

TABLE 2 PROJECT SUMMARY OF FEASIBILITY STUDY ON FLOOD CONTROL IN THE NORTHERN RURAL REGION OF SANTA CRUZ

AREA / SUB-AREA	FLOOD MITIGATION AND DRAINAGE IMPROVEMENT MEASURES				PROJECT EVALUATION										
	STRUCTURAL MEASURES			NON-STRUCTURAL MEASURES	Technical Efficiency (Reduction of flooded area more than 30 cm depth in 10-year frequency flood : km ²)		Economic Efficiency (EIRR : %)			Environmental Impact			PROJECT VIABILITY		
	Component of Structure Measures	Distance (km)	Project Cost (1,000 Bs)		Living Environment	Economic Environment	Natural Environment								
1. CHANE-PAILON AREA				698,584				279.00		12.1					
(1) Rio Chane Basin	Improvement of Rio Chane	26.350	234,627	- Protection of retarding basin - Flood warning - Flood plain management - Flood evacuation plan - Protected forest - Preparation of flood hazard map	Indispensable for avoiding any adverse effect. More effective with flood control of the Rio Piray.	21.10	A	Not feasible	3.8	C	High	Medium	Negligibly small	High viability for avoiding any adverse effect.	A
	(2) Rio Pailon Area	Improvement of Rio Pailon	31.680		344,624	Indispensable as the main stream area. One of the most effective component for the flood mitigation.	167.50	A	Highly feasible	16.4	A	High	High	Negligibly small	High viability as the main stream area.
	Improvement of Rancho Chico Drainage	3.600	8,113		Necessary to mitigating the adverse effect of the bridge construction along Route 9.	B		High				Medium	Negligibly small	Medium viability for avoiding adverse effect of the bridge construction.	B
	Improvement of El Chaco Drainage	1.470	1,118		Necessary to mitigating the adverse effect of the bridge construction along Route 9.	B		High				Medium	Negligibly small	Medium viability for avoiding adverse effect of the bridge construction.	B
