THE KINGDOM OF THAILAND**

**FINAL REPORT**

**DATA BOOK**

***Table of Contents***

- A. EXISTING, ONGOING AND PLANNED MAJOR BMA WASTEWATER SCHEMES
- B. SOLID WASTE LANDFILL SITES
- C. BMA COMMUNITY WASTEWATER TREATMENT PLANTS AND KHLONG WATER IMPROVEMENT LAGOONS INSPECTED BY THE STUDY TEAM
- D. PRIVATE WASTEWATER TREATMENT PLANTS INSPECTED BY STUDY TEAM
- E. FORECASTS OF FUTURE POPULATION IN PROPOSED SCHEME AREAS
- F. RELEVANT WATER QUALITY STANDARDS
- G. ANALYSIS OF KHLONG WATER QUALITY SURVEYS
- H. UNIT COSTS
- I. HYDRAULIC DESIGN CALCULATIONS FOR MAIN INTERCEPTOR SEWERS FOR PROPOSED WASTEWATER SCHEMES
- J. WASTEWATER QUALITY DETERMINED BY YANNAWA PROJECT CONTRACTOR
- K. WASTEWATER QUALITY IN LUMPHINI DETERMINED BY JICA EXPERT
- L. STUDY AND COUNTERPART TEAM WASTEWATER SURVEY RESULTS
- M. RECORDS OF WASTEWATER TREATMENT PLANT PERFORMANCE

**A. EXISTING, ONGOING AND PLANNED  
MAJOR BMA WASTEWATER SCHEMES**

**Scheme Name and Area** Si Phraya (1st Scheme)

**Catchment Area** 2.7 km<sup>2</sup>

**Population**

- *Population and forecast population of area*  
Designed for 120,000 in 2009
- *Serviced population and forecast serviced population of area*  
Total population of area forecast as 104,690 in 2017 (Wastewater User Charge Study, 1998) Assume fully serviced by scheme
- *Population density*  
388 per ha in 2017

**Flow**

- *Dry weather flow*  
Design capacity: 30,000 m<sup>3</sup>/d  
Currently 20,000 m<sup>3</sup>/d
- *Peak flow in foul sewers*  
Not known
- *Max fully treated flow*  
20,000 m<sup>3</sup>/s (limited by current pumping capacity)

**Influent quality**

Average BOD: 61 mg/l (October 1995 - April 1999), max.  
Monthly average: 89 mg/l. Full records are included in Table M1 in Data Book M

**Night soil**

None received

**Effluent quality**

Average BOD: 5 mg/l (October 1995 - April 1999), max.  
Monthly average: 9 mg/l Full records are included in Table M1 in Data Book M.

**Sludge produced**

- *Volume produced*  
1.6 m<sup>3</sup>/d average over 19 months (October 1995 - September 1996 and March - September 1998), currently reported to be 1.8 m<sup>3</sup>/d
- *Dry solids produced*  
0.11 t/d (October 1996 - September 1997), currently calculated to be 0.3 t/d.  
1.0 t/d assumed in future
- *Percentage of dry solids*  
6 % (October 1996 - September 1997), currently reported to be 15%
- *Per capita dry solids*  
2 g/c/d (calculated from 120,000 population)

- *Stabilisation in plant*  
None

#### *Sewers*

- *Type of system*  
Interceptor system on combined sewers
- *Length of foul sewers*  
2.3 km
- *Sewer sizes*  
600 – 1,200 mm dia.
- *No of interceptors*  
14
- *No of manholes*  
36
- *No of pumping stations*  
1
- *Capacity of pumping station*  
Not known

#### *Wastewater Treatment Plant*

- *Process*  
Contact stabilisation activated sludge
- *Process units*  
Coarse and fine screens, Flow balancing and pumping, Acrated grit separators, Mixed liquor contact aeration tanks, Rectangular scraped clarifiers, Return activated sludge stabilisation aeration tanks, Chlorination, Polymer dosing and sludge flocculation tanks, Sludge gravity thickeners, Sludge storage tanks, Polymer dosing and sludge belt presses, Sludge cake to skips, Rapid gravity sand filter for effluent used for road washing only.
- *Site area*  
0.30 ha
- *Housing*  
Fully housed

#### *Implementation*

- *Completion*  
1994
- *Current status*  
Operational

**Scheme Name and Area** Ratanakosin (2nd Scheme)

**Catchment Area** 4.1 km<sup>2</sup>

**Population**

- **Population and forecast population of area**  
Designed for 160,000 in 2011
- **Serviced population and forecast serviced population of area**  
Total population of area forecast as 93,675 in 2017 (Wastewater User Charge Study, 1998)
- **Population density**  
228 per ha in 2017

**Flow**

- **Dry weather flow**  
Design capacity: 40,000 m<sup>3</sup>/d
- **Peak flow in foul sewers**  
5 x DWF = 200,000 m<sup>3</sup>/d
- **Max fully treated flow**  
2.5 x DWF = 100,000 m<sup>3</sup>/d

**Influent quality**

Not known

**Night soil**

None will be received

**Effluent quality**

Not known

**Sludge to be produced**

- **Volume produced**  
40 m<sup>3</sup>/d from Design Report
- **Dry solids produced**  
8 t/d from Design Report
- **Percentage of dry solids**  
20 % design requirement
- **Per capita dry solids**  
70 g/c/d calculated
- **Stabilisation in plant**  
None

**Sewers**

- **Type of system**  
Interceptor Sewerage on existing Combined Drainage

- *Length of foul sewers*  
Not known
- *Sewer sizes*  
300 – 1,500 mm dia.
- *No of interceptors*  
4
- *No of manholes*  
Not known
- *No of pumping stations*  
Only at WWTP
- *Capacity of pumping stations*  
5 x DWF to preliminary treatment

#### ***Wastewater Treatment Plant***

- *Process*  
2 stage activated sludge
- *Process units*  
Coarse and fine screens, aerated grit channels, 2 circular path 1st stage aeration tanks with diffused air, 4 horizontal flow intermediate clarifiers, 2 circular path 2nd stage aeration tanks with diffused air, 4 horizontal flow final clarifiers, post aeration, sludge gravity thickeners, sludge belt presses.
- *Site area*  
0.64 ha
- *Housing*  
Plant on 3 operational floors with full air management and odour control.

#### ***Implementation***

- *Contract start*  
1993
- *Current status (November 1998)*  
80 % complete but contract halted
- *Planned completion*  
1999

**Scheme Name and Area**      **Din Daeng - BMA Stage 1 (3rd Scheme)**

**Catchment Area**              **37.8 km<sup>2</sup>**

**Population**

- **Population and forecast population of area**  
697,875 in 1990, 1,080,175 in 2015. Designed for 1,080,000 in 2011
- **Serviced population and forecast serviced population of area**  
Total population of area forecast as 1,169,930 in 2017 (Wastewater User Charge Study, 1998) Assume will be 92 % serviced in 2017
- **Population density**  
310 per ha in 2017

**Flow**

- **Dry weather flow**  
Design capacity: 341,289 m<sup>3</sup>/d for Stage 1 and 2, and 463,104 for Stage 3
- **Peak flow in foul sewers and preliminary treatment**  
5 x DWF: 1,706,400 m<sup>3</sup>/d for Stage 1 and 2, and 2,315,520 m<sup>3</sup>/d for Stage 2.
- **Max fully treated flow**  
1.5 x DWF = 511,920 m<sup>3</sup>/d for Stage 1, 2.5 x DWF for Stage 2 = 833,200 m<sup>3</sup>/d and for Stage 3 = 1,157,760 m<sup>3</sup>/d.

