

Rehabilitation Plan for Drinking Water System (c-4)

(1) Water system is easily broken down and water suspension frequently occurs.

(2) If the water system is rehabilitated, water suspension will be less frequent and water supply will be stabilized.

(3) For the rehabilitation and maintenance of the system, provision of labor force by beneficiaries will be necessary.

(4) Besides, beneficiaries have to pay water charge for the proper operation and maintenance.

(5) Stable water supply will be realized through the rehabilitation of system and sharing of obligation among the beneficiaries

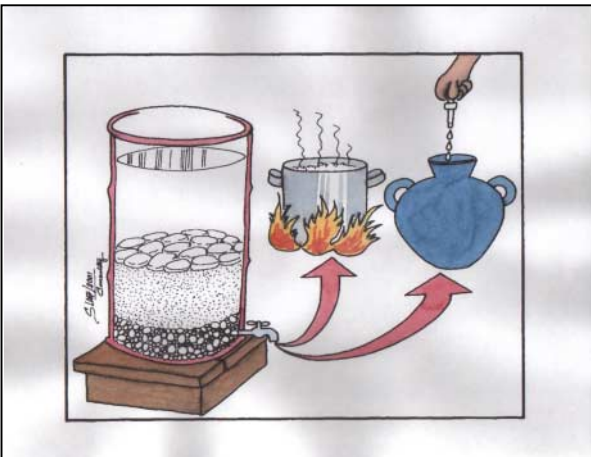

Water Quality Improvement Plan (c-5)

(1) Community people drink water from well or tap without boiling. Especially for children and men who works in the field.

(2) The water from these sources contains bacteria and people who drink it often suffer from sickness such as diarrhea.

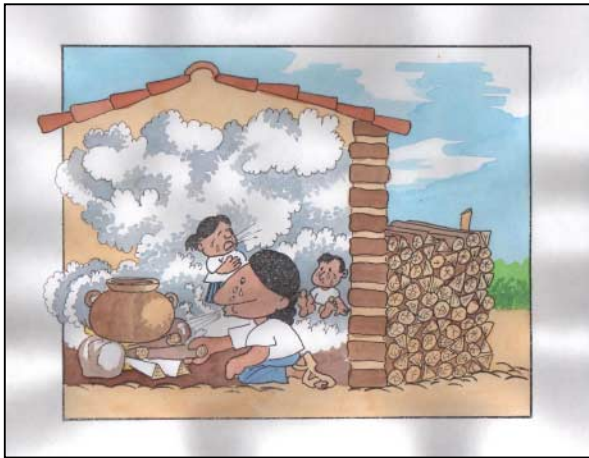

(3) Education will be made to make people understand water quality improvement by filtering, boiling or with medicines.

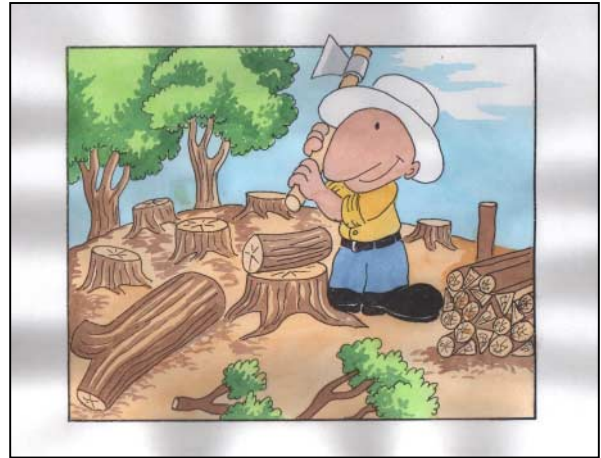

(4) With the sterilization of drinking water, sickness such as diarrhea will be reduced and people's health condition will be improved.

Plan of Extension Use of Improved Stoves and of Sauna Bath “Temascal” (c-6)

(1) Since people use traditional open-fire stove. Their houses are usually filled with smoke when it is used.

(2) Besides, traditional stove and sauna bath consume a lot of firewood.

(3) Use of improved stove and sauna bath will be promoted.

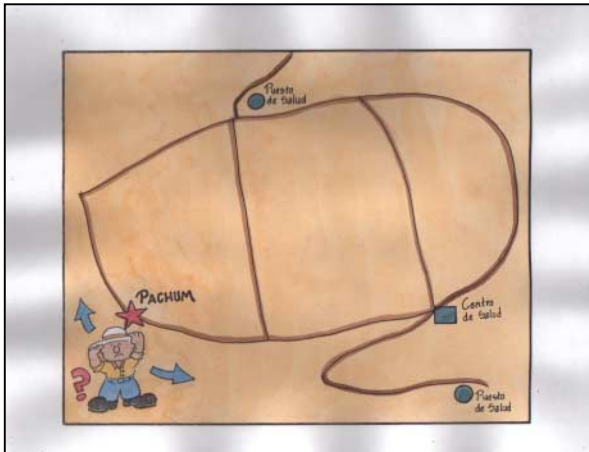

(4) With the installation of the improved stove, consumption of firewood will be reduced and clean air will be kept in the house.

