| | | | | | | | | | | | | | | |
| LEGENDS: | | | | | | | | | | | | | | |
| A. Existing ponds/reservoirs and their technical data are signed with black symbol, No and font, according above sources: | | | | | | | | | | | | | | |
| <ul style="list-style-type: none"> ● In operation. ○ Under construction. | | | | | | | | | | | | | | |
| B. Potential dangerous ponds and scrapped ones are signed with black symbol over the grey font, No and font: Source: Informative Bulletin of Land Reform Department, MINISTRY OF AGRICULTURE AND FOOD INDUSTRY, (1993), Vol. 15, CARD-INDEX LIST OF POTENTIAL DANGEROUS PONDS - AGRICULTURAL COOPERATIVE PROPERTY | | | | | | | | | | | | | | |
| C. Constructed, but non-existing (or non-operating) ponds. The reasons for stopping of operation are explained in the Remark column. Source: IRR VOSP/PROJECT - JSC (1982) CARD-INDEX OF AGRARIAN INDUSTRIAL COMPLEX | | | | | | | | | | | | | | |
| D. The meaning of used symbols is: | | | | | | | | | | | | | | |
| <ul style="list-style-type: none"> ● Added name of pond/reservoir applies to unreworked according to the type of basic source. ○ "Shiroka Poljana" reservoir transfers a part of the waters of Karadzija Dječevica (left tributary of Deepar river - Mesta River Basin) and higher stream of Karadzija Dura river (right tributary of Devenata river) for complex water use. ○ It consists of "Shiroka Poljana" main reservoir and few small ponds: "Blatino", "Dyavca" and "Vajrova Jela", and "Dyavca" & "Karadzija Dura" Pumping Stations, weavers, delivery channel and tunnel. ○ The boundary between Mesta and Shiroka wasserbecken comes into contact with "Shiroka Poljana" reservoir complex in eastern and northern directions and 4 separate hydroponic system also facilities get into different part basins. "Dyavca" Pumping station. ○ There is a pressure delivery channel between "Shiroka Poljana" reservoir and "Vajrova Jela" dam site, completed with closing equipment and a permit to work as a communication reach with difference between water levels - 0.5 m, and their working water. ○ "Shiroka Poljana" reservoir is in operation since 1942 and works during all year. There is a low for its work, connected with variability of enough water into the river during the dry period. ○ The main purpose of "Pyssaschank" reservoir is to store the winter waters coming from "Bajandim-Serzans-Chan" watershed and to use them for irrigation needs into the "Pyssaschank" Ph. ○ The higher price of the electric power, the concentrated irrigation market and the problems with water filtration through the dam are main reason for canceling an operation scheme of using of the reservoir. ○ The raised water level in the "Pyssaschank" reservoir (approximately 120 000 000 m³ water volume) was detected by order of a Minister of Agriculture (former of present - minister!!!). ○ "Churaba" reservoir is in construction since 1960. It has been a key stone for irrigation into the western parts of the Shiroka Zagona irrigation system. It is constructed to a level (net of 20 000 000 m³ water volume). The reservoir is not yet completed. ○ "Churaba" reservoir will store 100 000 000 m³ water after the end of its construction. There is two ways to compensate a shortage into the reservoir watershed: to transfer water from "Kopranat" or "Pyssaschank" reservoirs, or a construction of new wet. ○ Non-below or uncertain reservoir/pond. Unclear information. ○ The reservoir/pond is constructed over natural territory, for Mesta river watershed. ○ Destroyed ponds and reservoirs. | | | | | | | | | | | | | | |