**Influent quality**

Assumed for Stage 1: BOD 150 mg/l, SS 150 mg/l, N 30 mg/l, P 8 mg/l  
Assumed for Stage 2: BOD 200 mg/l, SS 200 mg/l, N 35 mg/l, P 10 mg/l

**Night soil**

None will be received

**Effluent quality**

Design limit for average quality: BOD 20 mg/l, SS 30 mg/l, N (total) 10 mg/l, NH<sub>3</sub>(N) 5 mg/l, P 2 mg/l, DO 5 mg/l

**Sludge to be produced**

- **Volume produced**  
Stage 1: 250 m<sup>3</sup>/d, Stage 2: 362 m<sup>3</sup>/d (NOSS Design Report - differs from Agricultural Use of Sludge Study: AIT,1998)
- **Dry solids produced**  
Stage 1: 34.1 t/d before lime addition, Stage 2: 51.2 t/d before lime addition (differs from Agricultural Use of Sludge Study)
- **Percentage of dry solids**  
20 % design requirement

- *Per capita dry solids*  
49 g/c/d calculated for Stage 1 and 47 g/c/d for Stage 2 from above - this does not include lime addition (differs from Agricultural Use of Sludge Study: AIT, 1998)
- *Stabilisation in plant*  
Partial lime stabilisation

#### **Sewers**

- *Type of system*  
Interceptor sewer system collecting from existing combined sewers
- *Length of foul sewers*  
66.4 km
- *Sewer sizes*  
200 – 3,200 mm dia.
- *No of interceptors*  
439
- *No of manholes*  
980
- *No of pumping stations*  
6
- *Capacity of pumping stations*  
Up to 350,000 m<sup>3</sup>/d

#### **Wastewater Treatment Plant**

- *Process*  
Activated sludge with nitrification and de-nitrification
- *Process units*  
Inlet pumping station, Bar screens, Aerated grit chambers, Aeration tanks with anoxic zones and diffused air system, Circular scraped clarifiers with chemical dosing for P removal, Sludge gravity thickeners, Sludge belt presses, Lime mills and Sludge cake dosing.
- *Site area*  
2.72 ha
- *Housing*  
Fully housed plant with operational plant on 2 floors. Air management and odour control for preliminary treatment only.

#### **Implementation**

- *Contract start*  
1993
- *Current status (November 1998)*  
86 % complete but contract suspended
- *Completion*  
Not known

**Scheme Name and Area**      Yannawa - BMA Stage 2 (4th Scheme)

**Catchment Area**              28.5 km<sup>2</sup>

**Population**

- **Population and forecast population of area**  
560,000 in 1992, 900,000 in 2020. Designed in 2 phases for these populations
- **Serviced population and forecast serviced population of area**  
Total population of area forecast as 540,275 in 2017 (Wastewater User Charge Study, 1998) Assume will be fully serviced in 2017
- **Population density**  
190 per ha in 2017

**Flow**

- **Dry weather flow**  
Design capacity: 200,000 m<sup>3</sup>/d for Phase 1 and 2, and 360,000 for Phase 3
- **Peak flow in foul sewers and preliminary treatment**  
5 x DWF: 1,000,000 m<sup>3</sup>/d for Phase 1 and 2, and 1,800,000 m<sup>3</sup>/d for Phase 2.
- **Max fully treated flow**  
1.5 x DWF = 300,000 m<sup>3</sup>/d for Phase 1, 2.5 x DWF for Phase 2 = 500,000 m<sup>3</sup>/d and for Phase 3 = 900,000 m<sup>3</sup>/d for Stage 3.

**Influent quality**

Assumed for Phase 1: BOD 150 mg/l, SS 150 mg/l, N 30 mg/l, P 8 mg/l  
Assumed for Phase 2: BOD 200 mg/l, SS 200 mg/l, N 35 mg/l, P 10 mg/l

**Night soil**

- **Volume delivered**  
1,000 m<sup>3</sup>/d
- **Quality**  
Assume COD 35,000 mg/l, BOD 4,000 mg/l, TS 25,000 mg/l, TDS 6,000 mg/l, SS 19,000 mg/l, P 310 mg/l, pH 7.2, Alkalinity (CaCO<sub>3</sub>) 1,800 mg/l, Grease 440 mg/l.

**Effluent quality**

Design limit for average quality: BOD 20 mg/l, SS 30 mg/l, N (total) 10 mg/l, NH<sub>3</sub>(N) 5 mg/l, P 2 mg/l, DO 5 mg/l

**Sludge to be produced**

- **Volume produced**  
Wastewater sludge at 20 % dry solids = 215 m<sup>3</sup>/d in Phase 1 & 2, and 442 m<sup>3</sup>/d in Phase 3 calculated from solids quantities excluding lime addition. Lime is proposed to be added at 5 kg/kg ds which is considered excessive.

- *Dry solids produced*  
24.0 t/d from wastewater + 19.0 t/d from night soil = 43.0 t/d in Phase 1 and 2,  
31.6 t/d from wastewater + 19.0 t/d from night soil = 50.6 t/d in Phase 3 from  
Design Report excluding lime addition.
- *Percentage of dry solids*  
20 % design requirement
- *Per capita dry solids*  
53 g/c/d calculated for Phase 1 and 2 and 43ghd for Phase 3 from above - this  
does not include lime addition (differs slightly from Agricultural Use of Sludge  
Study: AIT, 1998)
- *Stabilisation in plant*  
Lime stabilisation of wastewater sludge only.

### **Sewers**

- *Type of system*  
Interceptor sewer system collecting from existing combined sewers
- *Length of foul sewers*  
53 km
- *Sewer sizes*  
150 – 2,250 mm dia
- *No of interceptors*  
429
- *No of manholes*  
589
- *No of pumping stations*  
3
- *Capacity of pumping stations*  
106 – 1,513 l/s

### **Wastewater Treatment Plant**

- *Process*  
Sequential batch reactor activated sludge (CASS)
- *Process units*  
Inlet pumping station, Dynamic grit separators, Fine bar screens with  
compactors, Pumps to reactor basins with provision for chemical dosing for P  
removal, Reactor basins, Collection and cascade outfall, Sludge gravity  
thickeners, Sludge belt presses with polymer pre-conditioning, alum and lime  
dosing.
- *Site area*  
3.2 ha
- *Housing*  
Fully housed plant on 4 operating floors

***Implementation***

- *Contract start*  
1995
- *Current status (November 1998)*  
Design and construction 79 % complete
- *Completion*  
1999

**Scheme Name and Area**      **Nong Khaem - BMA Stage 3 (Part of 5th Scheme)**

**Catchment Area**              42.9 km<sup>2</sup>

**Population**

- *Population and forecast population of area*  
178,000 in 1992, 450,000 in 2020. Designed in 2 stages for these populations
- *Serviced population and forecast serviced population of area*  
Total population of area forecast as 362,685 in 2017 (Wastewater User Charge Study, 1998) Assume will be 49 % serviced in 2017 assuming Stage 2 does not proceed
- *Population density*  
85 per ha in 2017

**Flow**

- *Dry weather flow*  
Design capacity: 157,000 m<sup>3</sup>/d for Stage 1 Phase 1 and 2, not specified for Stage 2
- *Peak flow in foul sewers and preliminary treatment*  
5 x DWF: 785,000 m<sup>3</sup>/d for Stage 1, not specified for Stage 2
- *Max fully treated flow*  
1.5 x DWF = 236,000 m<sup>3</sup>/d for Phase 1, 2.5 x DWF for Phase 2 = 393,000 m<sup>3</sup>/d for Stage 1, not specified for Stage 2

**Influent quality**

Assumed for Phase 1: BOD 150 mg/l, SS 150 mg/l, N 30 mg/l, P 8 mg/l  
Assumed for Phase 2: BOD 200 mg/l, SS 200 mg/l, N 35 mg/l, P 10 mg/l