(5) With the introduction of improved sauna bath, people can take bath comfortably with clean air and firewood consumption will also be reduced.

Plan for Installation of Minimal Pharmacy Unit (c-11)

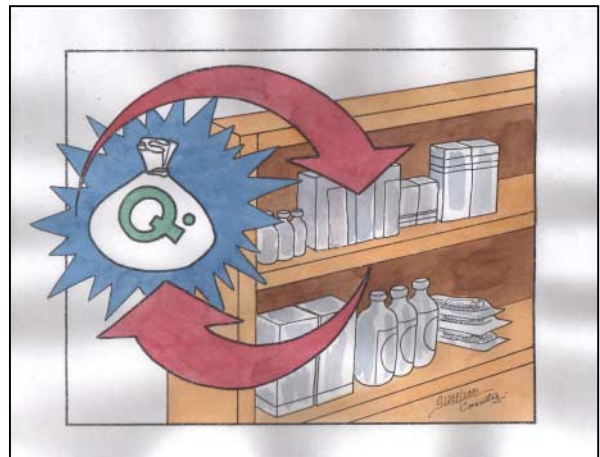

(1) People have to go far away to buy medicines and it takes long time.

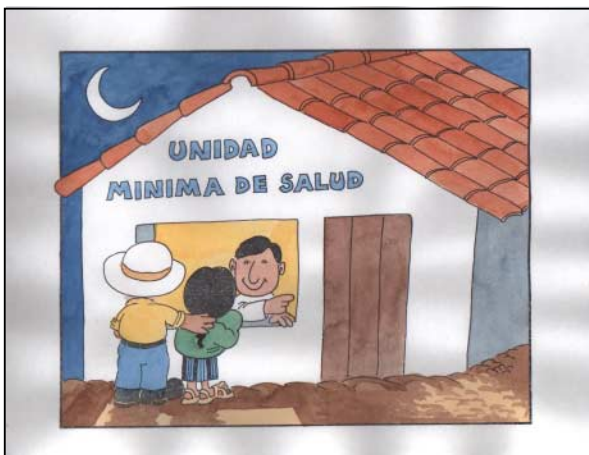

(2) Supply of medicines is not enough at health post. Private pharmacy is too expensive.

(3) Install Minimal Pharmacy Unit (MPU) in the community and sell medicines at lower price.

(4) Sale of medicines will be used for replenishment of medicines and for incentives of MPU staff.

(5) With the installation of MPU, medicines become easily available even in the night time.

(6) Because of easily-available medicines, health condition of community people will be improved.

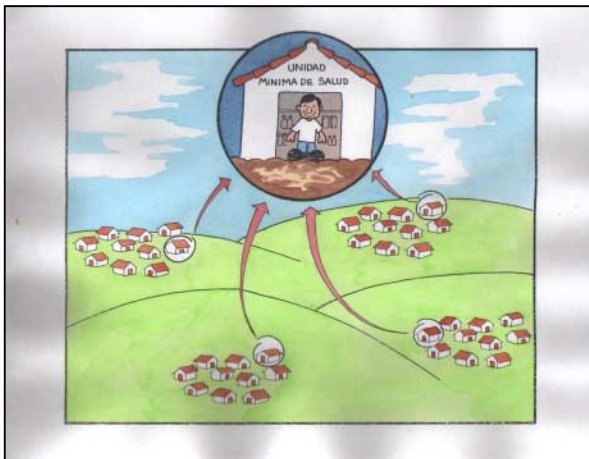

Municipality Community Health Service Plan (c-12)

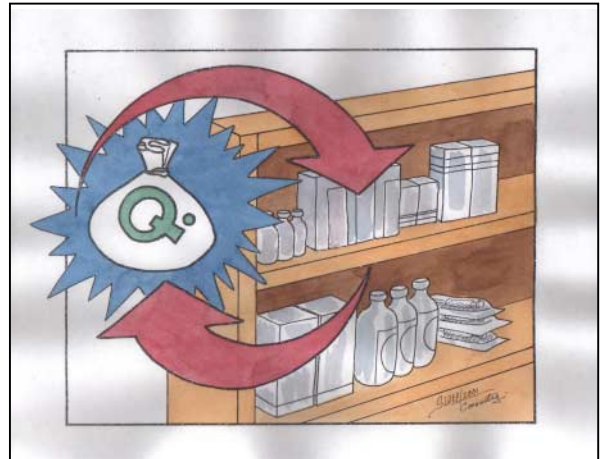

(1) Pharmacy clerk doesn't have proper knowledge and cannot sell medicine properly.