	Improvement of El Empalme II Drainage	5.290	7,304		Necessary to mitigating the adverse effect of the bridge construction along Route 9.	B		High				Medium	Negligibly small	Medium viability for avoiding adverse effect of the bridge construction.	B
	Development of Secondary Drainage	18.500	12,998		Necessary to make river and drainage improvement effective.	B		Medium				Medium	Negligibly small	Medium viability to make river and drainage improvement effective.	B
(3) Okinawa Drainage Basin	Improvement of Okinawa Main Drainage	21.650	61,891	High necessity as the major drainage area. It will contribute to mitigate the flood damage of Rio Grande.	90.40	A	Highly feasible	18.4	A	Exclusive High	High	Negligibly small	High viability as the major drainage area for mitigating the flood damage of Rio Grande.	A	
		Development of Secondary Drainage	35.500	27,909	Necessary to make river and drainage improvement effective.	B				Medium	Medium	Negligibly small	Medium viability to make river and drainage improvement effective.	B	
2. SAN JUAN-ANTOFAGASTA AREA				207,912				197.70		18.2					
(1) San Juan Area	Improvement of Arroyo Yapacanicito	17.360	37,350	- Protection of retarding basin - Flood warning - Flood plain management - Flood evacuation plan	Necessary for improving the northern area of San Juan.	91.60	B	Feasible	12.4	B	Exclusive High	High	Negligibly small	Medium viability as the intensive land use area.	B
	Improvement of San Juan Main Drainage (km 13, 17)	7.500	8,474		High necessity as the restoration of the main drainage.		A				Exclusive High	High	Negligibly small	High viability as the intensive land use area.	A
	Rehabilitation of San Juan Main Drainage (km 11, 15, 24, 28)	27.450	14,136		Necessary to rehabilitate the drainage functions.		B				Exclusive High	Medium	Negligibly small	Medium viability as the intensive land use area.	B
	Improvement of Arroyo Tejeria	8.160	8,215		Necessity as the drainage area.		B				Medium	Medium	Negligibly small	Medium viability as the intensive land use area.	B