**Night soil**

No new provision for night soil deliveries. Existing plant to remain

**Effluent quality**

Design limit for average quality: BOD 20 mg/l, SS 30 mg/l, N (total) 10 mg/l, NH<sub>3</sub>(N) 5 mg/l, P 2 mg/l, DO 5 mg/l

**Sludge to be produced**

- *Volume produced*  
73.0 m<sup>3</sup>/d (Agricultural Use of Sludge Study: AIT, 1998) for Stage 2
- *Dry solids produced*  
14.5 t/d (Agricultural Use of Sludge Study: AIT, 1998) for Stage 1
- *Percentage of dry solids*  
20 % design requirement
- *Per capita dry solids*  
32 g/c/d (Agricultural Use of Sludge Study: AIT, 1998)

- *Stabilisation in plant*  
Digestion plant for sludges from Nong Khaem, Ratburana and Yannawa

#### *Sewers*

- *Type of system*  
Interceptor sewer system collecting from existing combined sewers
- *Length of foul sewers*  
42.1 km
- *Sewer sizes*  
300 – 2,300 mm dia.
- *No of interceptors*  
208
- *No of manholes*  
356
- *No of pumping stations*  
8
- *Capacity of pumping stations*  
Up to 785,000 m<sup>3</sup>/d

#### *Wastewater Treatment Plant*

- *Process*  
Activated sludge (vertical loop reactor)
- *Process units - wastewater treatment*  
Coarse and fine screens, Vortex grit separators, Vertical Loop Reactor aeration tanks with both diffused air and surface aeration, Horizontal flow clarifiers with ferric chloride addition for phosphate removal, Diffused air flotation sludge thickeners.
- *Process units - central sludge treatment*  
Sludge cake rapid mix and slurry preparation tanks, Mesophilic anaerobic sludge digesters with membrane gas holders, Sludge belt presses.
- *Site area*  
8.32 ha
- *Housing*  
Open plant

#### *Implementation*

- *Contract start*  
1996
- *Current status (November 1998)*  
Design and construction 20 % complete
- *Completion*  
2001

**Scheme Name and Area**      **Ratburana - BMA Stage 3 (Part of 5th Scheme )**

**Catchment Area**              **42.3 km<sup>2</sup>**

**Population**

- **Population and forecast population of area**  
177,000 in 1992, 375,000 in 2020. Designed in 2 stages for these populations
- **Serviced population and forecast serviced population of area**  
Total population of area forecast as 435,195 in 2017 (Wastewater User Charge Study, 1998) Assume will be 42 % serviced in 2017 assuming Stage 2 does not proceed or 86 % if it does.
- **Population density**  
103 per ha in 2017

**Flow**

- **Dry weather flow**  
Design capacity: 65,000 m<sup>3</sup>/d for Stage 1 Phase 1 and 2, 130,000 m<sup>3</sup>/d for Stage 2
- **Peak flow in foul sewers and preliminary treatment**  
5 x DWF: 650,000 m<sup>3</sup>/d for Stage 1 and 2
- **Max fully treated flow**  
1.5 x DWF = 98,000 m<sup>3</sup>/d for Phase 1, 2.5 x DWF for Phase 2 = 163,000 m<sup>3</sup>/d for Stage 1, 325,000 m<sup>3</sup>/d for Stage 2

**Influent quality**

Assumed for Phase 1: BOD 150 mg/l, SS 150 mg/l, N 30 mg/l, P 8 mg/l  
Assumed for Phase 2: BOD 200 mg/l, SS 200 mg/l, N 35 mg/l, P 10 mg/l

**Night soil**

- **Volume delivered**  
400 m<sup>3</sup>/d
- **Quality**  
Assume COD 35,000 mg/l, BOD 4,000 mg/l, TS 25,000 mg/l, TDS 6,000 mg/l, SS 19,000 mg/l, P 310 mg/l, pH 7.2, Alkalinity (CaCO<sub>3</sub>) 1,800 mg/l, Grease 440 mg/l.

**Effluent quality**

Design limit for average quality: BOD 20 mg/l, SS 30 mg/l, N (total) 10 mg/l, NH<sub>3</sub>(N) 5 mg/l, P 2 mg/l, DO 5 mg/l

**Sludge to be produced**

- **Volume produced**  
55.0 m<sup>3</sup>/d (Agricultural Use of Sludge Study: AIT, 1998) for Stage 1.
- **Dry solids produced**  
11.0 t/d (Agricultural Use of Sludge Study: AIT, 1998) for Stage 1

- *Percentage of dry solids*  
20 % design requirement
- *per capita dry solids*  
45 g/c/d (Agricultural Use of Sludge Study: AIT,1998)
- *Stabilisation in plant*  
None proposed

#### **Sewers**

- *Type of system*  
Interceptor sewer system collecting from existing combined sewers
- *Length of foul sewers*  
21.7 km
- *Sewer sizes*  
300 – 2,300 mm dia.
- *No of interceptors*  
164
- *No of manholes*  
162
- *No of pumping stations*  
5
- *Capacity of pumping stations*  
Up to 325,000 m<sup>3</sup>/d (5 x DWF)

#### **Wastewater Treatment Plant**

- *Process*  
Activated sludge (vertical loop reactor)
- *Process units*  
Coarse and fine screens, Vortex grit separators, Vertical Loop Reactor aeration tanks with both diffused air and surface aeration, Horizontal flow clarifiers with ferric chloride addition for phosphate removal, Diffused air flotation sludge thickeners, Sludge belt presses, Lime addition to sludge cake.
- *Site area*  
1.41 ha
- *Housing*  
Housed plant, but with odour control for preliminary treatment units

#### **Implementation**

- *Contract start*  
1996
- *Current status (November 1998)*  
Design and construction 20 %
- *Completion*  
2001

- *Per capita dry solids*  
31 g/c/d assumed and used to derive quantities (Agricultural Use of Sludge  
- Study: AIT,1998)
- *Stabilisation in plant*  
None proposed

#### **Sewers**

- *Type of system*  
Interceptor sewer system collecting from existing combined sewers
- *Length of foul sewers*  
31 km
- *Sewer sizes*  
400 – 2,250 mm dia.
- *No of interceptors*  
300
- *No of manholes*  
Not known
- *No of pumping stations*  
3
- *Capacity of pumping stations*  
150,000 – 900,000 m<sup>3</sup>/d (6 x DWF)

#### **Wastewater Treatment Plant**

- *Process – wastewater treatment*  
Bid documents requires screening, grit removal, storm flow separation, biological  
and/or chemical treatment
- *Process – sludge treatment*  
Anaerobic digestion has now been selected from options in bid document.
- *Site area*  
1.12 ha
- *Housing*  
Fully housed

#### **Implementation**

- *Contract start*  
1999
- *Current status (November 1998)*  
Tenders submitted and contract being negotiated
- *Completion*  
2003

**Scheme Name and Area** Khlong Toey (7th Scheme)  
Note scheme not committed - information from SAPROF  
Study for OECF,1998

**Catchment Area** 57.15 km<sup>2</sup>

**Population**

- *Population and forecast population of area*  
694,000 in 2017. Previously 847,000
- *Serviced population and forecast serviced population of area*  
Total population of area forecast as 813,590 in 2017 (Wastewater User Charge Study, 1998) Assume mostly serviced by scheme
- *Population density*  
142 per ha in 2017

**Flow**

- *Dry weather flow*  
Design capacity: 261,000 m<sup>3</sup>/d. Previously 320,000 m<sup>3</sup>/d.
- *Peak flow in foul sewers and preliminary treatment*  
5 x DWF: 1,035,000 m<sup>3</sup>/d
- *Max fully treated flow*  
1.5 x DWF = 391,500 m<sup>3</sup>/d

