Source: Water quality results were collected from respective Water Districts or analyzed by PSF on site in the field survey using procured instruments.  
 Notes: Sampling point is located at upstream boundary of each river in respective municipalities. If several streams are present in an area, the stream nearest from populated area was selected. If there is no upstream, sampling point was selected near populated area.  
 Remarks: Class AA - Public Water Supply Class-I; Intended for waters having watersheds which are uninhabited and otherwise protected and which require only approved disinfection in order to meet the PNSDW. Class A - Public Water Supply Class-II; Sources of water supply that will require complete treatment (coagulation, sedimentation, filtration & disinfection) in order to meet the PNSDW.

7.6 Future Development Potential of Water Sources

JICA
