LEGEND

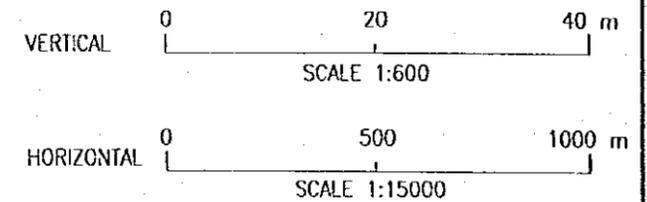

(Geological Strata)

Age	Formation and Strata Name	Symbol	Description
Holocene	Embankment	B	It consists of embankment, filled soil and refuse, and composed of clay, silt, sand and gravel.
	Riverbed deposit	rd	It consists of sand and gravel mainly at the upstream area of Simongan Weir. But it consists of sand and clay mainly at the downstream area.
Quaternary	Alluvium	Ac	It consists of clay and sandy clay, and shows gray. The sediments are very soft, and contain fragments of shell.
		As	It consists of fine grain sand and middle grain sand mainly, and contains the intercalated clay and silt generally. At the downstream area of Simongan Weir, it contains organic materials and fragments of shell.
		Ao	It consists of organic clay and organic fine grain sand mainly, but continuity as a stratum is poor.
Pleistocene	Diluvium	Dc	It consists of hard clay, and contains coral limestone partly. The surface part of this stratum is oxidized characteristically, and shows dark brown.
		Ds	It consists of sand mainly, and grain size of sand is from fine to coarse. And it contains many gravel, but diameter of gravel is smaller than 3cm generally.
		Dg	It consists of gravel and clay. The quality of clay is same as Dc stratum, and diameter of gravel is smaller than 20cm.
Tertiary-Quaternary	Dormer	Ds	It consists of alternation of conglomerate, sandstone and siltstone mainly, and contains mafic tuff partly. Sandstone and siltstone have tuffaceous quality, and the change of grain size of sandstone is big. The matrix of conglomerate consists of some material of sandstone. The gravel of conglomerate consists of andesite and pumice, and diameter of gravel is smaller than 20cm.
		Dp	It consists of volcanic breccia and mafic tuff mainly, and alternation is forming. The volcanic breccia contains fragments of andesite and pumice, and matrix consists of mafic tuff.

Photogrammetric Mapping

(1) Aerial Photography

Aerial photography at a scale of 1:8,000 and covering approximately 64 line kilometer in total was started after obtaining permission from the Central Survey and Mapping ABRI (PUSSURTA ABRI).

The results of the aerial photography are as follows:

Total No. of Films	1 Roll
Total Flight Runs	12 Runs
Total Exposures	156 Photos
Overlap and Side Lap	55% and 35%

(2) Stereo Plotting

The implication and purpose of stereo plotting and editing work are drawing details and contour lines used existing aerial photo diapositives, which are placed on the plate holders of the stereo plotter instrument (refer to Fig.3.1).

The sequences of the plotting and editing works are as follows:

(a) Data collection

All necessary data were collected and prepared for stereo plotting such as:

- Model index of aerial triangulation;
- Print out of aerial triangulation adjustment;
- Vertical control points and description on two (2) times enlarged aerial photographs; and
- Field identification on two (2) times enlarged aerial photographs.

(b) Planning

Preparation of stereo plotting was carried out as follows:

(i) Control sheets

Total control sheets of the stereo plotting topographic map are:

- 1 sheet for 1:2,000 scale of Railway topographic map

(ii) Models

Total models of stereo plotting are:

- 4 models for 1:2,000 scale of Railway topographic map

(c) Preparation of Control Sheets

Control sheets were produced by block adjustment result of aerial triangulation on polyester base material.

(d) Plotting

Plotting manuscript at the scale of 1:2,000 were produced from existing aerial photos at the scale of 1:8,000 by using second order precision plotter.

The sequences of the stereo plotting works are as follows:

- Inner Orientation;
- Relative Orientation;
- Absolute Orientation; and
- Plotting of details, spot height, vegetation boundary and contour lines.

Contour intervals for intermediate contour line are 1m map with the scale of 1:2,000.

Editing works was carried out on the plotting manuscript by compiling result of field identification, such as symbol annotation etc.