**Influent quality**

Assumed for Phase 1: BOD 150 mg/l, SS 150 mg/l, N 30 mg/l, P 8 mg/l  
Assumed for Phase 2: BOD 200 mg/l, SS 200 mg/l, N 35 mg/l, P 10 mg/l

**Night soil**

None to be delivered

**Effluent quality**

Design limit for average quality: BOD 20 mg/l, SS 30 mg/l, N (total) 10 mg/l,  
NH<sub>3</sub>(N) 5 mg/l, P 2 mg/l, DO 5 mg/l

**Sludge to be produced**

- *Volume produced*  
170 m<sup>3</sup>/d
- *Dry solids produced*  
33.93 t/d based on 1 kg/kg BOD
- *Percentage of dry solids*  
20 % design requirement
- *Per capita dry solids*  
49 g/c/d
- *Stabilisation in plant*  
None proposed

### **Sewers**

- *Type of system*  
Interceptor sewer system collecting from existing combined sewers
- *Length of foul sewers*  
92 km
- *Sewer sizes*  
150 – 2,800 mm

### **Wastewater Treatment Plant**

- *Process*  
Nitrifying activated sludge plant
- *Process units*  
Coarse screen, Grit separation, Storm flow separation, Activated sludge aeration tank with mixed liquor re-circulation, Rectangular scraped clarifiers, Final aeration, Centrifugal sludge thickeners, Dewatering centrifuges.
- *Site area*  
3.2 ha
- *Housing*  
Fully housed

### **Implementation**

Feasibility Study being arranged in 1999

**Scheme Name and Area**      **Thonburi (8th Scheme)**  
Note scheme not committed - information from SAPROF  
Study for OECF, 1998

**Catchment Area**              51.2 km<sup>2</sup>

**Population**

- *Population and forecast population of area*  
1,381,000 in 2017. Previously 1,531,000
- *Serviced population and forecast serviced population of area*  
Total population of area forecast as 1,160,415 in 2017 (Wastewater User Charge Study, 1998) Assume mostly serviced by scheme
- *Population density*  
227 per ha in 2017

**Flow**

- *Dry weather flow*  
Design capacity: 518,000 m<sup>3</sup>/d. Previously 575,000 m<sup>3</sup>/d.
- *Peak flow in foul sewers and preliminary treatment*  
5 x DWF: 2,590,000 m<sup>3</sup>/d
- *Max fully treated flow*  
1.5 x DWF = 778,000 m<sup>3</sup>/d

**Influent quality**

Assumed for Phase 1: BOD 150 mg/l, SS 150 mg/l, N 30 mg/l, P 8 mg/l  
Assumed for Phase 2: BOD 200 mg/l, SS 200 mg/l, N 35 mg/l, P 10 mg/l

**Night soil**

None to be delivered

**Effluent quality**

Design limit for average quality: BOD 20 mg/l, SS 30 mg/l, N (total) 10 mg/l,  
NH<sub>3</sub>(N) 5 mg/l, P 2 mg/l, DO 5/mg/l

**Sludge to be produced**

- *Volume produced*  
338 m<sup>3</sup>/d
- *Dry solids produced*  
67.34 t/d based on 1 kg/kg BOD
- *Percentage of dry solids*  
20 % design requirement
- *Per capita dry solids*  
49 g/c/d
- *Stabilisation in plant*  
None proposed

### ***Sewers***

- ***Type of system***  
Interceptor sewer system collecting from existing combined sewers
- ***Length of foul sewers***  
97 km
- ***Sewer sizes***  
150 – 3,800 mm

### ***Wastewater Treatment Plant***

- ***Process***  
Nitrifying activated sludge plant
- ***Process units***  
Coarse screen, Grit separation, Storm flow separation, Activated sludge aeration tank with mixed liquor re-circulation, Rectangular scraped clarifiers, Final aeration, Centrifugal sludge thickeners, Dewatering centrifuges.
- ***Site area***  
4.8 ha
- ***Housing***  
Fully housed

### ***Implementation***

No committed programme

**B. SOLID WASTE LANDFILL SITES**

## SOLID WASTE LANDFILL SITES

*Site Name and Location*      **Lat Krebang**  
*Management*                      **Privately managed under 5 year contract commenced 1994**

### *Capacity*

<i>Total</i>	about 6 million t
<i>Daily quantity accepted</i>	3,500 t/d
<i>Remaining capacity (January 1999)</i>	About 3 months
<i>When expected to be full</i>	1999
<i>Plans when full</i>	Contractor preparing new site in Samuk Prakarn

*Site Area*                              **35 ha**

*Site Access*                          **Poor unpaved track**

*Waste Delivery*                      **Contractor collects from On-Nut Transfer Station**

*Costs*                                      **Contractor paid Baht 149 per tonne**

### *Environmental Control*

<i>Cover</i>	No regular soil cover, most of waste exposed during inspection. 300mm soil cover planned.
<i>Base lining</i>	300 mm clay seal
<i>Leachate management</i>	Leachate collection and treatment in aerated lagoons but aerators not operating during inspection
<i>Gas management</i>	None
<i>Odour control</i>	Spray masking but not functioning during inspection
<i>Site management</i>	Poor and environmentally unsatisfactory
<i>Complaints from neighbours</i>	Reported complaints

*Waste segregation*                      **Segregation during waste collection but also scavengers on landfill site**

*Night soil or wastewater sludges accepted*      **No**

<b>Site Name and Location</b>	<b>Kamphangsacn</b>
<b>Management</b>	Privately managed under contract commenced 1989
<b>Capacity</b>	
<i>Total</i>	40 million t
<i>Daily quantity accepted</i>	4,000 t/d
<i>Remaining capacity (January 1999)</i>	38 million t, sufficient for more than 30 years
<i>When expected to be full</i>	after 2020
<b>Site Area</b>	160 ha
<b>Site Access</b>	Good paved track
<b>Waste Delivery</b>	Contractor collects from Nong Khaem and Tharaeng Transfer Stations
<b>Costs</b>	Contractor paid Baht 173 per tonne from Nong Khaem and Baht 214 per tonne from Tharaeng
<b>Environmental Control</b>	
<i>Cover</i>	regular soil cover
<i>Base lining</i>	20 m clay seal
<i>Leachate management</i>	Leachate collection and treatment in aerated lagoons
<i>Gas management</i>	None
<i>Odour control</i>	None
<i>Site management</i>	Good
<i>Complaints from neighbours</i>	No neighbours
<b>Waste segregation</b>	None at site
<b>Night soil or wastewater sludges accepted</b>	No

**C. BMA COMMUNITY WASTEWATER TREATMENT PLANTS AND  
KHLONG WATER IMPROVEMENT LAGOONS  
INSPECTED BY THE STUDY TEAM**

***Name and Function***

**Huay Kwuang Wastewater Treatment Plant**

Serves 38 local residential apartment blocks with a predominantly separate sewerage system and WWTP

***Management***

BMA

Plant constructed in 1975 for NHA, transferred to BMA in 1990.

***Location***

Huay Kwuang

***Operating Units***

Coarse bar screen,

Lift pumps

Bar screens

Grit channels

Primary settlement tanks

Conventional activated sludge plant

Secondary settlement tanks

Return sludge lift pumps

Chlorination plant (not used)

Sludge storage and sludge consolidation tanks

Sludge digestion

Sludge belt press

***Condition and Development Plans***

Clean and orderly plant with pleasant landscaping closely surrounded by apartment housing blocks. No treatment plant covering and odours evident. Bio-gas not utilised for heating, but gas mixing in digester. Excess gas is released periodically from digester without flare.

***Incoming Flow and Quality***

See performance records in Table M2 Data Book M.

