impasugong) Kisolon (Sumilao) Miaray (Dangcagan) San Vicente (Sumilao) Impalutao (Impasugong)	703 3,407 2,568 599 1,800	632 3,145 2,306 553 1,617	1,335 6,552 4,874 1,152 3,417	168 1,092 586 228 680
TOTAL	9.077	8,253	17,330	2,754

3. Composition of Barangay Councils

There were 35 barangay council members in all five barangays. Of the barangay council members, 26 (74 percent) are males and nine (26 percent) are females. Of the five barangay captains, four are males and one is female.

C. Respondents' Profile

1. Number and Gender of Respondents

There were 124 respondents in the group interviews. Of these, 63 (51 percent) are females and 61 (49 percent) are males. Table 2 presents the number of respondents by gender for each barangay:

TABLE 2: NUMBER OF RESPONDENTS

D. Socio Economic Profile

1. Level of Education of Household Members

The respondents indicated that most of their household members finished elementary education, with the male members slightly outnumbering the females. At the same time, a high number among the household members graduated in high school. There were also some members, mostly female, who finished college and a few male members pursued vocational courses.

2. Employed Household Members

Some 138 male and female household members were employed during the time of the interview. Of these, the most productive or those with regular employment among their household members belonged to the 15 to 45 age group which numbered 112. This was followed by the 46 to 60 age bracket with 20 members working. There were no employed members under the 15 and below age group. On the other hand, there was a very low number (6) of members under the 60 and above age category who was employed.

3. Occupation of Household Heads and Other Members

As indicated by the respondents, there were 147 persons among the respondents' household members who were productive or employed. Of these, majority was engaged in farming and/or foresting. Male members constituted the majority of

workers in this group, 75 to 25. There were also 19 laborers; nine office workers; six businessmen/women; three technicians; and two professionals. There were also six other members who worked in areas not listed.

Most of the household members who were gainfully employed earned a monthly income of P 5,000.00 and below. Few other members earned more than P 5,000

TOTAL	61	63	124	100

Duration of Fetching Water. For most of the male respondents (24), it takes only about 30 minutes to fetch water from the source to their house. For most of the female interviewees (20), one takes about 10 minutes to haul water. Eighteen respondents (15 females, 3 males) indicated doing the task for more than 30 minutes; while 9 respondents said it takes about 30 minutes. As many as 31 respondents did not respond to this question.

2. Were the respondents consulted on their respective roles and responsibilities?

The majority of the respondents indicated they were not consulted and/or briefed on their proposed roles and responsibilities on the planning, designing and construction of their water supply facilities. This is also true for the operation and maintenance and financing aspects of the system where most of them were not consulted. Only about 11 percent of the respondents, mostly females were consulted during the planning, design, operation and maintenance and financing of their water system.

5. Will the respondents participate in future projects?

For future projects, however, all respondents indicated that they would participate and/or contribute for certain activities. For the formation of BWSA, all female respondents will participate. On the formulation of water rates, all female and 28 male interviewees will likely to participate. This is also true in the selection of sites, construction of facilities and in the operation and maintenance, where male and female respondents signified intention to participate.

H. Financial Aspects

1. Are respondents presently paying for their water supply?

The majority of the female respondents (32), together with 27 male interviewees claimed they are paying for their water supply. On the other hand, most of the male interviewees (34), as well as 31 female participants indicated they are not paying.

TABLE 36: NUMBER OF RESPONDENTS PRESENTLY PAYING WATER FEE

TOTAL	61	63	124	100

3. Is the water fee enough for O&M?

For respondents who were paying water fees, the majority were uncertain to the adequacy of fees being collected for the operation and maintenance of the facilities. About 40 respondents (26 males and 14 females) claimed the fees were enough, while 20 (8 males, 12 females) said it is sufficient. Most of the respondents were uncertain as to the reasons why the fees being collected are not adequate. Eleven of the female respondents said the reason could be that not all water users pay their fees while seven male respondents said the O&M cost is too high.

(2) Who got sick during the past year? What sickness?

The respondents were uncertain as to the types of illness that afflicted their family members in the past year. A big percentage (27%) claimed the illnesses were not water-related. For diseases related to water, the leading cause was kidney trouble at 26%, followed by diarrhea at 9%, schistosomiasis and gastroenteritis at 7% each, skin diseases at 6% and typhoid fever and malaria at 2%...

The women were most afflicted with these water-related diseases during the year. Most susceptible were the wives and female children when 28% of them was each afflicted with various illnesses.

Detailed Typical CD Process in Agusan del Sur

1) Make courtesy calls. Courtesy calls are made to barangay/sitio officials prior to the conduct of meetings with the community. Then, a series of meetings and community assemblies are done where the WATSAN program is introduced, its significance and impact taken up and the importance of organizing promoted. This is followed by a more detailed presentation/orientation of the project — its concept, features, history, stakeholders, and the CO process utilized. Depending on the level of community awareness regarding the program/project, two or three meetings/assemblies are needed before doing the baseline survey.