(e) Result

The final manuscript was used for the fair drawing work and the numbers of sheets plotting manuscript are as below.

- 1 sheet plotting manuscript at scale of 1:2,000 for Railway area

(2) Fair Drawing

The implication and purpose of fair drawing work are drawing details using symbols and contour lines with tracing method from the plotting manuscript and other

additional data and information.

The sequence of the fair drawing were carried out as follows:

(a) Data Collection

All necessary data were collected and prepared for fair drawing such as:

- Plotting manuscript;
- Vertical control points and description on two (2) times enlarged aerial photographs; and
- Field identification results on two (2) times enlarged aerial photographs.

(b) Planning

Preparation for fair drawing were carried out as follows:

(i) Drawing sheets

Total sheets of fair drawing are 4 sheets, consisting of 2 sheets of Semarang map and 2 sheets of Ungaran map at scale of 1:2,000.

(ii) Legend and Symbol

The symbols and legend used in map are summarized in Table 3.1

(c) Preparation

The preparations were carried out as follows:

(i) Drawing sheets

Drawing sheets were made using computer PC on polyester base.

The sheet's size is A1 (60 cm x 85 cm).

(d) Fair drawing

Fair drawing was carried out with tracing method using drafting pen and black ink from plotting manuscript at scale of 1:2,000.

Fair drawing works are as follows:

- Drawing details;
- Spot heights and contour lines;
- Symbols and annotations, on the map symbols must be matched to legend; and
- Vegetation boundary.

Contour interval for intermediate contour lines are 1 m for map at scale of 1:2,000.

(e) Results

The final results of the fair drawing are:

- 1 sheet topographic map at scale of 1:2,000 for the Access Road to Railway Bridge.
- 1 sheet duplicate at scale of 1:2,000 for the Access Road to Railway Bridge.

3.2 Ground Survey

(1) Longitudinal Profile and Cross-Section Survey

(a) Installation of Kilometer Post

Prior to the commencement of the river longitudinal profile survey, kilometer posts of wooden pegs were installed on the right and left banks of West Floodway, Garang, Semarang, Asin and Baru rivers. When the location of a kilometer post is very close to such structures as bridges, water intake and water pipes, kilometer posts were shifted to the center line of these structures. The position of a kilometer post was decided by traverse method in the field.

(b) Longitudinal Profile Survey

The river longitudinal profile survey (the profile survey) by direct leveling was executed to obtain heights of kilometer posts for the river cross section survey and to prepare longitudinal profile sections. Leveling routes were formed by closed loops and double-runs. A total distance of the leveling survey covering West Floodway, Garang, Semarang, Asin and Baru rivers was 41 km.

The datum height was applied for the longitudinal profile survey including river cross section survey and auxiliary leveling. The heights of TTGs bench marks are applied to the kilometer posts by direct leveling.

All results of heights of kilometer posts by the profile survey, the deepest height of the river cross section survey, names of bridge and others were edited by Auto CAD system.. The longitudinal profile sections at a horizontal scale of 1:2,000, 1:1,000 and vertical scale of 1:100 were prepared on the draft plotting paper sheets using the longitudinal profile data.

(c) River Cross Section Survey

Heights and distance of slope changing points, roads, channels, etc. along the cross section lines were measured by using a Total Station System, levels and Electric Distance Meter (EDM).

Water levels and depths of the rivers were measured using a survey rod, and the distance of these measured simultaneously. The bridges, irrigation intakes and water pipes of all rivers were also measured. A total number of cross sections surveyed are approximately 814.

(d) Checking of Longitudinal Profile

(i) The check results of differences in height closure between the kilometer posts did not exceed $20\sqrt{S}$ (S: length of single run in kilometer) as specified in the Technical Specifications.

(ii) Checking of River Cross Sections

At the same kilometer posts checked above, river cross section lines were measured. The check results of height of these cross section line points did not exceed ± 50 mm and distance errors between the cross section line points are less than 1/300 as specified in the Technical Specifications.

Longitudinal profile and cross-section were surveyed along West Floodway, Garang, and two (2) tributary channels along Garang River.