***Effluent Flow, Quality and Utilisation***

See performance records in M2 Data Book M.

Some effluent used for watering the treatment plant site but most discharged to khlong.

***Sludge Production***

4 m<sup>3</sup>/d sludge cake at 14 % ds trucked for use in Sirikit Park in city.

***Operation Staff***

5 technical staff and 10 workers.

***Other Information***

BOD measured once per week, COD and SS three times per week

***Name and Function***

**Klong Chan Community Treatment Plant**

This is a septic tank/extended aeration process plant serving the local housing area. The plant only treats the overflow from the single septic tank.

***Management***

BMA

***Location***

Lat Phrao

***Operating Units***

Bar screen, Influent pump chamber, Aeration tanks, Secondary sedimentation tanks, Chlorination contact tank (not used), sludge sand beds.

***Plant Condition and Development Plans***

The aeration tanks suffer foaming problems. The plant is well kept although equipment is old.

***Incoming Flow and Quality***

Septic tank effluent inflow approx. 2,000m<sup>3</sup>/d but WWTP design capacity is 6,500 m<sup>3</sup>/d.

BOD 280 mg/l, COD 450 mg/l, SS 50 mg/l, pH 7

***Effluent Quality***

BOD 25 mg/l, COD 46 mg/l, SS 17 mg/l, pH 7

National Standard is 20:30 BOD:SS.

Final effluent discharged to Khlung Chan.

***Sludge Disposal***

There is no regular removal of sludge cake from the sand bed.

***Other Information***

BOD, SS and pH analysed by BMA once a week.

***Name and Function***

**Rama Indra Community Treatment Plant**

This is a septic tank/extended aeration process unit serving the local housing area. The plant only treats the overflow from the single septic tank.

***Management***

BMA

***Location***

North-East Bangkok

***Operating Units***

Bar screen, Pump chamber, Aeration tank with three floating aerators, Secondary sedimentation tanks, Chlorination contact tank (not used), Sludge sand beds.

***Plant Condition and Development Plans***

Plant is well kept but with ageing equipment.

***Incoming Flow and Quality***

Septic tank inflow approx. 400m<sup>3</sup>/d but WWTP design capacity is 800 m<sup>3</sup>/d.  
BOD 170 mg/l, SS 57 mg/l, pH 7

***Effluent Quality***

BOD 17 mg/l, COD mg/l, SS 24 mg/l, pH = 7  
National Standard is 20:30 BOD:SS.  
Final effluent discharged to canal.

***Sludge Disposal***

No regular removal of sludge cake is from the sand beds.

***Other Information***

BOD , SS and pH analysed by BMA once a week.

***Name and Function***

**Tung Song Houng WTP No 1**

This is an aeration/polishing pond system serving the local population accepting the overflow from the septic tanks.

***Management***

BMA

***Location***

Don Muang

***Operating Units***

Inlet pumping chamber, Bar screen, Aeration pond with 5 surface aerators, Polishing pond. The polishing pond contains fish.

***Plant Condition and Development Plans***

This old plant is well kept. Mechanical equipment is generally old, although recently the aeration system has been replaced. There is a problem with algal growth in ponds which is raked out manually.

***Incoming Flow and Quality***

Actual flow 1,500m<sup>3</sup>/d, but WWTP designed for 3,000 m<sup>3</sup>/d  
BOD 109 mg/l, COD 119 mg/l, SS 55 mg/l, pH 7.3

***Effluent Quality***

BOD 20 mg/l, COD 47 mg/l, SS 25 mg/l, pH 7.6  
National Standard is 20:30 BOD:SS.  
Final effluent discharged to Klong Bang Pood.

***Sludge Disposal***

No sludge is removed from the ponds.

***Operation Staff***

1 technical scientist and several labourers.

***Other Information***

Samples are analysed for BOD , COD, SS and pH by BMA site laboratory about twice a month.

***Name and Function***

**Tung Song Houng WTP No 2**

This is a conventional activated sludge plant serving the local population accepting overflow from septic tanks.

***Management***

BMA

***Location***

Don Muang

***Operating Units***

Inlet to balancing tank via bar screen, Aeration tank, Secondary settlement tank, Chlorination tank. Sludge drying bed. The sludge digestion tank is being used as a highrate aerobic system before secondary settlement.

***Plant Condition and Development Plans***

This plant has mechanical equipment which is generally old and much of the steel work is rusty and needs replacing.

***Incoming Flow and Quality***

Current inflow is 474m<sup>3</sup>/d but WWTP is designed for 700 m<sup>3</sup>/d.  
BOD 164 mg/l, COD 289 mg/l, SS 132 mg/l, pH 7.2

***Effluent Quality***

BOD 53 mg/l, COD 84 mg/l, SS 28 mg/l, pH = 7.5  
National Standard is 20:30 BOD:SS..  
Final effluent discharged to the Khlong.

***Sludge Production and Quality***

Sludge is removed from the bottom of the secondary settlement tank on to sand beds from where it is used as compost within the WWTP site.

***Other Information***

Samples are analysed for BOD , COD, SS and pH by the BMA site laboratory about once/twice a month.

***Name / Function***

**Makkasan Pond**

This is an aerated lagoon plant to improve Khlong Sam Sen water quality but there are also drain inlets.

***Location & Address***

Makkasan, Din Daeng

***Operating Units***

Aeration Pond with 3 – 12 day retention

Sedimentation Pond

14 ha site

***Incoming Flow***

30,000 – 140,000 m<sup>3</sup>/d, quality not known

***Effluent Disposal***

Final effluent discharged to the Klong Sam Sen.

***Sludge Disposal***

No sludge is wasted from the sedimentation pond.

***Name / Function***

**Rama IX Pond**

**This is an aerated lagoon plant to improve Khlong Lat Phrao.**

***Location & Address***

**Lat Phrao**

***Operating Units***

**Aeration Pond**

**Sedimentation Pond**

**8 ha site**

***Incoming Flow and Quality***

**30,000 – 60,000 m<sup>3</sup>/d**

**BOD 15 mg/l., COD 30 mg/l., SS 100 mg/l.**

***Effluent Quality***

**BOD 10 mg/l., COD 21 mg/l., SS 56 mg/l.**

**Final effluent discharged to the Khlong Lat Phrao**

***Sludge Disposal***

**No sludge is wasted from the sedimentation pond.**

**D. PRIVATE WASTEWATER TREATMENT PLANTS  
INSPECTED BY THE STUDY TEAM**

***Name and Function***

**Klang (Central) Hospital WWTP**

Plant built in 1979 for a 200-bed hospital. Developed in 1985/1987 for 400 beds.

***Location***

Pom Prap Sattru Pra

***Operating Units***

Grit chamber with bar screen, Equalisation tank, Aeration tank, Secondary sedimentation tank, Chlorination contact tank.

***Plant Condition***

Plant operates adequately though mechanical equipment is old. The aeration system has been recently replaced.

***Incoming Flow and Quality***

Inflow about 200m<sup>3</sup>/d.

BOD 246 mg/l, COD 266 mg/l, pH 6.5

***Effluent Quality and Disposal***

BOD 8.5 mg/l, COD 76 mg/l, SS 40 mg/l, pH 6.5

National Standard is BOD:SS 20:30.

Final effluent discharged to klong.

***Sludge Disposal***

Small amount of waste sludge used as liquid fertiliser.

***Management Arrangement***

Managed by BMA hospital staff on a part time basis.

***Other Information***

Samples analysed about twice a week.

***Name and Function***

Vajira Hospital WWTP  
Plant built in 1983 for 500 bed hospital.

***Location***

Dusit

***Operating Units***

Bar screen and scum separator, Aeration tank, Secondary sedimentation tanks, Chlorination contact tank with fish in final chamber. Sludge belt-press with polymer addition.