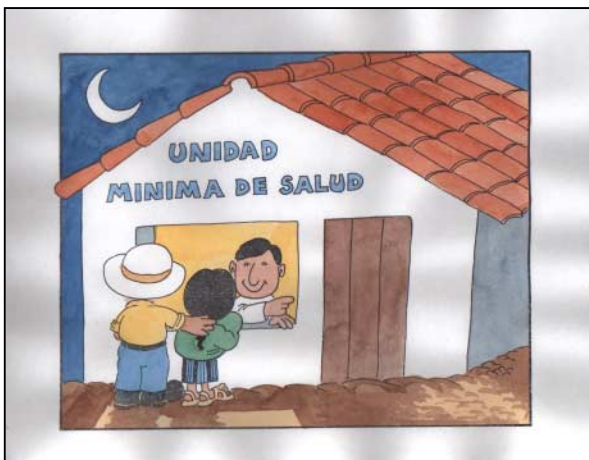

(2) Pharmacist and health promoters will be trained and they will provide basic health knowledge to people.

(3) Minimal Pharmacy Unit (MPU) will be installed in each community by Health Committee.

(4) Sale of medicines will be used for replenishment of medicines and for incentives of MPU staff.

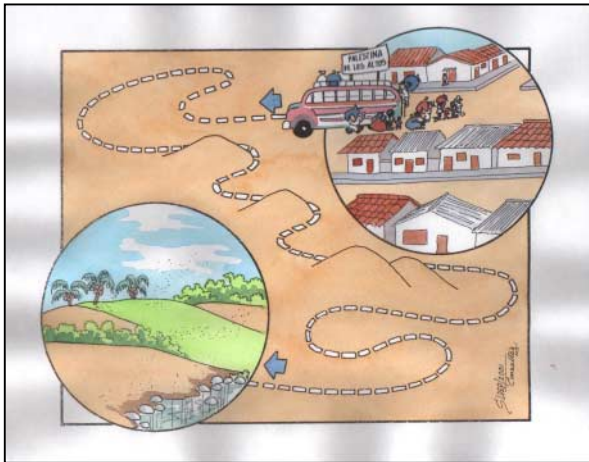

(5) With the installation of MPU, medicines become easily available even in the night time.

(6) Because of easily-available medicines, health condition of community people will be improved.

Plan for Migrant People to the Coastal Area (c-13)

(1) Many people go to coastal area from April to December to earn additional income.

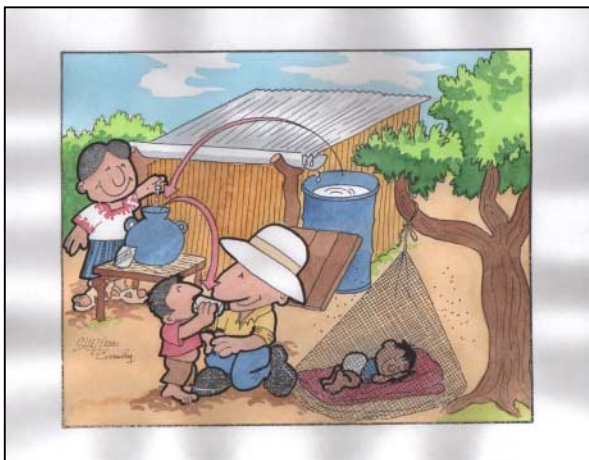

(2) They have to stay with very poor condition at their destination and people do not have enough knowledge on health and sanitary.

(3) Basic knowledge on health and sanitary will be provided to the migrants before their migration.

(4) Besides, basic equipment such as chemical protection goods, etc. will be provided to avoid sickness.

(5) Migrants will practice the knowledge learned from the training and their health condition will be improved.

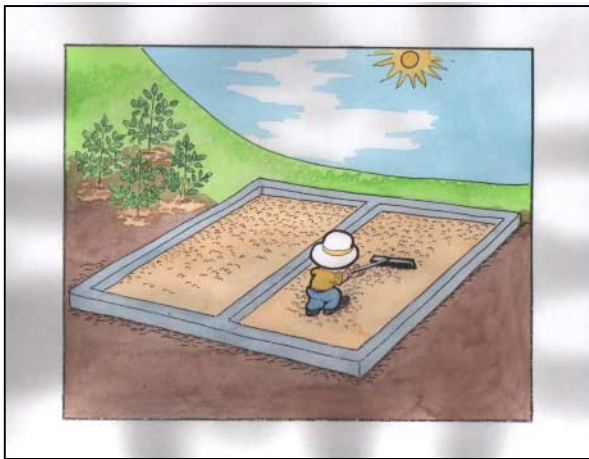

Plan for Reducing Workload in the Mountain Area through Coffee Processing (c-14)

(1) Farmers bring unprocessed coffee after harvest and sell to middlemen. Because of unprocessed coffee, buying price is low.

(2) By introducing manual pulping equipment, harvested coffee will be pulped nearby their farm.

(3) Pulped coffee beans will be dried so that unnecessary moisture will be taken away.

(4) Pulped cherry will be utilized as a material for making compost.

(5) Because of pulped and dried coffee, weight of beans will be reduced and, hence, transportation of produce becomes easier. Besides, buying price of beans will be higher.
