THE JOINT EVALUATION REPORT

ON

THE JAPANESE TECHNICAL COOPERATION

FOR

THE PRIMARY HEALTH CARE PROJECT IN NEPAL

PREPARED JOINTLY

BY

THE JAPANESE EVALUATION TEAM

AND

HIS MAJESTY'S GOVERNMENT OF NEPAL

The Japanese Evaluation Team (hereinafter referred to as "the Team"), organized by the Japan International Cooperation Agency (hereinafter referred to as "JICA"), headed by Dr. Makoto Doi, visited the Kingdom of Nepal from the 23rd of May to 31st of May 1997 for the purpose of evaluation of the activities of the Primary Health Care Project in Nepal (hereinafter referred to as "the Project") under the Record of Discussion (hereinafter referred to as "R/D") signed on the 25th of December 1992.

During its stay in the Kingdom of Nepal, the Team held a series of discussions, observations and exchanged views with His Majesty's Government of Nepal (hereinafter referred to as "HMG").

As a result of the discussions, both parties agreed upon the matters referred to in the document attached hereto.

Kathmandu, 30th of May, 1997

Dr. Makoto Doi

Ministry of Health

His Majesty's Government

Nepal

I OBJECTIVE OF THE JOINT EVALUATION

- 1. To evaluate the overall Project activities concerning improvements in the health status of the population in the model districts (Bhaktapur, Nuwakot).
- 2. To recognize the obstacles identified during the implementation of the Project activities in the model districts.
- 3. To make recommendations for improvements in the health status of the rural population.

II METHODOLOGY OF EVALUATION

1. Materials Used as Reference

In order to evaluate the past performance and achievements both in quantity and quality, the following materials were used as a basis of reference.

- (1) The Record of Discussions (R/D)
- (2) Tentative schedule of implementation
- (3) The Minutes of Discussions agreed upon by both authorities concerned in course of the implementation of the Project
- 2. Discussions and Observations

Just

土陆原

III PROJECT GOAL

1. Overall Goal

The overall goal of the Project is to improve the health status of the population in the model districts, that is Bhaktapur and Nuwakot in the Kingdom of Nepal, through intensification of Primary Health Care (PHC) services.

Emphasis will be placed on an effective Management Information System (MIS), participatory community health planning and evaluation, strengthening the functions of the District Health Offices (DHOs), the district hospitals and the Health Posts (HPs) in the model districts, and reinforcing cooperation among these institutions.

2. Specific Objectives

- (1) To develop MIS for PHC which allows timely and effective resource management
- (2) To promote participatory community health planning through activities in nutrition, health education, and community organization
- (3) To increase the access of the rural population to health care services through upgrading of health facilities and training of health personnel
- (4) To strengthen the functional cooperation between the DHOs and the District Hospitals for providing comprehensive health care services to the target population

Approaches and target levels of attainment in the respective districts reflect differences in existing conditions.

pos

土居為

IV PROGRESS OF THE PROJECT ACTIVITIES (April 1993 - April 1997)

The Project implemented the following activities to achieve the specific objectives specified in R/D from April 1993 to April 1997, in the spirit of community participation, self-reliance and self-determination which is mentioned in the declaration of Alma-Ata.

1. ACTIVITIES

1.1 Baseline Survey

The Project conducted baseline surveys in Bhaktapur and Nuwakot District to gain an understanding of the present health situation. In addition, the Project also conducted a baseline survey in the pilot Village District Committee (VDC), Bageswori VDC. The survey reports were published and disseminated in both the English and Japanese languages.

1.2 Improvement of Health Institutions

Under the improvement plan decided by the Hospital Management Committee, the Project renovated Bhaktapur Hospital, including the renovation of the X-ray room, the laboratory unit and operation theater, to intensify the service delivery system and to improve the quality of health services.

Furthermore, the Project provided necessary equipment and technical support including the assignment of a consultant on medical records based on the recommendation made by the Hospital Medical Recording System (MRS) Committee to develop an effective and efficient MRS in Bhaktapur Hospital for preparing clinical and administrative statistics of patients by keeping medical records in a systematic manner (ANNEX 1).

