PREFACE

In response to a request from the Government of the Republic of Honduras, the Government of Japan decided to conduct the Study on Water Supply System for Tegucigalpa Urban Area in the Republic of Honduras and entrusted the study to the Japan International Cooperation Agency (JICA).

JICA selected and dispatched a study team headed by Mr. Akira Takechi of Pacific Consultants International (PCI) and composed of staff members of PCI to Honduras, two times between February 2000 and November 2000. In addition, JICA set up an advisory committee headed by Mr. Yoshiki Omura, Senior Advisor, Institute for International Cooperation, JICA, which examined the Study from specialist and technical points of view.

The team held discussions with the officials concerned of the Government of the Republic of Honduras, and conducted field surveys in the study area. Upon returning to Japan, the team conducted further studies and prepared this final report.

I hope that this report will contribute to the promotion of this project and to the enhancement of friendly relationship between our two countries.

Finally, I wish to express my sincere appreciation to the officials concerned of the Government of the Republic of Honduras for their close cooperation extended to the team.

January, 2001

Kunihiko Saito
President
Japan International Cooperation Agency

**THE STUDY ON WATER SUPPLY SYSTEM FOR TEGUCIGALPA URBAN
AREA IN THE REPUBLIC OF HONDURAS**

January, 2001

Mr. Kunihiko Saito
President
Japan International Cooperation Agency

LETTER OF TRANSMITTAL

Dear Sir,

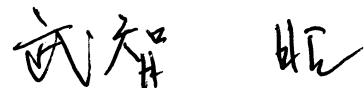

We are pleased to submit to you the final report entitled "The Study on Water Supply System for Tegucigalpa Urban Area in the Republic of Honduras". This report has been prepared by the Study Team in accordance with the contract signed on 18 January 2000 and amended on 10 August 2000 between the Japan International Cooperation Agency and Pacific Consultants International.

The report examines the existing conditions of the water supply system in the study area, proposes a master plan for the development of the water supply system and presents results of a feasibility study on the construction of a water source dam, which was identified as a priority project in the master plan.

The report consists of the Summary, Main Report, Supporting Report and Data Book. The Summary summarizes the results of all studies. The Main Report contains the existing conditions, the proposed master plan, the results of the feasibility study, and conclusions and recommendations. The Supporting Report includes technical details of contents of the Main Report. Data Book contains basic data used in the study.

All members of the Study Team wish to express grateful acknowledgement to the personnel of your Agency, Advisory Committee, Ministry of Foreign Affairs, Ministry of Health and Welfare, and Embassy of Japan in the Republic of Honduras, and also to Honduran officials and individuals for their assistance extended to the Study Team. The Study Team sincerely hopes that the results of the study will contribute to the improvement of the water supply conditions of Tegucigalpa, and that friendly relations of both countries will be promoted further by this occasion.

Yours faithfully,

Akira Takechi
Team Leader

GLOSSARY

CHAPTER 1 INTRODUCTION

1.1 BACKGROUND OF THE STUDY	1
1.2 OBJECTIVES OF THE STUDY	1
1.3 STUDY AREA.....	1
1.4 STUDY ORGANIZATION.....	3
1.5 SCHEDULE OF THE STUDY	4
1.6 CONTENTS OF THE REPORT.....	4

CHAPTER 2 EXISTING CONDITIONS

2.1 NATURAL CONDITIONS.....	5
2.1.1 TOPOGRAPHY AND GEOLOGY	5
2.1.2 HYDROLOGY	5
2.2 SOCIOECONOMIC CONDITIONS	9
2.2.1 POPULATION.....	9
2.2.2 ECONOMY	11
2.2.3 DEVELOPING COMMUNITY.....	12
2.3 WATER SUPPLY SERVICE	13
2.3.1 SERVICE AREA AND SUPPLY METHODS	13
2.3.2 SERVED POPULATION	13
2.3.3 CONSUMPTION	13
2.3.4 WATER UTILIZATION.....	15
2.4 WATER SUPPLY SYSTEM OPERATED BY SANAA	18
2.4.1 BACKGROUND.....	18
2.4.2 OUTLINE OF THE EXISTING SYSTEM.....	20
2.4.3 WATER SOURCES AND CONDUCTION FACILITIES	22
2.4.4 WATER TREATMENT PLANT	25
2.4.5 TRANSMISSION AND DISTRIBUTION SYSTEM.....	31
2.4.6 WATER SUPPLY BY TANK LORRY	36
2.4.7 ON-GOING PROJECTS	36
2.4.8 EXISTING PROBLEMS	37
2.5 SANITARY SYSTEM	37
2.5.1 OUTLINE	37
2.5.2 PRESENT SEWER SYSTEM.....	38
2.5.3 PRESENT PROBLEMS	38
2.6 RELEVANT LAWS AND REGULATIONS	41
2.6.1 GENERAL	41
2.6.2 FRAME LAW FOR WATER SUPPLY AND SEWERAGE SECTOR	41
2.6.3 GENERAL LAW OF WATER.....	42
2.7 ORGANIZATION OF SANAA	43
2.7.1 OBJECTIVES AND COMPETENCE OF SANAA.....	43
2.7.2 ORGANIZATION STRUCTURE	43
2.7.3 NUMBER OF PERSONNEL.....	46