***Plant Condition and Development Plans***

The plant is well maintained though mechanical equipment is old.

***Incoming Flow and Quality***

Inflow about 2,000m<sup>3</sup>/d  
BOD 90 mg/l, COD 150 mg/l, SS 65 mg/l, pH 7

***Effluent, Quality and Disposal***

BOD 17 mg/l, COD 30 mg/l, SS 24 mg/l, pH 7  
National Standard is BOD:SS 20:30.  
Final effluent discharged to klong.

***Sludge Disposal***

Sludge cake is used as compost on the site grounds.

***Management Arrangement***

Managed by BMA hospital staff part time by 4 labourers and 1 technician.

***Other Information***

Samples analysed by BMA site laboratory about once a week.

***Name and Function***

**CP Tower WWTP**

This is an extended activated sludge/aerobic system constructed in 1990 serving this 30-floor commercial building. Wastewaters are from offices, shops and restaurants. There are approx 2,000 staff and the WWTP has a design capacity for 6,000 p.e.

***Location***

Bang Rak

***Operating Units***

Equalisation tank and pre-aeration tank

Contact aeration tank

Sedimentation tank

Chlorine contact tank

Effluent sump

Sludge sump

The design was by Unoimax Int of Bangkok.

***Plant Condition***

This plant is in good condition and located within the basement of the CP Tower.

***Incoming Flow and Quality***

Design inflow 480m<sup>3</sup>/d at 200 mg BOD/l.

***Effluent, Quality and Disposal***

National Standard is BOD:SS 20:30.

Final effluent discharged to drain.

***Sludge Disposal***

12 m<sup>3</sup> of sludge is removed by vacuum road tanker once a year.

***Management Arrangement***

Managed by CP staff of which 5 to 6 staff are responsible for water and wastewater operations.

***Name and Function***

**River Garden Apartment WWTP**

This is a septic tank/anaerobic filter unit system constructed in 1990 for this 17-floor condominium of 46 apartments housing about 100 people.

***Location***

Bang Rak

***Operating Units***

Septic tanks

Two-stage anaerobic units

Sedimentation tank

Chlorine contact tank

This plant was designed by ASC Consultant.

***Plant Condition and Development Plans***

The plant is in good condition located within the basement.

***Incoming Flow and Quality***

Not known

***Effluent, Quality and Disposal***

National Standard is BOD:SS 20:30.

Final effluent discharged to drain.

***Sludge Disposal***

Sludge is removed by vacuum road tanker once a year.

***Name and Function***

**Narai Hotel WWTP**

This plant was constructed in 1995 to serve the 15-floor hotel of 471 rooms, kitchen and restaurant with 500 staff.

***Location***

Bang Rak

***Operating Units***

Screening chamber  
Sludge re-aeration tank  
Contact aeration tank  
Sedimentation tank  
Disinfection contact tank  
Sludge storage tank  
Sludge press (not used)

***Plant Condition***

This plant is new and in good condition.

***Incoming Flow and Quality***

Design inflow is 700m<sup>3</sup>/d at 200 mg BOD/l.

***Effluent Quality and Disposal***

National Standard is 20:30, BOD:SS.

Effluent BOD 14 mg/l, COD 54 mg/l, SS 15 mg/l, pH 7.78, Grease/oils 0.1 – 20.

Final effluent discharged to drain.

***Sludge Disposal***

No sludge is wasted from the sedimentation tank

***Management Arrangement***

Managed by hotel staff by 4 to 5 technical operators.

***Other Information***

Analysis by private laboratory about once/twice a month.

Chlorine is dosed only in the high season, usually November to May.

***Name and Function***

**Singha Beer WWTP, Boon Rawd Brewery Co.**

This is an Upward Flow Anaerobic Sludge Blanket (UASB) and Activated Sludge (AS) system constructed in 1994/95. The plant is an upgrade of an Anoxic/AS plant which was originally constructed in 1980.

The flows enters the equalisation tank from the various production lines.

***Location***

Dusit

***Operating Units***

Screening basket  
Equalisation tank,  
Anaerobic UASB reactor  
Aeration tank  
Sedimentation tank  
Thickener tank  
Sludge plate press.

***Plant Condition***

This plant is new and all equipment is in good condition.

***Incoming Flow and Quality***

Design inflow is 6,000m<sup>3</sup>/d.

BOD 1600 mg/l, COD 2000 mg/l, SS 600 mg/l, TDS 3000 mg/l, N 50 mg/l,  
P 5 mg/l.

***Effluent Quality and Disposal***

BOD 15 mg/l, SS 25 mg/l, TDS 1250 mg/l, N <5 mg/l, P 5 mg/l.

Final effluent discharged to drain leading to Chao Phraya river.

***Sludge Disposal***

12 m<sup>3</sup>/week of sludge is taken for use on the Singha sugar cane fields.

***Management Arrangement***

Managed by Singha staff WWTP manager, one laboratory assistant and 15 operators.

***Other Information***

Aeration tank has a spray masking odour control system.

**E. FORECASTS OF FUTURE POPULATION  
IN PROPOSED SCHEME AREAS**

Table E.1 Forecasts of Future Population in Planned and Proposed Wastewater Scheme Areas (1/3)

Catchment Name	District	Dist Area (km <sup>2</sup> )	Dist Area (%)	Catch Area (km <sup>2</sup> )	1998		2000		2010		2020	
					Density (no/ha)	Population (x1000)	Density (no/ha)	Population (x1000)	Density (no/ha)	Population (x1000)	Density (no/ha)	Population (x1000)

- 2): Assume 80 % of population in this part of district
- 3): Assume 50 % of population in this part of district

**F. RELEVANT WATER QUALITY STANDARDS**

## 2. Effluent

### A. Industrial Effluent Standards (PCD/MOSTE)

Items	Unit	Standard values
1. pH	-	5.5 – 9.0
2. Total Dissolved Solids (TDS)	mg/l	- not more than 3,000 mg/l depending on receiving water or type of industry under consideration of PCC but not exceed 5,000 mg/l not more than 5,000 mg/l exceed TDS of receiving water having salinity of more than 2,000 mg/l or TDS of sea if discharge to sea
3. Suspended Solids (SS)	mg/l	- not more than 50 mg/l depending on receiving water or type of industry or type of wastewater treatment system under consideration of PCC but not exceed 150 mg/l
4. Temperature	°C	not more than 40
5. Colour and Odor	-	not objectionable
6. Sulfide (as H <sub>2</sub> S)	mg/l	not more than 1.0
7. Cyanide (as HCN)	mg/l	not more than 0.2
8. Heavy Metals		
- Zinc	"	not more than 5.0
- Chromium (Hexavalent)	"	not more than 0.25
- Chromium (Trivalent)	"	not more than 0.75
- Arsenic	"	not more than 0.25
- Copper	"	not more than 2.0
- Mercury	"	not more than 0.005
- Cadmium	"	not more than 0.03
- Barium	"	not more than 1.0
- Selenium	"	not more than 0.02
- Lead	"	not more than 0.2
- Nickel	"	not more than 1.0
- Manganese	"	not more than 5.0
9. Fat, Oil and Grease (FOG)	"	not more than 5 mg/l depending on receiving water or type of industry under consideration of PCC but not exceed 15 mg/l
10. Formaldehyde	"	not more than 1.0
11. Phenol	"	not more than 1.0
12. Free Chlorine	"	not more than 1.0
13. Pesticides	"	not detectable

Items	Unit	Standard values
14. Biochemical Oxygen Demand (BOD)	"	not more than 20 mg/l depending on receiving water or type of industry under consideration of PCC but not exceed 60 mg/l
15. Total Kjeldahl Nitrogen (TKN)	"	not more than 100 mg/l depending on receiving water or type of industry under consideration of PCC but not exceed 200 mg/l
16. Chemical Oxygen Demand (COD)	"	not more than 120 mg/l depending on receiving water or type of industry under consideration of PCC but not exceed 400 mg/l