Likewise, the Project constructed Bode and Bageswori HP and renovated Nagarkot, Changunarayan and Nangkhel HP. In addition, the Project provided necessary construction materials to Tathali and Dadhikot HP to construct their HP buildings with the cooperation of the local people (ANNEX 2).

上居為

()...)20

The Project has also provided basic medical equipment and instruments to nine (9) HPs and twelve (12) Sub-Health Posts (SHPs) in Bhaktapur District.

At the request of HMG, JICA completed the construction of the Kakani Primary Health (PH) Center in Nuwakot District Constituency No. 1 and provided necessary equipment to upgrade the quality of health services for the local community which it covers.

Moreover, the Project renovated the X-ray room at Trisuli Hospital including installation of a new X-ray machine and provided necessary medical equipment and instruments for the improvement of the health services.

The Project also provided basic medical equipment and instruments to ten (10) HPs and seventeen (17) SHPs in Nuwakot District.

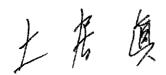

1.3 Improvement of the MIS

The Project supported the renovation of the computer room at Bhaktapur District Public Health Office (DPHO) to include a statistical section in order to develop the MIS at the district level. Two (2) staff members from both Bhaktapur DPHO and Nuwakot DHO were trained in a basic computer course supported by the Project. JICA provided the necessary equipment for the statistical section in Bhaktapur DPHO (ANNEX 3).

The Project also provided some office equipment to the Central Regional Health Directorate (CRHD) to improve the MIS on the regional level.

1.4 Drug Scheme

To identify the appropriate drug scheme, the Project implemented a drug scheme at Nangkhel, Changunarayan and Bageswori HP based on the decision made by the local community, the HP Development Committee and the HP. In the first stage, the Project provided the startup medicine, furniture and stationary supplies to the abovementioned HPs for executing the community-based drug scheme.

Jango

In the second stage, the Project mobilized people in the community and encouraged them to participate actively in applying this scheme to the remaining HPs by themselves without startup medicine. The Ministry of Health (MOH) provided some medicine in addition to the regular medical supply to use as startup medicine. As a result, the Project could expand this scheme to all the HPs in the Bhaktapur District.

This drug scheme program has been expanded to SHPs in Bhaktapur District based on a decision made by the local community and the HP Development Committees. Ten (10) SHPs have started drug schemes by their own efforts by applying the same scheme (ANNEX 4).

The Project introduced the same type of drug scheme at Kakani PH Center and Gorshyang SHP in Nuwakot District by providing some medicine for pediatric use and necessary supplies in order to reduce the problem of unavailability of medicine in the local market.

1.5 Maternal and Child Health (MCH)

The Project started child health activities under the guidance of the Japanese experts and strengthened them at all nine (9) HPs in Bhaktapur District by adding ante natal and postnatal examinations. In addition to this, an MCH clinical operation manual was produced to standardize the systematic examination system (ANNEX 5).

Auxiliary Nurse Midwives (ANMs) and Community Health Volunteers (CHVs) can play a vital role for the smooth operation of the MCH activities in the community. Therefore, the Project supported a CHV refresher training cum literacy program for the CHVs of Bageswori VDC for twenty-four (24) days in order to develop their knowledge and skill to support clinical activities as well as health services at the grassroots level in their area. An ANM refresher training course was also held with the support of the Project.

Coh

土居镇

ANMs are the key persons in the MCH clinical activities at the HP level. The Project has been organizing a monthly ANM meeting in Bhaktapur District to identify the problems related to the MCH clinic and to stimulate them to work hard for the clinic. In addition to the above mentioned activities, the Project produced a poster to make the local people aware of the uses and importance of the HPs.

Likewise, the Project has introduced an MCH clinic at the Kakani PH Center in order to provide basic MCH services, including monitoring of child growth and pregnancy, to the local community more reliably.

1.6 Health Education

1.6.1 Field Level Activities

To improve health services in the model districts by making them smoother and more effective, the Project made a plan to establish a Joint Coordination Committee for health education at the district level. A monthly HP incharge meeting has been organized at Bhaktapur and Nuwakot Districts (ANNEX 6).

