(54) Title:	Workpiece holder for rotary grinding machines for grinding semiconductor wafers, and method of positioning the workpiece holder
(57) Abstract:	
	<p>The invention relates to a workpiece holder (1) for rotary grinding machines for grinding semiconductor wafers, having a rotatable work surface (9) which points toward the rotating grinding tool (7) and on which the semiconductor wafer (10) to be machined is laid, and to piezoelectric elements (2) on which the workpiece holder (1) is axially supported. The piezoelectric elements (2) can be operated independently of one another and, when operated, undergo a change in their linear dimension, an operated piezoelectric element axially raising or lowering the workpiece holder (1) at the point (4) at which it supports the workpiece holder (1).</p> <p>The invention further relates to a method of positioning the workpiece holder (1).</p>