	Development of Secondary Drainage	35.000	33,304		Necessary to make river and drainage improvement effective.		B				Medium	Medium	Negligibly small	Medium viability to make river and drainage improvement effective.	B
(2) Antofagasta Area	Improvement of Arroyo Jochi	11.800	25,010	- Protected forest - Preparation of flood hazard map	Indispensable to improve flooding condition in the Antofagasta Area.	106.10	A	Highly feasible	23.4	A	High	Medium	Negligibly small	High viability as the intensive land use area.	A
	Improvement of Arroyo Tacuaral	5.800	18,272		Necessary to improve flooding condition in the Antofagasta Area.		B				High	Medium	Negligibly small	Medium viability as the intensive land use area.	B
	Development of Road-cum-embankment	9.830	6,071		Indispensable for project phasing in the San Juan - Antofagasta Area.		A				Medium	Medium	Negligibly small	High viability for project phasing.	A
	Development of Antofagasta Main Drainage	8.800	21,389		Necessity as the drainage area.		B				High	Medium	Negligibly small	Medium viability as the intensive land use area.	B
	Development of Secondary Drainage	26.500	35,691		Necessary to make river and drainage improvement effective.		B				Medium	Medium	Negligibly small	Medium viability to make river and drainage improvement effective.	B

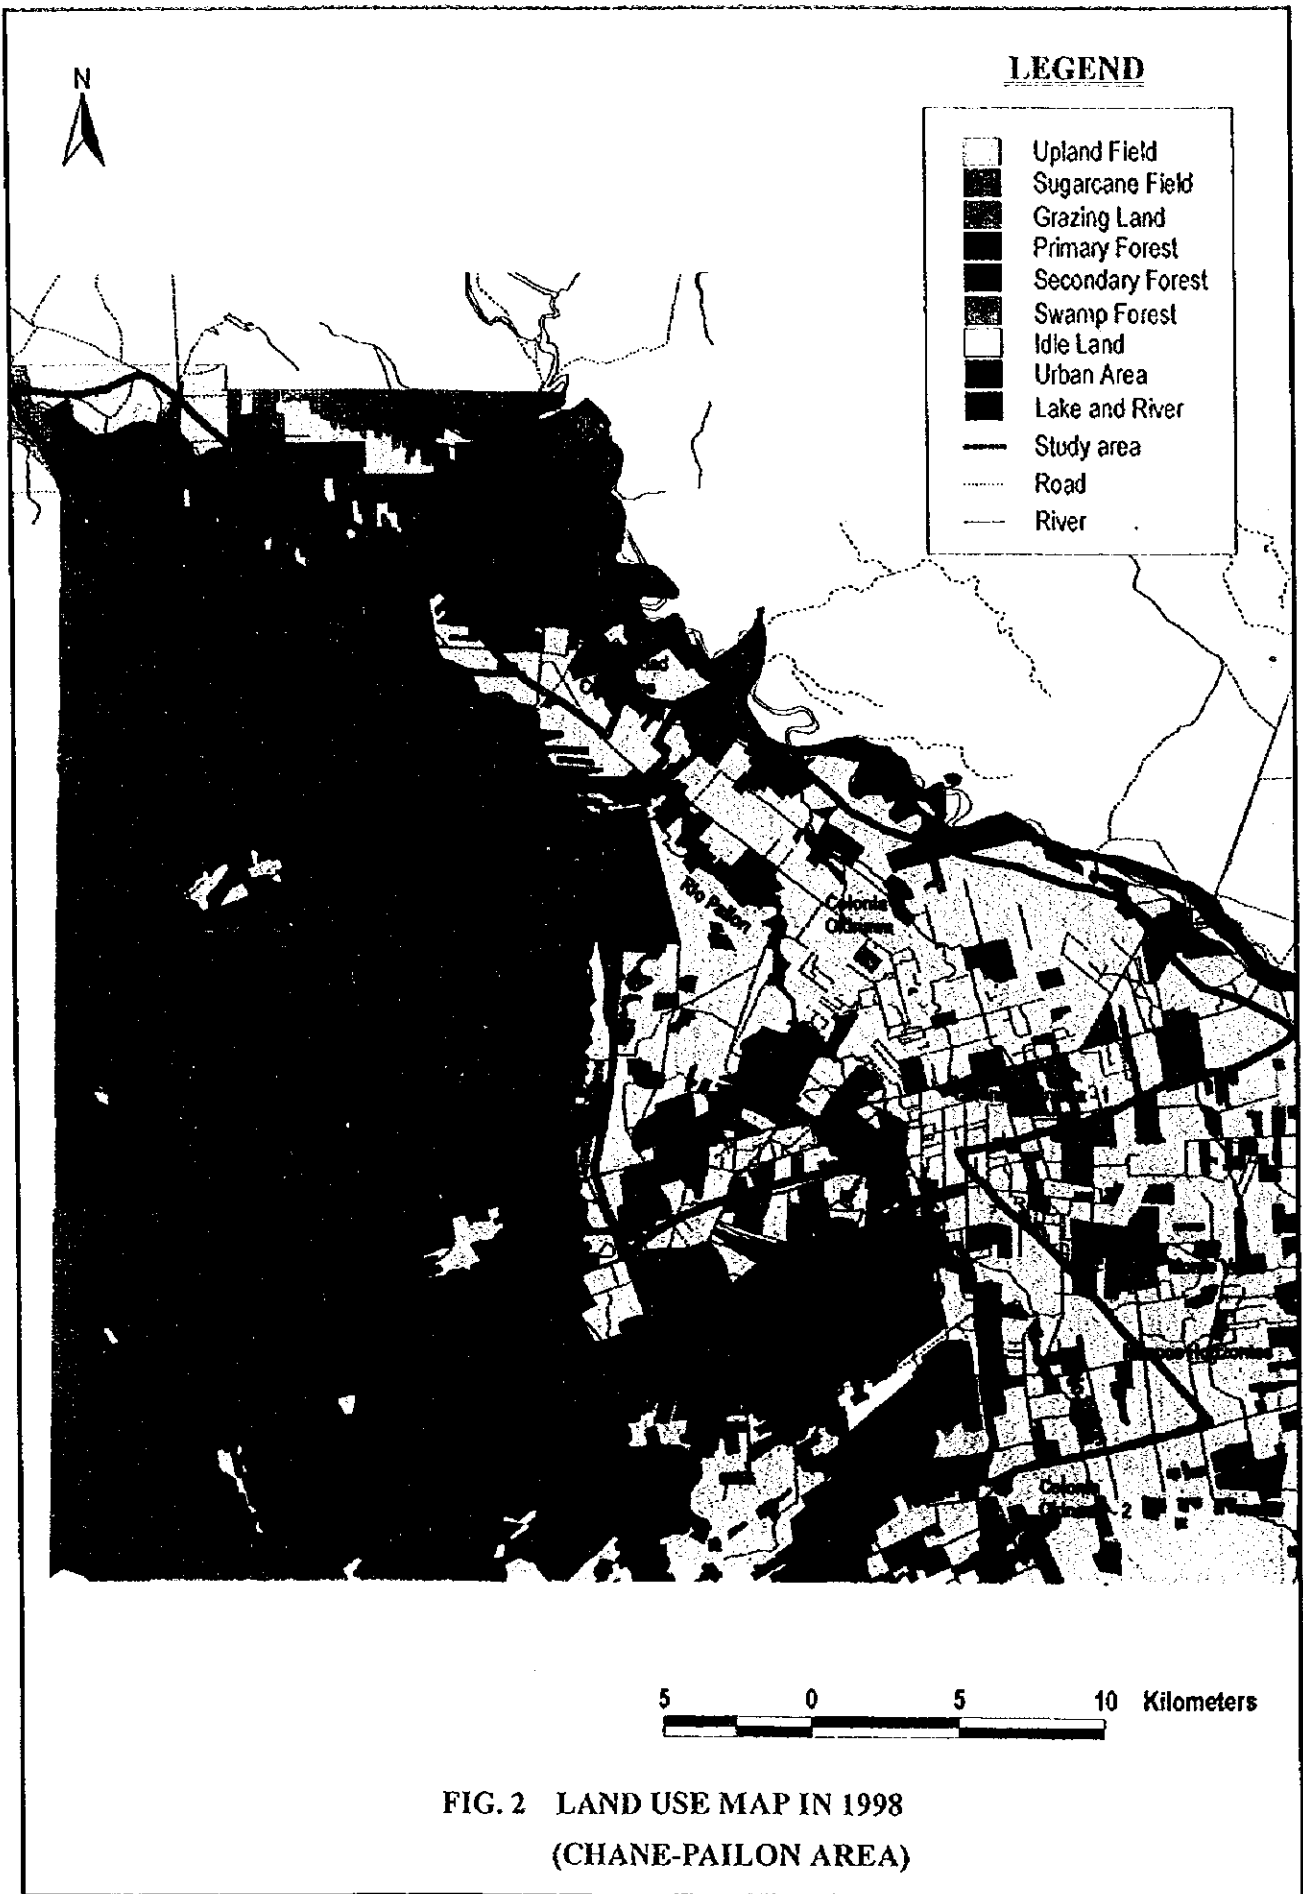

Remarks : Ranking of viability of project components A : High B : Medium C : Low

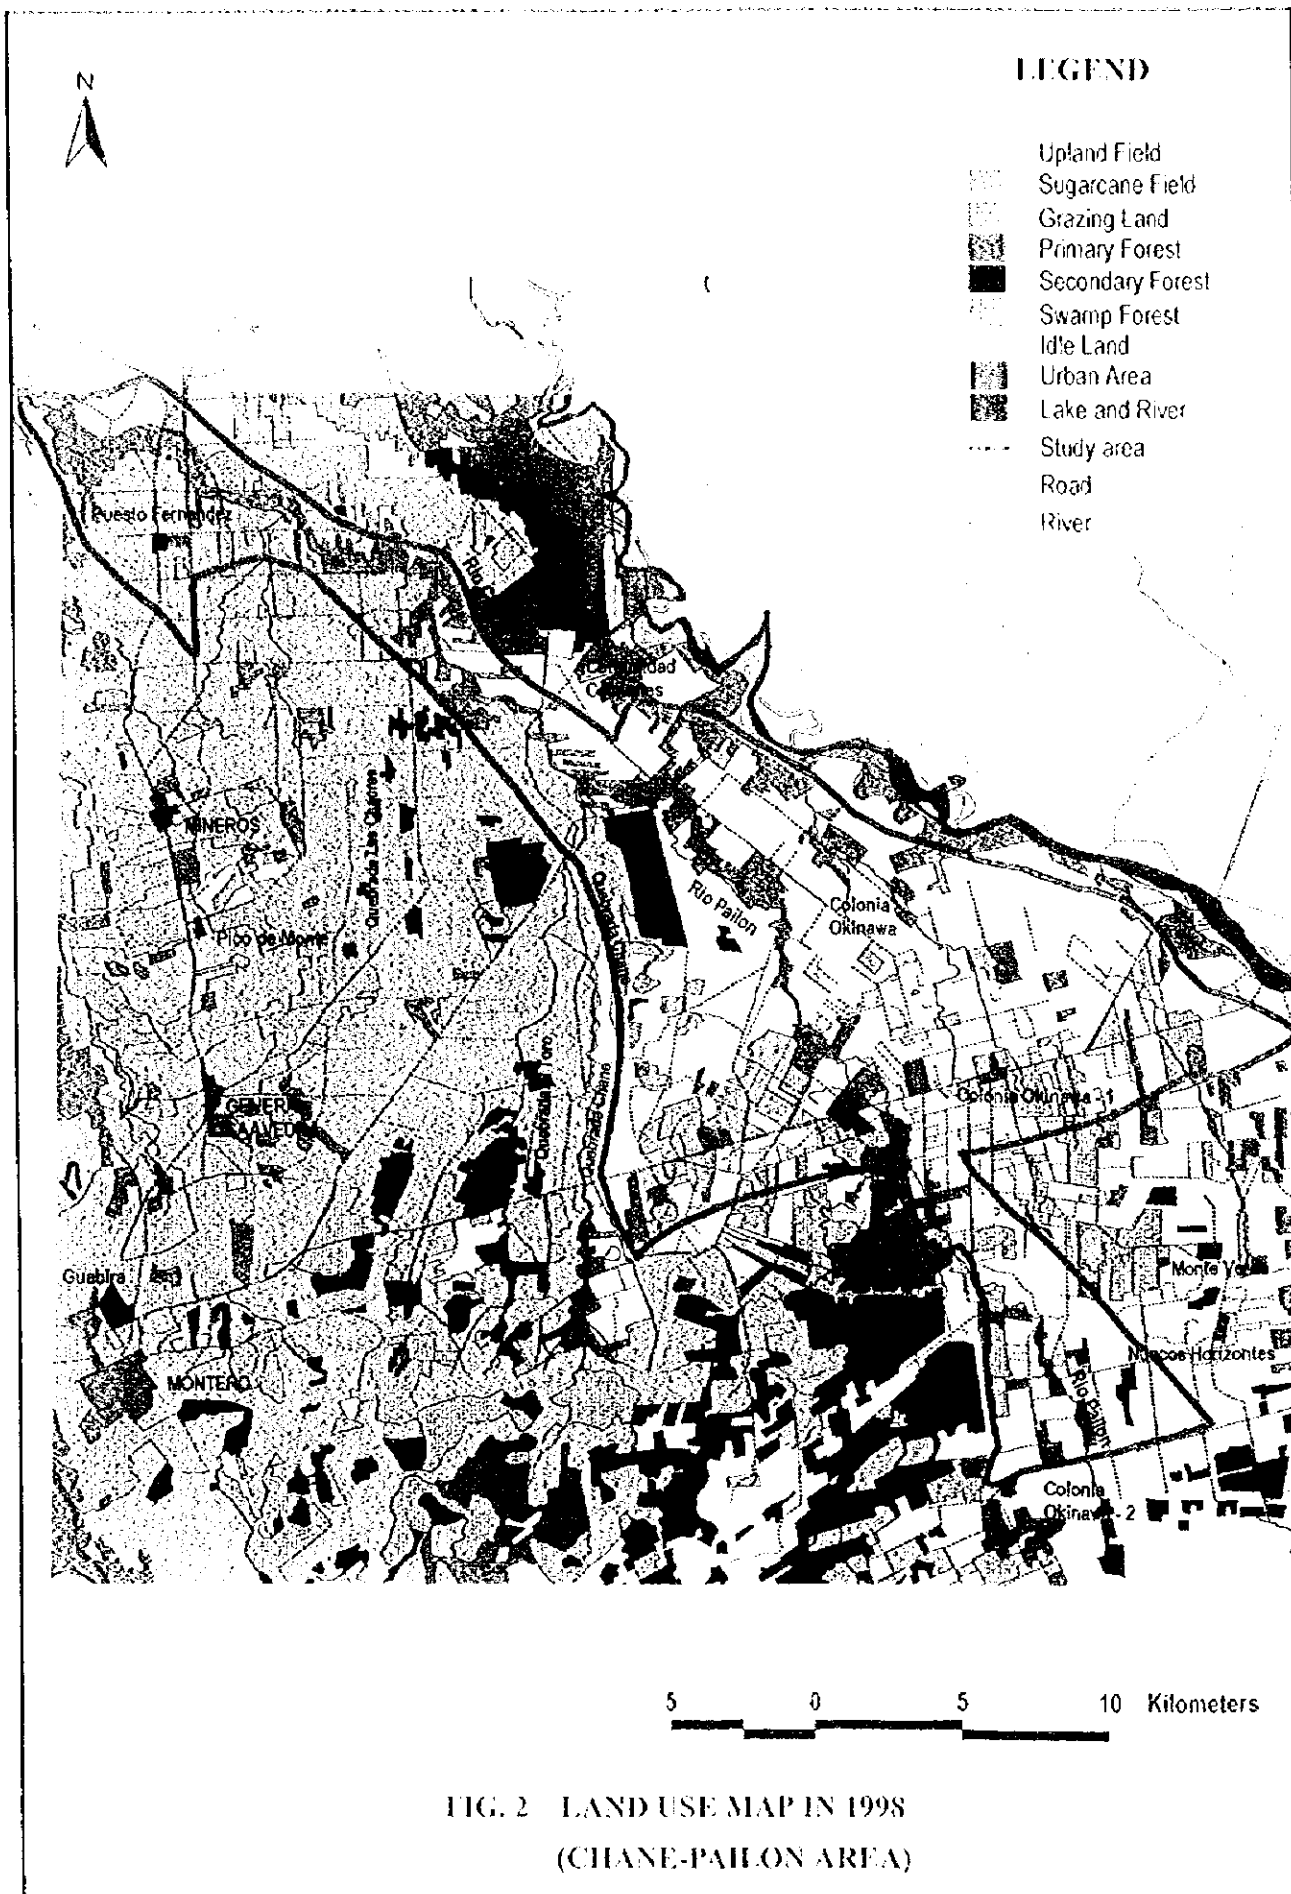

TABLE 3 IMPLEMENTATION PROGRAM

Project	Priority	Fiscal Year											
		1999	2000	2001	2002	2003	2004	2005	2006	2007	2008	2009	2010
I Structural Measures		Stage-1						Stage-2					
1. Chane - Pailon Area													
(1) General Coordination and Arrangement													
(2) 1 st Priority Components													
- Rio Chane / Rio Pailon	1B												