The Project has been operating "the health education car" equipped with audio-visual equipment to inform the local community about health at HPs (ANNEX 10).

To strengthen the health education program, the Project supported a health education cum literacy program to CHVs and Traditional Birth Attendants (TBAs) of seven (7) VDCs covered by Bode, Changunarayan and Nangkhel HP with the support of a local Non-Government Organization (NGO).

The nutrition program is a key component of health education. Therefore, the Project has conducted a nutrition survey to learn about basic nutritional factors and eating habits, such as, nutrition related knowledge, attitudes and practices of the local people of Nagarkot VDC and its basic ecological factors.

Joneth

土居镇

1.6.2 Study Tour

The Project organized and supported four (4) observation and study tours for HP incharge and ANMs in Bhaktapur District. The HP incharge, staffs of Bhaktapur DPHO and CRHD visited Pokhara in December 1995 with the JICA experts to study the health care activities provided by the different health institutions, namely, Western Regional Hospital, Western Regional Health Laboratory, Western Regional Health Directorate (WRHD), Kaski DHO, Bairani HP and Gajuri PH Center. Similarly, ANMs of the HPs and Matron of Bhaktapur Hospital visited Makawanpur and Parsa Districts in March 1996 to study the health care activities provided by Bhandara HP and Birgunj Hospital. Two (2) more study tours, one (1) to Dharan and another to Pokhara, were also conducted in March 1997.

1.6.3 Technical Exchange Program

The Project conducted a technical exchange program in July 1994 with the Thailand Public Health Project by JICA. Three (3) HMG health personnel visited the Project at Khon Kaen in Thailand and exchanged ideas and views on health activities with relevant health personnel of the Government of Thailand and JICA medical experts in Thailand.

1.7 Other

- (1) Out-patient survey in Bhaktapur Hospital
- (2) Collection of data from HPs
- (3) Survey of the local environment to find out the quality of drinking water which is actually used by the local people of Bageswori VDC
- (4) Publication of the Project annual reports
- (5) Production of the Project calendar from Nepalese Year 2051 to promote public relations for the Project activities
- (6) Production and dissemination of an MCH handbook, leaflet on Project activities and video on MCH activities

土居复

Jondon

2. INPUT BY JICA

2.1 Dispatch of Japanese Experts

Twelve (12) long-term experts (ANNEX 7-1) and twenty-eight (28) short-term experts (ANNEX 7-2) have been dispatched to transfer their knowledge and skill to Nepalese counterparts in various fields.

2.2 Counterpart Training in Japan

A total of ten (10) counterparts have been received for training in Japan during the last four (4) years (ANNEX 8). The nomination of counterpart personnel for training in the Japanese Fiscal Year 1997 has not been finalized.

2.3 Annual Provision of Equipment

The equipment under the technical cooperation of JICA worth about US \$1.29 million and equipment accompanying the experts worth about US \$0.13 million in the last four (4) years were donated (ANNEX 9).

The above-mentioned equipment are expected to be used effectively in the respective health institutions. The list of equipment for the Japanese Fiscal Year 1997 has not been finalized yet.

2.4 Local Cost Support

(1) Renovation of the health institutions at Bhaktapur and Nuwakot Districts

1)	Kakani PH Center	10,000,000 Rs.
2)	Bageswori and Bode HP	7,000,000 Rs.
3)	Other five (5) HPs	3,690,000 Rs.
4)	Bhaktapur Hospital	1,150,000 Rs.

- (2) Improvement of MIS in CRHD
- (3) Improvement of MRS at Bhaktapur Hospital
- (4) Production of a Project calender

Justo

土在填

- 3. Input by HMG of Nepal
- 3.1 Necessary manpower for the health institutions in both Bhaktapur and Nuwakot Districts
- 3.2 Necessary budget for covering running costs and maintenance costs for the health institutions of Bhaktapur and Nuwakot Districts
- 3.3 Necessary budget for the customs clearance of the equipment provided by JICA

Just

土居魚

V RESULT OF ACTIVITIES

1. To develop MIS for PHC which allows timely and effective resource management,

The project provided the necessary equipment and support, including basic training, to the related personnel of DPHO and DHO to improve the MIS at the district level. At the beginning of the Project, the statistics section of DPHO and DHO calculated the data manually. During the period of four (4) years, the statistics section can process the data into computers by using existing formats which are used by MOH.