2) Preparation of profile (secondary information) and survey forms.

- (a) <u>General information</u>. Distance from barangay to poblacion, mode of travel, time and fare; no. of sitio/purok; dominant ethnic groups, common occupation of residents; demographic data (no. of household, male and female population) by sitio/purok, no. of dwelling structures, school buildings, other buildings, availability of electricity by sitio/purok.
- (b) Barangay WATSAN status. Existing water supply systems, by sitio/purok, by type and service level, no. of facilities (functioning), potability, no. of HH served, who installed, who operates, user charges, if any; HHs toilet facilities, by sitio/purok, no. of HHs with private toilets by type, no. of HH using shared toilets by type, no. of HH without toilets; no. of community waste disposal systems by sitio/purok, by method and wastewater system; no. of reported morbidity and mortality cases of water-borne/contact/vector-borne diseases of barangay residents.
- WATSAN related programs and projects in the barangay. Existing WATSAN programs/project by type of activity, implementing organization/agency, sponsoring funding agency, specify years when operated in barangay, name of community association organized, if any; past WATSAN programs/projects by type of activity, implementing organization/agency, sponsoring funding agency, specify years when operated, name of community association organized, if any; Community organizations in the barangay, watsan related groups/organization and other community organizations, its name of group/organization, sitios where members are, sponsoring agencies, year organized and status; other barangay facilities.

- description of water sources-undeveloped springs, streams and other water sources which can be tapped and developed, sources which can be improved including estimated distance to center of HHs to be served, availability of water, estimated flows during dry and wet seasons; water and well depths by sitio/purok, by season; availability of construction materials for water supply and toilet if available for free at barangay or at hardware/other stores, its sources, name and address of store, materials available, distance from barangay and means of transport for materials; sources of pumps and spare parts for pumps name and address of dealer/store, types of pumps/parts available and distance from barangay; barangay residents with skills in water supply system construction and maintenance, type of skill, no. of persons and remarks; well drillers and water supply contractors who can be tapped for barangay works, their name address, services rendered and charging rates; local fabricators of toilet bowls, their name, location, type/description of toilet bowl.
- 3. Identify of community volunteers. As an initial step in community organizing, a core group of about 7 persons consisting of community leaders is formed. This is the formation of an informal community organization that will assist the CD worker in the preparation of CO strategies, community profiling, identification of project sites, and other work.
- 4. Conduct baseline survey. In the conduct of this survey, focus group discussion was applied and the results validated during barangay spot mapping. The barangay spot map reflects the location of structures (scaled) and different facilities/infrastructure. This serves as a planning tool in the development of WATSAN program for the area.
- 5. Inspect/identify project sites and validate projects. An assembly is called again to present the results of the survey, its profile, assessment and needs. The CD team situates the community, i.e., where they are now in the sector. A member of the CD team will then facilitate the surfacing of thoughts from the group in terms of identifying the needs for WATSAN facilities, how project will be implemented in their area, how the facility will be designed and constructed, and how the community perceives their role in the project. In some cases, the community request technical assistance from the Center on site selection of identified areas.
- 6. Conduct technical and community consultative meetings of members and officers together with barangay officials. By this time, the core group has already specific

projects to be implemented. Together with these interim officers, meetings with barangay officials are undertaken to determine local counterpart funding support to the program/project.

- 7. Facilitate project implementation. After funding has been assured, the CD team facilitates the implementation of the project through supervision and monitoring progress of construction. Contribution from the community comes in the form of free labor (pahina).
- 8. Consolidate BWSA Organization. The core group formulates the by-laws and policies of the organization and have these ratified by the members. The election of BWSA officers follows. A barangay resolution is passed endorsing the association and submitted to the Municipal Development Council/Sangguniang Bayan for registration/accreditation. Parallel to this activity is the completion of the facility and in most cases, the turn-over of the facility to the newly-organized BWSA, which can coincide with the swearing-in of BWSA officials.
- 9. Conduct training on skills and management to BWSA officials by the Center. The module includes topics on: human resource development (self and group awareness, communication skills, group facilitation and conducting meeting, effective community work, leadership skills and roles of officers and members, and conflict management); technical (hydrogeology and site selection, well construction and identification of handpump parts, equipment plumbing tools and materials for construction and repairs, hand pump principles of operation, maintenance and approach in trouble shooting, spring development, types of spring, their characteristics and method of developing, operation and maintenance of tank, spring box and distribution line, excreta, liquid and solid disposal system, water related diseases-prevention/control and water quality surveillance); financial management; project planning management; and action planning.
- 10. Undertake follow-up activities. The CD team after the construction of the WATSAN facilities undertakes follow-up activities such as monitoring and evaluation and the provision of recommendations/adjustments on the O&M of the facilities, where needed.