- Okinawa Main Drainage	1A												
(3) 2 nd Priority Components													
- R.Chico / El Chaco / El empalme II	2B												
- Secondary Drainage	2B												
2. San Juan - Antofagasta Area													
(1) General Coordination and Arrangement													
(2) 1 st Priority Components													
- Arroyo Jochi	1A												
- Road-cum-embankment	1A												
- San Juan Main Drainage (km 13, 17)	1B												
(3) 2 nd Priority Components													
- Arroyo Yapacanicito	2A												
- Arroyo Tacuara	2A												
- San Juan Main Drainage (km 11, 15, 24, 28)	2B												
- Arroyo Tejeria / Antofagasta Main Drainage	2B												
- Secondary Drainage	2B												
II Non-structural Measures													
(1) General Coordination and Arrangement													
(2) Implementation of Non-structural Measures	1A

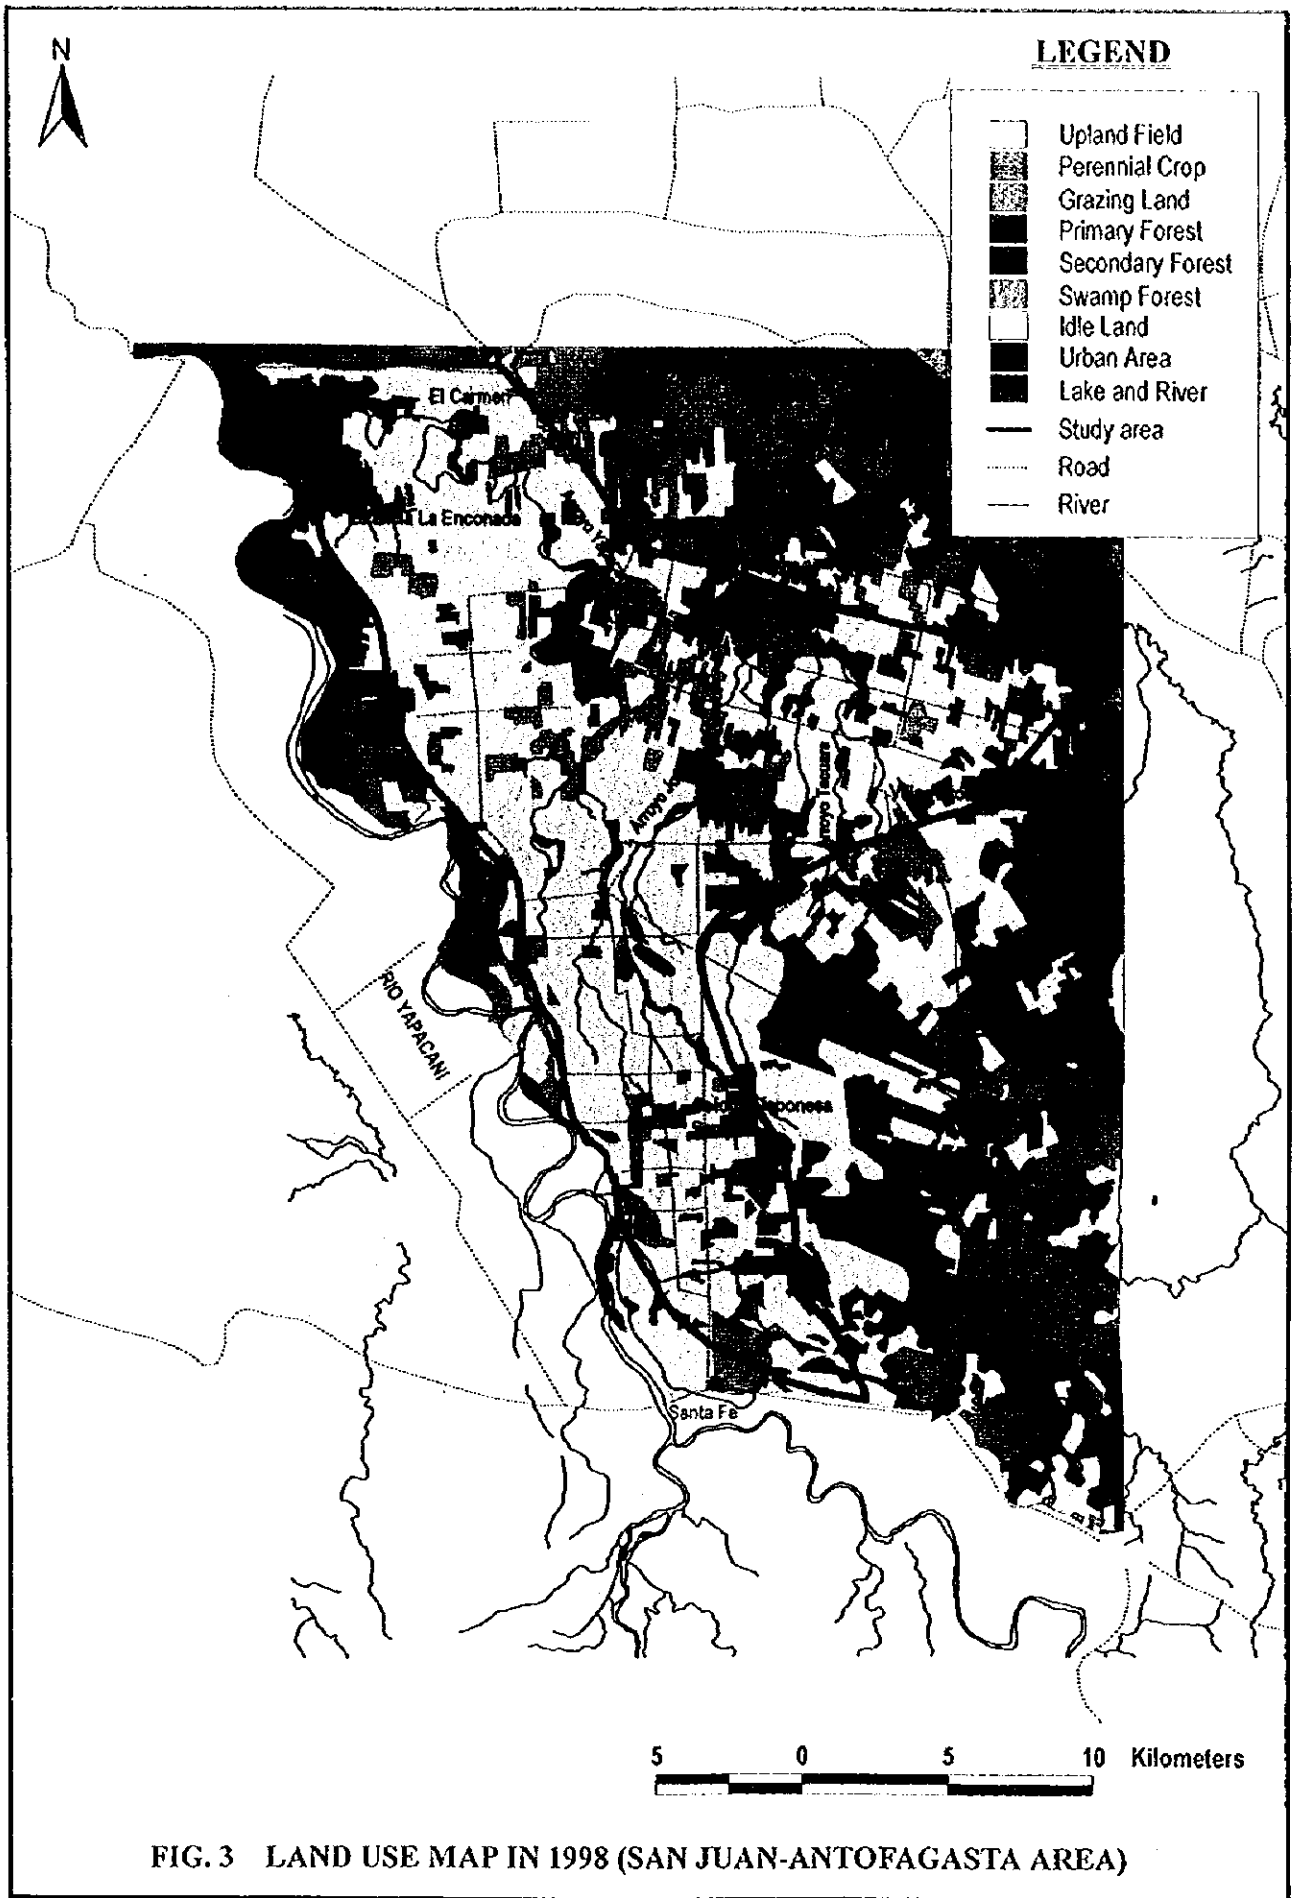

FIG. 3 LAND USE MAP IN 1998 (SAN JUAN-ANTOFAGASTA AREA)