At present, the statistics section is capable to report the data to the HP incharge meeting every month as the feed-back of the monthly report to the HPs.

2. To promote participatory community health planning through activities in nutrition, health education, and community organization,

The Project organized an incharge meeting every month in Bhaktapur and once every two (2) months in Nuwakot District for promoting community participation. Moreover, the Project also organized an ANM meeting to identify the problems regarding the provision of better quality health services to people in the local community by utilizing their experiences.

The Project realized the need of health education for mothers, CHVs and TBAs to make them aware of the importance of MCH. Hence, the Project organized health education activities by utilizing a mobile video car for mothers. Furthermore, the Project organized some literacy cum health education classes for CHVs and TBAs as well as made them more conscious of family health. As a result, they have been participating more actively in health activities launched by their neighboring health institutions for the community.

土陆镇

At the beginning of the Project, almost all of the HPs had faced the problem of an inadequate drug supply for a year in providing services to the community. Therefore, the Project introduced an innovative drug scheme to the community for their benefit by having them participate in their own health activities. This scheme has been appreciated widely by the local community and almost all HPs and SHPs of Bhaktapur District have implemented it by themselves.

At the beginning, the village people expected almost all support to come from the donor agencies or NGOs. However, after four (4) years of the Project the VDCs and the HP Development Committees realized that self-reliance and self-effort were more important than asking help from other organizations. As a result, some VDC and the HP Development Committees made plans to construct their own HPs by active local community participation physically and financially. As a result, three (3) HPs, Changu, Nagarkot and Nangkhel have been already constructed and Tathali and Dadhikot are now under construction. This has been made possible through construction materials provided by JICA.

In addition, the Katunje SHP has been constructed by the village people themselves without getting any help from the outside. This is certainly a result of community participation.

3. To increase the access of the rural population to health care services through upgrading of health facilities and training of health personnel,

In order to upgrade health facilities the Project improved the physical facilities, such as construction of HPs, a PH center, renovation of Bhaktapur Hospital, supply of equipment and instruments, etc. Similarly, the Project organized different types of training for health personnel, such as on the job training, regular meetings, study tours, technical exchange programs, counterpart training in Japan, etc.

4. To strengthen the functional cooperation between the DPHO and DHO and the District Hospitals for providing comprehensive health care services to the target population,

John

土居原

The doctor of Bhaktapur Hospital was involved in the operation of an MCH clinic at the HP level with close cooperation of the HP staff. This clinic was expanded to all nine (9) HPs under the DPHO of Bhaktapur by effective support of Bhaktapur Hospital. Furthermore, Bhaktapur Hospital established an MCH section with the support of the Project for strengthening and improving the quality of health services to the community.

Moreover, Bhaktapur DPHO organizes regular HP incharge meetings to improve communication between HPs, SHPs and DPHO regarding an improved health service delivery system. Bhaktapur Hospital participates in the meetings to transfer new ideas and technology to the incharge of HPs and SHPs through lectures and discussions. As a result of this functional cooperation among the health institutions of Bhaktapur District, the health service delivery system of the HPs and SHPs have been upgraded.

上居原

VI CONCLUSION

- 1. Community participation is indispensable to develop the PHC activities. Therefore, the Project made an effort to activate to the local people toward better health. However, community participation in the Nuwakot District is inadequate.
- 2. The Team found that the statistic sections were capable to smoothly analyze data on morbidity every month for individual HPs and provide feed-back to the HPs through the HP incharge meeting. However, the DPHO and DHO have to strengthen the statistics section through continuous manpower assignments and by making them able to process the data according to the needs of the DHOs in a short span of time. Moreover, more training and motivation are required of the concerned personnel for them to conduct their jobs effectively.
- 3. The community has recognized the better use of health institutions. MOH is also concentrating its effort to establish SHPs in each VDC.