West Floodway and Garang River

Work Item	Volume	Drawing		Remarks
		No. of Sheets	Scale	
Longitudinal Profile	9.598 km	5	H=1/2,000 V=1/100	Sheet Size: A1
Cross-Section Survey	204 sections	104	H=1/200 V=1/100	Sheet Size: A1

Cengkek River (tributary of Garang River)

Work Item	Volume	Drawing		Remarks
		No. of Sheets	Scale	
Longitudinal Profile	0.499 km	1	H=1/1,000 V=1/100	Sheet Size: A1
Cross-Section Survey	15 sections	8	H=1/200 V=1/100	Sheet Size: A1

Kalito River (tributary of Garang River)

Work Item	Volume	Drawing		Remarks
		No. of Sheets	Scale	
Longitudinal Profile	0.498 km	1	H=1/1,000 V=1/100	Sheet Size: A1
Cross-Section Survey	12 sections	6	H=1/200 V=1/100	Sheet Size: A1

Railway

Work Item	Volume	Drawing		Remarks
		No. of Sheets	Scale	
Longitudinal Profile	4 km	1	H=1/2,000 V=1/100	Sheet Size: A1
Cross-Section Survey	Approx. 41 sections	approx. 14	H=1/100 V=1/100	Sheet Size: A1

Simongan Weir Site

Work Item	Volume	Drawing		Remarks
		No. of Sheets	Scale	
Longitudinal Profile	-	-	H=1/1,000 V=1/100	Sheet Size: A1
Cross-Section Survey	Approx. 13 sections	approx. 7	H=1/100 V=1/100	Sheet Size: A1

Tributary of Garang River

Work Item	Volume	Drawing		Remarks
		No. of Sheets	Scale	
Longitudinal Profile	0.08 km	1	H=1/100 V=1/100	Sheet Size: A1
Cross-Section Survey	Approx. 5 sections	Approx. 3	H=1/100 V=1/100	Sheet Size: A1

(2) Topographic Survey

Topographic surveys were carried out for Simongan Weir site and Midstream of Garang River (refer to Fig. 3.1). The work of quantities carried out are as follows.

Site	Quantity	Scale
Simongan Weir Site	4,675 m ²	1 : 100
Midstream of Garang Rive	4,000 m ²	1 : 100

3.3 Structural Survey

(1) Location

Structural survey were conducted at Railway Bridge and Simongan Weir to investigate size, shape, configuration, material and so on.

(4) Drawing

Drawings have been plotted at scale 1: 50 and 1:100.

The final results of the fair drawing are as follow:

Work site	Drawing No. of Sheets	Remarks
Railway Bridge	5	Sheet Size: A1
Simongan Weir	7	Sheet Size: A1

3.4 Land Subsidence

In the Past decade, land subsidence was caused in the coastal area of Semarang City due to the excess exploitation of ground water by the industrial sector. During this study period, leveling survey of TTGs and benchmarks that were established by the JICA Study Team in August 1997.

As a result of the survey, all of the benchmarks established by the Team are found to be subsided with the range of 1.2 cm and 10.0 cm.

The leveling survey was carried out with the following procedure.

(1) Datum Elevation

The elevation of TTG obtained from the Mean Sea Level of Indonesia established by Bakosurtanal are applied as the datum elevation.

(2) Checking of Government Bench Marks

Before starting leveling survey, elevation of three government benchmarks namely TTG446, TTG447 and TTG449 were checked and the results are presented in the table below.

Leveling Loops	Distance	Misclosure
TTG449 to TTG447	4.5 km	8 mm
TTG447 to TTG446	5.7 km	-210 mm

From the above, it was judged by the JICA Study Team that TTG446 shall be ignored because TTG446 is considered to be subsided by about 21 cm from 1983.

The JICA Study Team decided to use TTG447 as the benchmark for Subsidence leveling.

(3) Accuracy of Leveling

As show in Fig. 3.2 and 3.3, any misclosure of leveling does not exceed $10\text{mm}/\sqrt{S}$ between benchmarks (S: a single distance between bench marks in kilometer). And Standard division was $1.18\text{ mm}/\text{km}$ and $2.82\text{mm}/\text{km}$.

For examination, 10 permanent benchmarks were checked. Re-examining these points at regular intervals can more easily check the amount of annual rate of land subsidence. The survey result are as shown in Fig.3.4