**Remarks :**

1. PCC = Pollution Control Committee
2. The standards were summarized from the Notification of the Ministry of Science, Technology and Environment, No.3, B.E. 2539 (1996) issued under the Enhancement and Conservation of the National Environmental Quality Act B.E. 2535 (1992). The Notification was published in the Royal Government Gazette, Vol. 113, Part 13 D, Dated February 13, B.E. 2539 (1996).
3. Notification of the Ministry of Science, Technology and Environment, No.4, B.E. 2539 (1996) issued under the Enhancement and Conservation of the National Environmental Quality Act. B.E. 2535 (1992) and published in the Royal Government Gazette, Vol. 113, Part 13 D, dated February 13, B.E. 2539 (1996) specifies that pollution sources that the above standards are to be applied are factories group II and III issued under the Factory Act B.E. 2535 (1992) and every kind of industrial estates.
4. Notification of the Pollution Control Committee, No. 3, B.E. 2539 (1996) dated August 20 B.E. 2539 (1996) has issued types of factories (category of factories issued under the Factory Act B.E. 2535 (1992) that are allowed to discharge effluent having different standards from the Minister Notification No.3 above as follows:
  - 4.1 BOD up to 60 mg/l
    - 1) animal furnishing factories (category 4 (1))
    - 2) starch factories (category 9 (2))
    - 3) food from starch factories (category 10)
    - 4) animal food factories (category 15)
    - 5) textile factories (category 22)
    - 6) tanning factories (category 29)
    - 7) pulp and paper factories (category 38)
    - 8) chemical factories (category 42)
    - 9) pharmaceutical factories (category 46)

10) frozen food factories (category 92)

4.2 COD up to 400 mg/l

- 1) food furnishing factories (category 13 (2))
- 2) animal food factories (category 15 (1))
- 3) textile factories (category 22)
- 4) tanning factories (category 29)
- 5) pulp and paper factories (category 38)

4.3 TKN

- 1) 100 mg/l – effective after 1 year from the date published in the Royal Government Gazette of the Ministerial Notification No. 4
- 2) 200 mg/l – effective after 2 year from the date published in the Royal Government Gazette of the Ministerial Notification No. 4 for the following factories :
  - food furnishing factories (category 13 (2))
  - animal food factories (category 15 (1))

C. Building Effluent Standards

1) Standard Values

Parameter	Unit	Range or Maximum Permitted Value For These Categories				
		A	B	C	D	E
1. pH	-	5-9	5-9	5-9	5-9	5-9
2. BOD	mg/l	20	30	40	50	200
3. Solids						
3.1 SS	mg/l	30	40	50	50	60
3.2 Settleable S.	mg/l	0.5	0.5	0.5	0.5	-
3.3 TDS	mg/l	500	500	500	500	-
4. Sulfide	mg/l	1.0	1.0	3.0	4.0	-
5. Total Kjeldahl Nitrogen (TKN)	mg/l	35	35	40	40	-
6. Fat, Oil and Grease (FOG)	mg/l	20	20	20	20	100

\* These values are in addition to the TDS of the water used.

Source : Notification of the Ministry of Science, Technology and Environment issued under the Enhancement and conservation of the National Environmental Quality Act. B.E. 2535, published in the Royal Government Gazette, Vol. 111 special part 9, dated February 4, B.E. 2537 (1994).

## 2) Type and Sizes of Buildings Subject to Effluent Control

Building Type	Size	Level of Standard	Remarks
1. Condominium	Less than 100 units	C	
	100 but not more than 500	B	
	500 units or more	A**	
2. Hotels	Less than 60 rooms	C	
	60 but not more than 200	B	
	200 rooms or more	A**	
3. Dormitories	From 10 to not greater than 50 rooms	D	
	From 50 to 250 rooms	C	
	250 rooms or more	B	
4. Massage parlors (or equivalent)	From 1,000 m <sup>2</sup> to not greater than 5,000 m <sup>2</sup>	C	
	5,000 m <sup>2</sup> or more	B	
5. Hospitals	From 10 to not greater than 30 beds	B	
	30 beds or more	A**	
6. Schools, Colleges, Universities or Institutes	From 5,000 m <sup>2</sup> to not greater than 25,000 m <sup>2</sup>	B	
	25,000 m <sup>2</sup> or more	A**	
7. Government offices, Stage enterprises, International agencies, Banks, and Office Buildings	From 5,000 m <sup>2</sup> to not greater than 10,000 m <sup>2</sup>	C	Working Area only (excluding central service area)
	10,000 m <sup>2</sup> to not greater than 55,000 m <sup>2</sup>	B	
	55,000 m <sup>2</sup> or more	A**	
8. Department stores	From 5,000 m <sup>2</sup> to not greater than 25,000 m <sup>2</sup>	B	
	25,000 m <sup>2</sup> or more	A**	
9. Fresh food markets	From 500 m <sup>2</sup> to not greater than 1,000 m <sup>2</sup>	D	
	From 1,000 m <sup>2</sup> to not greater than 1,500 m <sup>2</sup>	C	
	From 1,500 m <sup>2</sup> to not greater than 2,500 m <sup>2</sup>	B	
	2,500 m <sup>2</sup> or more	A**	
10. Restaurants and food shops or food centers	Less than 100 m <sup>2</sup>	E	Dining area
	From 100 m <sup>2</sup> to not greater than 250 m <sup>2</sup>	D	
	From 250 m <sup>2</sup> to not greater than 500 m <sup>2</sup>	C	
	From 500 m <sup>2</sup> to not greater than 2,500 m <sup>2</sup>	B	
	2,500 m <sup>2</sup> or more	A**	

\* Level of Standard refers to the 6 parameters listed in standard Value-Building Effluent Standards.

\*\* This type and size of building will be controlled by the Pollution Control Officer, as specified in Section 69 of the Act.

## D. Housing Estate Standards

### 1) Standard Values

Parameter	Unit	Range of Maximum Permitted Values for These Categories	
		A 100 units but not more than 500	B more than 500 units
1. pH	-	5.5-9.0	5.5-9.0
2. BOD	mg/l	30	20
3. Solids			
Suspended Solids (SS)	-	40	30
Settleable Solids	ml	0.5	0.5
TDS	mg/l	500	500
4. Sulfide	"	1.0	1.0
5. Total kjeldahl Nitrogen (TKN)	"	35	35
6. Fat, Oil and Grease (FOG)	"	20	20

Source : Notification of the Ministry of Science, Technology and Environment No. 5.6 B.E. 2539 (1996) issued under the Enhancement and Conservation of National Environmental Quality Act, B.E. 2535 (1992), published in the Royal Government Gazette, Vol. 113, Special Part 9, dated March 27, B.E. 2539 (1996).