LEGEND

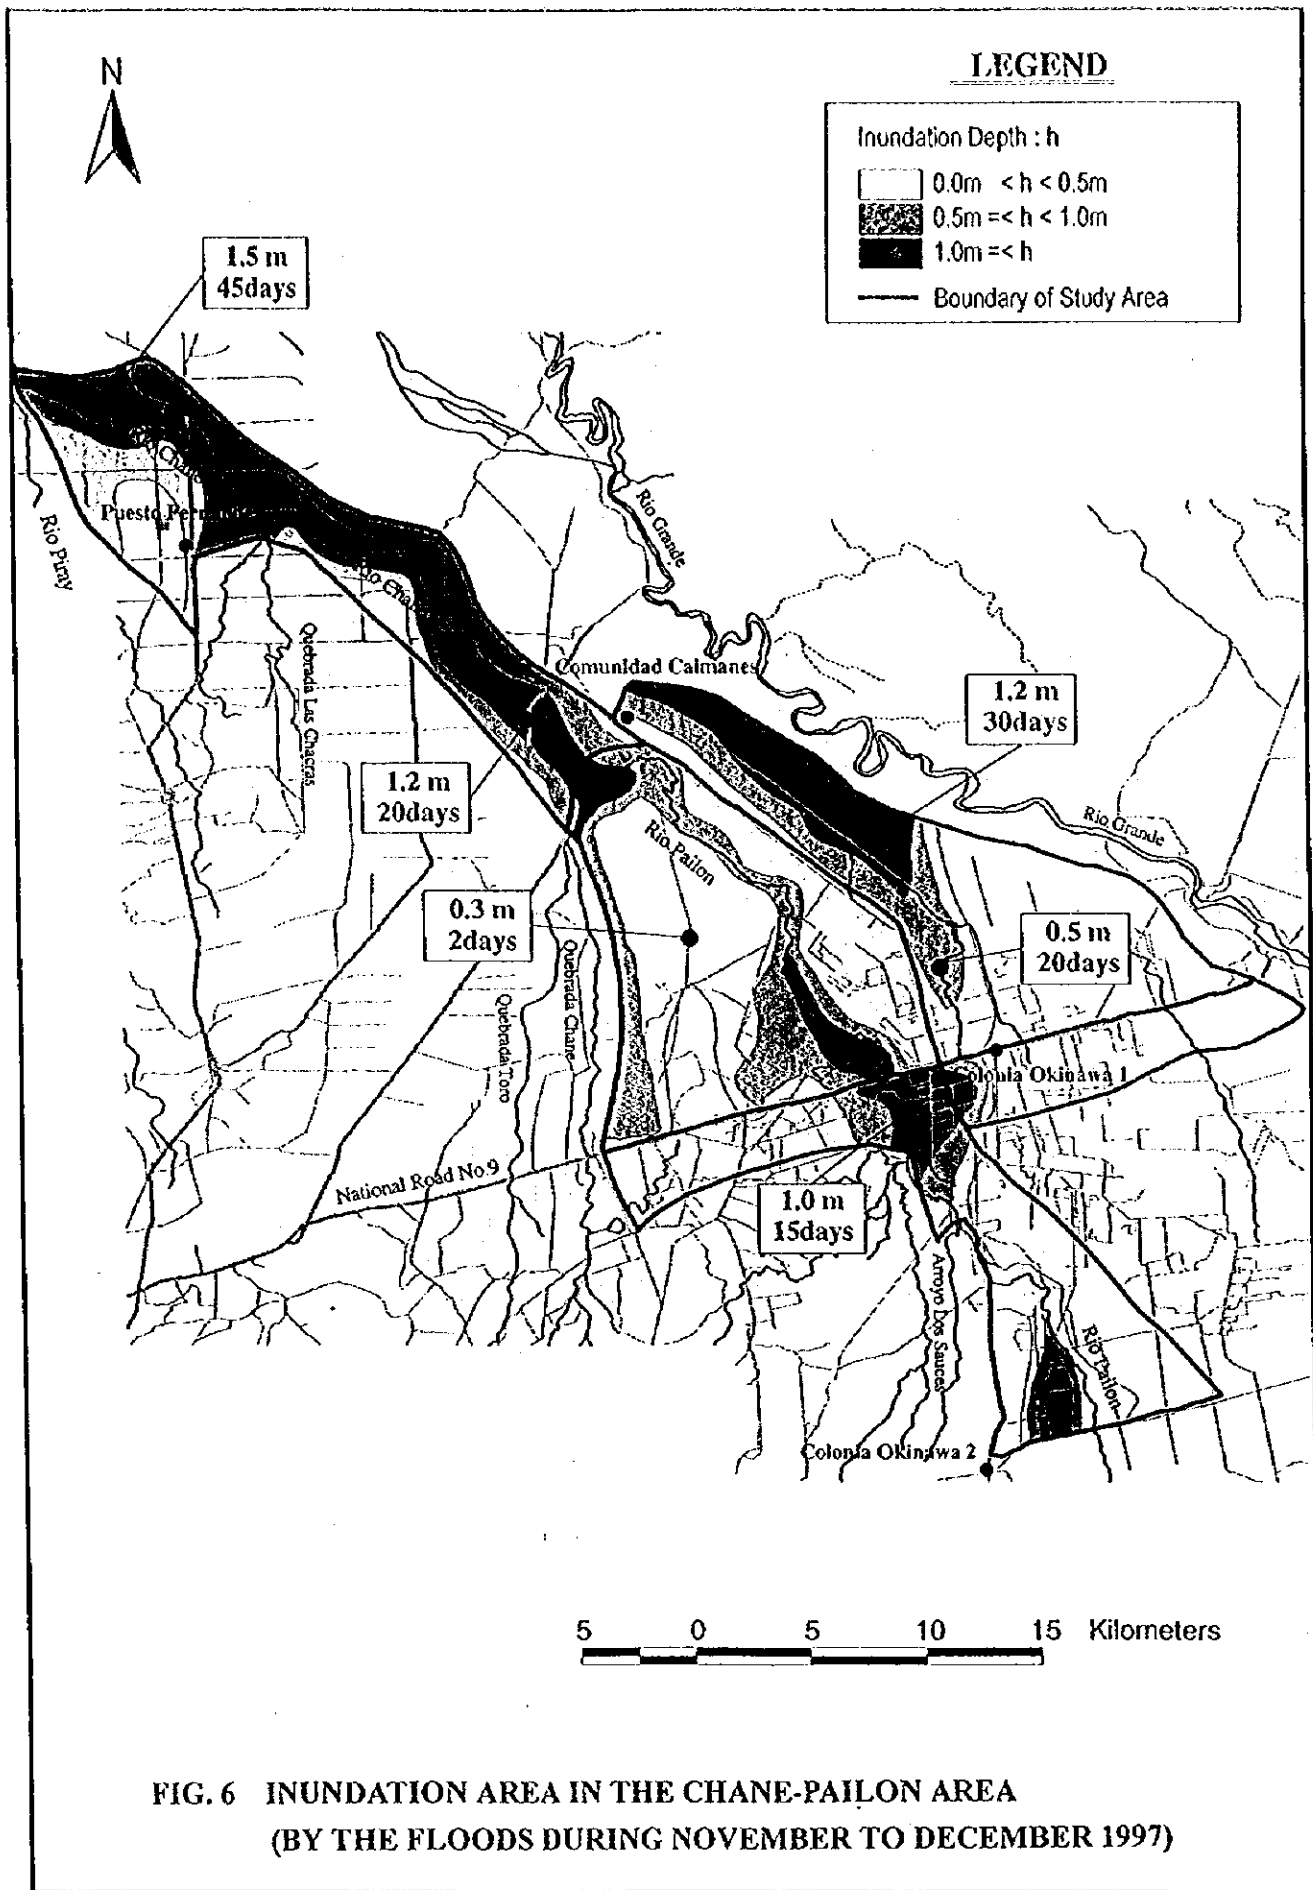

Class	Criteria
II	Soils well suited for crops, having slight limitations that restrict their use
III	Soils moderately suited for crops, having moderate limitations that require the selection of suitable crops and/or special management of soils
IV-07	Soils poorly suited for crops, having severe limitations of nutrient that restrict crops and/or require very careful management of soils
IV-08	Soils poorly suited for crops, having severe limitations of drainage that restrict crops and/or require very careful management of soils
V	Soils unsuited for crops, having severe limitations that are impractical to remove
VI	Soils having severe limitations that make them generally unsuited for cultivation and that limit their use to pasture
VII	Soils having severe limitations that make them unsuited for cultivation and pasture and that restrict their use to forest
