

3. プロジェクト成果広報セミナー資料

Jointly Organised By:

Forestry Department Peninsular Malaysia
Perak State Forestry Department
&
Japan International Cooperation Agency

INTRODUCTION

The Small Scale Fast-growing Forest Plantation Project has been implemented through the collaboration of Forestry Department Peninsular Malaysia, Perak State Forestry Department and Japan International Cooperation Agency (JICA) for three years from 1 November 1999 to 31 October 2002. The purpose of this project is to collect technical and managerial information of fast-growing tree species producing specific end uses such as for housing and manufacturing. This project therefore aims to select suitable species for fast-growing forest plantation and to establish their management system in order to promote forest plantation activities for sustainable forest development and management in the tropics.

The project established a total of 60 ha plantations comprising 299 experimental plots in Chikus, Bukit Tapah and Bikam Forest Reserves in the State of Perak. The plots comprise silvicultural and species trials of indigenous fast-growing tree species. The silvicultural trials aim to find a cost-effective way of plantation establishment while the species trials are designed to recommend tree species suitable for industrial fast-growing forest plantation establishment.

OBJECTIVES

The objectives of this seminar are to disseminate data, information and results of the project, as well as to exchange experience amongst participants attending the seminar.

The seminar will bring together foresters, scientists, and private entrepreneurs to critically review and discuss the result of the project and set it into perspective in relation to similar work undertaken elsewhere. The seminar will also provide recommendations for future work and their translation into guidelines for the development of silvicultural and management systems in the establishment of fast-growing forest plantation with specific end uses.