### 2) Methods for Examination

Parameter	Method
1. pH Value	pH Meter
2. BOD	Azide Modification at 20° celceus, 5 days
3. Suspended Solids	Glass Fibre Filter Disc
4. TDS	Dry Evaporation 103-105° celceus, 1 hour
5. Settleable Solids	Imhoff cone 1,000 cm <sup>3</sup> , 1 hour
6. Sulfide	Titrate
7. Total Kjeldahl Nitrogen	Kjeldahl
8. Fat, Oil and Grease	Sovent Extraction by Weight

Remark : Based on : Standard Methods for Examination of Water and Wastewater Recommended by APHA, AWWA and WEF of America

#### 4. Surface Water

##### A. Surface Water Quality Standards ; Classification and Objectives.

Parameter	Unit	Statistic	Standard Value for Class***				
			1	2	3	4	5
1. Color, Odor and Taste	-	-	N	n	n	n	-
2. Temperature	°C	-	N	n'	n'	n'	-
3. pH Value	-	-	N	5-9	5-9	5-9	-
4. Dissolved Oxygen	mg/l	P20	N	6	4	2	-
5. BOD (5 day, 20 °C)	mg/l	P80	n	1.5	2.0	4.0	-
6. Coliform Bacteria							
- Total Coliform	MPN/100 ml	P80	n	5,000	20,000	-	-
- Fecal Coliform	MPN/100 ml	P80	n	1,000	4,000	-	-
7. NO <sub>3</sub> -N	mg/l	Max. allowance	n	5.0	5.0	5.0	-
8. NH <sub>3</sub> -N	"	"	n	0.5	0.5	0.5	-
9. Phenols	"	"	n	0.005	0.005	0.005	-
10. Cu	"	"	n	0.1	0.1	0.1	-
11. Ni	"	"	n	0.1	0.1	0.1	-
12. Mn	"	"	n	1.0	1.0	1.0	-
13. Zn	"	"	n	1.0	1.0	1.0	-
14. Cd	"	"	n	0.005*	0.005*	0.005*	-
	"	"		0.05**	0.05**	0.05**	-
15. Cr hexavalent	"	"	n	0.05	0.05	0.05	-
16. Pb	"	"	n	0.05	0.05	0.05	-
17. Total Hg	"	"	n	0.002	0.002	0.002	-
18. As	"	"	n	0.01	0.01	0.01	-
19. CN	"	"	n	0.005	0.005	0.005	-
20. Radioactivity							
- Gross alpha	Becquerel/l	"	n	0.1	0.1	0.1	-
- Gross beta	"	"	n	1.0	1.0	1.0	-
21. Organochlorine Pesticides (total)	mg/l	"	n	0.05	0.05	0.05	-
22. DDT	µg/l	"	n	1.0	1.0	1.0	-
23. α BHC	"	"	n	0.02	0.02	0.02	-
24. Dieldrin	"	"	n	0.1	0.1	0.1	-
25. Aldrin	"	"	n	0.1	0.1	0.1	-
26. Heptachlor & Heptachlor epoxide	"	"	n	0.2	0.2	0.2	-
27. Endrin	"	"	n	none	none	none	-

Note : P = Percentile value  
n = naturally  
n' = naturally but changing not more than 3°C  
\* = when water hardness not more than 100 mg/l as CaCO<sub>3</sub>  
\*\* = when water hardness more than 100 mg/l as CaCO<sub>3</sub>  
\*\*\* = Water Classification

Classifications	Objectives/Condition & Beneficial Usages
Class 1	Extra clean fresh surface water resources used for : (1) conservation not necessary pass through water treatment processes require only ordinary process for pathogenic destruction (2) ecosystem conservation where basic organisms can breed naturally
Class 2	Very clean fresh surface water resources used for : (1) consumption which requires ordinary water treatment processes before use (2) aquatic organism of conservation (3) fisheries (4) recreation
Class 3	Medium clean fresh surface water resources used for : (1) consumption, but passing through an ordinary treatment process before using (2) agriculture
Class 4	Fairly clean fresh surface water resources used for : (1) consumption, but requires special water treatment process before using (2) industry
Class 5	The resources which are not classification in class 1-4 and used for Navigation

Parameter	Methods for Examination of Surface Water Quality
1. Water Temperature	Thermometer
2. pH Value	Electrometric pH Meter
3. Dissolved Oxygen	Azide Modification
4. BOD	Azide Modification at 20 °C, 5 days
5. Total Coliform Bacteria and Fecal Coliform Bacteria	Multiple Tube Fermentation Technique
6. NO <sub>3</sub> -N	Cadmium Reduction
7. NH <sub>3</sub> -N	Distillation Nesslerization
8. Phenol	Distillation, 4-Amino antipyrine
9. As	Atomic Absorption-Gaseous Hydride
10. CN	Pyridine-Barbituric Acid
11. Cu, Ni, Mn, Zn, Cd, Cr hexavalent and Pb	Atomic Absorption-Direct Aspiration
12. Total Hg	Atomic Absorption-Cold Vapor Technique
13. Radioactivity	Low Background Proportional Counter
14. Total Organochlorine pesticides, DDT, $\alpha$ -BHC, Dieldrin, Aldrin, Endrin, Heptachlor and Heptachlor epoxide	Gas-Chromatography

Remark : Based on Standard Methods for Examination of Water and Wastewater Recommended by APHA AWWA and WEF of America

Source : Notification of the National Environmental Board, No. 8, B.E. 2537 issued under the Enhancement and Conservation of National Environmental Quality Act, B.E. 2535, published in the Royal Government Gazette, Vol. III, Part 16, dated February 24, B.E. 2537 (1994).

Wang Thong Lang	13	81	36	157	16	91
Bung Kum	6	58	44	183	15	88

Note: Transportation unit costs of the Sludge Cake are computed by the following formula;

$$y = 3.2807 x + 38.405$$

where;

x is Transportation distance by km to the disposal site

y is Transportation cost in Baht

**Table H.10 Construction Cost of Simple Landfill**

On the basis of;

Excavation Volume; 1,500,000 m<sup>3</sup>  
 Excavation Depth: 10 m  
 Mean Excavation Area; 150,000 m<sup>2</sup> (400 m x 400 m)

No.	Work Item	Unit	Quantity	Unit Cost	Amount
				US\$	x 10 <sup>3</sup> US\$
1	Access Road, Macadam, We = 7.5 m	m	1,500	110	165
2	Excavation, Common, L = 500 m	m <sup>3</sup>	1,500,000	2.2	3,300
3	Miscellaneous, 5% of above	L.S.			175
	<b>Sub-total</b>				3,640
7	Overhead and Others, 25% of above	L.S.			910
	<b>Total</b>				4,550

Construction Unit Cost

$$4,550,000 \text{ US\$} \div 1,500,000 \text{ m}^3 = 3.0 \text{ US\$/m}^3$$

**Table II.11 Annual Operation and Maintenance Cost of Landfill Yard  
(Well-equipped)**

1)	• Swampdozer 13 ton, 2 units for Spreading and Compaction Work of Dumping Solid Cake		
	• Rental Charge of Swampdozer		
	5,980 yen/hr. x 0.50		2,990 yen/hr.
	• Operator's Cost		
	Operator 350 B/d ÷ 5 hr./d = 70 B/hr.		
	Assistant 225 B/d ÷ 5 hr./d = 45 B/hr.		380 yen/hr.
	<u>Sub total</u>	115 B/hr x 3.333 yen/B	
	• POL		
	127 PS x 0.138 ℓ/PS x 11.54 B/ℓ x 1.20 x 3.333 yen/B		810 yen/hr.
	<u>Total</u>		4,180 yen/hr.
	4,180 yen/hr. ÷ 3.333 yen/B = 1,254 B/hr.	Say	1,300 B/hr.
	Annual O&M Cost		
	1,300 B/hr. x 900 hr./year x 2 units x 1.07		<u>2,500,000 Baht</u>
2)	• Drainage Pumping Unit (One unit is standby)		
	• Electricity Charge		
	7.5 KW x 3.0 B/KW x 365 d/year = 8,213 B		
	• Operator's Cost		
	200 B/d x 2 men x 30 d/month x 12 month/year		
	= 144,000 B		
	<u>Sub-Total</u>	152,213 x 1.30	Say 200,000 Baht
3)	• Annual Total O&M Cost		
	• Well-equipped		2,700,000 Baht
		Say	75,000 US\$
	• Simple (without Drainage)		<u>2,500,000 Baht</u>
		Say	<u>70,000 US\$</u>