2.8 FINANCIAL PERFORMANCE OF SANAA	46
2.8.1 FINANCIAL CONDITIONS OF SANAA.....	46
2.8.2 FINANCIAL CONDITIONS OF SANAA METROPOLITAN DIVISION	48
2.8.3 TARIFF	49
2.9 INSTITUTIONAL ISSUES.....	50
2.9.1 OUTLINE	50
2.9.2 TARIFF PROBLEM.....	50
2.9.3 LABOR UNION PROBLEM	51
2.9.4 WATER SOURCE PROTECTION PROBLEM	51

CHAPTER 3 PLANNING BASIS

3.1 GENERAL	53
3.2 POPULATION PROJECTION.....	53
3.2.1 BASE DATA	53
3.2.2 PRESENT POPULATION.....	53
3.2.3 PROJECTION OF TOTAL POPULATION	54
3.2.4 POPULATION PROJECTION FOR EACH NEIGHBORHOOD	55
3.3 URBAN AREA.....	57
3.4 WATER DEMAND FORECAST	63
3.4.1 GENERAL	63
3.4.2 WATER SUPPLY POLICIES	63
3.4.3 SERVICE AREA AND SERVICE POPULATION	65
3.4.4 UNIT WATER DEMAND FOR DOMESTIC USE.....	67
3.4.5 RESULT OF WATER DEMAND FORECAST	67
3.5 REQUIRED FLOW RATE.....	68
3.5.1 INTRODUCTION	68
3.5.2 REQUIRED PRODUCTION RATE.....	70
3.5.3 REQUIRED INTAKE RATE	71

CHAPTER 4 SELECTION OF MASTER PLAN PROJECTS

4.1 GENERAL PRINCIPLES	73
4.2 WATER PRODUCTION RATE OF EXISTING SYSTEM.....	73
4.2.1 PICACHO SUBSYSTEM	74
4.2.2 LOS LAURELES SUBSYSTEM.....	74
4.2.3 CONCEPCION SUBSYSTEM.....	74
4.2.4 MIRAFLORES SUBSYSTEM.....	75
4.2.5 EXISTING PRODUCTION RATE	75
4.3 CANDIDATE PROJECTS.....	75

GLOSSARY

99 % reliable yield capacity	: A yield capacity of a water source during the driest month in 10 years. It means available yield in 119 months during 120 months, which is equivalent to 99.17 % (= 119/120) reliable in terms of duration.
Accounted-for water	: Distributed water which generates revenue.
Unaccounted-for water	: Distributed water which does not generate revenue. Unaccounted-for water may include physical loss, water use for fire fighting, and non-measured water due to malfunction and insensibility of micrometers.
Willingness to pay	: An amount which a respondent of the questionnaire survey accepts to pay for the project(s) or service(s) specified in the questionnaires.
Opportunity cost of capital	: Lost profitability of alternative investments which should be given up because of investments to the proposed projects. Theoretically the opportunity cost of capital equals to the marginal productivity of capital in a country, however, practically it is difficult to calculate it. If the economic internal rate of return of the proposed projects becomes lower than the opportunity cost of capital, the proposed projects are not feasible from the economic viewpoint.
Net present value	: Difference between present value of benefits and present value of costs. Present value of benefits (or costs) is given as follows.
	$PV = \sum_{t=1}^n \frac{B_t \text{ (or } C_t\text{)}}{(1 + r / 100)^t}$
	where, PV : present value, n : evaluation period of the project B_t : benefits in the year t , C_t : costs in the year t r : discount rate (%)
Economic internal rate of return	: A discount rate with which the net present value of economic benefits and economic costs of the project becomes zero.
Financial internal rate of return	: A discount rate with which the net present value of financial revenue and financial costs of the project becomes zero.
Standard conversion factor	: A factor to convert domestic market price of non-tradable goods to international market price. The standard conversion factor is approximated based on trade statistics such as amount of import and export goods and import and export taxes.