The Project conducted both the drug scheme and the staff training, which contributed to increasing the reliability of health institutions to the community.

Although the physical facilities and condition of equipment availability have been improved in the health institutions in both Bhaktapur and Nuwakot Districts, the system for their proper utilization and maintenance should be improved to increase reliability.

4. Functional cooperation between Bhaktapur Hospital, HPs and SHPs has been improved significantly. However, active participation of Bhaktapur DPHO is strongly expected to link the health institutions of Bhaktapur District for a better service delivery system to the community. In contrary to this, it has not been functioning as well as it should be in Nuwakot District.

Functional cooperation between CRHD and DPHO and DHO is highly expected to provide comprehensive health care services to the target population.

Carry

土居复

Finally, the Team has concluded that the MOH, the Project and local community are contributing their joint efforts for the betterment of the local community health and hygiene including improvement of health facilities under limited available resources.

Japanese side confirm the Ministry of Health's view that significant achievements have been realized by the Project over the four (4) years period, April 1993 - April 1997. It is specifically those achievements for which the Project can be justifiable proud, that raise the duel concerns of sustainability and institutionalization of systems, processes and procedures that have lead to the Project achievements in the areas of improvements of health institutions, MIS, community drug schemes, MCH and health education. Though the necessary information is most probably available in greater detail in the various project documents and reports, it would be necessary to specifically identify:

what specific actions have been taken to assure the sustainability of project advances and;

the specific plans for the gradual phasing out of the current Project activities.

With the Ministry's desire to replicate the Project's achievement in other districts, it would be useful for the Project staff to report on the lessons' learned in implementing the various project components, to learn what approaches worked and which did not, what specific factors lead to differences in success between the two (2) districts.

HMG, MOH is going to have National Community Drug Program (NCDP). Drug scheme run with JICA support has given interesting results. This will help us to choose the appropriate scheme for the community. However, when the NCDP guideline will be introduced, all the various drug schemes will come under the umbrella of NCDP.

Jan

VII CONTENTS OF DISCUSSION IN JOINT COORDINATION COMMITTEE

- 1. From the Japanese side, the following recommendations were presented.
- (1) Extension of time frame of the Project by one (1) year at most
- (2) Establishment of PHC section in DPHO and DHO
- (3) Improvement of training for AMNs and CHVs
- (4) Clarification of the function of Kakani PH Center
- 2. The Nepalese side made comments and recommendations as follows.
- (1) As for the Japanese recommendation (1), HMG fundamentally agreed with the one (1) year's extension of the Project. However, it desired to expand the target area in the future.
- (2) As for the Japanese recommendation (2), HMG responded that it is mandetory duty for DPHO and DHO to supervise HPs and SHPs. However, HMG and the Government of Japan agreed to strengthen their functions.
- (3) As for the Japanese recommendation (3), HMG answered that it had already had training system for AMNs and CHVs.
- (4) As for the Japanese recommendation (4), HMG answered that Kakani PH Center's rule and function have been clearly defined as other PH Centers.
- (5) HMG evaluated that the Project have actualized significant achievement over the four (4) years of the Project period. Furthermore, HMG recommended that a detailed report from the Government of Japan was desirable so that it could replicate achievement of the Project in other districts.

Jers

土陆 夢.

As for the drug scheme conducted by the Project, HMG mentioned that it would be integrated with the National Community Drug Program after introducing its guidelines.

土居原

Joseph

VII RECOMMENDATION

The Project turned out to be successful to substantial extent to establish community participational health administration systems such as MCH, drug schemes and health education.

However, the Joint Coordination Committee noticed several Project activities were yet to be implemented and also that there is need to strengthen administrative system, prior to the take-over by HMG.

Likewise, there is room to promote community participation in the Nuwakot District, which is described in the conclusion.

Based on this recognition, the Joint Coordination Committee recommends both HMG and the Government of Japan to start discussions about the following two (2) matters.

- 1. To extend the Project term by one (1) year at most as a follow-up in the basis of the framework of the present R/D
- 2. To consider the specific plans for the gradual phasing out of the current Project activities
